HOW TO MAINTAIN Asian Recorder FILE :

ASIAN RECORDER news-sheets are issued weekly. They are numbered consecutively from the first issue in January to the end of December each year.

Events in all the countries of Asia are listed under each country, arranged alphabetically, with a summary for each if necessary.

Events about Asia happening outside Asia are listed under a separate heading ASIA OUTSIDE ASIA.

Sport is listed at the end, without regard to country.

Each item is acknowledged to the source from which it is taken—newspaper, periodical, Radio, Embassy or Government Department—to give it authority.

Every three months, these news-sheets are accompanied by an INDEX. Each year, the Annual INDEX will incorporate all the three previous quarterly indices. An explanation of the INDEX is given on the back cover.

To insert the news-sheets in the binder—open the binder by the backflap. unscrew the nuts, raise the flat rod and insert the news-sheets; thereafter, let the flat rod rest on the sheets, press the flat rod firmly down and screw down the nuts.

EXECUTIVE EDITOR:

M. Henry Samuel

The following have agreed to be on the Board of Honorary Advisers :

Sardar K. M. Panikkar, author, administrator, diplomat;
Mrs. Kamaladevi Chattopadhyaya, well-known social worker;
Mr. V. Ramakrishna I. C. S. (retired);
Mr. Frank Moraes, journalist;
Mr. A. D. Mani, journalist; and
Mr. M. Chalapathi Rau, journalist.

Office Address : 6, Queen Victoria Road, Post Box 595, New Delhi (INDIA). Telephone : 46207

ASIAN RECORDER

January 1—8, 1960

Regd. No. D-727
Vol. VI No. 1

CEYLON

A. **Colombo Council Elections:** The United National Party (UNP), led by the former Premier, Mr. Dudley Senanayake, secured an absolute majority in the elections to the Colombo City Municipal Council held on December 19, 1959.

Much significance was attached to the civic elections as it could reflect the trend of voting in the forthcoming General Elections.

The UNP captured 23 of the 37 seats in the House.

[The UNP had a bare majority of one in the previous Council which the Bandaranaike Ministry dissolved two years ago on grounds of incompetence following a prolonged strike of municipal workers.]

The Opposition leader, Dr. N. M. Perera's Lanka Sama Samaj Party, which contested in about 25 wards, was successful in only eight places. The Communist Party was thoroughly defeated. Even the leader of the Communist Party, Mr. Peter Kueneman, lost his seat to his United National Party rival in a straight fight by a margin of 96 votes.

The Communist Party and the Sri Lanka Freedom Party were able to secure only one seat each.

The overall party position in the new Council was as follows: United National Party 23; Lanka Sama Samaj Party 8; Independents 4; Communists 1; Sri Lanka Freedom Party 1.

Only four candidates secured a majority of 1,000 votes and all of them were United National Party candidates. Three women were elected to the Council, including Mrs. Ayesh Rau, a woman of Indian origin.

The Trotskyist Lanka Sama Samaj Party, which held only three seats in the previous Council, gained largely from other Left-wing groups who clashed and from the section of Mahajana Eksath Peramuna (People's United Front) led by Mr. Philip Gunawardene which failed to secure a single seat.

CHINA

A. **Tibet Chapter Of Chinese People's Political Consultative Conference:** Peking Radio reported on December 22, 1959 the formation of the Tibet Chapter of the Chinese People's Political Consultative Conference (CPPCC) in Lhasa.

The Conference is an organ charged with the task of unifying all nationalities, classes, political parties, mass organizations, notable public figures and overseas Chinese.

According to the Radio, the Tibet Chapter has held its first meeting in Lhasa already.

Fifty-two of its 134 members were described as people belonging to the "upper strata and religious circles" in Tibet.

The Political Commissar of the Tibet Military Area Command of the Chinese Army and Deputy Secretary of the Working Committee of the Chinese Communist Party in Tibet, Gen. Tan Kuan-san, who presided over the meeting, declared: "The present meeting will go over policies related to democratic reforms in Tibet and questions of production and reconstruction. It will serve to mobilize people of all stratas in Tibet on a still wider scale to give their best for a better, quicker and more thorough carrying out of democratic reforms in Tibet and the development of agriculture and stock-breeding under the brilliant leadership of the Communist Party and the Central Government."

The representative of the Central People's Government in Tibet and Secretary of the Working Committee of the Chinese Communist Party in Tibet, Gen. Chang Chin-wu, said: "Under the leadership of the Chinese Communist Party, the Tibet Committee will make a glorious contribution to the consolidation and unification of the Motherland, the strengthening of the unity of all nationalities and the construction of a democratic, socialist new Tibet."

The Vice-Chairman and Secretary-General of the Preparatory Committee for the Tibet Autonomous Region, Mr. Ngapo Ngawang Jigme, said: "Only with the solicitude of the great Chinese Communist Party and Chairman Mao Tse-tung that the Tibet Committee of the CPPCC, which has long been desired by us, has now been founded. This is a historic and happy event and represents another glorious victory for the Communist Party's nationalities policy in the Tibet Region."

The formation of the Tibet Chapter was interpreted by observers as marking the complete integration of the region with China.

Land Reforms:

Meanwhile, according to Press reports, the Tibetan Land Reforms Committee, recently formed to plan and supervise the re-distribution of land in Tibet, has asked for "productive activities" organized in Tibet's Lamaist monasteries.

The 26-man Committee said at a meeting in November that it was necessary to introduce "democratic administration" in monasteries while maintaining the Peking Government's policy of freedom of religious belief and protection of patriotic law-abiding monasteries.

[The declared communist policy is to pay compensation for land taken from feudal land-owners who took no part in the Tibetan rebellion against communist China and to confiscate the rebels' land without payment. Until the rebellion, most of the land in Tibet belonged to feudal lords and monasteries. The Committee decided that the Government should not pay compensation for land which serf-owners rented from the former Tibet Local Government which was dissolved by Peking for launching the revolt. There will also be no compensation for land allocated by the former Local Government to officials in lieu of salary.]

[Prev. ref. 3019:CHI:B]

B. **Lanchow - Sinkiang Railway:** Work is in progress on the 2,349-kilometre Lanchow-Sinkiang railway which, when completed, would greatly reduce the railway distance between Peking and Moscow.

Following the route of the Old Silk Road from Lanchow up the Kansu Corridor, this line traverses the desert into the Sinkiang-Uighur Autonomous Region to Hami, passes north of the Turfan depression, crosses the Tien-shan to Urumchi, continues north-westward, then through the Ala Pass to the Soviet border where it meets the railway from Aktogai on the Turkish Railway.

When completed, it will supplement the two lines now being used, the one running through China's north-east provinces to the Soviet border and the other, a shorter one *via* Ulan Bator in the Mongolian People's Republic.

The new railway will help speed up the development of China's north-west and the Sinkiang region and in strengthening the ties between these areas and the rest of the country.

To-date, 1,177 kilometres of the rail track is open to traffic from Lanchow to Weiya in Sinkiang. The road-bed, bridges and culverts on the Weiya-Urumchi section have been built. The section from Urumchi to the Soviet border has been surveyed and part of the road-bed made. The Soviet section between Aktogai and the Chinese border was opened to traffic on July 1, 1959.

The new railway has some notable features. Most of it is being laid on tablelands 1,000 metres above sea level and it traverses through exceptionally difficult terrain: high mountains, deep canyons, deserts, akali flats, swamps and earthquake zones. It crosses the Yellow River and the Wuhsiao-ling Range whose peaks rise 3,000 metres above sea level. Seven tunnels had to be cut on the Wuhsiao-ling section and in places the road-bed had to be built up to a height of 40 metres. Several hundred bridges and culverts, large and small, had to be built across the many streams in the Shanshan area.

INDIA

SUMMARY: Further Nehru-Chou En-lai Letters On Sino-Indian Border; Congress Decision On Bifurcation Of Bombay State; "Ginger Group" On Coalition Governments; Eastern Rice Zone Formed.

A. **India-China Border—Further Correspondence:** Replying to Mr. Nehru's letter of November 16, the Prime Minister of China, Mr. Chou En-lai, wrote on December 17 proposing a meeting between Mr. Nehru and himself on December 26 in any place in China or at Rangoon to reach "some agreement on principles as a guidance to concrete discussions of the boundary question by the two sides."

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The letter of Mr. Chou En-lai was handed over to Mr. Nehru by the Chinese Ambassador in Delhi, Mr. Pan Tzu-li, at the Ministry of External Affairs on December 18, 1959. It was released to the Press by the Chinese Embassy late at night on December 18, 1959.

The basic idea of Mr. Chou En-lai's proposal for the meeting implied a virtual rejection of Mr. Nehru's main proposals of November 16.

Mr. Nehru, in his letter of November 16, had made three suggestions: (1) that in Ladakh, China should withdraw to the boundary shown in Indian maps and India should withdraw to the boundary shown in Chinese maps leaving this area unadministered; (2) that on the rest of the frontier neither side should send out patrols from its checkposts; and (3) that the Chinese should withdraw from the Indian check-post of Longju but Indian troops would refrain from re-occupying it.

Mr. Chou En-lai, while claiming that his original proposals of November 7 suggesting the withdrawal of the forces of the two sides 20 kilometres (or such distance as was deemed appropriate by both sides) would create a favourable atmosphere for the talks, said that he was "prepared to agree to a partial solution" by applying Mr. Nehru's Longju proposal to other disputed places as well.

He named ten such "disputed" places, all within Indian territory. They included Khinzemane in N-EFA, Shipki Pass and eight other places in Uttar Pradesh and Ladakh.

Mr. Chou En-lai welcomed Mr. Nehru's proposal for the frontier posts of the two countries to stop sending out patrols but suggested that this should apply not only to N-EFA and the central border but also to Ladakh.

He rejected Mr. Nehru's proposal on Ladakh on four grounds:

(1) That there was no reason to treat Ladakh as a special case as China was claimed to have been in actual control of the whole of this area which was shown in their maps of 1956 except for one place "occupied" by India.

(2) That it represented "a big step backward from the principle agreed upon to maintain *status quo*."

(3) That it was unfair. In this connexion, he said that even "the most anti-Chinese part of the Indian Press had pointed out India's concession as only theoretical because "India has no personnel there to withdraw while China would have to withdraw from a territory of 33,000 square kilometres."

(4) That this area had long been under Chinese jurisdiction. In this connexion, Mr. Chou En-lai claimed that the road which the Chinese had built through the Indian Aksaichin plateau had been in existence since the Ching Dynasty of China, that it was used by the Chinese Liberation Army in 1950 to enter Tibet, and that between March, 1956 and October, 1957, the Chinese built a 1,200 kilometres-long motorable highway through it without any challenge from India.

Mr. Chou En-lai suggested that if India should still insist after this that her demand to this area was proper, then the principle she wanted to apply to Ladakh should be applied to N-EFA.

This would involve Indian armed forces and other personnel withdrawing to the boundary shown in Chinese maps—that is, withdrawing from nearly 35,000 square miles of Indian territory.

Referring to the historical data concerning the India-China border, Mr. Chou En-lai said that his Government would give a detailed reply in the near future.

In the meanwhile, he claimed that the Survey of India maps up to 1938 showed a Ladakh boundary which corresponded to that shown in Chinese maps and that up to 1952 the India-China boundary was shown as undelimited in Indian maps.

Mr. Nehru Rejects Proposal To Meet:

Turning down the proposal of Mr. Chou En-lai for a meeting between the Indian and Chinese Premiers in Rangoon or in China on December 26, 1959, Mr. Nehru informed him in a letter on December 21 that he did not see "how we can reach agreement on principles when there is such complete disagreement about facts."

Mr. Nehru denied the charge that Indian forces had committed aggression or occupied Chinese territory and maintained that intrusions by "Chinese personnel have brought about the present situation and created apprehensions."

Giving the substance of his reply to Parliament on December 21, 1959, he said that he would prefer to wait for Mr. Chou En-lai's reply to his letter of September 26, 1959 and the Note of November 4, 1959 before "we discuss what should be the next step."

He also announced that the Indian Ambassador in Peking, Mr. G. Parthasarathi, had been called to New Delhi for consultations.

In his letter, Mr. Nehru made the following other points:

(a) He regretted that his "reasonable and practical proposals aimed at lessening tension" had been rejected.

(b) Mr. Chou En-lai's reply was merely a re-iteration of claims to extensive areas in Indian territory.

(c) His claim that Indian prisoners had received friendly treatment was disproved by Mr. Karam Singh's statement of the "deplorable treatment" to which they were subjected.

(d) He endorsed Mr. Chou En-lai's statement that their concern should be with peaceful reconstruction of their countries. As far as he was concerned, he had always expressed his willingness to meet and discuss outstanding differences and settle them peacefully.

Acharya Vinoba Bhave's Support To Mr. Nehru:

Speaking at a meeting in Sirsa (Punjab) on December 19, 1959, the Bhoodan leader, Acharya Vinoba Bhave, supported Mr. Nehru's policy towards China *vis-a-vis* the border dispute and said that at a time when even wise people were losing grip of the situation, Mr. Nehru was maintaining his "wisdom, cautious vigilance and practical action."

Today, he said, there was tension between India and China, but he had no doubt that ultimately there would again be goodwill between the two countries. "China cannot be so foolish as to create enemies all round. Even if China is not behaving properly, India need not change her basic policies. That will be a wrong step."

Referring to the criticism of Mr. Nehru's policy with regard to China, he said that Mr. Nehru was the only leader in India who was asking people not to get nervous but face the situation boldly and with courage. He had told us that no country in the world today could afford to plunge into a world war. Several followers of Mahatma Gandhi, including Mr. C. Rajagopalachari, were pleading for a change in India's foreign policy. But, Mr. Nehru continued to maintain that he understood the internal as well as the international pulse of the people. "I feel that this phase of Mr. Nehru's life is the brightest and the most glorious. Despite his advanced age he is maintaining wisdom and balanced judgment. His words make me feel that Mahatma Gandhi is still alive in India. At present, Mr. Nehru is being attacked on all sides. But everybody looks at this problem purely from the political point of view, forgetting the broader aspects of the problem."

[Prev. ref. 3060:INI:A]

B. **International Monitoring Station Opened:** The first of a series of six permanent international monitoring stations in India was inaugurated by the Central Minister of Transport and Communications, Dr. P. Subbaroyan, at Ghatorni, about 10 miles from New Delhi, on December 19, 1959.

It is said to be the biggest monitoring station in Asia.

The other five stations are proposed to be set up in different parts of the country by the end of the Second Five-Year Plan period.

Set up at an estimated cost of Rs. 12,00,000 the station was erected by the Wireless Planning and Co-ordination branch of the Central Ministry of Communications. It will help in the efficient handling of radio frequencies in the country and will enable the Government to detect illegal frequency users and poachers on frequencies allotted to India by other nations.

The station is on a 200-acre area, free from man-made electrical noises, on Delhi-Gurgaon Road. It is powerful enough to receive from and monitor signals to all parts of the world.

(*The Times of India*, New Delhi)

[Prev. ref. 3003:INI:J]

C. **Bifurcation Of Bombay State:** The Congress Working Committee's decision on the bifurcation of the bilingual Bombay State into Maharashtra and Gujerat was officially announced by the A-ICC in New Delhi on December 19, 1959 when it released the Congress Working Committee resolution of December 4, 1959.

The resolution said that "in the context of the developments that have taken place, the re-organization of the present State of Bombay involving its division has become necessary."

The Working Committee agreed with the recommendation of the nine-man Bombay Committee that the present Bombay State should be bifurcated. [The Committee, set up under the chairmanship of Pandit G. B. Pant, was to advise the Congress President on the issue.]

Almost simultaneously with the release of the Working Committee's resolution, the Central Home Minister, Pandit G. B. Pant, informed some members of Parliament that the Government had officially received the Congress Working Committee resolution on the bifurcation of Bombay and that they were considering the question.

He indicated that the Government would bring the necessary legislation before Parliament with regard to the re-organization of the State as soon as possible after some basic details had been finalized.

The Working Committee had so far withheld the publication of the resolution as copies of the resolution had first to be sent to the Central Government and the Bombay Government for action.

Handing copies of the resolution to newsmen, the A-ICC General Secretary, Mr. Sadiq Ali, said: "It is

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

now for the Government of India and the Bombay Government to make appropriate proposals to Parliament."

Although there would be no separate Vidarbha State, safeguards were provided in the Working Committee resolution for the people of the Vidarbha region and for maintaining the importance of Nagpur city. Vidarbha region is to be included in the new Bombay State (Maharashtra).

The Working Committee was of the view that it would be to the advantage of both the new State of Bombay and Vidarbha if Vidarbha formed part of the new State with "adequate arrangements for the protection of the interests of Vidarbha and the city of Nagpur."

Details of Bifurcation—Chavan-Mehta Agreement:

Attached to the resolution was an Appendix giving details of the Agreement arrived at between Bombay's Chief Minister, Mr. Y. B. Chavan, and Dr. Jivaraj Mehta (representing Gujerat) on the financial arrangements and boundary adjustments.

According to this Agreement, the Dangs district would form part of Gujerat while the Baragam-Dangs area would remain in Maharashtra. Umbergaon tehsil in Thana district would be divided, with an area containing an agreed number of villages going to Gujerat and the rest remaining in Maharashtra.

Navapur taluk and the five adjoining taluks of West Khandesh would remain in Maharashtra. Some areas in Navapur, Nandurbar, Akkalkuwa and Taluda taluk, which would be submerged by the Ukai Project Reservoir, would be transferred to Gujerat with a two-mile land belt running around them.

Among the other items of agreement between Mr. Chavan and Dr. Mehta was one to set apart Rs. 10 crores out of undivided Bombay's assets for the construction of a new capital city for Gujerat.

It was also decided that the assets and liabilities should be provisionally shared by the new States on the basis of population. This question would, however, be finally settled by the provisions of the States Re-organization Act unless a variation was agreed upon. The provisional shares of the two States would be transferred immediately on bifurcation.

The estimated annual deficit of the Gujerat State would be met by Maharashtra for the first six years.

Agreement was also reached on the broad principles for sharing the staff and training and research facilities, although no details were given.

Text Of Resolution:

The following is the text of the Congress Working Committee's resolution:

"The Working Committee has given careful consideration to the report of the Committee of nine appointed to advise the Congress President on the question of re-organization of the Bombay State. This nine-man Committee considered various aspects of this question and, in the event of such re-organization being decided upon, further considered in what manner this should be done. The object of the Committee was to obtain the largest measure of agreement and to recommend a scheme which would be beneficial to the States and people concerned and desirable in the larger interests of the nation. With these objectives in view, the Committee conferred with a large number of individuals concerned and representatives of organizations who gave them the benefit of their advice and co-operation in the task.

"The Committee stated that in the context of the developments that have taken place, the re-organization of the present State of Bombay, involving its division, has become necessary. The Working Committee agrees with this recommendation.

"In regard to the city of Bombay, it was agreed that its cosmopolitan character should be preserved, the interests of the linguistic minorities should be protected and special attention should be paid to the development of the city.

"The nine-man Committee requested Mr. Yeshwantrao Balwantrao Chavan and Dr. Jivaraj Mehta to discuss between themselves the issues that would arise from the re-organization of the State with regard to financial arrangements, demarcation of boundaries and other matters. Agreed conclusions were reached in regard to these and are given in the attached Appendix.

"The nine-man Committee gave special consideration to Vidarbha. They recognized that strong sentiment prevails among many people in Vidarbha for the formation of a separate State. Various proposals were made and considered by the Committee. In any event, the assurances given under what is known as the Nagpur Pact should be kept in view and even more generous concessions, wherever possible, might also be made in order to satisfy the people of Vidarbha. The Committee has expressed its preference for the inclusion of Vidarbha in the new State of Bombay.

"The Working Committee has given careful thought to the question of Vidarbha. They realize that there is an apprehension among many people in Vidarbha that in the event of Vidarbha forming part of the new State of Bombay, the interests of Vidarbha might not be effectively safeguarded, and, in particular, the growth and development of the city of Nagpur might not be adequately looked after. Having considered all aspects of this question, the Working Committee feels that it will be to the advantage of both the new State of Bombay and of Vidarbha if Vidarbha forms part of the new State, with adequate arrangements for the protection of the interests of Vidarbha and the city of Nagpur. Any other arrangement would come in the way of the proper development of these areas. From the larger point of view of the nation also, the inclusion of Vidarbha in the new State of Bombay is desirable. It is important, however, that adequate arrangements should be made so that the people of Vidarbha feel that their interests are well protected.

"The Working Committee expresses the general agreement with the proposals put forward by the Committee.

"This question of re-organization of one of the great States of India will have to be considered by the Central Government and Parliament and the State Legislature of Bombay. The Working Committee, therefore, forwards these recommendations to the Government of India and to the Bombay State Government for their consideration.

"(1) *Financial and Administrative Arrangements*: (a) Cost of construction of a new capital city for the State of Gujerat: It has been agreed to set apart Rs. 10 crores out of the assets of the present State of Bombay before the division of the assets and liabilities of the present State. (b) Division of assets and liabilities: It was agreed that this should be provisionally shared by the new States on the basis of population and finally according to the provisions of the States Re-organization Act, 1956, or any agreed variations therein. The provisional shares of the respective State should be transferred to them immediately on bifurcation, the money value of such physical assets as are agreed to be shared being taken into account on the date of bifurcation. (c) In view of the financial position of the present bilingual State, the estimated annual deficit of the State of Gujerat will be met by the new Bombay State (Maharashtra) in the first six years after the formation of the State of Gujerat and by a tapering arrangement of 20 per cent reduction each successive year during the next four years. Effect will be given to this financial adjustment, as far as may be, in one lump sum by reflecting the capitalized amount in the apportionment of suitable assets and liabilities at the time of re-organization. For the computation of the capitalized amount, the prevailing market rate of interest on the Government of India's securities on the appointed date wil be assumed. (d) Agreement has also been reached on the broad principles for apportionment of staff, facilities for training and research and the transfer of officers and composition of various autonomous Boards and Tribunals.

"(2) *Territorial Arrangement*: (a) It was agreed that the Dangs district would form part of the State of Gujerat. (b) The Baragam-Dangs area would remain in the new State of Bombay (Maharashtra). (c) Umbergaon taluk in district Thana will be divided and the area of specific villages agreed upon will be merged with the new State of Gujerat and the remainder will continue in the new State of Bombay (Maharashtra). (d) Navapur taluk and the adjacent five other taluks of West Khandesh district, namely, Nandurbar, Akkalkuwa, Taluda, Shahada and Akrani will continue in the new State of Bombay (Maharashtra). Some areas in Navapur, Nandurbar, Akkalkuwa and Taluda taluks would be submerged by Ukai Project Reservoir. Such submergence area with a land-belt of about two miles round it would be transferred to the jurisdiction of the State of Gujerat to enable the smooth execution of the Project and unified control and responsibility for the acquisition of land and rehabilitation of the persons displaced thereby.

Samyukta Maharashtra Samiti's Reaction:

The General Council of the Samyukta Maharashtra Samiti, which met in Bombay under the presidentship of Mr. S. A. Dange on December 23 and 24, 1959 passed a resolution welcoming the Congress decision to bifurcate Bombay but described the plan as "humiliating and hurting the sentiments of the Maharashtrian people."

The Congress decision, it added, sought to "cripple the future growth of Maharashtra State politically and economically."

The first "humiliation and exasperation" for the new State, it said, was to deny it the name of Maharashtra and to call it Bombay State. It appealed to the Congress and other parties in Parliament to see that this decision was reversed.

Secondly, the Samiti felt that the financial arrangements proposed would "cripple the new State financially from its very birth", imposing "on us at the very beginning a loss of over Rs. 50 crores." Not only the State of Gujerat had been granted Rs. 10 crores to build a new capital from the common funds before separation but also the Maharashtra State "is bound hand and foot for the next ten years to pay all the deficits of the State of Gujerat without check and without any scrutiny from the State of Maharashtra which is to foot the bill." Lest the Government and people of Maharashtra later raised objections, the whole sum is to be paid in advance from the share of the assets of the new State, thus imposing at the very beginning a loss of over Rs. 50 crores. The interests of Maharashtra were also likely to be adversely affected in the matter of division of assets.

The third objection raised by the Samiti against the Congress plan was that injustice had been done to the new State on the question of territorial arrangements. "In this, every known principle, of demarcating the boundary between Gujerat and Maharashtra has been violated."

Regarding the decision of the Congress to include Dangs in Gujerat, it stated that Dangs was part of Maharashtra and was recently adjudged to be so on the basis of the language test.

On the question of Ukai dam, it felt that it was "positively harmful" from all points of view to the people of Khandesh and other nearby districts.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

[Prev. ref. 3035:INI:B]

D. **Ginger Group's Coalition Governments "Thesis":** The Congress Socialist Forum—popularly called the 'Ginger Group'—suggested in the form of a 28-page "Thesis" on December 19, 1959 that there should be coalition Governments at the Centre and, as far as possible, in the States for the next 10 to 12 years.

These coalitions, it said, should consist of the Congress, P-SP, Sarvodaya workers and "other socialist elements."

The "Thesis" is entitled "Nehru must give the lead."

The Forum's spokesman, Mr. S. N. Mishra, told newsmen the same day (December 19) that the conclusions of the "Thesis" would possibly be raised in the form of a resolution at the Bangalore session of the Congress.

He said that he would rule out the communists, communal organizations and Mr. J. P. Narain from the proposed coalitions.

The call for a coalition Government, he added, was based on the conclusion that for an adequate rate of development in the country the "Congress cannot go it alone".

The "Thesis" said that although Mr. Nehru had admirably summed up the complexities of the situation in the country, "one is entitled to know how the Prime Minister proposes to go about the task".

"The fact that the Prime Minister emphasizes certain things which are of the highest importance to the country is extremely gratifying. But the country wants something more from him. It wants to be told that he is going to face up to their logic and full implications and forge the necessary instruments and methods."

A second reference to the desirability of a new lead from Mr. Nehru was contained towards the end of the "Thesis." "There seems to be no difference of opinion that Jawaharlal Nehru is synonymous with a great opportunity for the country. Evidently, therefore, the lead in this direction will have to be given by him. Such an important historical step may perhaps ultimately provide a real answer to the question: 'What if a re-assuringly stable father-figure suddenly vanishes?'"

The proposal was based on the Group's analysis of the situation facing the country. The three factors which led it to suggest the idea were Chinese aggression on Indian territory, the "retreat of democracy" in the neighbouring countries and "a certain measure of acession of strength to the reactionary elements" in the country.

It specifically mentioned the rivalries among political parties which "can permit nothing more than a pale and anaemic programme of industrialization and a moderate rate of economic growth".

It was critical of the "disintegration" in the Congress, Congressmen's opposition to the betterment levy in the Punjab and the fact that Mr. Nehru's lead in using a small car and the voluntary cuts made by Ministers in their salaries "have not worked down the pyramid".

Discussing past efforts at unity made by the Congress and P-SP leaders, it maintained that a "radical change" in the situation had taken place. This change, in its view, had been caused by the clear goal of a Socialist society adopted by the Congress and the hopeful trends of political co-operation in Kerala and Orissa.

It did not attach much importance to a rejection of the unity idea by P-SP at its Jubilee session in Bombay.

A coalition would only be possible when the various parties agreed upon "the basic principles and the broad outline" of a programme. It was, however, optimistic about "like-minded" parties doing so.

The coalitions' most important task would be to give a lead in formulating the Third Five-Year Plan—"the main instrument of social and economic change". To fulfil the Plan, the "alliance" would have to train "a very large number of workers" on a priority basis. The training programme "will have to be treated as the fulcrum of the entire programme of national reconstruction."

The coalitions would generate such great opportunities for everyone in the development field that bickerings over seats and fears about party interests would find no place.

The Congress Socialist Forum, which comprises mainly the younger elements in the Congress party, was formed two years ago.

When Mr. Nehru wanted to resign, the Group emphatically argued against it.

At the beginning of 1959, it produced a booklet embodying its approach to the Third Five-Year Plan and explained it vigorously at the Nagpur Congress session in January, 1959.

Its main aim is to encourage progressive thinking among Congressmen and influence policies through the A-ICC and the Congress Parliamentary Party. In this, its members see no violation of party discipline.

Mr. K. D. Malaviya Disagrees:

The "Thesis" was, however, criticized by Mr. K. D. Malaviya, Minister for Mines and Fuel and founder-member of the Forum, on December 20, 1959.

He not only expressed "violent disagreement" with the "Thesis" but also complained that the proposal was never discussed by the Forum.

Mr. Asoke Mehta's Statement:

The Chairman of the Praja-Socialist Party, Mr. Asoke Mehta, said in a statement in New Delhi on December 23, 1959: "We have been anxious and are keener now for closer understanding between democratic socialists in the Congress and outside."

He welcomed the "thoughtful analysis" of the present situation offered by the Congress Socialist Forum and said: "Whether co-operation at the governmental level is desirable is not a relevant matter today. It is to achieve co-operation in various spheres of national activities that is urgently necessary and eminently possible today.

"The necessity for such a Forum to be organized proves that criticism about large sections in the Congress not being committed to socialism has not been without substance."

He said that co-operation was needed in activities such as the building of co-operatives, strengthening of the panchayats, mobilization of young people and rescuing students from the prevailing morass. "The challenge of China can be met only by our discovering a democratic alternative to totalitarian cadres.

"In the West, socialism is in the process of re-formation. In India, where our socialism was never dogmatic, re-formulation is easier. We have not merely to establish closer association between democracy and socialism but make socialism the decisive vehicle for economic development and social change. All this demands not only deep involvement in socialism but also constant refinement of ideas. We shall welcome all opportunities with fellow-socialists for such joint exploration in ideas and new institutions. No partisan considerations hamstring us and we would welcome a similar mood in other parties".

E. **Sardar Swaran Singh On Steel Production:** The Central Minister for Steel, Mines and Fuel, Sardar Swaran Singh, told the Central Committee of the All-India Manufacturers' Organization in Bombay on December 20, 1959 that in regard to steel production "by and large, we have turned the corner."

"In retrospect", he added, "I think that 1958 was the worst year; 1960 promises to be much better. In 1961, there will be self-sufficiency".

The steel targets set for the Second Five-Year Plan would be achieved and so far as the Third Five-Year Plan was concerned, the current aim was to expand steel production to 10 million tons of ingots. "The target of 10 million tons is by no means final and I am not quite sure what the final shape of it will be. But I can assure you that we are keenly aware of the necessity of planning for a size which will save us the continuing drain on our foreign exchange".

(*The Statesman*, New Delhi and *The Times of India*, Bombay)

[Prev. ref. 2960:INI:F]

F. **Bhilai Billet Mill Commissioned:** The billet mill of the Bhilai Steel Works was officially commissioned on December 24, 1959. Sardar Swaran Singh performed the inaugural ceremony.

The commissioning of the billet mill meant the implementation of that part of the Indo-Soviet Agreement signed on February 2, 1955 which stipulated that steel in saleable form would be rolled out during 1959.

The blooming mill started functioning on November 7, 1959. The "blooms" would now be further rolled into billets, a kind of steel for which there is great commercial demand.

The Bhilai project has already received orders for more than 200,000 tons of billets from the various rolling mills in the country.

Besides the billet mill, three other units went into production a week later. The second coke oven battery started producing coke from December 22, 1959 while the second blast furnace started producing pig-iron from December 26, 1959. The last unit to be comsioned would be the refractory materials plant.

One more unit of the Bhilai works went into production on December 19, 1959. This was a cupola of 10-ton capacity in the foundry shop. The cupola plant would produce 25,000 tons of quality pig-iron per annum for making different iron-casts.

G. **Eastern Rice Zone Formed:** The Central Food and Agriculture Minister, Mr. S. K. Patil, announced in the Lok Sabha (House of the People) on December 21, 1959 the formation of the Eastern Rice Zone comprising West Bengal and Orissa.

This announcement, which was embodied in a Notification issued on December 21, 1959, was not welcomed by Opposition members from Orissa, who tried to interrupt Mr. Patil when he read the Notification.

According to the Notification, the formation of the new Zone would not only help in stabilizing the prices of rice in West Bengal at a suitable level but would also enable the cultivators of Orissa to get higher prices for their produce. Rice would now move freely between the two States.

The Government of India had agreed to maintain a reserve stock of 75,000 tons of rice

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

in Orissa to avoid any undue rise in the price. This stock would be built up by procurement in Orissa itself and the State Government was imposing a levy scheme for this purpose.

It had also been decided, he added, to continue the distribution of rice from Government stocks in Calcutta. Accordingly, another Notification had been issued to ensure the continuance of the provisions in force at present regarding distribution of rice from Government stocks.

In order to check the possible smuggling of rice from the new Zone, it was further decided to create a five-mile non-movement belt along the border of the Zone. Movement to and within this belt would be restricted. Only *bona fide* residents of the border area would be allowed to carry a maund of rice for personal consumption.

[Prev. ref. 2755:BUR:C]

H. **Swatantra Party Group In Parliament:** It was stated in New Delhi on December 23, 1959 that ten members of the Swatantra Party in the Lok Sabha (House of the People) had formed themselves into a group under the leadership of Prof. N. G. Ranga.

The idea was said to be to function in an organized manner in the name of the Party from the opening of the Budget session of Parliament on February 8, 1960.

Mr. M. R. Masani would be Deputy Leader of the group, while Mr. Mohammed Imam and Mr. S. A. Matin would be Secretary and Whip respectively. The other members of the group are: Kunwarani Vijaya Raje, Mrs. Lalita Rajya Laxmi, Mr. Prakash Vir Shastri, Mr. Ram Garib, Mr. T. D. Muthukumaraswamy Nayudu and Mr. M. S. Sughandhi.

Under the rules, a minimum of 30 members is required for recognition as a distinct parliamentary group. Only the Communist Party fulfil this requirement at present. For recognition as a full-fledged party, the minimum membership required is 50. Congress is the only party to fulfil this condition at present.

(*The Statesman*, New Delhi)

[Prev. ref. 3064:NI:F]

I. **Location Of Drug Projects—Decisions:** The Central Minister of Industry, Mr. Manubhai Shah, announced in the Rajya Sabha (Council of States) on December 22, 1959 the Government's decisions in regard to the location of the various drugs and intermediates' projects.

In a statement laid before the House, he said that the Government had decided to locate the antibiotics plant at Rishikesh (UP), synthetic drugs plant at Sanatnagar (Hyderabad, Andhra Pradesh), surgical instruments plant near about Madras city, phyto-chemicals plant at a suitable site in Kerala, glandular projects plant (two units), one at the modernized slaughter house in Bombay and the other at the modernized slaughter house at Calcutta, and the basic chemicals and intermediates plant at Apta Kharpada, near Panvel, in Bombay.

Regarding phyto-chemicals, he said that there might be a possibility of locating a second unit of phyto-chemicals in the eastern region of India.

The final selection of actual sites would be determined in consultation with the Soviet technical experts in the case of the first five projects and with the West German firm of Bayers, technical experts in the case of basic chemicals and intermediates projects.

The Government of India, he added, had further provisionally decided to establish drugs farms in the following regions for growing specific medicinal plants in each region: (1) Jammu and Kashmir; (2) Darjeeling area in West Bengal; (3) Kerala; (4) Nilgiris in Madras; (5) Chakrata Hills in Uttar Pradesh; and (6) Monga Hills area in Assam.

A Committee of technical experts would be set up shortly to recommend specific plants to be cultivated to the best advantage within the regional farms and to indicate the possible supplies of medicinal raw materials from them.

INDONESIA

A. **State Of War Proclaimed:** In a broadcast to the nation on December 16, 1959, President Sukarno declared Indonesia to be in a "state of war" and extended the Martial Law which he instituted after a Cabinet crisis 33 months ago.

He himself further took over powers to administer Martial Law previously held by the leaders of the three Armed Services.

Under the 'state of war', he said, civilians could be summoned to work with the armed forces. Those who refused were liable to action under military discipline as deserters.

He added that the country still had to consolidate the former rebel areas and there were "efforts to bring about confusion in the economic field".

He added: "Let us not forget that as long as West Irian (Dutch New Guinea) is still occupied by the imperialists, the sovereignty of the country still continues to be threatened."

Speaking at a conference of the Muslim Nahdaat-ul-Ulema on December 17, 1959, President Sukarno said that a new Government decree would be issued shortly abolishing insignificant political parties which were "not genuine."

The decree, he added, would simplify the Republic's multi-party system as a major step in implementing his "guided democracy" concept.

(*The New York Times* and *The Statesman*, Calcutta)

[Prev. ref. 3079:IND:A]

B. **Supervision Of Oil Sales:** The Defence Minister, Lt.-Gen. A. H. Nasution, issued a Martial Law decree on December 20, 1959 ordering Government supervision of domestic oil distribution and sales by foreign oil companies.

The decree said that the supervision would be on oil of the Standard Vacuum Company, De Batafsche Petrojpi Matschappij (BPM) and Caltex Petroleum Matschappij—the three multi-million dollar concerns drilling on Sumatra and Borneo islands.

Lt.-Gen. Nasution, who is also Army Chief of Staff, said that this supervision was related to the Cabinet's programme of providing food and clothing on a priority basis for the Indonesian people. Oil sales and distribution could not be separated from efforts towards establishing public order and security in the Republic.

IRAN

A. **Shah Married:** On December 21, 1959, the 40-year-old Shah was married to Miss Farah Diba, 21-year-old daughter of a middle-class Iranian Army captain, in a simple ceremony in Tehran.

(*The Hindu*, Madras)

[Prev. ref. 3058:IRN:A]

IRAQ

A. **Cultural Agreement With Britain:** Iraq and Britain signed in Baghdad on December 14, 1959 the first Cultural Agreement between the two countries.

The Agreement provided for the setting up of a mixed commission to work out details of future co-operation in the sphere of arts and sciences.

It also provided for exchange of books, students, lecturers and professors. There would also be cultural visits.

The British Ambassador in Baghdad, Sir Humphrey Trevellyan, signed the Agreement for his country, and Brigadier Moheddin Abdel Hamid, Education Minister of Iraq, signed for his country.

Brig. Hamid said: "We are sure this Cultural Agreement will fulfil its purpose for the welfare and benefit of both our nations, provided it is implemented in the same spirit in which it was created—a spirit of friendship and co-operation in the fields of culture, thought and knowledge."

[Prev. ref. 2689:IRQ:B]

ISRAEL

A. **Vote Of Confidence In New Government:** The Israeli Prime Minister, Mr. David Ben-Gurion, presented his new five-parties Coalition Government to Parliament on December 16, 1959 and asked for a vote of confidence in it.

Mr. Ben-Gurion introduced new blood into the Cabinet without radical changes in its political composition—compared with the one which resigned in July, 1959.

The new Cabinet was made up of 16 Ministers—nine from Mr. Ben-Gurion's Moderate Mapai Labour Party; two from the National Religious Front; two from the Left-Wing Mapam Party; one from the Left-Wing Ahduth Haavoda; one from the Liberal Progressive Party and one non-partisan.

Mr. Ben-Gurion retained the Defence portfolio and Mrs. Golda Meir remained as Foreign Minister. General Moshe Dayan, Israeli Army Commander in the Sinai campaign three years earlier, became Minister for Agriculture.

As stated by Mr. Ben-Gurion, the new Government's basic principles included proposals to be made to the Arab States for the conclusion of non-aggression pacts to replace the present Armistice Agreements and disarmament in West Asia to end Arab-Israeli strife.

On December 17, 1959, Mr. Ben-Gurion received a vote of confidence from Parliament for his new Coalition Government. The voting was 78 to 33.

JAPAN

A. **Supreme Court Ruling On American Forces:** The Supreme Court set aside on December 16, 1959 a ruling of the Tokyo District Court which, on March 30, 1959, had held that seven people charged with trespassing an American military base were not guilty.

The District Court had based its ruling on the ground that US forces were a 'war potential' and that their presence was illegal under the 'no-war' clause of the post-War Constitution of Japan.

Setting aside the verdict, the Supreme Court said that though the "no-war" clause of the Constitution prevented Japan from possessing any 'war potential', it did not prevent her from making arrangements for her defence. It held that the presence of US forces did not constitute a 'war potential."

The 15 Judges of the Supreme Court further held that the US-Japanese Security Treaty did not run against the post-War Constitution. In effect, it meant that the stationing of American troops on Japanese soil was not *ultra vires* the Constitution.

This was the first time the Supreme Court was called upon to give a ruling on a constitutional question.

The decision, according to observers in Tokyo, removed a major obstacle to the signing of a new Mutual Security Treaty between Japan and USA.

PAKISTAN

A. **Air Transport Agreement With West Germany:** An Air Transport Agreement between Pakistan and West Germany was initialled at Bonn on December 14, 1959.

It granted rights and facilities for the operation of international air services by the airlines of the two countries.

At present, the West German Airline, *Lufthansa*, has a twice-weekly service to Pakistan.

A Pakistani Embassy spokesman at Bonn said that Pakistan International Airlines was contemplating extending their west-bound services to West Germany in March, 1960.

(*Dawn*, Karachi)

B. **Price Control On Superior Qualities Of Rice Lifted:** The Government lifted the price control on superior qualities of rice on December 14, 1959 to give an impetus to traders to sell rice to exporters.

The Government announcement followed the decision taken by the West Pakistan Government on December 13, 1959 to withdraw monopoly procurement and State trading in superior quality rice.

The West Pakistan Government also fixed a target of 90,000 tons for export in 1960. Out of this, 40,000 tons would be *basmati* rice and 25,000 tons each of *parmal* and *begmi* varieties.

To ensure a fair price to the growers, both the Central and Provincial Governments announced prices at which the West Pakistan Government would buy rice from the growers if offered.

UNITED ARAB REPUBLIC

A. **World Bank Loan For Improving Suez Canal:** The World Bank announced in Washington on December 22, 1959, a loan of $56,500,000 to the United Arab Republic to be used to improve the Suez Canal.

The loan was earmarked for UAR's Suez Canal Authority, which is responsible for the management, operation and maintenance of the waterway.

The Bank said that the need to widen and deepen the Canal "stems not only from growing traffic but also to a large extent from the increase in the size of tankers seeking transit."

Eight private United States banks and the Bank of Tokyo Ltd., participated in the World Bank's loan to the extent of a little more than $5,000,000.

The loan was for a term of 15 years at six per cent interest, with repayment beginning in March, 1962.

The loan would cover the foreign exchange requirements of the Suez Canal project, which began in 1959 and which would cost about $107,900,000. The Suez Canal Authority would meet the remaining costs from its own resources.

The World Bank announcement said: "When the programme is completed in 1961, the Canal will be widened and deepened to accommodate ships with a draft of 37 feet (about 46,000 deadweight tons) compared with the present maximum of 35 feet (about 36,000 deadweight tons).

"The Authority will also have the modern plant and equipment it will need to provide ships using the Canal with efficient service. Deepening and widening will open the Canal to, and enable it to serve efficiently, many large tankers now under construction or coming into service."

Describing the Suez Canal as one of the world's most important waterways, the World Bank statement noted that in 1958 at least one trip through the Canal was made by more than one-third of all ocean-going vessels and three-fifths of all oil tankers of over 4,000 tons gross. Traffic now amounted to 13,000 ships and 140,000,000 tons of cargo a year, of which 70 per cent was oil, mainly from West Asia. The discovery of new oil-fields outside West Asia might slow the rate of the growth of traffic.

The Bank's intention to make the loan had been opposed by groups in the US Congress who said that the UAR President, Col. G. A. Nasser, should lift the blockade of Israeli ships and cargoes in the Suez Canal.

The latest protest came from 66 members of the US House of Representatives. But the US Secretary of State, Mr. Christian A. Herter, said recently that the Bank was an economic institution and should not be used to exert diplomatic pressure.

[Prev. ref. 715:YEM:A]

ASIA OUTSIDE ASIA

SUMMARY: Disarmament Discussions In UN: UN Resolution On Proposed French Nuclear Tests In Sahara; Antarctica Conference.

A. **Disarmament Discussions In UN—General Assembly Transmits Soviet Proposals To 10-Nation Committee:** The Political Committee of the UN General Assembly began a discussion on October 14, 1959 of the proposals for total disarmament made by the Soviet Prime Minister, Mr. Nikita Khruschev, on September 18, 1959.

The US Government's formal reply to Mr. Khruschev's proposals was made by the US delegate, Mr. Henry Cabot Lodge.

He said: "We are willing to take large steps or small steps as long as they are real steps taken in confidence and that all concerned take equal steps together."

He said that if all nations laid down their arms, there must be institutions to preserve international peace and security and preserve the rule of law. The US Government considered that the three following questions, in particular, required answers:

(1) What type of international police force should be established to preserve international peace and security?

(2) What principles of international law should govern the use of such a force?

(3) What internal security forces, in precise terms, would be required by the nations of the world if the existing armaments were abolished?

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The UN Disarmament Commission might well be the proper body to examine these matters, but the United States would welcome the Committee's views on how best these questions might be studied.

The road to complete disarmament was long, and the United States would be happy to travel to the end of it.

He added: "We will rejoice over savings from reduced armaments that can be spent instead to heal the sick, feed the hungry and erase poverty from the world.

"The United Nations should not overlook the many practical steps which lay right before us and not fall victims to the all-or-nothing theory of disarmament.

"We welcome the Soviet Union's expression of willingness to seek progress through limited steps. For its part, the United States is willing and anxious to move forward on any aspect of this great problem, including the following:

"Reducing chances of surprise attack; gaining experience in the actual operation of workable systems of international control; lightening the great weight of all armaments, both nuclear and other types, and—first in priority because nearest to realization—on a controlled cessation of nuclear tests.

"The United States unreservedly supports the greatest possible amount of controlled disarmament.

"Any disarmament programme, whether it be for 100 per cent or one per cent disarmament, must have adequate and timely inspection and control built into it so that both sides reduced their armaments in plain sight of each other, every step of the way.

"The United States wants to know what inspection and control the Soviet Union would accept.

"There cannot be 100 per cent disarmament with only ten per cent inspection.

"The United States believes that detailed consideration of the Soviet proposals should be the job of the new ten-nation Disarmament Committee which is due to begin work in Geneva early in 1960."

The chief Czech delegate, Mr. Jiri Nosek, said that the implementation of Russia's disarmament proposal would "bring about trust among States."

In the debate on October 16, 1959, the Foreign Minister of Cambodia, Mr. Son Sann, said that, perhaps for the first time in man's search for a lasting peace, a ray of hope had appeared as the result of the encouraging aspects of the recent Geneva negotiations.

The United Nations, he added, should make use of the present favourable trend in international relations to draw up a general but precise directive which could lead to a solution of the disarmament problem. The key to the problem was the issue of effective international control.

Albania's Foreign Minister, Mr. Behar Shtylla, said that the 'cold war,' coupled with the establishment of a net-work of military bases, had created a hot-bed of dangerous tensions.

Dr. Mario Amadeo (Argentina) said that the Soviet plan was of undoubted importance and deserved serious consideration.

The British delegate, Mr. David Ormsby-Gore, said on October 19, 1959 that the Soviet and Western positions on disarmament had come closer to each other.

At the same time, he said, Britain's own proposals constituted a "pragmatic approach, which does not begin by calling for drastic measures unlikely to prove realistic at so early a stage".

Saying that he had been struck in particular by the fact that the Soviet proposals no longer contained a demand for an immediate ban on nuclear weapons before any start could be made on conventional forces reductions and that foreign bases now should be abolished only as conventional disarmament became complete, he remarked that these were "hopeful auguries."

The West, he added, was "fully prepared to examine the Soviet proposals constructively and in every detail."

While he did not wish to be "unduly pessimistic" about the Soviet Plan, people should not be encouraged towards "over-optimism on this score" in the light of experience.

He suggested that the Secretary-General, Mr. Dag Hammarskjoeld, appoint a UN representative to attend the Committee's proceedings.

On October 22, 1959, Mr. Christian Palamas (Greece) took issue with those who had said that Mr. Khruschev's proposals for general and complete disarmament constituted a propaganda move which contained nothing new in substance.

He said: "We cannot share light-heartedly such a pessimistic point of view of something of such vital importance. The Soviet proposals carry the weight of having been submitted by the Head of the Soviet Government itself."

He added that there was no doubt that the Soviet plan, taken as a whole, constituted a most daring proposition.

M Jules Moch (France) questioned whether total disarmament was workable and realistic. But, he added, Mr. Khruschev's proposals on the problem had proved that his position was not inflexible.

Referring to the key issue of control, he said that France rejected control without disarmament just as much as it rejected disarmament without control. The aim at every stage of control was to dispel distrust by giving every State the certainty that others were faithfully fulfilling their obligations.

On October 27, 1959, Mr. Vasily Kuznetsov (Russia) told the Political Committee that Russia was prepared to agree that measures on the prohibition of nuclear weapons, destruction of their stock-piles, and the cessation of their production be carried out within the shortest possible time.

He said that the Soviet Union was willing to consider amendments to this proposal as well as other plans that might be submitted. The Disarmament Plan submitted by the British Foreign Secretary, Mr. Selwyn Lloyd, in the General Assembly on September 17 must also be carefully studied.

He added: "The Soviet Union does not claim that our document contains an exhaustive elaboration of all details concerning the solution of the disarmament problem. The declaration of the Soviet Government enumerates the basic principles; no small joint effort will still be needed in order to translate these principles into the concrete language of Treaty Articles."

Referring to the question of controls, he said that Russia was ready to accept the strictest and most comprehensive control over disarmament.

The Indian delegate, Mr. V. K. Krishna Menon, urged the Political Committee to speed up its debate on the Soviet proposals for general and complete disarmament so that members could get down to discussing items on nuclear tests.

He said: "There are other items on the agenda regarding nuclear explosions, one of them relating to tests in the Sahara, which are regarded with great urgency."

All UN Members Sponsor Resolution:

All the 82 delegations at UN sponsored a resolution on October 29, 1959 urging the ten-nation Disarmament Committee to work out details of an East-West agreement in the shortest possible time.

The rush of sponsors was so great that an American spokesman said that the tabling of the draft resolution in the main Political Committee had to be delayed.

The Soviet, French and British delegates welcomed the agreement of the entire membership of the Committee.

The Soviet delegate, Mr. V. Kuznetsov, disclosed that the draft resolution was a modified version of the initial Soviet draft.

He said that both the Soviet and Western negotiators had shown a constructive approach. The Soviet Union would have preferred forthright support to Mr. Khruschev's total disarmament proposals. Nevertheless, he had accepted the amendments, because the agreement evolved between the two sides was important.

The American delegate, Mr. Henry Cabot Lodge, declared that the real goal remained "disarmament right across the board, involving all types of weapons, covering every means of warfare."

He gave the pledge that the United States would enter into the new disarmament negotiations determined to make progress, and added: "I think it has always been clear that comprehensive disarmament may be achieved in various ways and by various means."

The French delegate, M Jules Moch, recalled that East-West agreement had been reached in 1954 on referring all disarmament proposals to a five-nation Sub-Committee but that the talks finally ended in a deadlock.

This, he said, should not discourage present efforts because "our minds have matured since then. We are now all aware of the folly of total war".

The British delegate, Mr. David Ormsby-Gore, noted that the draft resolution kept an open mind on all disarmament proposals, not preferring one before the other, nor excluding any useful suggestion.

This was the first time in the history of United Nations that a resolution had been sponsored by all its members.

The resolution read as follows:

"The General Assembly, moved by the desire to save the present and succeeding generations from the danger of a new and disastrous war;

"Striving to put an end completely and for ever to the armaments race which places a heavy burden on mankind and to use the resources thus released for the benefit of mankind;

"Desiring to promote the creation of relations of trust and peaceful co-operation between States;

"Mindful of the resolution of September 10, 1959 of the United Nations Disarmament Commission;

"Being convinced that any progress towards the goal of complete and general disarmament under effective international control will contribute to the achievement of these high aims;

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

"Considering that the question of general and complete disarmament is the most important one facing the world today;

"Calls upon Governments to make every effort to achieve a constructive solution to this problem;

"Transmits to the United Nations Disarmament Commission, and requests the Secretary-General to make available to the 10-nation Disarmament Committee for thorough consideration the Declaration of the United Kingdom of September 17, 1959 and the Declaration of USSR of September 18, 1959 and other proposals and suggestions made, as well as the records of plenary meetings and meetings of the First Committee at which the question of general and complete disarmament was discussed;

"Expresses the hope that measures leading towards the goal of general and complete disarmament under effective international control will be worked out in detail and agreed upon in the shortest possible time."

Political Committee Adopts Resolution:

Without a formal vote, the Political Committee adopted unanimously the 82-nation resolution on November 2, 1959.

The chief Indian delegate, Mr. V. K. Krishna Menon, told the Committee before the adoption of the resolution that the 10-nation Disarmament Committee should function under the "umbrella of what is usually called the summit." According to this suggestion, if the Committee was deadlocked, it would immediately ask the big Powers to resolve the difficulty.

He wished the Committee not to be isolated from the new climate arising from the Eisenhower-Khruschev meeting, the visit of Mr. Harold Macmillan (the British Prime Minister) to the Soviet Union and the impending visit of Mr. Khruschev to France.

Scientists and technicians, soldiers or statesmen capable of infringing an agreement for complete disarmament, he said, should be subject to a code, violation of which would be punishable.

He said he was making this suggestion on his own personal responsibility (he had not been able to consult his Government) in order to bring in an element of individual responsibility.

The violator could be tried under the law of his own country or handed over to an International Tribunal as the case might be.

There should be no excessive secrecy over the 10-nation talks. While the ten nations would be masters of their own procedure, they should be able to use diplomatic connections with other Governments in order to keep them informed.

A ban should be placed on the industrially very advanced countries exporting capital equipment and technicians meant to establish arms industries to other countries at present not engaged in such industries. This was important, as without such a ban, any disarmament agreement might become useless. This particular kind of enterprise was not in the interests of humanity.

The Disarmament Commission, consisting of the entire membership of the United Nations, should meet towards the middle of 1960. This should not be a routine meeting but one at Governmental level since the ultimate responsibilities in the matter of disarmament rested with the United Nations. This would be the method of keeping the United Nations fully informed and concerned with this matter apart from reference to chancellaries.

The Soviet delegate, Mr. V. Kuznetsov, declared that Russia did not stand on the position of all or nothing which some people had attempted to attribute to it.

He said that if agreement on complete general disarmament was not possible, the Soviet Union was prepared to come to terms on a number of partial steps. These included a ban on nuclear weapons, cessation of testing, setting up of a zone of control and inspection with a reduction of foreign troops in Europe, creation of a central European atom-free zone, dismantling of foreign bases, conclusion of a non-aggression pact between the NATO members and the Warsaw Treaty nations, and so on.

But, he said, the most reliable guarantee against war lay in a radical solution providing for destruction of all material means of warfare.

The American delegate, Mr. Henry Cabot Lodge, announced that his Government might itself wish to put forward new proposals based on a thorough review now under way.

General Assembly Passes Resolution:

The General Assembly unanimously adopted the resolution on November 20, 1959.

At the same time, the Assembly decided to transmit to the 10-nation Disarmament Committee all current disarmament proposals. These included those of Mr. Nikita Khruschev for total disarmament within four years and the three-stage Plan advanced by the British Foreign Secretary, Mr. Selwyn Lloyd.

B. **Proposed French Nuclear Tests In Sahara — UN Resolutions:** On November 1, 1959, India tabled in UN Political Committee a resolution saying that all States should desist from conducting nuclear tests and from making decisions or preparations in regard to these tests.

The resolution called for agreement between the United States, Soviet Union and United Kingdom on total cessation of nuclear tests. The draft would have the General Assembly request the three nuclear Powers, then conferring in Geneva, to report to the General Assembly on the results of the Conference so that the Assembly might take further action.

The following day (November 2), Japan, Austria and Sweden tabled a joint resolution expressing the hope that Britain, USA and USSR would intensify their efforts to reach an early agreement on the suspension of nuclear tests.

The draft also expressed appreciation of the efforts of the three nuclear Powers to reach agreement on this issue.

Another Indian Draft:

The Indian delegate, Mr. C. S. Jha, introduced a resolution in the Political Committee on November 18, 1959 appealing to all States which had not conducted nuclear tests to desist from carrying out such tests.

The resolution also called for a speedy international agreement on the total cessation of nuclear and thermo-nuclear tests. Nineteen countries joined India in sponsoring the resolution.

Mr. Jha said it was India's intention that the Assembly record its appreciation of the efforts being made by the nuclear Powers to reach agreement. The Assembly should appeal to the nuclear Powers to continue their present voluntary suspension of tests and that "not only the three nuclear Powers who at present are in a position to conduct such tests but all other States should desist from undertaking such tests, even if they should have the capability of doing so."

As the debate progressed, it was announced that 22 other nations had joined India in sponsoring the resolution: Afghanistan, Burma, Ceylon, Cuba, Ethiopia, Ghana, Guinea, Indonesia, Iraq, Japan, Jordan, Lebanon, Liberia, Libya, Morocco, Nepal, Saudi Arabia, Sudan, Tunisia, the United Arab Republic, Yemen and Yugoslavia.

Indian sources expressed satisfaction over the fact that Japan, co-signatory with Austria and Sweden to another resolution which omits references to other Powers desisting from nuclear tests, found it possible to co-sponsor the Indian resolution.

The next speaker after Mr. Jha, Mr. R. Sandler (Sweden) said he regretted that France had taken a negative attitude to Asian-African appeals with regard to the proposed nuclear tests in the Sahara.

He said that in the course of research in Sweden a new potentially dangerous by-product of nuclear testing had been discovered. Particles much bigger than the usual very small ones had appeared in the 'fall-out' and the rate of radio-activity in these particles had proved to be so high that it meant a deadly dose for cells coming in direct contact with these so far unknown particles.

Mr. Vasily Kuznetsov (Soviet Union) said that nuclear tests were a manifestation of the arms race in the field of creating new ever more dreadful means of annihilation.

The text of the revised Indian draft read as follows:

"The General Assembly, desiring to safeguard mankind from the increasing hazards resulting from tests of nuclear and thermo-nuclear weapons,

"Bearing in mind the profound concern evinced by the peoples of all countries regarding the testing of nuclear and thermo-nuclear weapons,

"Welcoming the endeavours at Geneva of the States concerned to reach an agreement on the discontinuance of these tests and the progress so far achieved,

"Noting with appreciation that the States concerned have voluntarily suspended such tests enabling progress in the discussions in Geneva,

"Considering that an agreement on the cessation of nuclear and thermo-nuclear tests with effective international control is urgent,

"(1) Expresses its appreciation to the States concerned for their patient and sincere efforts to reach agreement on the discontinuance of nuclear and thermo-nuclear tests with effective international control, and for the progress hitherto achieved;

"(2) Expresses further the hope that the States concerned will reach such agreement at an early date;

"(3) Appeals to the States concerned in the Geneva discussions to continue their present voluntary suspension of tests and to other States to desist from such tests;

"(4) Requests the States concerned to report to the Disarmament Commission and the General Assembly the results of their negotiations."

India's efforts to proceed with her resolution followed the failure of her efforts to reach agreement with Austria, Japan and Sweden over a common draft.

It was understood that the point where the negotiations broke down was the insistence by Austria, Japan and Sweden, who

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

had also tabled a resolution on the same subject, that the common resolution should not contain any appeal to the non-nuclear Powers to desist from the tests in view of a separate Moroccan resolution on the impending French nuclear tests in the Sahara.

At a special meeting of Asian and African members on November 16, it was decided by a majority to go ahead with the revised Indian draft resolution.

Afro-Asian Resolution :

Twenty nations of the Afro-Asian Group tabled a resolution in the UN Political Committee on November 4, 1959 to have the General Assembly express "grave concern over the intentions of the French Government to conduct nuclear tests in the Sahara" and urge France to refrain from carrying them out.

Among the sponsoring countries were India, Afghanistan, Ethiopia, Ghana, Indonesia, Iraq, Morocco and the United Arab Republic.

India had earlier tabled a resolution on a related subject (see above).

Introducing the resolution, Mr. Ahmed T. Benhima (Morocco) said that the matter was being brought before the United Nations as a last resort because France had rejected all representations made to her in this connexion.

He said that Morocco had sent five Notes drawing France's attention to the grave dangers posed by the proposed atomic tests to adjoining populations. Britain, USA and Russia had conducted their tests in their own territories, but France proposed to use an area over which there were conflicting territorial claims. A section of the French Press had described the Sahara as an uninhabited desert, but the region where the tests were proposed to be held had some of the most fertile areas. There were rich palm groves and even monasteries. There was greater danger in desert regions because radio-active dust was not washed away for want of rain.

He pointed out that the food of the populations of the region was milk, cereals, dates and meat products which were most susceptible to contamination from atomic 'fall-out'.

In the debate on November 5, 1959, Mr. Charles King (Liberia) said he had been puzzled by the fact that despite many protests France showed no desire or willingness to stop the preparation of its proposed tests.

The French delegate, M Jules Moch, said that the proposed test in Sahara created no danger for anybody.

He said that the French experiments involved "a very small amount of energy in comparison with other experimentations previously carried on." It would be less than one-thousandth of the energy that had already been released in the Soviet, American and British tests.

France was exploding an atomic bomb. Great as was its force, it was a mere fraction of that of a hydrogen bomb which projected a large quantity of radio-active matter into the stratosphere. The test area was totally uninhabited for a radius of 93 miles.

Mr. David Ormsby-Gore (United Kingdom) said that Britain had a special interest in assuring that no harm was done to the people in Africa who had not yet attained independence and for whose welfare the British Government had a special responsibility.

Britain had taken every step to ensure that the measures to be taken by France would assure the safety of all concerned.

The Ghana delegate, Mr. Alex Quaison-Sackey, said that before placing the question on the agenda, the African countries and people had approached the French Government directly expressing their alarm and anxiety at French intentions. It was a matter of distress that the French Government scornfully disregarded the general anxiety over the proposed tests.

Mr. V. K. Krishna Menon (India) told the Committee on November 6, 1959 that if France did not desist from carrying out its proposed test in the Sahara it would necessarily open the door to other tests at a time when there was every prospect of success in the Geneva talks among the nuclear Powers.

He asked France to heed the world-wide appeal to abandon the tests and said: "There is far more opposition, probably in France, to this business than anywhere else in the world because the sense of guilt there must be greater.

"My country refuses to believe that a country with the background of the French Republic with its great human traditions would simply embark on a project of this character inimical to world peace against the trend of world opinion, against the trend of progress that is being made in this matter in Geneva merely for the purpose of establishing prestige. In fact, the prestige of France will increase if she gives up the test. This won't in any way be interpreted as an attitude of yielding to pressure."

He took exception to M Moch's implication that the issue was an internal matter of France and said that this was an argument which the Soviet Union, United States and Britain never used. M Moch had alleged that France was being discriminated against. "Does liberty lie in the capacity to inflict harm equally?" The question of discrimination could not apply in respect of these matters.

When the debate was resumed on November 9, 1959, Dr. Ali Sastroamidjojo (Indonesia) said it was a sad reflection on the world situation that the Assembly should have unanimously adopted a resolution on disarmament only to be faced now with a discussion of French plans to conduct nuclear tests in the Sahara.

He said that France was proceeding on a road in defiance of the legitimate rights of the African peoples who asked for nothing more than respect and mutual understanding.

Mr. Ahmed Shukairy (Saudi Arabia) bitterly criticized France for its "glory mania".

He said: "It is futile for France to attempt to be what it cannot be. France is no longer the Great Power it used to be. In Europe and Asia, there are other Powers that are becoming great. Hence it is sterile for France to attempt to line up with the United States or the Soviet Union in the field of atomic power. In terms of resources and knowledge, France is perhaps 500 years behind. It is, therefore, futile for France to join the 'Atomic Club', particularly so when the 'Atomic Club' is in the process of liquidation."

The French delegate, M. Jules Moch, interrupted the Saudi Arabian delegate when he spoke of the "glory mania" of France.

Asking for the floor on a point of order, M Moch said that calumnious, slanderous imputations were being made against his country.

He said he despised the statements Mr. Shukairy had already made and he regarded "this delegate as a professional of incitement, bad taste and insults."

He asked the Chairman, Dr. Franz Matsch of Austria, not to tolerate Mr. Shukairy's attacks.

The American delegate, Mr. Henry Cabot Lodge, observed that the American Government favoured an effectively controlled agreement to end all nuclear weapons tests.

The Soviet delegate, Mr. V. Kuznetsov, urged France to give up the projected nuclear test in the Sahara.

On November 10, 1959, Mr. Rishikesh Shaha (Nepal) said he regretted that France had not taken note of the representations made to her about her proposed atomic test in the Sahara.

Speaking for Italy, Mr. Egidio Ortona, said that the Committee was not entitled at this time to discuss whether France was or was not to conduct nuclear tests.

He said it would be certainly difficult for a country like Italy to subscribe to a concept of discrimination on nuclear preparedness. Some delegates had said that France was searching for prestige. "Our reaction to this is that United Nations can hardly do more than ask France to join in nuclear disarmament and eventual agreement on suspension of tests."

The Ceylon delegate, Sir Claude Corea, said that no one could deny France its right as a sovereign Power to explode an atomic weapon.

France, which had abstained from testing for so long now, said that the time had come when it had to have a nuclear bomb not only for its prestige but also for its own security. But, it was not likely that people would forget that this bomb was to be exploded in the Sahara. What the people of Africa and Asia were worried about was not so much the radio-active 'fall-out' but that a European Power had chosen an African territory to explode its bomb.

Anglo-Italian Resolution:

Britain and Italy tabled a resolution in the Political Committee on November 10, 1959 which would associate France with any international agreement to ban nuclear tests permanently.

It would also urge France to take "full account" of apprehensions expressed in the Political Committee on its intentions to explode an atomic bomb in the Sahara.

On November 11, 1959, Bolivia, Ecuador, El Salvador, Mexico and Panama tabled amendments to the Afro-Asian resolution in an effort to make it more acceptable to France.

The amendments would make several changes in the preambular part of the Afro-Asian resolution and, in the operative section, would delete the expression "grave concern" at French intentions, while substituting the following: "Expresses the hope that the Government of France will re-consider its decision to carry out such tests, taking into account the views expressed in the debates on this question."

Mr. Jose Correa (Ecuador), one of the five Latin American nations which sponsored the amendments, said that it would be very serious

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

for humanity if the tests by a fourth Power should begin a new series when the other three had suspended their own tests. The aspect was more important than national considerations.

He urged support for the Latin American amendments and said that the essence of the amendments was to make it possible for the Assembly to express its views in a conciliatory manner.

Winding up the debate, the French delegate, M Jules Moch, said on November 11, 1959 that one hydrogen bomb was the equivalent of more than 100 of the explosions that his country was going to carry out.

He said that the British and American delegates had confirmed that the explosions in Nevada and Australia had done no harm and the same applied to explosions of lesser power yield in an even more favourable site such as the Sahara.

He added: "I hope, my country will not have the time to build for herself a nuclear arsenal, because the other States will have had the wisdom gradually to renounce their own. We shall never abandon our effort for disarmament. Why then distort our hopes by accusing us of entering the race for prestige?"

He asked with what right and towards what end the United Nations was concerning itself with the Sahara test question. Did not a discriminatory measure of this order exceed the limits of its competence? What Article of the Charter would allow a sovereign State to be prevented from carrying out, after three other Powers had done, an experimentation whose harmlessness had been demonstrated?

"Contested Territory":

During the debate in the second week of November there was a clash over the description of the territory in which France planned to set off nuclear tests.

According to the Chairman of the 82-member Political Committee, Dr. Franz Matsch the Sahara was "contested territory". This veteran Austrian diplomat, who represented his country in the League of Nations before the United Nations was born made the above statement after the French and African delegates clashed over the status of the Sahara. African delegations claimed that it was African territory, but the French said that it was Metropolitan France.

The dispute flared up when the delegate of Ghana, Mr. Alex Quaison-Sackey said: "I am forced to emphasize the fact that the Sahara does not belong to France. It must never be forgotten for one moment that any French interests in any foreign country, including the Sahara, is one of trusteeship and not of sovereignty."

M Jules Moch (France), rising on a point of order, protested that the question of allegiance of the Sahara was not on the agenda.

The Chairman, Dr. Franz Matsch (Austria), told the representative of Ghana that the territorial question of Sahara was not on the agenda.

Mr. Quaison-Sackey replied that France was brought before the Assembly because she proposed to hold tests on a territory belonging to Africa and Africans.

Dr. Matsch said: "In reply to what the representative of Ghana has just said I think it could be more in line with what has been said till now to speak of a contested territory rather than say that the Sahara does not belong to France."

it to be said that the Sahara is a contested territory."

But, Mr. Quaison-Sackey had the last word. He said: "Ghana is one of the those countries which is unashamedly opposed to any imperialists' claim to any territory in Africa. We reject categorically any pretensions to use the argument of sovereignty as justifying the explosion of a French bomb in the Sahara."

Afro-Asian Resolution Carried By Political Committee:

The Political Committee voted for the Afro-Asian resolution on November 12, 1959.

M Moch retorted: "I cannot allow

The vote was 46 for, 26 against and 10 abstentions. This was two votes short of the two-thirds' majority necessary for the passage of the resolution in the General Assembly.

Britain and the United States, France's closest allies, were among the 26 nations which opposed the resolution.

Britain also suffered a sharp rebuff in the Committee.

Its initiative in trying to divert attention from the French test plans to the whole question of stopping nuclear tests, which has been under negotiation at Geneva for the past year, went down.

The Committee rejected by 38 votes to 24, with 20 abstentions, a resolution, in sponsorship of which Britain was joined by Italy and Peru, to associate the French Government with an ultimate tests cessation Pact.

France herself was among those delegations which abstained in the vote, and most of Britain's Commonwealth partners voted against her.

A group of Latin American States earlier had sought to soften the terms of the resolution against France by dropping the expression of "grave concern" and calling on France to "re-consider" rather than simply "refrain from such tests."

But none of the original sponsors would accept this. Two of them, Ghana and Indonesia, moved sub-amendments to restore the original operative formula and to emphasize in preambular paragraphs the apprehensions which had been expressed about the tests during the debate.

As these were sub-amendments, in UN parlance, they had voting priority. All were adopted, and the original Latin American amendments were not even put to vote.

The 23-nation draft, as amended, was then carried.

General Assembly Passes Afro-Asian Resolution:

The 23-nation Afro-Asian resolution was passed by the UN General Assembly on November 21, 1959.

The voting was 60 for and one against, with 20 abstentions. France was the only country voting against it. Among those who abstained were the United States and Britain.

The Assembly also approved by 78 votes to none, with two abstentions, the Japanese-Swedish-Austrian resolution expressing hope for agreement on a permanent nuclear test ban and also asking USA, the Soviet Union and the United Kingdom to maintain their voluntary test suspension.

Speaking before the vote was taken, the British delegate, Mr. David Ormsby-Gore said that the resolution was in some ways inaccurate and misleading, especially as regards the actual risks involved to life and health.

He repeated his earlier argument that the suggestion that these risks existed was not borne out by Britain's experience.

M Jules Moch (France) said that the resolution was "directed against my country and my country alone". It was, he added, "unwanted, exceptional and discriminatory in character."

Ghana's delegate, Mr. Alex Quaison-Sackey, threw a counter-challenge to the French delegate.

He said that "millions who live in the African continent will decide by this vote today who their real friends are."

Mr. C. S. Jha (India) replying to M Moch said: "We shall vote for the resolution not because we are unfriendly to France but because we are inimical to nuclear tests."

Irish Resolution:

After the Afro-Asian resolution was passed, the Irish Foreign Minister, Mr. Frank Aiken, introduced on November 13, 1959, the next item in the agenda—a resolution aimed at preventing wider dissemination of nuclear weapons.

The resolution would have the General Assembly recognize "that the danger now exists that an increase in the number of States possessing nuclear weapons may occur, aggravating international tensions and the difficulty of maintaining world peace and thus rendering more difficult the attainment of a general disarmament agreement."

Mr. G. S. Pathak (India) said that the Irish proposals to limit the "nuclear club" to those Powers which now possessed nuclear weapons did not go far enough. At the same time, India supported the Irish aims.

Among others, Malaya and Greece also supported the Irish resolution.

The Political Committee adopted the Irish resolution on November 16, 1959.

The resolution was carried by 66 to none, with 13 abstentions. There was no negative vote. France, Kuomintang, Soviet Union and other communist States abstained.

The Irish resolution was adopted by the General Assembly on November 20, 1959 by 68 votes to none against, with 12 abstentions.

General de Gaulle On Atomic Weapons:

The French President, General Charles de Gaulle, told a news conference in Paris on November 10, 1959 that "if the Anglo-Saxons and the Russians agree between themselves to stop their nuclear tests, France can only approve." But if France were invited to renounce nuclear weapons while others possessed and were developing enormous quantities of them, there would be no chance of her "complying with this invitation."

A little later, after some references to the possibility that Europe might be annihilated jointly from Washington and Moscow, and that the two rivals might "merge", he said: "If the United Nations Organization shows itself capable of putting an end effec-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

tively to the menace and, to begin with, succeeds in placing the instruments of death under international control—as France is in fact proposing through its delegate to the disarmament conference—then France will immediately, without hesitation and most willingly, apply international law."

C. **US Scientists Photograph Venus From Balloon:** Two US scientists who climbed 15 miles in a plastic balloon to study the planet Venus landed at Manhattan, Kansas, USA, on November 29, 1959 after 24 hours in the stratosphere.

The pilot, Com. Malcolm Ross, was slightly injured by the landing in a windy field and was taken away in an ambulance. The other balloonist, Prof. Charles B. Moore, walked out of the gondola unaided.

The two men looked at the Moon through a powerful telescope and were especially interested in discovering something about the moisture content of the planet's atmosphere.

Part of the result of this investigation was revealed on November 30 by the head of the Project, Dr. John Strong, Director of Astrophysics at Johns Hopkins University, Baltimore.

He told newsmen that scientists could not definitely say that there was water vapour around Venus. The two men who went up in the balloon had photographed Venus through a 16-inch telescope.

He added that the conclusion that there was vapour around the planet was made by spectroscope. A higher-powered telescope might have helped to determine whether there was life of any kind on Venus.

He and the two balloonists agreed that the presence of water vapour raised the possibility that life of some kind existed on the planet.

(*The New York Times*)

[Prev. ref. 2957:AOA:C]

D. **US Rocket With Monkey:** The United States sent a monkey into space in a capsule in the nose cone of a "Little Joe" rocket on December 4, 1959.

The capsule containing the monkey was said to be of the type to be used in future efforts to put a man into space.

The intention was to release the capsule 40 to 75 miles above the Earth and recover it as it parachuted down.

A group of warships and aircraft stood by for the recovery effort.

Aboard the capsule, in addition to the monkey, were some small biological specimens—spears of barley, nerve cells of a rat, test tubes of bacteria cultures, flour beetle-eggs and larvae.

A naval vessel reported at 10-30 p.m. IST that it had sighted the capsule.

The tiny monkey, named *Sam*, was landed after recovery at the naval base of Norfolk (Virginia) on December 5. It survived a 552-mile journey into space and landed in the waters of the Atlantic.

The monkey, when recovered, was reported to be in good shape and ate a good dinner.

In its flight in space, the monkey experienced an acceleration about eight times the force of gravity on launching and 19 times that of gravity when the escape rocket tripped the capsule free. For a few seconds he was travelling at 3,000 miles an hour.

Exactly 39 minutes after *Sam* came down, a Navy patrol plane sighted the container in the water, and shortly afterwards a destroyer fished the capsule aboard.

The monkey will undergo tests at the Air Force School of Aviation Medicine at Brooks Air Force Base in Texas to determine how he reacted to the long-range effects of his rocket flight.

[Prev. ref. 2777:AOA:B, 2933:AOA:G]

E. **UN General Assembly's Renewed Appeal On Hungary Issue:** The UN General Assembly adopted a resolution on December 9, 1959 renewing its appeal to Hungary and the Soviet Union to comply with its earlier resolution over the Hungarian question.

The resolution, sponsored by 24 States including Britain and the United States, deplored the two nations' disregard of its recommendations.

These included a request for the withdrawal of Soviet forces from Hungary and the observance of human rights in that country.

The vote was 53 in favour, 10 against and 17 abstentions. Two members were absent. India was among those who abstained.

The issue was debated for the fourth time running on the initiative of the Assembly's Special Representative, Sir Leslie Munro (New Zealand), who reported that the "framework of repression" in Hungary had remained unchanged.

The resolution also asked Sir Leslie, who was President of the Assembly in 1957, to "continue his efforts" to obtain compliance with Assembly appeals.

In December, 1958, when the General Assembly deplored continuing repression in Hungary and the continued refusal of the Soviet and Hungarian Governments to co-operate. The vote was 54 to ten, with 15 abstentions.

(*The New York Times*)

[Prev. ref. 2798:AOA:B]

F. **Antarctica Conference:** A 12-nation Conference to draw up a Treaty to keep Antarctica as an area of peace began in Washington on October 15, 1959.

The countries represented were: Britain, the United States, France, Russia, Australia, New Zealand, South Africa, Argentina, Chile, Belgium, Japan and Norway.

Welcoming the delegates, the American Secretary of State, Mr. Christian A. Herter, said that Antarctica should not become the object of political conflict but should be open for the conduct of scientific investigation.

He added that the work of explorers and scientists from the countries represented at the Conference had made it possible to formulate and give legal effect to certain principles which ensure peace and co-operation in a vast area of the world.

After Mr. Herter's speech, the American delegate, Mr. Herman Phleger, was elected Chairman of the Conference.

The leader of the New Zealand delegation, Mr. A. D. McIntosh, said that his Government wanted to make clear its opposition to nuclear or other testing of weapons in the Antarctic area.

He added that the proposed Treaty should ensure that Antarctica remained permanently sealed off from the tensions of the 'cold war'.

The chief Japanese delegate, Mr. Koichiro Asakai, said that the proposed Treaty was a real challenge because it would be the first time in history that such an agreement had been made on so large a scale.

However, he wanted the Treaty to be kept open for accession by all countries which have *bona fide* interests in Antarctica.

Senor Marcial Mora (Chile) maintained that the territory claimed by his country was part of metropolitan Chile and formed its southern-most province.

Mr. Richard Casey (Australia) said that only under the proposed Treaty could the Antarctic continent be kept from becoming a breeding ground for suspicion.

He added that his country was confident that all parties would pledge themselves to the principle that there should be no militarization of the area.

Mr. Vasily Kuznetsov (USSR) urged the Conference to lay the foundation for an international *regime* of Antarctica.

He added that the Conference must proceed on the basis of the main task now facing mankind, namely, maintenance and consolidation of peace among all States and the development and strengthening of friendship among all nations.

The South African delegate, Mr. Eric Louw, announced that his country was taking over from Norway a key base in Antarctica, near a new Russian station.

He added that a 10-man expedition would be leaving for the base in November, 1959 and would remain there during the Winter of 1960. This would be the first all-South African scientific expedition to the mainland of Antarctica.

Also addressing the opening session, the British delegate, Sir Esler Dening, said that a Treaty to develop Antarctica for peaceful purposes must avoid anything which might unduly limit genuinely scientific expeditions.

He said that Britain supported proposals for a system of observation and inspection to ensure that the basic purpose of preserving the area from military activities was achieved. At the same time, it seemed important to bear in mind the relevance of certain practical considerations. He had particularly in mind the need to limit requirements as regards the attachment of observers to expeditions and bases as well as the possible need of certain countries to provide logistic support for their scientific expeditions from military sources. It would be difficult to ban such support, although it must be made clear that military personnel and equipment could only be employed for peaceful purposes.

Although Britain had sovereignty claims in Antarctica, he added, she was nevertheless prepared to subscribe to a clause in the Treaty which would maintain the legal *status quo* in the area.

Agreement Signed:

After seven weeks of intense negotiations, the 12 nations signed a Treaty in Washington on December 1, 1959 to preserve Antarctica for peaceful scientific research for all time.

The Treaty banned all military weapons from the 5,000,000 square mile continent. It set up the world's

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

first international inspection system to ensure that Antarctica would be used only for peaceful purposes.

The signing was seen by many diplomats as a hopeful augury for East-West disarmament negotiations where agreement also would have to be reached on an inspection and control system.

It may be a year or longer before all the 12 Governments ratify the Agreement and before it goes into effect. But, a final act signed by the chief delegates to the Conference in conjunction with the Treaty itself provided that the representatives of the 12 countries shall meet in Washington within two months of the signing and when necessary thereafter to deal with any *interim* arrangements.

Once the Pact came into force, representatives of the Treaty Powers would meet within two months in Canberra (Australia) to consult on Antarctic questions of common interest.

The Preamble to the Agreement stated that the signatories recognize that "it is in the interests of all mankind that Antarctica shall continue for ever to be used exclusively for peaceful purposes and shall not become the scene or object of international discord."

The following are the Articles of the Agreement:

"(1) Antarctica shall be used for peaceful purposes only. There shall be prohibited *inter alia* any measures of a military nature, such as the establishment of military bases and fortifications, the carrying out of military manoeuvres as well as the testing of any type of weapons. The present Treaty shall not prevent the use of military personnel or equipment for scientific research or for any other peaceful purpose.

"(2) Freedom of scientific investigation in Antarctica and co-operation toward that end, as applied during the International Geo-physical Year shall continue, subject to the provisions of the present Treaty.

"(3) In order to promote international co-operation in scientific investigation in Antarctica, the contracting parties agree that, to the greatest extent feasible and practicable: (a) information regarding plans for scientific programmes in Antarctica shall be exchanged; (b) scientific personnel shall be exchanged; (c) scientific observations and results from Antarctica shall be exchanged and made freely available.

"(4) Nothing contained in the present Treaty shall be interpreted as a renunciation by any contracting party of previously asserted rights of or claims to territorial sovereignty in Antarctica.

"No acts or activities taking place while the present Treaty is in force shall constitute a basis for asserting, supporting or denying a claim to territorial sovereignty in Antarctica or create any rights of sovereignty in Antarctica. No new claim or enlargement of an existing claim to territorial sovereignty in Antarctica shall be asserted while the present Treaty is in force.

"(5) Any nuclear explosions in Antarctica and the disposal there of radio-active waste material shall be prohibited. In the event of the conclusion of international agreements concerning the use of nuclear energy, the rules established under such agreements shall apply in Antarctica.

"(6) The provisions of the present Treaty shall apply to the area south of 60 degrees South Latitude, including all ice-shelves, but nothing in the present Treaty shall prejudice the rights of any State under international law with regard to the high seas within that area.

"(7) Each contracting party shall have the right to designate observers to carry out any inspection provided for by the present Article.

"Observers shall be the nationals of the contracting parties which designate them. Each observer designated shall have complete freedom of access at any time to any or all areas of Antarctica.

"Aerial observation may be carried out at any time by any of the parties.

"(8) Observers designated shall be subject only to the jurisdiction of the contracting party of which they are nationals in respect of all acts or omissions occurring while they are in Antarctica for the purpose of exercising their functions.

"(9) Representatives of the parties shall meet at Canberra within two months after the entry into force of the Treaty and thereafter at suitable intervals and places for the purpose of exchanging information, consulting together on matters of common interest pertaining to Antarctica and formulating and recommending to their Governments measures to further the objectives of the Treaty.

"(10) Each of the contracting parties undertakes to exert appropriate efforts, consistent with the Charter of the United Nations, to the end that no one engages in any activity in Antarctica contrary to the principles or purposes of the present Treaty.

"(11) If any dispute arises, the contracting parties shall consult among themselves with a view to having the dispute resolved by negotiation, inquiry, mediation, conciliation, arbitration, judicial settlement or other peaceful means of their own choice. Any dispute not so resolved shall, with the consent of the parties, be referred to the International Court of Justice.

"(12) The Treaty may be modified or amended at any time by unanimous agreement of the contracting parties.

"(13) The Treaty shall be subject to ratification by the signatory States and shall be open for accession by any State which is a member of the United Nations or by any other State which may be invited to accede with the consent of all the original 12 contracting parties. Instruments of Ratification and Accession shall be deposited with the US Government.

"(14) The present Treaty, done in English, French, Russian and Spanish, each version being equally authentic, shall be deposited in the archives of the US Government."

Before signing the Agreement, each country briefly signified its complete approval of the Treaty. Mr. V. Kuznetsov (Russia) showed his country's approval by saying in English, "agreed".

President D. Eisenhower (USA) said in a message that the Treaty and the guarantees it embodied "constitute a significant advance toward the goal of a peaceful world with justice".

Background:

The Antarctica Conference was convened at the suggestion of the United States to conclude an International Treaty for the frozen continent. The objective is to permit freedom of scientific investigation in the area and ensure that it is used only for peaceful purposes. It is suggested that the existing situation as regards territorial claims will be frozen.

The States concerned took part in the work of the International Geo-physical Year in 1957-58 (IGY) in the Antarctic region.

Preliminary consultations have, at President Eisenhower's invitation, been taking place between them in Washington since June, 1958.

The US proposal for a Treaty, contained in Notes released on May 3, 1958, said that continued co-operation on scientific research in Antartica would be necessary after the IGY and agreement on this would prevent *inter alia* unnecessary political rivalries in the area. America proposed a Treaty with the following peaceful purposes: freedom of scientific investigation for all and continuation of international scientific co-operation; use of Antarctica for peaceful purposes only; any other peaceful purpose not inconsistent with UN Charter.

In the past, there have been a number of proposals on the future of Antarctica.

As early as in 1948, the US Government proposed to all States with territorial claims in Antarctica that an 8-Power Condominium in accordance with UN principles be established for the continent. Only the United Kingdom and New Zealand were prepared, in principle, to accept the idea.

In 1956, India proposed, but later withdrew, an item for the agenda of the UN General Assembly concerning Antarctica. This would have proposed an international agreement that the area should not be used in any manner that would create or accentuate world tensions but only to serve the general welfare.

In February, 1958, the Argentine and Chilean Government expressed themselves in favour of continued scientific co-operation in Antarctica and of peaceful use of the area. However, both these countries made reservations about any internationalization proposal.

The five States, with mutually recognized claims, divide some four-fifths of the continent between them. About one-fifth of it remains unclaimed.

The United States has traditionally neither made nor recognized any claims in Antarctica, but in its Notes of May, 1958, it reserved the right to assert a territorial claim or claims.

The Soviet Government has never put forward a claim to Antarctic territory; but, in 1950, it declared that it would recognize no decision on an Antarctic *regime* reached without its participation. Its acceptance in June, 1958, of President Eisenhower's invitation to talks referred to the retention of all rights based on discoveries by Soviet citizens, including the right to put forward territorial claims.

Japan, which has considerable whaling interests in the Southern Ocean, renounced any Antarctic rights by the terms of Article 2(e) of the Japanese Peace Treaty of 1951.

The Argentine and Chilean claims together extend over the whole of the British Falkland Islands Dependencies and a fraction of the otherwise unclaimed Pacific sector. British attempts, first made in 1947, to bring the matter to the International Court of Justice have been rejected by Argentina and Chile.

During the International Geo-physical Year, the greatest number of expeditions ever to visit Antarctica at one time were on the continent. Activities in connexion with IGY were not regarded as affecting in any way sovereignty over the areas explored. Protests at infringement of sovereignty in such cases were suspended.

At the end of IGY, a number of scientific stations other than those of countries with territorial claims in the area has been maintained. Scientific and exploratory work has continued.

In April, 1959, the following stations were occupied, though many others are in use intermittently: United Kingdom 9 (on the mainland and islands); Australia 3; New Zealand 2 (one maintained jointly with the United States); United States 3 (including South Pole); USSR 3; Argentina 9; Chile 4; Belgium, France, Japan and Norway one each.

ASIAN RECORDER

January 9—15, 1960

Regd. No. D-727
Vol. VI No. 2

BURMA

A. **Editor Acquitted:** Mr. Justice Thoung Sein of the Rangoon High Court acquitted on appeal the Editor and Publisher of *The Rangoon Daily*, U Yu Maung, on December 19, 1959.

U Yu Maung had been sentenced by the lower court to one year's rigorous imprisonment and a fine of K500 for allegedly violating Section 5A (1) (b) of the Emergency Provisions Act, 1950, as amended by Act 26 of 1958.

The case against him was that an article was published in *The Rangoon Daily* on April 5, 1959 which had brought about a lowering in the morale and discipline of the civil servants of the Government.

The alleged offending article was headed: "Officers who are not the people's representatives but speak like politicians are to be commended." It was in the form of a dialogue between two imaginary persons discussing the draft amendment to the Trades Union Act which the Government planned to introduce in Parliament during the August, 1959 session.

The prosecution case was that certain excerpts from that article were clearly designed to undermine the discipline and morale of the civil servants. It was not suggested, however, that the article was in any way aimed at subverting or prejudicially affecting the discipline and loyalty of the armed forces.

Mr. Justice Thoung Sein pointed out that the Emergency Provisions Act, as its name implied, was meant to deal with emergency situations and to prevent emergencies. The main purport of the amendment of 1958 was to expedite and accelerate the restoration of peace and tranquillity throughout the country and to prevent any acts of sabotage and interference with that object.

CEYLON

A. **British Loan Offer Accepted:** The Government announced the acceptance of the UK Government's offer of a sterling credit of £2.5 million on December 28, 1959.

The offer, made in September, 1958 was in accordance with the policy of the Commonwealth assistance loans evolved at Montreal during that month (September).

Ceylon would use the loan for purchasing equipment for its telephone reconstruction programme.

(*The Times of Ceylon*, Colombo)

[Prev. ref. 2295:AOA:B]

B. **Merger Of Indian-origin Labour Parties:** The Ceylon Workers' Congress and the Democratic Workers' Congress, representing Indian-origin plantation labour, announced in Colombo on December 23, 1959 their decision to merge again into a single organization.

The Ceylon Democratic Congress had split into the two groups in 1955.

They also announced that they would fight the next General Elections under the banner of the Ceylon Democratic Congress which stood for the building up of the country along socialistic lines.

The Congress had been accorded recognition as one of the 18 parties entitled to enter the Elections.

By a constitutional amendment, the Ceylon Government had abolished the system of separate electorates for registered Ceylonese citizens of Indian origin and reservation of seats for them. The change would entitle registered citizens to seek election from any constituency and to vote from the common list.

The bulk of the plantation workers from whom the Congress drew its support are "State-less," having been refused Ceylon citizenship. Those registered as citizens are estimated to number about 100,000 and a part of them distributed mainly in the tea-growing areas would be entitled to vote in the next Elections.

After the merger, the leaders of the two organizations said that they would open discussions immediately with other political parties to investigate prospects of electoral alliances.

They did not name the parties with which they would discuss but indicated their preference for an "alliance of progressive forces" and said that such alliance "offered the best hopes for the future."

The Ceylon Workers' Congress and the Democratic Workers' Congress claim between them a total membership of over 400,000. On the basis of that claim the merged body would become the largest single trade union in the country.

(*The Times of Ceylon*, Colombo and *The Hindu*, Madras)

[Prev. ref. 3059:CEY:A]

CHINA

A. **Aircraft Production:** *Jane's All the World's Aircraft* published on December 16, 1959 said that China's State aircraft factory near Mukden was now producing the MIG-17 jet fighter at the rate of between 20 and 25 a month. The first Chinese version of this single-seater fighter was produced in 1956.

It added: "Engines, radio instruments and certain other items of equipment are imported from USSR which also supplies technical assistance".

Jane's devoted a section to communist China for the first time in its 1959-60 edition.

A feature of this section was the emphasis laid in China on glider-training and production.

With the help of Polish experts, it said, large gliding establishments had been set up at Tohan-tia-kou and Shen-lang and a central gliding school had been organized by Polish instructors at An-yan.

Licence-production of gliders of Polish origin began in these factories in 1955-56 and "substantial numbers" of four types had been delivered since.

A Chinese glider design office was formed towards the end of 1956 and the prototype of the "first glider of original design" flew in May, 1958.

It published seven photographs of Chinese-built aircraft and described ten in addition to MIG-17.

In a preface to its 50th edition, *Jane's* commented: "The aircraft and aero-engine industries of the Great Powers still depend very largely on military orders for their existence although there would seem to be scant hope for the continuation of this state of affairs for the future.

"Although it is unlikely that the manned military aircraft will ever be completely replaced by the missile, the number and type of specialized aircraft needed by the major air forces are likely to decline in the years to come".

It then went on to refer to the cancellation of the contracts for the Canadian Avro, Arrow and the North American F-108 Rapier by the Royal Canadian Air Force and the US Air Force respectively in 1959 and pointed out that the US and Canadian air forces were thus following the Royal Air Force in "abandoning the future development of piloted interceptors of the conventional type.

"This situation is having world-wide repercussions, exemplified by the new British aircraft industry to contract by amalgamation, and the American industry's vast self-imposed programme of diversification mainly into the field of electronics. The French industry, too, is having to trim its development programme, and here again diversification with the objective of lessening the dependence of the industry on Government support is being pursued."

INDIA

SUMMARY: Dr. T. Erlander's Visit; Mr. J. P. Narayan's Thesis On "Reconstruction of Indian Polity"; Durgapur Blast Furnace Inaugurated; Rajasthan Land Commission's Report.

A. **Dr. Tage Erlander's Visit:** The Swedish Premier, Dr. Tage Erlander, arrived in New Delhi from Karachi on December 18, 1959 on a 12-day visit to India.

He was received at Palam airport by Mr. Nehru, the Mayor of Delhi and a large gathering of diplomats and officials.

Accompanying Dr. Erlander were his wife and the head of the Political Division of the Swedish Foreign Ministry, Mr. Sverker Astrom.

In a brief statement at the airport, Dr. Erlander said that he had come to India on a "visit of goodwill and friendship" with great expectations".

He emphasized Sweden's similarity of outlook with India both in the approach to solving economic and social problems and in the field of foreign policy.

State Banquet:

Next day (December 19, 1959), Mr. Nehru held a State banquet in honour of Dr. Erlander, at which both Mr. Nehru and Dr. Tage Erlander underlined the similarity in the policies be-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

ing pursued by their countries and their approach to various international problems.

Mr. Nehru said that Sweden had been following a policy "which is dear to us and which we have tried to follow firmly and propose to follow in the future, that is, a policy of non-alignment—which is sometimes rather mistakenly called neutrality — non-involvement in military alliances and non-alignment".

Wherever India and Sweden had occasion to work together, whether in UN or elsewhere. Mr. Nehru added, there had been a great deal of co-operation between their representatives and delegations. Whether it was a policy of banning nuclear weapons or of progressive disarmament or something on racial inequality, representatives of both the countries had worked in co-operation.

Referring to the visit of the US President, Mr. D. D. Eisenhower, to India, he said: "A few days ago, India had the privilege of welcoming with great warmth and cordiality the distinguished head of a great nation. It is a peculiar pleasure now to welcome the Swedish Prime Minister. Your country is not nearly as big as USA or India, but we have long learnt to attach value not to bigness but to other qualities in a nation. And among those qualities your country appears to possess many in an abundant measure".

Replying to the toast, Dr. Erlander said that the people of Sweden were aware of the important role which India had to play owing to her key position in world affairs.

He added: "We find that your approach to international problems, be it inside or outside UN, often coincides with our own. As your relative weight and influence is much greater than ours, it is only natural that we study your words and actions with particular interest."

Civic Reception:

Dr. Erlander was given a civic reception by the citizens of Delhi on December 20, 1959.

The Mayor of Delhi, in his Address of welcome, said that Sweden had made a great contribution to world science, literature and art. Nobel Prizes were a true symbol of Sweden's faith in international co-operation, goodwill and world peace.

On behalf of the citizens, he presented Dr. Erlander with a Kashmiri carpet and Mrs. Erlander a scarf.

Replying to the Address, Dr. Erlander said: "If we devote our increasing resources to technological research, industrial progress and agricultural reform, we build a better future with greater freedom for coming generations."

There was, he added, a great similarity in the policies pursued by the two countries on international problems and on peace, freedom and democracy. When Mr. Nehru spoke in Sweden during his visit in 1957 on these matters, he said, "he spoke directly to our hearts." Democracy was firmly established in Sweden. Political movements representing totalitarian ideas had never been important in his country.

Mr. Nehru, in his speech, said that Sweden was an ideal country for India to emulate. "We want democracy and socialism in this country. This is our aim. While Sweden has achieved this aim with considerable success, we have yet to reach it."

Mr. Nehru also announced at the reception that Dr. Erlander had offered to give an Indian boy and a girl scholarships to study in Sweden.

Later, Dr. Erlander visited Meerut, Agra, Jaipur, Madras, Trivandrum, Mysore and Bombay.

He left Bombay for Karachi on December 30, 1959.

B. **Prince Norodom Sihanouk's Visit:** The Prime Minister of Cambodia, Prince Norodom Sihanouk, arrived in New Delhi on December 27, 1959 for talks with Mr. Nehru.

He spent two days in New Delhi and before leaving on December 29, 1959 he said that the exchange of views he had had with Mr. Nehru would greatly help Cambodia "in the conduct of Cambodia's 'neutral' policy which is so hard to manage but in which our people have so much faith."

In a statement to the Press, he said that he was given opportunities of conversing "confidently with Mr. Nehru on topics of mutual interest concerning world and home affairs and we were once again in full agreement."

(*The Times of India*, New Delhi)

[Prev. ref. 2599:CAM:A]

C. **"Reconstruction Of Indian Polity"—Mr. J. P. Narayan Explains His Thesis:** Speaking in New Delhi on December 28, 1959, the Sarvodaya and Socialist leader, Mr. Jayaprakash Narayan, set out the broad features of his plan for lasting and organic democracy in India.

This, he said, was the first authentic exposition of his thesis called "Reconstruction of Indian Polity," although some portions of it had appeared in a section of the Press giving a rather distorted picture.

Mr. Narayan envisaged a four-tier State structure with the village community rather than the individual as the foundational or basic democracy. The three tiers above them would be the Zila councils, State councils and the Union.

The emphasis in the entire scheme would be on the foundational democracy or the gram panchayat which would be elected not on the basis of adult franchise but by "general unanimity" of all the villagers above 18 years of age, or through a system of "drawing lots."

He discarded the present voting system in the country because it tended to divide the village communities by exaggerating their prevailing differences in caste, creed and property. The system was unsuited because the task before Indian democracy was to unite the community for national reconstruction.

He did not claim originality for the scheme. Village communities had existed in India until the British replaced them by the parliamentary pattern. Gram panchayats functioned for centuries, undisturbed by internal upheavals of external invasions because of their vitality and their unifying character.

Even the voting patterns he suggested, he said, were not new. The method of "general unanimity" was used in Northern India for electing gram panchayats while that of "drawing lots" was in use in South India until about a hundred years ago. He named a village in Madras where this system still worked. Qualifications for a candidate in both cases were strictly laid down.

He did not explain the methods of election for the other three tiers but hinted that some indirect method should be adopted there also.

Even Mr. Nehru, he said, had thrice mentioned the need for indirect elections during his speeches before the last General Elections though he did not pursue the idea.

He quoted Mr. U. N. Dhebar as another supporter of this idea.

In Mr. Narayan's opinion, the pattern suggested by him was the same as that envisaged by Mahatma Gandhi. Acharya Vinoba Bhave was working on it on a limited scale. He was convinced that the new pattern was superior to the parliamentary pattern. It was enough to say fear of controversy. It was enough to say fear controversy. It was enough to say that the parliamentary system was unsuited to India.

Parliamentary System Criticized:

His objections against the parliamentary system—as it functioned in India—were many. The system was against the spirit of India's rural traditions. Village communities in India were a live force but the parliamentary system did not assign any effective role for them in the functioning of democracy.

The parliamentary system, on the other hand, was based on the "atomized individual," a by-product of industrialization in Europe which disrupted the village communities. In India, village communities were not so thoroughly disrupted yet.

A majority of Indians did not understand the system. They were mere spectators to a system which functioned from above.

The political parties also did not help people in understanding the system. By constantly harping on and exaggerating the differences between them, these parties created dissension and disunity. The parliamentary system of election was, moreover, too expensive for even the smaller parties.

He described the Indian parliamentary system as an "umbrella democracy." It protected the people from above but did not encourage them to function on the theory of "Government of the people, by the people and for the people." It was uninspiring.

There was the danger that the people might opt for communist dictatorship or military rule because the "democracy from above is failing and we are not building up democracy from below."

He was not in favour of scrapping the parliamentary system in India until an alternative on the pattern suggested by him was built up. He would like, therefore, the foundations of the new pattern to be laid while Mr. Nehru was at the helm of affairs.

It was not difficult, he said, to establish gram panchayats in India's 556,000 villages within the next four or five years. A beginning had already been made in Uttar Pradesh, Andhra Pradesh, Rajasthan and some other States.

If voluntary workers took up the scheme with understanding and determination, they could lay the foundation for a lasting democracy in India within the next few years.

Parliamentary democracy had failed in most Asian nations and dictatorships had taken their place. He, however, saw a redeeming feature in the dictatorships in Egypt, Pakistan and Indonesia. The dictators themselves were advocating democracy. The schemes envisaged by the "national union" in Egypt, "basic democracy" in Pakistan and "national front" in Indonesia were similar to the Gandhian ideal of Gram Rajya.

The only European nation conducting similar experiments was Yugoslavia.

[Prev. ref. 2676:INI:P]

D. **Durgapur First Blast Furnace Inaugurated:** The President, Dr. Rajendra Prasad, inaugurated the first blast furnace of Durgapur Steel Works in Durgapur on December 29, 1959.

As the President pulled a lever, red hot molten iron poured into a ladle.

With the inauguration of the "last of the three major steel plants under the Second Five-Year Plan,"

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

production formally began at this Rs. 140-crore Project, which is the largest British undertaking overseas.

[The plant was erected by a Consortium of 13 British engineering firms in pursuance of an Agreement signed in October, 1956 between Hindustan Steel Limited and the Indian Steelworks Construction Company, representing the Consortium.]

Inaugurating the blast furnace, Dr. Rajendra Prasad said: "With the completion of the three steel plants, in course of time, we hope not only to meet the internal requirements of steel but also lay aside a part of the output for export. It may now be said that the foundations of India's industrialization have been truly and firmly laid."

Sir Cyril Jones, Chairman of ISCON, said that the members of the Consortium would be happy to assist in the further expansion of Durgapur Steel Plant envisaged in the Third Five-Year Plan.

Mr. C. J. M. Alport, United Kingdom Minister of State for Commonwealth Relations, who represented the British Government at the function, said that Durgapur symbolized the close relationship which existed between Britain and India.

He added: "Together, our people have been through good times and bad, and common experience has created between us strong affinities which make it impossible for either of us to be indifferent to the fortunes of the other."

The Indian Minister for Steel, Mines and Fuel, Sardar Swaran Singh, said that 1959 had been a year of substantial achievements for the public sector in iron and steel and announced that more than 400,000 tons of pig iron was produced with the result that not only were the country's requirements met but considerable quantities were exported.

He hoped that with the experience gained in the Second Five-Year Plan, there would be less reliance "on the help of friends from abroad."

He added that the shortage of pig iron would soon become a memory of the past. Rourkela and Bhilai had already started producing steel and the first consignment of billets left Bhilai for the re-rolling mills in Bombay a few days ago. "We will face the New Year with hope and confidence."

Mr. S. Boothalingam, Secretary to the Department of Steel in the Government of India, told a news conference on December 29, 1959 that he did not "bar the possibility" of private sector plants getting a share in further expansion of the steel industry under the Third Plan.

He, however, thought that priority should logically be given to raising the capacity of the three plants in the public sector, as two private units at Burnpur and Jamshedpur had already undertaken a phase of expansion in the Second Plan.

Asked about future steel prices, he said, the present surcharges contained in current selling prices provided an element of cushioning which could be suitably adjusted downwards should it prove necessary to stimulate the demand for steel.

He thought, however, that such "manipulation" of prices would be unnecessary because the demand would continue to be strong.

(*The Statesman*, Calcutta)

[Prev. ref. 2745:INI:F]

E. Rajasthan Land Commission's Report: The Rajasthan Land Commission, in its report presented to the State Assembly by its Chairman, Mr. Mohanlal Sukhadia, in the third week of December, 1959, recommended that the process of resumption of jagirs in the State should be completed by the end of 1959 and that the process of abolition of zamindari and biswedari estates, which started on November 15, 1959, should be completed "as expeditiously as practicable".

[The Commission was appointed by the State Government in 1956 to "study the land reforms already introduced in Rajasthan, ascertain how far these have actually been implemented and make such recommendations for their implementation or for further reform as may be necessary."]

Since the Land Commission was set up, the report said, several important changes had taken place in the country and the entire conception of land tenure and tenancy had changed. Intermediaries and land-holders were no longer in the picture, ceilings on the existing holdings of agricultural lands had been imposed in the State and the emphasis now was on co-operatives.

The legislation for soil conservation, it said, should be undertaken and brought into force as soon as possible and the work of consolidation of holdings should be pushed with all possible speed. Even after the introduction of co-operative farming, the need for consolidation of holdings would remain, and the Government might consider the advisability of setting up a committee for the simplification of the tenancy and revenue laws.

In the opinion of the Commission, while there should be legislation about land management practices, it would be premature to apply any such legislation to the holdings of the ordinary cultivator as that would merely result in harassment of cultivators. Legislation about land management practices—generally on the lines indicated in the Second Five-Year Plan—might be undertaken but it should be applied to big agricultural farms in the first instance.

It thought that the co-operative farms deserved encouragement rather than discouragement, and co-operative farms should, therefore, not be singled out for the application of land management legislation. The question whether agricultural income-tax would be leviable on co-operative farms was an issue which might be separately examined.

It recommended that succession to agricultural tenancies in the State should not be governed by personal law but by a specified order of succession on the lines of those laid down in the old Jaipur Tenancy Act and the Marwar Tenancy Act. If succession was governed by personal law, it would lead to fragmentation of holdings, whereas the policy of the Government was to prevent fragmentation.

As regards the redemption of pre-existing mortgages, the Commission recommended that where a period of 20 years or more had expired since the mortgage was effected, the mortgage should be deemed to have been satisfied in full without any payment whatsoever by the mortgagor and the mortgaged land should be redeemed and possession thereof delivered to the mortgagor free from all encumbrances.

Other recommendations included that the concession of free house sites to tenants embodied in the Rajasthan Tenancy Act should be extended to all agricultural workers and village artisans who had been permanently residing in a village for ten years or more; that grazing areas should be properly demarcated expeditiously where it had not been done and surplus grazing lands made available for cultivation; that Collectors must see that culturable lands were not allowed to lie idle; and that legislation to regulate the collection of fees at the State cattle fairs should be undertaken.

It also recommended that the Government should consider the advisability of appointing a committee to examine the effect on the peasantry of the land reforms and tenancy legislation so far undertaken.

(*The Statesman*, New Delhi)

[Prev. ref. 3005:INI:V]

F. Agricultural Land For Scheduled Castes—Commissioner's Report For 1958-59: In his report for 1958-59 presented to Parliament on December 22, 1959, the Commissioner for Scheduled Castes and Scheduled Tribes recommended first preference to members of the Scheduled Castes in the allotment of agricultural lands.

He said that land was the only means for the Scheduled Caste people to free themselves from the yoke of the superior classes or castes. Therefore, agricultural lands should be made available to them by giving them first preference.

It was true, he said, that the economic conditions of the Scheduled Castes would improve side by side with the rest of the country, but their economic dependence on others, especially in rural areas, deprived them of the civic rights and the spirit of assertion.

In a reference to the extension of the constitutional reservation for the Scheduled Castes and Scheduled Tribes by another ten years, he hoped that within this period untouchability would disappear and the confidence of these sections won over to such an extent that they might not need further reservations thereafter.

The progress relating to the assignment of cultivable waste lands to Scheduled Castes, he added, was far from satisfactory. The Bhoodan movement had rendered some help, but the distribution of lands had not been followed up by financial assistance for developing the land.

The progress in the direction of education had been satisfactory though it was slow in respect of the Scheduled Tribes. Every year, the number of students in colleges from these communities were increasing at a rapid rate. It, however, pointed out that the progress of education among girls from the backward classes was practically negligible and required special attention.

The training-cum-production centres for cottage industries for the benefit of these communities had still to prove their worth, as the trainees were more after stipends than learning a job to make it a means for their living.

As regards representation in the Services, he said that the delay in reaching the target of percentages fixed by the Government was justifiably causing dissatisfaction among backward classes. The excuse that adequate numbers of qualified candidates were not forthcoming could not hold good for all times and could not remedy the situation. Steps had been taken by Allahabad University to give special training to Scheduled Castes and Tribes for IAS and if that scheme succeeded it should be extended to other places.

[Prev. ref. 3053:INI:G]

G. West Bengal-Orissa Food Zone —Five-Point Agreement: The Orissa Minister for Supply, Mr. Nilamani Routray, told the State Legislative Assembly during question-hour on December 29, 1959 that the composite food Zone of West Bengal and Orissa came into operation on December 21, 1959 on the basis of a five-point Agreement between Orissa and the Government of India for ensuring checks on possible draining of stocks from Orissa to Calcutta, local scarcity and price increase.

He said that the following were the points of Agreement:

(1) Building up of a buffer-stock of 75,000 tons of rice and paddy in Orissa for meeting internal requirements;

(2) Licensing of wholesale dealers in paddy and rice;

(3) Levy of 20 per cent on wholesale dealers to assist the State Government in building up the reserve;

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

(4) Central subsidy to the State Government to maintain the consumer prices despite any rise in producers' prices; and

(5) Financial assistance of Rs. 10,00,000 to the State Supply Department.

Mr. Routray added that there would be a "five-mile no-movement belt" to check smuggling.

H. **Manufacture Of "Dart" Avro-engines—Agreement With Rolls Royce:** The Indian High Commissioner in London, Mrs. Vijayalakshmi Pandit, signed an Agreement with Rolls Royce Limited on behalf of the Government of India on December 30, 1959 under which the Rolls Royce "Dart" engines would be produced under licence in India.

The engines would be installed in the *Avro*-748 transport aircraft which would be manufactured in India.

(*The Times*, London)

[Prev. ref. 2888:INI:D]

I. **Hindustan Shipyard Ltd Annual Meeting:** Addressing the 7th annual meeting of the Hindustan Shipyard Ltd in New Delhi on December 21, 1959, the Chairman, Mr. G. L. Mehta, made a strong plea for giving first priority to making the Hindustan Shipyard at Vishakapatnam a more productive and efficient organization before launching on a second shipyard project at Cochin.

He said that in an industry "which has to face international competition and which is subject to cyclical and severe slumps," the country should be "concerned with the economics of ship construction and not merely with the number of shipyards."

In the ultimate analysis, the burden would have to be borne by the tax-payers and the consumers of the country.

Faced with severe competition in world shipping, he said, Hindustan Shipyard was finding it very difficult to secure orders from Indian ship-owners.

The Government and Indian ship-owners should consider this problem, and the inter-linked questions of price and subsidy should be reviewed.

Referring to the progress of the Vishakapatnam yard, he said that the Company was now in a position to increase its output provided the necessary foreign exchange was made available by the Government. The current level of production was about 2½ ships per annum.

He also emphasized the need for setting up a central agency to assist and encourage the development of indigenous capacity for ship-building materials.

J. **A-II And IAC Annual Reports For 1958-59:** The annual reports of Air-India International (A-II) and Indian Airlines Corporation (IAC) for 1958-59, placed before Parliament on December 18, 1959, said that A-II's operating profits registered a "substantial" drop in 1958-59 while the trend of "declining losses" in IAC continued.

The report of A-II explained that although the profits were lower than in 1957-58 (by about Rs. 56,00,000), they were made in a difficult year marked by a severe recession in USA and Europe and by restrictions on air travel from India, coupled with a substantial increase in the capacity offered.

The air transport industry throughout the world, it added, suffered a financial set-back during the year and the fact that A-II was able to meet its expenses, including allocation to depreciation and for obsolescence on spares, on its enlarged fleet and to produce a modest profit, might be considered satisfactory.

In ordering Boeing-707 aircraft, the A-II had taken the first essential step to ensure the maintenance of its competitive position on its "blue ribbon route" to the continent and UK.

The IAC incurred a loss of Rs. 91,19,000 as compared to Rs. 103,07,000 in 1957-58.

The report of IAC disclosed that the Government of India had agreed to subsidize the losses of the Corporation on the basis of a standard cost and to re-organize the capital structure of the Corporation by writing off the past losses and treating a part of capital as interest-free.

Discussing future trends, the report said that based on the results of the year, the Corporation could look forward to further improvements in its services and better financial results of its operation which should bring satisfaction to Government, to passengers and other clients and to its employees.

K. **Indian Telephone Industries Ltd Report For 1958-59:** The annual report of the Indian Telephone Industries Ltd (Bangalore) for 1958-59 revealed that the Company had undertaken the mass production of several new items and soon hoped not only to make the country self-sufficient in all types of tele-communication equipment but also produce exportable surplus in course of time.

During the year, the industry made a net profit of Rs. 26,97,582 and declared a 2½ per cent dividend on it.

An achievement of the industry during the year had been the reduction in manufacturing costs and a corresponding lowering of the sale price. The turn-over during the year was nearly Rs. 3½ crores, representing an increase of a little over Rs. 26,00,000 over the previous year.

The production targets had been reached and in certain items exceeded.

L. **Sindri Fertilizers And Chemicals Ltd Report For 1958-59:** The annual report of Sindri Fertilizers and Chemicals Ltd for 1958-59 revealed gross profits of the order of Rs. 3,83,39,218, dividend to the shareholders amounting to Rs. 85,00,000 and the completion of Sindri's Rs. 13-crore expansion scheme.

The gross profits for the year amounted to Rs. 3,83,39,218, after providing Rs. 199,23,496 for depreciation and utilizing Rs. 13,18,168 in paying interest on the loan to the Government of India and Rs. 11,78,371 for Wealth Tax.

After adding Rs. 2,00,00,387—the amount brought forward from 1957-58 account—the balance available was Rs. 1,79,19,570. Out of this amount, Rs. 30,49,773 had been provided as reserve for repairs and renewals Rs. 31,97,600 for development reserve as required by the Finance Act, Rs. 16,14,959 as taxation reserve and Rs. 85,00,000 as dividend to shareholders. This left Rs. 15,57,238 to be carried over to next year's account.

The total production of ammonium sulphate during the year was 3,30,122 tons as against 3,32,031 tons in the preceding year, showing a decrease of 1,909 tons. However, 668 tons of ammonia was sold during the period corresponding to a production of 2,301 tons of ammonium sulphate.

The fertilizer despatches to the various States during the year were 3,32,305.2 tons.

[Prev. ref. 984:INI:L]

N. **Mr. D. Sarmah Relieved Of Portfolios:** It was announced in Shillong on December 29, 1959 that the Assam Minister for Education, Jails, Roads and PWD, Mr. Debeswar Sarmah, had been relieved of his portfolios.

The Chief Minister, Mr. B. P. Chaliha, took over Mr. Sarmah's portfolios.

No reasons were given for the step.

Mr. Sarmah had been a Minister in the Assam Government since 1957.

There were serious charges against Mr. Sarmah—that he had worked against the Congress nominee, Mr. D. K. Barooah, in a recent by-election to the State Assembly from Nowgong in which a communist candidate was elected.

[Prev. ref. 1447:INI:C]

O. **Heart Operation On Dog:** Dr. Pritam Das, Professor of Clinical Surgery in the Ganesh Shanker Vidyarthi Memorial Medical College in Kanpur, told the Kanpur branch of the Indian Medical Association on December 26, 1959 of how he had performed a successful heart operation three weeks earlier on a dog after stopping the heart deliberately for almost half-an-hour.

He said that the body of the dog was first cooled in ice-water under anaesthesia. The chest was then opened and the heart exposed. Subsequently, the circulation of blood through the heart was stopped by clamping the superior and inferior vena cava. A mixture of special drugs was then perfused into the coronary artery. This led to the complete stoppage of heart beats.

An operation on the heart, he said, was then performed and its interior was cleaned. When the heart remained inactive, there was no respiration. The brain had also lost all activity and from all tests, a condition similar to clinical death had occurred. At the end of 27 minutes the heart was made to resume activity by an injection of another set of medicines.

The dog was demonstrated at the meeting.

[Prev. ref. 3058:INI:Y]

INDONESIA

A. **Action Against Aliens:** The Defence and Security Minister, Lieut.-Gen. A. H. Nasution, gave Parliament on December 16, 1959 a survey of the security situation in the country.

He said that Chinese settlers, owing allegiance to Peking and Taipeh, had banded together to oppose the ban on alien traders in rural areas and the Army had been instructed to watch the movements of aliens.

The same day (December 16), a spokesman of the Foreign Affairs Department said in Djakarta that the Government and the Indonesian people were very much astonished at the anti-Indonesian campaign in China.

He said: "We all know that People's China, in her fight for taking Taiwan and in her international struggle in general, is striving hard to attract the loyalty of all overseas Chinese towards Peking. In this matter, the Government of Indonesia sincerely supports the Chinese by especially recognizing the existence of only one China and by firmly joining the struggle for the inclusion of People's China in UN.

"In winning the loyalty of the overseas Chinese, however, China has sacrificed the friendship and interests of the Indonesian people and put aside the principles of socialism.

"If a big country is employing its strength to sacrifice the interests of a neighbour—a small country—to achieve its national objective, then such an attitude harbours the seeds of menace which should be scrupulously watched."

Meanwhile, it was stated, the shifting of aliens from the rural areas in Sukabumi district had been completed in spite of some minor hitches. Official sources claimed that in all 1,563 persons had been moved from rural areas in the district. About 400 persons were allowed to continue to stay due to illness or for similar reasons.

In Djakarta, the War Administrator Lieut.-Col. Wirhardikusuman, issued on December 15, 1959 a regulation prohibiting the capital's residents from giving shelter to aliens (from rural areas).

This measure, it was explained, was taken as attempts had been made by alien nationals to enter the capital and seek shelter or hiding places with relatives though there was a regulation prohibiting them to enter and settle in the Djakarta Raya area. Punishment for violation of the new Order was three years' jail term and a fine of 10,000 rupiahs.

Closure Of Bank:

Lieut.-Gen. A. H. Nasution, in his capacity as Central War Administrator, ordered on December 16, 1959 the closing down of the Great Eastern Banking Corporation and all its branches.

He said that the action was taken "on grounds of the regulation on banking organizations and bodies which have been set up by or for the nationals of a foreign country having no diplomatic relations with the Republic of Indonesia."

The Corporation is a Kuomintang Chinese Bank.

Marshal Chen Yi's Letter:

On December 25, 1959, the Chinese official *Hsinhua News* reported the contents of a letter sent by the Foreign Minister, Marshal Chen Yi, to the Indonesian Foreign Minister, Dr. R. Subandrio, on the question of Chinese nationals in Indonesia.

It suggested that the two Governments hold immediate talks on the question and said that China had already appointed its Ambassador in Djakarta, Mr. Huang Che, to represent her at such talks.

It said that the Indonesian ban on Chinese traders in rural areas had been "utilized to make a concentrated attack on overseas Chinese."

The letter was in reply to one from Dr. Subandrio on December 13, 1959 rejecting a Chinese protest about the treatment of Chinese citizens, whom Indonesia accused of "capitalistic and monopolistic behaviour."

The latest letter said that China hoped that Indonesia would agree to immediate talks on the subject "considering the present grave situation—and for the sake of safeguarding the friendly relations between the two countries."

It said that Dr. Subandrio's contentions about the role of overseas Chinese in Indonesia, the cause of the "present activities of antagonism and discrimination against the Chinese" and charges levelled against China's representative organs in Indonesia, were all unacceptable to China.

The majority of Chinese in Indonesia were working people and had lived amicably and had played their part in Indonesia's economic development. A very small number of them did not behave well, but it was unfair to say that the entire ovearseas Chinese community was a "monopoly group" hindering development.

The ban on Chinese traders had resulted in "tens of thousands" of Chinese losing their homes and properties, being displaced and "landed in a desperate situation."

It suggested that the two countries promptly ratify in Peking the Sino-Indonesian Treaty on Dual Nationality and at the same time set up a joint committee in Djakarta "in accordance with the Notes exchanged between the Prime Ministers of the two countries."

It urged a speedy agreement so that the pressing question of Chinese who wanted to return to their homeland could be settled.

It also called on the Indonesian Government to lift the restrictions on Chinese diplomats.

B. **Compulsory Military Training Proposed:** The Defence Minister, Lieut.-Gen. A. H. Nasution, told a group of recruits for military training in Djakarta on December 23, 1959 that compulsory military training would be introduced in Indonesia from 1960.

He added that Indonesia's defence system must be based on the people's potential and a perfect territorial defence organization must be created. Indonesia's military build-up would continue until the entire nation could be called up for the defence of the country at any moment.

[Prev. ref. 2907:IND:C]

IRAN

A. **Tension On Iran-Iraq Border:** According to official reports from Abadan on December 23, 1959, jet fighters of the Iranian Air Force were moved to the Iraq frontier to reinforce tanks and heavy artillery transferred there earlier in the week owing to tension following a claim by the Iraqi Prime Minister, General Abdel Karim Kassem, to a three-mile strip of territory near the oil centre of Abadan.

The Persian Gulf Naval Commander, the Frontier Guards Commander and members of the General Staff from Tehran had inspected the Army, Navy and Air Force units along the frontier and ordered them to deal with any emergencies.

Despatches from Tehran on December 28, 1959 said that although Iran believed in an amicable settlement of her dispute with Iraq over the Sharett-el-Arab, she was nevertheless fortifying her defences against a possible Iraqi attack.

The Sharett-el-Arab, near Abadan, forms the mouth of the Tigris and Euphrates rivers, and tension between Iran and Iraq had arisen over Iraq's claim to a three-mile border strip in that area.

It was reported on December 28, 1959 that Iran's main re-inforcements were stationed at the strategic commercial port of Khorramshahr, which had almost been turned into a fortress, and around the Abadan Refinery, which is within easy range of Iraqi guns.

Iranian anti-aircraft guns, heavy tanks and artillery were in position, camouflaged, along the Sharett-el-Arab. Several rows of trenches had been dug at Khorramshahr and at several other strategic points. Several gunboats equipped with guns and machine-guns were patrolling the Sharett-el-Arab on a round-the-clock basis.

All military leave in the area was cancelled and all troops and officers of the Iranian land forces were put on a 24-hour stand-by basis.

The Iranian Prime Minister, Mr. Manouchehr Eghbal, said that Sharett-el-Arab belonged to Iran as two-thirds of its water flowed from Iran and the usage of centuries had set its seal on Iran's sovereignty.

Gen. A. K. Kassem's Statement:

At a dinner given in Baghdad on December 23, 1959 by the 19th Infantry Brigade, the Iraqi Prime Minister, Gen. A. K. Kassem, was reported to have accused imperialists of inciting Iran to commit aggression against Iraq. [Gen. Kassem deployed this Brigade to stage the Iraqi Revolution in July, 1958.]

The dinner was in celebration of General Kassem's recovery after the attempt to assassinate him on October 7, 1959.

He was reported to have said: "We know the inciter and we will crush both Iran and the inciter."

He accused the Iranian Government of many frontier violations, encroaching on Iraqi territory to a depth of 7 to 11 kilometres and building police posts and diverting the waters of the river Alwand, causing floods in Iraq.

The borders of Iraq and Iran, he added, had been established since 1913 and advised those massing troops on Iraq's border to withdraw.

American Advice:

The American and British Ambassadors in Tehran, Mr. Edward Wailes and Sir Geoffrey Harrison, called on the Iranian Foreign Minister, Mr. Abbas Aram, on December 23, 1959 and were understood to have discussed the border situation with him.

In Washington, the US State Department spokesman, Mr. Lincoln White, told a news conference on December 24, 1959: "We find it difficult to believe that these two neighbouring countries cannot, with goodwill on both sides, resolve their differences by peaceful negotiations."

He said that the State Department had received some information that troop movements were taking place on both sides of the border but not to the extent reported by Press despatches.

He denied another Press report that the US State Department was actively using its influence to persuade Iraq and Iran to negotiate an amicable settlement.

He added: "Contrary to certain Press reports, the United States is not playing a mediatory role in this dispute."

[Prev. ref. 3079:IRQ:A]

JAPAN

A. **Exchange Restrictions To Be Relaxed:** A spokesman of the Japanese Finance Ministry said on December 18, 1959 that the Government would liberalize the foreign exchange restrictions to the extent of eliminating the need of the Ministry's prior approval in the remittance of foreign exchange by Government agencies.

He added that foreign insurance companies would simultaneously be allowed to remit 100 per cent of their re-insurance premia in foreign exchange from their offices compared to the present limit of 20 per cent.

This action coincided with a recent announcement that the nation's foreign exchange reserves now stood at a record $1,250,000,000.

The spokesman said that further liberalization would take place probably in January, 1960 with the easing of restrictions on non-trade foreign exchange transactions.

Liberalization Of Imports:

On December 26, 1959, the Minister for International Trade, Mr. Hayato Ikeda, said in Tokyo that a Conference of Finance and Commerce Ministers had decided that liberalization of imports of raw cotton and raw wool be put into practice on April 1, 1960.

He added that the Government would announce early in January, 1960 a list of some additional commodities which would be liberalized for import in addition to the list already announced.

The announcement on wool and cotton developed from promises Japan had made to loosen import restrictions in response to pressure from the parties to the Geneva Agreement on Tariffs and Trade (GATT).

It made the first major break-through, although some concessions had already been announced notably in adding a number of commodities from the United States to the list of goods whose imports are automatically approved.

It was the view in Tokyo that liberalization on Japan's part would strengthen her argument against those GATT parties, especially in the Commonwealth which invoke Article 35 of the Agreement against Japan.

[Under Article 35, parties to the GATT may provide for exceptions to the equal treatment all members should receive.]

The announcements of trade liberalization from London and Paris gave Japan further sharp reminders of the need for reciprocity from its end.

In anticipation of the December 26 announcement, textile prices dropped the previous day on the Osaka markets with dealers fearing that increased imports would disturb the supply and demand situation.

(*The New York Times*)

[Prev. ref. 2632:JAP:A]

LAOS

A. **Government Re-shuffle:** The Prime Minister, Mr. Phoui Sananikone, in a major re-shuffle of his Government on December 19, 1959, dropped six Ministers and eight Secretaries of State, all of whom belonged to the Committee for Defence of National Interests (CDIN).

Diplomatic sources in Vientiane and elsewhere described CDIN as extreme 'Rightist.'

The main members who were dropped were the CDIN President and Defence Minister, Gen. S. Patmannavong, the Foreign Minister, Mr. Khamphan Panya, the Secretary of State for Defence, Col. Phoumio Nosavan, the Secretary of State for Information, Mr. Sissouk Champassak, the Secretary of State for Social Affairs, Lieut.-Col. Oudone Sananikone, the Secretary of State for Education, Mr. Impeng Suryahhal, and the Secretary of State for Justice, Mr. Tan Choklamountry.

Mr. Sananikone himself took over Foreign Affairs, National Defence, Public Works, Information and Social Affairs portfolios.

Laotian sources said it was correct to assume that the change would signify a more elastic policy towards Pathet Lao rebels but said that they did not have information whether the new Government planned to resume negotiations with rebels.

CDIN was opposed to such moves and branded the Pathet Lao as "traitors."

Observers suggested that the Cabinet reshuffle possibly resulted in part from the report of the UN Fact-finding Sub-committee on Laos which had not fully backed charges of communist aggression.

(*The Nation*, Rangoon)

[Prev. ref. 3027:LAO:A]

B. **Restrictions On Aliens:** The Government has announced that from January 22, 1960 it would ban non-Laotians from 12 kinds of business.

They included importing arms and ammunition, radio and radio spare parts, printing, owners and drivers of taxis and lorries, charcoal and wood dealers, pawn-brokers, butchers, fishmongers and hairdressers.

(*The Hindu*, Madras)

MALAYA

A. **Loans For Foreign Firms:** The Finance Minister, Mr. Tan Siew Sin, said in Kuala Lumpur on December 28, 1959 that foreign-owned or controlled business houses in the Malayan Federation would be allowed to borrow from banks and other finance agencies in the Federation for purposes of their business, provided the companies were willing to bring into the Federation a reasonable proportion of their initial capital needs.

He added that in considering applications from such companies for permission to borrow money locally, the Government would also pay due regard to the value of the industry concerned to the Federation's economy.

(*The Statesman*, Calcutta)

ASIA OUTSIDE ASIA

SUMMARY: UN Debate On Algeria; UN General Assembly Vote On Korean Re-unification, On Expansion Of Membership Of Security Council, Economic & Social Council And World Court And On Treatment Of People Of Indian Origin In South Africa; UNRWA Mandate Extended; End Of UN General Assembly Session.

A. **UN Debate On Algeria:** A debate on Algeria was opened in the United Nations main Political Committee on November 30, 1959.

The French delegation boycotted the meeting, as it did later during the debate in the General Assembly, in protest against UN "interference" in what it considered to be "a domestic problem of France."

This was the fifth year running that the issue had come up before UN. In 1958, the General Assembly failed by a single vote to muster the required two-thirds' majority for the endorsement of a resolution to recognize the right of Algeria to independence.

The first speaker on November 30, 1959 was Mr. Mongli Slim (Tunisia) who said that the Political Committee confronted the question this time in different conditions from those of 1958. New prospects for the restoration of peace in Algeria had emerged—restoration by a democratic solution which would be in harmony with UN principles.

He added that the Tunisian Government had consistently preached the need of a freely negotiated solution which would create good relations between France and the "great Magreb".

On December 2, 1959, France's principal allies cautioned UN against adopting any resolution on the Algerian question in 1959 lest it should hamper progress already made towards a solution.

Sir Pierson Dixon (UK) and Mr. Henry Cabot Lodge (USA) made their appeals as envoys of Afro-Asian nations prepared to table a draft resolution urging French and Algerian representatives to begin informal discussions on the issue of Algerian independence.

Sir Pierson said that Great Britain was very mindful of the danger that any resolution, however moderately worded, might set up new pressures which, far from promis-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

ing a satisfactory outcome, would in practice retard and complicate it.

He said it was his Government's considered view that the right course for the General Assembly was not to express itself through a resolution on the substance of the matter. Quite apart from judicial doubts connected with the Article of the Charter which bars UN intervention in a member-State's domestic affairs, it seemed that "in view of the promising, yet delicate and sensitive point now reached, this would, on purely practical grounds, be the course of wisdom and prudence."

He went on to say that new prospects had been opened up by the far-reaching and imaginative programme which had been put forward by France, and an offer had been made to discuss the conditions for a cease-fire which, all were agreed, must be the first step in this programme. "On the other side also, there are men of goodwill and statesmanship who share the desire to reach a final settlement as speedily as possible." (For General de Gaulle's proposals on Algeria, see at the end.)

Mr. Henry Cabot Lodge (USA) said that it was evident that there was a spirit of conciliation which his Government welcomed.

The United States also hoped, he said, that the members of the Committee would see the wisdom of avoiding a resolution on the Algeria problem. The utmost caution now was not only warranted but essential. If the members weighed the situation carefully, they will surely see that the threshold of a historic occasion had been reached, in which the principals should be unhampered and allowed to seek a solution.

Dr. Mahmoud Fawzi (UAR) took issue with Sir Pierson Dixon's proposal and asserted that the Assembly must not agree to take a passive attitude.

He said that members should keep in mind that not only no action must be taken which would prejudice a just solution but also that they should maintain positiveness and contribute to the attainment of the solution required.

He added that the Assembly would be well advised to urge France and the Algerians promptly to start discussions.

The Committee heard the delegates of Saudi Arabia and Iran on December 1, 1959.

Mr. Ahmed Shukairy (Saudi Arabia) said that France had two alternatives to break the deadlock on the Algeria question. France should either agree with the "Government of Algeria" on the guarantees for freedom of choice or leave the processes to be worked out and implemented under UN auspices.

He spoke of Gen. de Gaulle's "confused ideas" and said that he had reduced the principle of self-determination to "a fiction."

Referring to the Algerian nationalists' proposal that a group of their leaders now in French detention should begin discussions with France, he said: "In all liberation movements, negotiations have started with leaders rushed from prison to the conference hall."

He cited the examples of Mr. Jawaharlal Nehru, Dr. Kwame Nkrumah of Ghana, Archbishop Makarios of Cyprus, and Said Zaghlul Pasha of Egypt as "vivid illustrations." There was also a memorable precedent in French history. Both the King of Morocco and the President of Tunisia had been invited to negotiate with France when they were in French hands.

Mr. Shukairy set four principles behind which, he said, UN must stand:

"(1) We have to view the problem as belonging to a people, not to individuals, and to a territory forming one unity. We should not agree to divide the people or to partition their homeland. (2) The United Nations must voice unreserved support for the principle of self-determination as an inherent right of the people of Algeria, (3) The United Nations must urge the two parties to enter without delay into negotiations or conversations with a view to agreeing on the political and military terms of a cease-fire. (4) The United Nations should urge that the two parties must reach agreement on the guarantees that will enable the people of Algeria to express their will under conditions of complete freedom and democracy."

Afro-Asian Resolution:

After the several delegations had presented their points of view, U Thant (Burma) introduced a resolution on behalf of 21 Asian and African countries.

The resolution urged French and Algerian representatives to enter into informal discussions to determine conditions necessary to give the Algerian people the right of self-determination as early as possible. Such discussions should lead to a cease-fire.

It also noted with satisfaction that the two parties had accepted the right of self-determination as the basis for a solution of the Algerian problem.

Introducing the resolution, U Thant said that the primary concern of its sponsors was to help France by helping the Algerian cause.

In the debate on December 3, 1959, the delegate of Ghana, Mr. Alex Quaison-Sackey, said that the Algerian situation was causing concern to UN members as untold suffering was being inflicted on the Algerian people.

Mr. Ali Suleiman (Iraq) said that countless lives would have been saved if France had recognized Algeria's right to self-determination from the very beginning.

Mr. Abdul Rahman Pazhwak (Afghanistan) said that both parties should be encouraged to arrive at a peaceful settlement of the problem. This argument was supported by Mr. Nong Kimny (Cambodia).

Before the Committee adjourned for the day, it was announced that Malaya had also joined in sponsoring the draft resolution.

The following day (December 4, 1959), Mr. R. Venkataraman (India) told the Political Committee that it was somewhat surprising that the French Government should refuse to negotiate with the nominees of the Algerian "Provisional" Government because those persons happened to be in French detention and not fighting in Algeria.

He cited India's experience in its independence movement and said: "Not only were the British prepared to negotiate with the leaders who were then in jail but they were also prepared to release them without conditions to enable them to conduct the discussions in liberty. The spirit which animated this grand gesture found ready response among the nationalist leaders. There were several such occasions in our history and on each occasion the British accepted the claim of the people of India that our leaders who were in detention should be the ones with whom the British authorities could negotiate."

He said he was sure everyone would agree that nothing should be done in UN that would in any way endanger the chances of the parties concerned getting together as early as possible. India was one of those countries which would not do anything either in United Nations or outside which would in any way hamper the peaceful solution of problems.

But after examining the resolution before the Committee, India felt convinced that it contained nothing to which either the French or the Algerians could take exception. France had a glorious record of helping dependent peoples to grow to freedom and independence, and India was sure that the same spirit would animate French dealings with Algeria.

He appealed to the French Government to accept the objectives underlying the resolution in the same spirit in which the authors offered it.

Mr. Arkady Sobolev (USSR) said that the French proposals could play an important role in an Algerian settlement if they were bolstered by concrete measures to secure accommodation of mutual interests.

He said that Gen. Charles de Gaulle's offer of self-determination and the response by Algerian nationalists meant that for the first time in many years, actual steps had been taken towards settling the problem by peaceful means.

He added that there were possibilities now of a swift settlement, and it was the duty of UN to contribute in all ways to the attainment of a peaceful and just solution.

Mr. H. F. Cooper (Liberia) said that it was futile to try to thwart the rights of the people to self-determination by arguing that this was a domestic matter for France.

Prince Aly Khan (Pakistan) said on December 5, 1959 that his delegation believed that guarantees for the application of self-determination were as necessary to a just solution of the Algerian problem as a cease-fire and a referendum was necessary to a peaceful and democratic solution.

Dr. Mahmoud Fawzi (UAR) said he hoped that the General Assembly would assume its full responsibilities and not be deflected by manoeuvres derived from reactionary trends and alliances.

Mr. D. Vidicof (Yugoslavia) observed that the basis for a solution of the Algerian problem by peaceful means with the application of the right of self-determination had been accepted by France and Algeria. All that now remained to be solved were the conditions for self-determination and the necessary safeguards and guarantees for a cease-fire. These could be settled only by means of negotiation.

Mr. Omar Abdel Hameed Adeel (Sudan) told the Committee on December 7, 1959 that his Government had never agreed with the argument that Algeria was a domestic matter for France.

He said that Gen. de Gaulle had taken a bold move in declaring that the Algerians had the right of self-determination. "But we must confess that General de Gaulle's proclamation of September 16, 1959 contains so many flaws that it tends to rob it of much of its content." There was a threat to partition Algeria. But Algeria was a national entity, and any suggestion of partition would be unacceptable.

Another flaw was the fact that the choice made by the Algerians would have to be endorsed by the French people.

He added that despite these flaws Gen. de Gaulle's proclamation was to be welcomed because it accepted the principle of self-determination.

Mr. Ahmed Shukairy (Saudi Arabia) criticized Western delegates who had urged the Committee to adopt no resolution on Algeria in 1959.

Noting the advice of the Australian delegate, Mr. James Plimsoll, that a resolution unacceptable to France would not be helpful, Mr. Shukairy said that this was "highly dangerous advice." Were the United Nations to accept it, it would have to abandon its responsibilities, for in any dispute there was always a party resisting UN intervention.

Commenting on French objections to the draft resolution, he said that the resolution was not intended to "elicit recognition of the Algerian Government by the United Nations or France". A vote for the resolution should in no way be constructed as recognition of the "Algerian Government". A vote against the resolution would dim the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

prospects of peace. "No resolution means no pourparlers. It means no cease-fire. It means no peace."

Resolution Adopted By Political Committee:

At the end of the debate on December 7, 1959, the Political Committee adopted the Afro-Asian resolution urging the "two parties" to the Algerian dispute to begin as early as possible informal discussions about conditions for self-determination and for a cease-fire.

The vote was 38 to 26, with 17 abstentions. This left the fate of the resolution in doubt when it goes before the General Assembly.

In the General Assembly it needs a two-thirds' majority for endorsement. Abstentions do not count as votes.

According to a dispatch from UN Headquarters, intensive lobbying by the French delegates outside the Assembly chamber and by French envoys in key capitals of the world was reflected in the vote.

The French objected to the phrase "two parties" to the dispute, because they considered that this gave United Nations' sanction to the Algerian Nationalist movement and that there were, in any case, more than two parties to it.

The French also took strong exception to the bid to link the political aspects of the problem with the question of a cease-fire, which was all that Gen. de Gaulle had offered to discuss initially with the Algerian representatives.

Amended Resolution:

When the Afro-Asian resolution failed to get the required two-thirds' majority in the Committee to ensure its passage in the General Assembly, the sponsors met and produced an amended resolution.

The operative part of the original resolution urging the two parties to the Algeria dispute to enter as early as possible into informal discussions on conditions for self-determination and a cease-fire was substituted by the following paragraphs:

"The General Assembly recognizes the right of the Algerian people to self-determination:

"Urges the holding of pourparlers with a view to arriving at a peaceful solution on the basis of the right to self-determination in accordance with the principles of the Charter of the United Nations."

Several delegations to which the proposed amended resolution was shown were said to have expressed serious reservations about it. Much was said to hang on the attitude of the Latin American nations.

Debate In General Assembly:

The General Assembly took up the Algerian question with two resolutions before it on December 12, 1959.

One, submitted by its main Political Committee, would urge that the 'two parties' to the dispute enter 'as early as possible' into informal discussions on conditions for self-determination and for a cease-fire.

The other, sponsored by Pakistan, Chairman of the Afro-Asian Group for December, 1959, would have the Assembly recognize the right of the Algerian people to self-determination and would urge the holding of pourparlers with a view to arriving at a peaceful solution on the basis of the right to self-determination in accordance with the principles of UN Charter.

Dr. Mario Amadeo (Argentina) said that there was nothing in the new version (the one sponsored by Pakistan) which could directly or indirectly impair the honour and interests or offend the sensibilities of France.

U Thant (Burma) said that his country believed that the Assembly's deliberations should end with a positive conclusion on the Algeria question.

He said that passage of this helpful and conciliating resolution alone could, once and for all, shut the doors of UN to the very distressing item of Algeria.

Sir Claude Corea (Ceylon) said that the Algerian conflict had a world-wide significance. Ceylon's sympathies went to both the people of Algeria and France.

Mr. R. Venkataraman (India) said that India could not accept the argument that there should be no resolution on this or any other difficult problem. It was the right and duty of the Assembly to give its guidance.

Sir Pierson Dixon (UK) said the British Government's view was that a resolution on Algeria could only do harm, and Britain would vote against Pakistan's resolution.

Mr. Rishikesh Shaha (Nepal) said that the amended resolution contained no element which the overwhelming majority of the Assembly had not approved in the past in some form or other.

The Assembly then began a paragraph-by-paragraph roll-call vote on the Pakistan resolution.

Amended Afro-Asian Resolution Rejected:

The amended Afro-Asian resolution was rejected by the Assembly. It failed to get the required two-thirds' majority. The vote was 39 in favour and 22 against, with 20 abstentions.

The Assembly also rejected recognition in the resolution of 'right of the Algerian people to self-determination'.

Both the operative paragraphs of the amended resolution had been adopted separately by the required two-thirds' majority when they were put to vote paragraph by paragraph. But the Assembly declined to endorse them in the resolution as a whole.

Observers at UN said that they could not immediately recall a precedent for this action. Customarily, adoption of separate paragraphs of a resolution presaged its endorsement as a whole.

The vote on the entire resolution meant that it failed to get adoption by two votes.

The Algerian Nationalist delegation which was in New York to watch the debate blamed "manoeuvres and pressures of the Atlantic Coalition" for the defeat of the resolution.

They said that these "pressures and manoeuvres" could only strengthen their conviction that there could not be and would not be a cease-fire in Algeria without an agreement between the two parties on the conditions and guarantees of implementation of the Algerian people's right to self-determination.

A French spokesman said that the Algerian Nationalist movement had suffered a definite defeat.

Mr. Henry Cabot Lodge (USA) explained why he had not voted for the resolution.

He said that his country believed that notwithstanding the modifications made in the original resolution, it was not likely to be helpful in attaining an early and hopeful solution. "The resolution embodies two principles of fundamental importance—the principle of self-determination and the principle of seeking solution to difficult problems through peaceful means. These principles we strongly endorse".

Formation Of "Free Algerian Government":

A "Free Algerian Government" was proclaimed in Cairo on September 19, 1959 by the Algerian rebel leaders. It was immediately recognized by Iraq and UAR.

The Prime Minister of the "Free Algerian Government", Mr. Ferhat Abbas, formally declared the setting up of the new Government at a crowded news conference.

The new Government, he said, would provisionally have its headquarters in Cairo. The flag of the new Government would be green and white with a crescent and a star.

Within minutes of the announcement on the formation of the new "Government", its Information Minister, Dr. Mohammed Y. Azad, declared: "Algeria is at war with France."

He said that there were several Governments which refused to recognize that there was a war in Algeria. "I hope they will now recognize it."

The Government would be responsible to a 52-member Council of the National Algerian Revolution.

Two Ministers of the "Free Algerian Government", Dr. Francis and Dr. Mohammed Y. Azad, called on the Indian Ambassador in Cairo, Mr. R. K. Nehru, late at night on September 18, 1959 to present documents to him about the new Government.

Gen. de Gaulle's Offer To Algerian Nationalists:

On September 16, 1959, the President of France, General Charles de Gaulle, made a "political offer" to the Algerian nationalists.

He said that the Algerians would be free to choose integration with France, or secession from France, or internal autonomy within the French Community.

In case of secession, France would have to endorse the arrangement. Self-determination by the Algerians of their future could not take place until there was peace in the land.

In a television interview in New York on October 11, 1959, the French Foreign Minister, M Maurice Couve de Murville, said that France was willing to discuss a cease-fire in Algeria with the Algerian Nationalist leaders.

On November 20, 1959, the Algerian "Provisional Government" issued a *communique* in Tunis assigning to Mr. Mohammed Ben Bella, Mr. Hocine Ait Ahmed, Mr. Mohammed Boudiaef, Mr. Rabah Bitat, and Mr. Mohammed Boudiaef, Mr. Rabah Bitat and Mr. Mohammed Khider, in French custody, the task of starting talks with the French Government.

Mr. Mohammed Ben Bella is a military leader captured and Deputy Minister in the "Provisional Government". The other four are Ministers of State.

Mr. Ben Bella, Mr. Khider, Mr. Ahmed and Mr. Boudief were captured by the French authorities in October, 1956, when their aircraft was intercepted while flying from Morocco to Tunis. Mr. Bitat was captured separately.

The *communique* said that there could not be a cease-fire without an accord on the guarantees of a healthy application of the principle of self-determination.

If the French Government agreed to the principle of the meeting with the five Algerian leaders, the "Provisional Government" would send immediately a mandate to its delegates and the necessary instructions for the accomplishment of their mission.

Officials at the French Prime Minister's office in Paris on November 20, 1959 made clear that the insur-

B. **UN General Assembly Resolution On Korea:** A resolution submitted in the UN Political Committee by Britain, the United States and 12 other nations (Korean war allies) on November 24, 1959 expressed regret at the non-co-operation of the communist authorities in seeking the re-unification of Korea through free elections.

In the debate on November 24, 1959, the UK delegate rejected the communist plea that since the Chinese "Volunteers" had been withdrawn from Korea, UN forces should also withdraw.

He said that UN forces were in Korea legally as custodians of the right of the Korean people to unity and independence.

The Political Committee had before it the report of the United Nations Commission for the Unification and Rehabilitation of Korea (UNCURK).

On November 23, 1959, the Political Committee had turned down a proposal that a North Korean representative be invited to take part in the debate.

An American resolution to invite South Korea only was approved by 49 votes to 30, with 15 abstentions.

On November 24, 1959, Mr. I. I. Tugarinov (USSR) said it was no accident that each year resolutions were imposed on United Nations in which solutions were proposed contrary to the will of the people.

He said: "Can one consider seriously that voting before the muzzles of foreign cannon will really be free? Every right-thinking human being will find it clearly that the Government of North Korea can never agree to such preposterous demands."

The presence of foreign troops in Korea was a hurdle which must be removed before any solution could be found. The activities of the UN Korean Commission were at variance with the aim of unification, and should be abolished. He called for the withdrawal of all foreign forces from Korea.

Mr. Visutr Arthayukti (Thailand) said the Korean Commission's report revealed that the Republic of Korea (South Korea) had grown in strength.

Speaking in the discussion on the report of the UN Commission for the Unification and Rehabilitation of Korea, the South Korean Foreign Minister, Dr. Chung W. Cho, told the Political Committee on November 25, 1959 that the unification of Korea was the oldest problem of its kind in the world today.

The Political Committee had before it a 15-Power draft resolution re-affirming the United Nations' objective of attaining a unified, independent and democratic Korea under a representative government.

It also called for the early holding of genuinely free elections.

Dr. Cho, who was invited to participate in the debate, said: "If there is to be a resolution of global tension and conflict, what better place to start it than in Korea?

"We have differences with the Soviet Union, but that should not preclude unification of Korea any more than it prevents the independent existence of other neighbouring countries of USSR.

"I submit that if the communists anywhere, at any time, ever had the intention to trust their cause to the free competition of fair discussion, multiple party nominations and the secret ballot, then they should not and could not shrink from the test in the northern part of Korea."

He said that economic difficulties had been forced on South Koreans by the "unnatural division" of the country.

He demanded the unconditional withdrawal from "our territory of all the aggressive invading troops from communist China."

The Indian delegate, Mr. H. Dayal, said he regretted that the Committee would not hear a representative of the North Korean Government.

He said: "There is nothing in the Commission's report to cause to hope that the lines on which we are proceeding will lead to an early realization of the common objective of us all. We are convinced that the future of Korea cannot be effectively discussed, still less can solutions for the present division and difficulties be found in the absence of the Government responsible for more than half the area and nearly a third of the population of Korea.

"We are equally convinced that no solution is likely to come out of a simple reiteration of previous resolutions of the General Assembly."

He said that the withdrawal of troops from South Korea might be helpful to progress. The country must be treated as a whole and the unnatural division must be eliminated.

He observed that India could not support the resolution, nor could she support any proposals that "might have the effect of freezing the present division of Korea". A solution would only be found when Korea ceased to be an item in the "general complex of Great Power disagreement in East Asia and throughout the world".

Political Committee Adopts Resolution:

The Political Committee adopted the resolution on November 27, 1959 recommending that the General Assembly call for genuine free elections at an early date in divided Korea.

Forty-nine States voted for the draft resolution and 19 countries, including India, abstained. With the exception of Britain and Yugoslavia, all the abstentions were cast by members of the Afro-Asian Group. Nine Soviet bloc countries voted against the resolution.

A number of Afro-Asian delegates declared that while they were in sympathy with the aims of United Nations in Korea, they felt that the resolution did not contain any new approach to the problem.

For instance, Dr. Ali Sastroamidjojo (Indonesia) said that year after year United Nations had stated its objectives in regard to Korea. The first step must be to create a climate of conciliation.

He said: "We have heard that everything is wonderful in one part of Korea and horrible in the other. Can there really be unification in this type of atmosphere?"

General Assembly Passes Resolution:

On December 9, 1959, the General Assembly called on the "communist authorities concerned" to agree to holding "free elections" in Korea at an early date.

Passed by 54 votes to nine, with 17 abstentions, the resolution also re-affirmed the Assembly's intention of bringing about by peaceful means a unified, independent and democratic Korea under a representative form of government.

It also asked the "communist authorities concerned" to accept this objective and asked the UN Commission for the Unification and Rehabilitation of Korea to continue its work.

C. **UN Security Council, Economic & Social Council And World Court—Expansion Of Membership Postponed:** A debate on the question of amending the UN Charter to provide for increasing the membership of the Security Council and the Economic and Social Council and the number of Judges of the International Court of Justice began in the UN Political Committee in the middle of October, 1959.

The Security Council has now five permanent members—Britain, United States, France, Soviet Union and Kuomintang—and six elected members.

The Economic and Social Council has 18 members, including the five permanent members.

Mr. Harold Beeley (UK) told the Special Political Committee on October 15, 1959 that Britain would support proposals for a reasonable addition to the membership of both the Security Council and the Economic and Social Council.

Mr. C. S. Jha (India) said that an expanding world organization like UN had a static composition of principal organs. This inevitably gave rise to unhealthy pressures.

He said that gross under-representation of Asian and African States meant over-representation of other areas. Since the Security Council was concerned with the maintenance of international peace and security, geography played an important part. Large parts of the world could not be left unrepresented.

He added that India favoured expanding the members of the various Councils, but it realized that unless there was Great Power unanimity, no revision of the Charter to enlarge membership would come about.

Mr. Leon A. Guerrero (Philippines) suggested that Asian and African countries be invited to participate in the discussions of the Economic and Social Council but without a vote.

He cited Article 69 of the Charter which allowed the Economic and Social Council to invite any member of UN to participate, without vote, in its deliberations on any matter of particular concern to that nation and pointed out that Asian and African countries had the most interest in economic development, yet they were denied their proper vote in ECOSOC.

He appealed to the Soviet bloc of nations to confine their stand on China's admission to the question of expanding the Security Council only.

On October 17, 1959, Mr. Zaiton Bin Ibrahim (Malaya) rejected the argument that no move could be made to increase the membership of the principal organs of United Nations without the participation of China.

Sir Claude Corea (Ceylon) said that it was the prevailing sentiment of the great majority of members

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

that the membership of the two bodies be increased.

As any revision of the UN Charter would require the endorsement of the five permanent members of the Security Council, he said, he could do no more than to appeal to the Soviet Union to consider whether it could move away from the rigidity of its position to make some amendment of the Charter possible.

Mr. Turguet Menemencioglu (Turkey) told the Committee on October 19, 1959 that United Nations should give top priority to the matter of increasing the membership of the Security Council and two other bodies—the Economic and Social Council and the International Court of Justice.

He pointed out that in the very near future a number of new States would be joining United Nations. Steps should be taken to ensure that new-comers were allowed to participate fully in the work of United Nations.

Mr. Rafik Asha (United Arab Republic) said that he shared the views of the Afro-Asian Group of the member-States that the membership of the two Councils should be increased.

He added: "These two great continents of the world are inadequately represented in these two Councils."

Afro-Asian Bid To Defer Enlargement Of UN Bodies:

On October 21, 1959, several States of Africa and Asia decided to postpone for a year their efforts to have the Security Council and the Economic and Social Council enlarged.

A draft resolution co-sponsored by Afghanistan, Burma, Cambodia, Ceylon, Ghana, Indonesia, Iraq, Jordan, Lebanon, Libya, Pakistan and Saudi Arabia was tabled in the Special Political Committee.

Tabling the resolution, Sir Claude Corea (Ceylon) said that because it was impossible to make progress at the present session, the sponsors wanted to postpone the question till the next session in 1960.

He added that the great majority of the UN member-States were in favour of the expansion of UN organs and the need to give the Afro-Asian countries a stronger voice.

The Afro-Asian resolution was tabled to counter a Latin American proposal that the General Assembly appoint a Good Offices Committee to try to break the deadlock, which has for years prevented the expansion of the Councils.

The Soviet Union, whose assent as a permanent member of the Security Council is essential, refused to consider the necessary alteration in the UN Charter until China was admitted to United Nations.

Speaking in the Special Political Committee on October 21, 1959, Mr. Arkady Sobolev (USSR) said that Russia could not and would not agree to a review of the Charter under the existing circumstances.

On October 23, 1959, El Salvador sponsored a resolution proposing the establishment of a Good Offices Committee for the purpose of obtaining agreement among the Big Five Powers on increasing the membership of the UN Security Council and other Committees.

Mr. C. S. Jha (India) said that any Charter amendment to allow for increased membership of the three bodies would require the agreement of all the five permanent members of the Security Council.

He said: "The creation of a Good Offices Committee would be tantamount to applying a degree of pressure on the Soviet Union. The key to the whole question is persuasion and not pressure."

Mr. Rafik Asha (UAR) said that he too would support the Afro-Asian draft resolution.

On October 26, 1959, Japan and France declared themselves to be in favour of establishing a Committee to seek agreement among the Big Five Powers on amending the UN Charter to allow an increase in the membership of three of its principal organs—the Security Council, the Economic and Social Council and the International Court of Justice.

India and Ceylon, however, re-iterated their opposition to establishing a special Committee to seek agreement among the Big Five Powers. They simply asked that the question be postponed until 1960.

Both these countries rejected a suggestion by Dr. Rafael Uruquia (El Salvador) that the sponsors of the Afro-Asian draft appeared to be suffering from amnesia by forgetting that they had themselves suggested in 1956 the establishment of a Negotiating Committee of the type envisaged by El Salvador.

Decision By Political Committee:

The Special Political Committee decided on October 28, 1959 to defer action to increase the membership of the three UN organs until the 1960 session.

The vote was 47 in favour and 25 against. There were 10 abstentions.

The Committee decided to establish a body composed of five States "to study the possibility of arriving at an agreement which will facilitate the amendment of the Charter so as to increase the membership" of the three UN organs.

UN Assembly Agrees To Postponement of Question:

The UN General Assembly agreed on November 25, 1959 to postpone for a further year any expansion of the Security Council.

It also postponed the question of increasing the membership of the Economic and Social Council and the number of judges of the World Court.

The vote was 48 in favour of postponement, 10 against and 22 abstentions.

[Prev. ref. 2427:AOA:L, 3045:AOA:P]

D. **UN General Assembly Resolution On Treatment Of People Of Indian Origin In South Africa:** On December 7, 1959, India again accused South Africa in the UN Special Political Committee of flouting the UN General Assembly resolutions by refusing to negotiate with India and Pakistan on the treatment of half-a-million people of Indian and Pakistani origin in South Africa.

The debate arose from the General Assembly resolution of 1958 which appealed to South Africa to enter into negotiations with India and Pakistan, invited the member-States to use their good offices to bring about negotiations and asked the parties concerned to report to the Assembly regarding any progress that might be made.

The Indian delegate, Mr. M. Govinda Reddy, told the Committee that since the 1958 resolution, the Government of India had written to the Government of the Union of South Africa, both through South Africa's Permanent Representative at UN and her High Commissioner in London, offering negotiations without prejudice to the juridical stand of the different parties to the dispute and that no reply of any kind had been received to these communications.

Every speaker who took part in the discussion on December 8, 1959 condemned South Africa's racial policies and her failure to negotiate with India and Pakistan.

The United States was no less strong than the other delegations in condemning South Africa.

A 10-nation resolution renewing the appeal to South Africa to open negotiations with India and Pakistan was introduced in the Special Political Committee.

On December 9, 1959, Lord Birdwood (Britain) said that India seemed to suggest that the United Kingdom still retained certain obligations regarding the Capetown Agreement of 1927.

He said: "Whatever the particular status in international law of the outcome of the discussions which took place at various times between the representatives of the Indian and South African Governments, I should like to make it clear after very careful study that we are satisfied that the United Kingdom has no longer any obligations from that outcome, if it ever had them."

Mr. M. Govinda Reddy replied that he had not suggested that Britain had any legal or constitutional obligations in the matter. "All I meant was that the United Kingdom has a moral obligation to help solve this question."

Explaining his vote, Lord Birdwood said that Britain retained genuine doubts regarding the competence of the Assembly to intervene in the question. "Even if these doubts did not exist, however, we are far from convinced that further discussion in the United Nations has really brought any nearer to solution a problem which has now been discussed here for so many years without result. I would certainly not wish the United Kingdom Government's general attitude to this matter to appear unhelpful or ungracious."

Mr. M. D. Yakovlev (USSR) said that the South African racial policies were in flagrant conflict with the United Nations Charter.

Mr. Rafik Asha (UAR) said: "If the volcano has not erupted in South Africa, it is because the people of that country have not lost faith in United Nations."

Political Committee Adopts Resolution:

The General Assembly's Special Political Committee renewed its appeal to South Africa on December 9, 1959 to enter into negotiations with India and Pakistan on the question of the treatment of people of Indian origin in South Africa.

A resolution containing the appeal was adopted by 58 votes to none, with 10 abstentions.

The vote was taken by a show of hands. Britain indicated before the vote that she would abstain.

The resolution would have the Assembly regret deeply that the Government of South Africa had not replied to the communications from the Governments of India and Pakistan on the subject.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

This provision was adopted in a separate vote by 57 to none, with 12 abstentions.

A separate vote on the paragraph appealing to South Africa to enter into negotiations resulted 57 to none, with 12 abstentions.

A clause inviting the member-States to use their good offices to bring about negotiations was adopted by 58 to none, with nine abstentions.

The parties were invited to report, jointly or severally in 1960 on any progress that might be made. This provision was adopted by 60 to none, with six abstentions.

The Committee adopted the resolution as a whole by 58 votes to none, with 10 abstentions. Fourteen countries were absent when this vote was taken.

General Assembly Passes Resolution:

The General Assembly adopted the resolution on December 10, 1959.

The vote was 66 to none, with 12 abstentions. Four countries were absent.

The resolution was similar to the one adopted by the Assembly in 1958.

The abstaining countries were: Australia, Belgium, Canada, Kuomintang, Dominican Republic, Finland, France, Luxembourg, Netherlands, Portugal, Spain and Britain.

Almost all the Latin American countries voted for the resolution. Among other countries which voted for it were: Denmark, Greece, Iceland, Ireland, Italy, New Zealand, Norway, Sweden and the United States.

[Prev. ref. 3043:AOA:G]

E. UN General Assembly Extends UNRWA Mandate: Speaking in the debate on the problem of Palestine refugees in the UN Special Political Committee on November 19, 1959, Mr. C. S. Jha (India) urged the continuance of the United Nations Relief and Works Agency (UNRWA).

He said that not only on the basis of human considerations was continuance of the Agency justified and desirable but also because it had helped to maintain a climate in which forces "that can and will solve the problem in its various aspects" could operate. (The present mandate of UNRWA is due to expire on June 30, 1960).

Mr. Jha emphasized that the problem could not be treated in isolation and purely in terms of economic rehabilitation; it was an inseparable element of the whole West Asian situation. If it were merely a question of resettling a million refugees in certain areas, the problem, though onerous, would not have been of such difficulty and severity. India had succeeded in settling and re-integrating nearly 9,000,000 refugees who came to India—some still coming—as a consequence of Partition.

He said: "If we are to believe the numerous and successive reports of the Directors of the Agency (UNRWA) and all observers, the Palestine refugees are unreconciled to their plight and continue to display by and large an intense longing and determination to return to their homelands, now part of Israel. The Israeli representative had said that past UN resolutions did not confer on the refugees the unconditional right to return. Varying interpretations are possible on any formal document and we have no desire to enter into any legal argument. The plain meaning of the resolutions seems to us to indicate that it was clearly the intention of UN that the refugees should be given the choice either of returning or not returning to their homes with compensation for loss or damage to property and that whatever choice they made should be respected."

Recalling India's efforts to avoid the partition of Palestine, he pointed out that India had striven for the establishment of a federated Arab State with autonomous Arab and Jewish regions in Palestine. "We shall never cease to regret that this proposal did not find favour. We believe it would have been the wisest solution that would have preserved peace and stability in West Asia and saved us from facing the problem of the Palestine refugees and many other headaches."

Dr. Ali Sastroamidjojo (Indonesia) urged the Committee to re-affirm the validity of the 1948 resolution dealing with repatriation or compensation.

In the General Assembly on November 23, 1959, Pakistan and Indonesia jointly sponsored a draft resolution asking for extending the mandate of UNRWA by five years.

Later, the five-year period was amended to three years.

During the discussion of the Indonesian-Pakistan resolution on November 26, 1959, Dr. Conor Cruise O'Brien (Eire) offered UN a stage-by-stage plan for solving the 11-year-old problem of the 1,000,000 Palestine Arab refugees.

Dr. O'Brien said that a limited number of refugees could be permitted to return to their homes in Israel to "take stock" of the situation. These refugees could then be encouraged to return to the refugee camps to give an account of their new life to those of the refugees who had remained behind. "In this way, a knowledge of actual conditions in Israel would gradually permeate the refugee camps."

If, as a result, there appeared to be a substantial demand for compensation from Israel for properties the refugees had left behind, a compensation-payment programme should be launched with the full weight of UN behind it.

M Pierre de Vaucelles (France) said that his delegation was gratified that UNRWA had, during 1959, not only managed to maintain its level of assistance to the refugees but had actually been able to improve living conditions, educational and vocational training in the refugee camps.

He said that the French Government, for many years, had set aside, in addition to its contribution to UNRWA, about 10,000,000 francs for providing fellowships to refugees. Unfortunately, an extremely disquieting problem remained—that of UNRWA's limited resources. France regretted that only three major Powers had had to assume about nine-tenths of the burden of supporting UNRWA. France planned to raise its own contribution to 100,000,000 francs in 1959 from 60,000,000. France hoped that other Governments would follow suit. (USA, Britain and Canada are the three main contributors to UNRWA.)

He believed that it would be unwise to transfer UNRWA's responsibilities to some other agency, and United Nations could not now abandon the 1,000,000 refugees. Therefore, UNRWA's work must continue.

In the debate on November 27, 1959, Mr. Taib Salim (Tunisia) said that the refugee problem was closely linked with all the political problems which made the Arab world a region of unrest and instability.

[UNRWA, established ten years ago and supported by voluntary contributions, had been the main means of channelling aid to the 1,000,000 Palestine Arabs who fled to neighbouring Arab countries during the 1948 Arab-Israeli conflict.]

Mr. Arkady Sobolev (USSR) said that any failure to make progress towards a solution of the problem could only add to the misgivings of those who cherished peace in West Asia.

India's Contribution:

Mr. Harishwar Dayal (India) announced on December 10, 1959 an Indian Government contribution of Rs. 100,000 to UNRWA.

He told a Special Pledging Conference for Refugee Aid Funds at UN Headquarters that the Government of India, out of its resources, had cared for its own refugees who had recently been "augmented by some 13,000 new (Tibetan) refugees who have entered our northern borders."

Speaking for Israel, Mr. Michael Comay said he wanted to point out that the new draft resolution represented a compromise on which Israel was not consulted and to which Israel was not a party.

Political Committee Agrees To Extension:

The Special Political Committee recommended a three-year extension of the mandate of UNRWA on December 8, 1959.

The vote was 71 in favour of the resolution, with none against and one abstention.

The vote was on a joint Pakistani-Indonesian resolution, asking the Assembly to extend UNRWA's mandate from June 30, 1960 (when the current mandate expires) and to review the Agency's relief operations again in two years.

The draft also asked the Assembly to reactivate the long-dormant Palestine Conciliation Commission and to direct that body to seek the repatriation of the Arab refugees to Israel or to seek Israeli compensation for them.

It would also have the Assembly appeal to member-States for more and bigger contributions for UNRWA's work.

General Assembly Agrees To Extension:

The UN General Assembly agreed without debate on December 9, 1959 to extend the mandate of the UN Relief and Works Agency for three years from June 30, 1960.

There was no negative vote against the proposal. Eighty members voted for the resolution. Israel abstained.

The resolution embodying the proposal also called on the Palestine Conciliation Commission to make further efforts to obtain the repatriation of the refugees or payment of compensation by Israel.

Israeli View:

The Israeli Prime Minister, Mr. David Ben-Gurion, said in Tel Aviv on November 27, 1959 that Israel was prepared to discuss a solution of the problem of the Palestine Arab refugees either directly with the Arabs or through a mediator.

He added that such a discussion could take place independently of peace negotiations, but they would have to be based on plans for re-settling the refugees in Arab countries.

The Israeli Foreign Minister, Mrs. Golda Meir, told a group of British journalists in Jerusalem on December 7, 1959 that Israel would not accept any of the Palestine Arab refugees.

She said that as a part of an overall Israeli-Arab settlement some Arab refugees might be allowed in under a scheme of reunion of families, but that was all, although Israel was prepared to pay compensation.

Explaining the reason for this, she said that those refugees who were children 11 years ago had in the intervening period been indoctrinated in their schools, through specially prepared text-books, to hate Israel and to aim at Israel's destruction.

If Israel accepted these refugees, she added, Israel would be committing suicide.

F. **UN General Assembly Takes No Action On Hungarian Delegation's Credentials:** The UN General Assembly formally decided on December 10, 1959, for the fourth successive year, to take no action regarding the credentials of the Hungarian delegation.

It did so by adopting by 72 votes to one (Hungary) with one abstention (Rumania) a recommendation by its Credentials Committee. Eight countries were absent.

Dr. Endre Ustor (Hungary) said that this "systematic abuse of the rules of procedure and discrimination against a member-State is illegal and discriminatory."

He added that it was quite obvious that the United States was behind the recommendation of the Credentials Committee.

(*The New York Times*)

[Prev. ref. 2798:AOA:B]

G. **End Of 14th Session Of UN General Assembly:** The United Nations General Assembly ended on December 13, 1959 after a traditional minute of silent prayer or meditation.

The Assembly had been originally scheduled to end on December 5, 1959 but pressure of outstanding business made it necessary to prolong the session by a week.

Closing the Assembly session, the President, Dr. Victor Belaunde (Peru), said that at the start of the session he had prayed to God that the session might go down in history as the assembly of peace, and the general feeling was that his prayer had been answered.

He said: "We have arrived at unanimous resolutions on disarmament, on outer space and on matters of the greatest importance relating to the social and economic order and to the sacred trust of trusteeship. The discussions, generally speaking, have been marked by objectivity and by praiseworthy moderation and dignity".

The other items which had aroused the keenest interest had been economic and technical assistance to the less-developed countries. "Our technical assistance programmes are inspired by the idea of fostering a sense of vocation, of encouraging effort, or in a word, mobilizing the energy of youth and, at the same time, directing them towards mastery over Nature and the zealous continuation of spiritual values."

He added that the increasing growth of population and the justifiable eagerness for a better life made it necessary to arouse in the new generation a zest for work and a pioneering spirit.

H. **Rocket To Record Radio Signals From Stars:** A four-stage rocket designed to record signals emanating from the stars was launched at Wallops Island (Virginia—USA) on December 22, 1959 by Canadian and US scientists.

The rocket carried a new X-248 engine as its fourth stage in an experiment to see how such an engine would work in the vacuum of space.

The US National Aeronautics and Space Administration (NASA) said that the rocket was set to reach a height of 560 miles. The rocket "went off good".

It was in flight for about 18 minutes and then came down in the Atlantic Ocean about 600 miles from Wallops Island.

The 48-lb pay-load of the rocket carried a three-megacycle radio-receiver to collect signals from the stars. These signals were telemetred back to Earth.

The vehicle was made up of an *Honest John* missile and two *Nikes* as well as the X-248 engine. It weighed 7,000 lbs at take-off.

(*The New York Times*)

[Prev. ref. 3046:AOA:U]

I. **Britain's "Zenith" Reactor Goes Into Operation:** The *Zenith* reactor at the British Atomic Energy Establishment at Winfrith Heath (Dorset) was put into operation for the first time on December 19, 1959.

It was announced that the final stages of commissioning the plant would be carried out in the next few months.

The *Zenith*, the first reactor to be built at Winfrith Heath, cost about £400,000. It will be first used to establish characteristics for a 20MW high-temperature, gas-cooled reactor experiment called *Dragon*, which is to be built at Winfrith.

An Agreement with the Organization for European Economic Co-operation provides for a joint research and development project over a five-year period from April 1, 1959, with headquarters at Winfrith.

[Prev. ref. 3042:AOA:D]

J. **A New World Speed Record For Jet Aircraft:** The United States Air Force claimed a new world record for one of its jet planes on December 16. 1959.

The aircraft achieved a speed of 1,521 miles an hour during a flight over California. This is nearly 38 miles an hour faster than the speed claimed by a Soviet fighter plane in October, 1959.

(*The New York Times*)

[Prev. ref. 2718:AOA:F]

K. **Another Nuclear-Powered Submarine Launched In USA:** The United States launched on December 20, 1959 another nuclear-powered submarine.

The submarine named *Scorpion* is 252 feet long. It was launched at the Groton Shipyard in Connecticut.

(*The New York Times*)

[Prev. ref. 2908:AOA:D]

L. **America's First Rocket Engine Powered By Liquid Hydrogen Fired Successfully:** The American Defence Department announced on December 6, 1959 that America's first rocket engine powered by liquid hydrogen had been successfully test-fired.

The engine, XLR 115, will boost the *Saturn*, the big rocket to be used to send a 12,000 lb. space probe to Venus or Mars.

The Defence Department said that the engine had been operated for several minutes at a time, starting and running under the same conditions it would meet in outer space when used as a booster.

The engine's thrust per pound of fuel per unit of time was 30 per cent greater than the present paraffin-fuelled rocket engines.

M. **India Elected To Administrative Council Of ITU:** On December 8, 1959, India was elected as the 101st member of the Administrative Council of the International Tele-communications Union meeting in Geneva.

This is a Specialized Agency of UN dealing with all international tele-communication problems—those concerned with telegraph, telephone and radio.

The new Council will direct the organization until the next Conference is held in Geneva in 1965. The other countries elected to the Council included the United States Canada, France, Italy, West Germany, Britain, Yugoslavia, the Soviet Union, the United Arab Republic, Japan and Iran.

The Conference, the governing legislative body of the 96-member ITU, meets in principle every five years and is the only body empowered to revise the International Telecommunications Convention, which governs the Union.

N. **International Lenin Peace Prize For Mr. Danilo Dolci Of Italy:** The International Lenin Peace Prize was presented in Rome on November 24, 1959 to the Italian leader and writer, Mr. Danilo Dolci.

Making the presentation, Mr. Ilya Ehrenburg, a member of the International Lenin Peace Prize Committee, said: "You have championed man's right to labour, peace and happiness. You have fought against enmity, for friendship among all people and all the nations. You are an old enemy of war. We can only admire a nation which creates and does not destroy, which loves but does not hate and which knows for sure that its olive groves are cultivated not to provide shelter for lethal weapons. I rejoice at presenting this Peace Prize to you at a time when mankind is full of great hopes."

Accepting the Prize, Mr. Dolci said: "I accept this Prize with the hope that by my future activity I shall be able to justify this great honour."

SPORT

A. **New All-India Golf Champion:** The All-India Golf Championship ended in Calcutta on December 27, 1959 in a triumph for Capt. P. G. Sethi who defeated John Forman by three and two in a thrilling 36-hole final after being two up at the half-way stage.

This was the first time in his career that Sethi had won the title. His form over the semi-final round was so consistent that he was strongly favoured to win the title.

Vol. VI No. 3

PAKISTAN

A. F-M Ayub Khan On Kashmir And Prospects Of Military Government In India: In an interview published in the *Reynold's News*, a Left-wing London Sunday newspaper, on December 20, 1959, the President of Pakistan, Field-Marshal Mohammed Ayub Khan, said that no military alliances with India could be considered by Pakistan until the Kashmir issue was solved.

He said: "Today, 85 per cent of the Indian Army is facing us. It has been built up against us. We have to keep on watching it.

"No amount of talking by Mr. Nehru can make us blink at the hard facts of life about Kashmir. He has got to be reasonable—his country's interests demand it.

"Kashmir is a matter of life and death to us. It is absolutely vital, because under the Canal Waters Agreement, we will be restricted to the use of three Western rivers only. Progress in (Pakistan) can only take place if we can conserve every single ounce of water. This is possible only in the hill areas of Kashmir."

India, he added, would be in a far better state to face China if Mr. Nehru's attitude towards Kashmir could be changed. "When I talk of mutual defence, I mean the solution of problems between us."

He was asked whether India would eventually have a military *regime* similar to Pakistan, and he replied that he believed that it was "inevitable." "As I read events in history, all the new countries in the East and Africa which are without strong armies and a strong civil service will remain in a mess for a long time."

A military *regime* had come to Pakistan before India because, when the Muslim League in Pakistan broke up, so many parties emerged that it was impossible to have a strong Government. "Please understand that when I talk of a strong Government, I do not mean dictatorship."

India had until recently been more fortunate. The Congress Party had remained strong, and they had a good leader in Mr. Nehru. Now, the Congress was in the process of breaking up and there was no likelihood of another powerful Party arising, except perhaps the communists. "When that happens, they will face the same difficulties that made a military *regime* necessary in Pakistan. We got our independence in order to live a decent life—to progress. Our creative energies can only be fully released if we have reasonable freedom and security. To have these conditions, we must have a representative form of Government but of a type that does not permit quick changes of power."

A Denial Of Statement:

On December 22, 1959, however, F. M. Ayub Khan denied that he had predicted "a military take-over in India."

The following statement was issued by the President's Public Relations Officer:

"A section of the Press in Pakistan has reproduced the account of an interview which the President of Pakistan gave to a special correspondent of *Reynold's News*. The manner in which this interview has been presented is likely to give an impression that the President thought that India was bound to get a military *regime*. This presentation is not correct.

"While analyzing the circumstances leading to the Revolution in Pakistan, the President had juxta-posed the collapse of the Muslim League in this country with the stresses and strains which are now visibly bearing down on the Congress Party in India.

"He was of the view that if the Congress Party broke up, India would face the same difficulties that confronted Pakistan before the Revolution. Whether or not India will have a military *regime*, as a result, is a matter for journalistic speculation and must not be attributed to the President."

Interview With "Le Monde":

F-M Ayub Khan also referred to Kashmir in another interview he gave to the Paris newspaper *Le Monde* on December 19, 1959.

He told that paper that "Kashmir was a question of life and death for Pakistan."

He said: "There should not be any military problem between India and Pakistan, for the Indo-Pakistan sub-continent is very vulnerable. If the Kashmir question is not settled, it would bring ruin on India and Pakistan. Both countries would lose their independence over it.

"Not only are we joined with the Muslim populations of that province, not only does the Kashmir territory present a vital interest for us and our allies from a strategic point of view, but most of the water courses on which our existence depends have their sources in Kashmir.

"We are doing our utmost to bring the Indian leaders to understand our point of view, and we believe that President Eisenhower, for his part, was able to discuss the question in New Delhi."

B. World Bank Team Discussion On Construction Of Canal Water Replacement Works: The first round of discussions between the World Bank team and the West Pakistan Water and Power Development Authority ended in Lahore on December 15, 1959.

Discussions on that day (December 15, 1959) mainly revolved round the engineering details of the Canal Water replacement works to be constructed in West Pakistan.

The World Bank team, headed by Mr. S. Eldewereld (Holland), was in Pakistan to assess the financial and technical capacity of Pakistan to accomplish the plan for the construction of replacement works and link canals.

The following day (December 16, 1959), the team left for Rawalpindi.

The team was composed of financial and engineering experts.

On December 16, 1959, the World Bank team discussed with the Pakistan Finance Minister, Mr. M. Shoaib, details connected with the preparation of a plan for the construction of the Canal Waters replacement works.

The leader of the team, Mr. S. Eldewereld, told newsmen in Rawalpindi that the discussions were "progressing well."

From Rawalpindi, the World Bank team returned to Lahore on December 16, 1959 to continue discussions with the West Pakistan Water and Power Development Authority.

Answering questions at a reception held in Lahore on December 14, 1959 in honour of the team, the Chairman of the West Pakistan Water and Power Development Authority, Mr. S. Faruque, said that the Mangla Dam proposed to be constructed in Kashmir territory had been included in the Pakistan plan for the construction of replacement works.

He said he was thinking of re-designing the blue-print of the Mangla Dam so that it could be completed in five years instead of eight years as originally scheduled.

[The Mangla Dam, to be constructed on the river Jhelum, is estimated to cost Rs. 1,400,000,000].

Mr. S. Eldewereld told newsmen in Lahore on December 18, 1959 that the team had approved Pakistan's plan for the construction of the replacement works.

He said that the cost of the works to be built with foreign aid would be $1,000,000,000 and described the plan as the biggest ever taken up by the World Bank.

Implementation of the plan would begin as soon as the proposed Treaty between India and Pakistan on the use of the Indus Basin waters was signed. The plan would be embodied in the Treaty.

He could not indicate the exact time when the Treaty would be finalized and signed, but he expressed the hope that it would be early in the New Year (1960).

The replacement works were to be completed in ten years. A team of World Bank experts would be stationed in Pakistan to maintain close contacts with the Pakistani authorities during the period of the construction.

The World Bank team left Pakistan on December 19, 1959.

C. Wheat Rationing To Be Withdrawn: The Food Minister, Mr. Hafizur Rahman, told a news conference in Rawalpindi on December 24, 1959 that wheat rationing in West Pakistan would be withdrawn from April, 1960 and free trade in wheat would be restored.

[At present, wheat rationing exists in about 100 towns covering 15 per cent of the total population of 40,000,000 in West Pakistan].

Mr. Rahman said that the United States Government had promised to give Pakistan 500,000 tons of wheat in 1960 to enable the country to build up a reserve stock to back up the decision to do away with rationing. Wheat requirements of Pakistan were about 4,000,000 tons annually. The estimated yield in 1960, due to a special production drive, was about 3,800,000 tons.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

He also announced the removal of all existing restrictions in the movement of wheat throughout West Pakistan, including the Karachi Federal Area.

He said that the effect of these decisions would be that the trade would have full freedom to buy wheat wherever available in the Province and sell it at a fixed price of Rs. 15-8-0 per maund when prices went beyond a reasonable level.

The Government had fixed the floor-price of wheat at Rs. 13-8-0 per maund against the 1959 price of Rs. 12-8-0 to provide an incentive to the growers for bringing large areas of land under wheat.

The Government's new wheat policy would not be applicable to "Azad Kashmir" which was deficit in wheat. The Central Government would continue to meet the requirements of "Azad Kashmir" out of imported stocks.

He indicated that Pakistan would continue to buy wheat from "traditional markets" abroad out of the country's foreign exchange resources to meet the gap between production and consumption.

(*Dawn*, Karachi)

PHILIPPINES

A. **Agreement With Kuomintang:** The Kuomintang Administration undertook on December 18, 1959 to accept Chinese nationals ordered to be deported by the Philippine Government "after the due processes of law had been afforded to them."

The acceptance was contained in a Memorandum of Agreement signed in Manila on December 18, 1959.

The Kuomintang Ambassador in Manila, Mr. Tuan Maulan, representing his country, and the Filipino Secretary for Foreign Affairs, Mr. Felixberto Serrano, signed the Agreement.

It provided that the ban on the entry of Kuomintang Chinese citizens into the Philippines imposed in November, 1959 would be lifted as soon as the 31 Chinese deportees had left for Taipeh. The imposition of the ban followed the Kuomintang Government's refusal to accept the 31 deportees.

It specified that the question of about 2,700 temporary Chinese visitors whose authorized period of stay in the Philippines had already elapsed would be subject to separate negotiations between the two countries.

(*The Manila Times*)

[Prev. ref. 3039:PHI:A]

UNITED ARAB REPUBLIC

A. **Russia To Prepare A Project Report For A Dam On Euphrates:** It was announced in Damascus on December 24, 1959 that the Syrian Region had signed on that day (December 24, 1959) a contract with the Soviet organization, Techno-Export, for preparing a preliminary project report for the establishment of a dam on the Euphrates.

Dr. Nureddin Kuhala, President of the Executive Council of Ministers, told a news conference in Damascus that work on the dam, which was as important as the building of the Aswan Dam for the Egyptian Region of UAR, was due to start in 1962.

He added that the first stage of the project would cost 300,000,000 lira (about £30,000,000) and would take four years to complete.

The dam would help to irrigate 1,500,000 acres of land and would generate 100,000 kilowatts of electricity.

(*The Egyptian Gazette*, Cairo)

[Prev. ref. 2916:UAR:A]

B. **Progress Report On Industrial Development Plan For Syrian Region:** A progress report (available in New Delhi on December 20, 1959) on the Syrian Region's Five-Year Plan for Industrialization (1959-63) forecast that the Plan would probably be completed well ahead of schedule.

The report pointed out that while the estimated cost of the entire programme was £ (Syrian) 560,000,000 (about £55,000,000), projects costing £S113,400,000 had been completed by the end of 1959. These included a large number of projects of various sizes, ranging from very small workshops to full-size textile mills completed by the end of September, 1959 costing £S52,500,000. Another five factories, estimated at £S6,900,000, were scheduled for completion in the next few weeks. They were a carpet factory, a milk pasteurization plant, a detergents factory, a biscuit factory and a refrigerator factory.

The total of £S113,400,000 for the first year was arrived at by including the cost of the Homs Oil Refinery, which started operation in the Summer of 1959.

It was expected that 1960 would see the completion of two cement factories—one at Homs and one at Aleppo—costing respectively £S4,000,000 and £S7,500,000, the woollen textile factory at Damascus, a smaller woollen textile plant at Homs, a radio assembly shop and an iron foundry. A number of existing plants, mainly textile mills, would also be completed during 1960.

The Ministry of Industry put the total amount invested in the first two years of the Plan at £S154,000,000. With the exception of the oil refinery, these investments were all in the private sector of industry.

The bulk of the Plan, which included oil installations, a fertilizer plant, a paper mill, as well as larger textile and other plants, would be State-financed.

(*Middle East Economic Digest*, London)

[Prev. ref. 2448:UAR:A]

ASIA OUTSIDE ASIA

SUMMARY: Mr. D. D. Eisenhower's Visit To Eleven Nations; Conference On Peaceful Uses Of Outer Space; Elections To UN Security And Trusteeship Councils.

A. **Mr. D. D. Eisenhower's World Tour:** Starting from Washington on December 3, 1959 on a world tour, the President of the United States, Mr. D. D. Eisenhower, visited Rome, Ankara, Karachi, Kabul, New Delhi, Tehran, Athens, Tunis, France, Madrid and Casablanca during nearly three weeks. He returned to Washington on December 22, 1959. [For the story of his visit to India see page 3074].

Purpose Of Tour Explained:

In a nation-wide radio and television address just before he started on his tour on December 3, 1959, Mr. Eisenhower said that peace and friendship in freedom expressed the aspiration of America and was America's real message to the world.

He said: "During this mission of peace and goodwill, I hope to promote a better understanding of America and learn more of our friends. In every country I hope to make widely known America's deepest desire—a world in which all nations may prosper in freedom, justice and peace, unmolested and unafraid. I shall try to convey to every one our earnestness in striving to reduce the tensions dividing mankind—an effort first requiring, as indeed Mr. N. Khruschev agrees, the beginning of mutual disarmament. Of course, I will stress that the first requirement for mutual disarmament is mutual verification.....

"Americans still can learn much from other cultures; and from the ideals and achievements of others we can gain new inspiration.

"If we can truly co-operate with other nations, especially our friends of the free world, we can first defeat the evils of hunger, privation and disease that throughout the ages have plagued mankind. Even more than this, we can help reduce the world tensions and troubles that are the material of explosions and disaster.

"I set forth, as your agent, to extend once again to millions of people across the seas assurances of America's sincere friendship.

"I hope all can understand that beyond her shores, as at home, America aspires only to promote human happiness, justly achieved."

News Conference In Washington:

The previous day (December 2, 1959), Mr. Eisenhower addressed a news conference in Washington, at which questions were asked about his tour.

Answering one question, he said: "I think we can conclude from all the reports that come to us from abroad that there is a great deal of doubt remaining in the minds of many people, including our friends, allies and other friends, as to America's real sincerity in pursuit of peace.

"We have tried to emphasize this point in every possible way, through diplomatic contacts, through the speeches of the Secretary of State, myself and others, and still it doesn't seem to come through.

"Now, I have relatively few months left (as President of USA) and I decided to make something, make an effort that no President ever was called on before to make; but I do feel a compulsion to visit a number of countries, and through them hoping to reach many others, and tell them exactly what I believe the United States is trying to do; that our basic aspiration is to search out methods by which peace in the world can be assured with justice for everybody.

"I want to prove that we are not aggressive, that we seek nobody else's territories or possessions; we do not seek to violate anybody else's rights. We are simply trying to be a good partner in this business of searching out for peace, which means in the long run, searching also methods in which we, the nations, independent nations together co-operating, can find a better life for all of us. And that means politically and materially.

"Now, this is what I am trying to do, and such prestige and standing as I have on the Earth, I want to use it, and as long as my other duties do not prevent me from doing so, I am going to work on this in every possible way I can."

In Rome:

Mr. Eisenhower arrived in Rome on December 4, 1959.

Welcoming Mr. Eisenhower at the airport, Mr. G. Gronchi, President of Italy, said he was certain that the US President would make an effective

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

contribution to the cause of the West and of peace.

He added that despite the multi-party Italian system, which included a powerful communist faction, Italy's tribute to Mr. Eisenhower "is unanimous—I want to stress the word 'unanimous'."

Replying, Mr. Eisenhower said that he had brought a simple message from his country to the Italian people: "We want to live in peace and friendship and freedom."

He recalled that more than 10,000,000 American citizens claimed direct Italian origin. "Therefore, our friendship is not only an official one but one of people stretching their hands across the sea as relatives."

The Mayor of Rome, Mr. Urbano Clocetti, handed President Eisenhower the Keys of the City and said that he wished him well on his delicate and important mission.

Welcome By Italian Communists:

Italian communists extended a big welcome to Mr. Eisenhower.

The Rome branch of the Italian Communist Party, claiming to speak for 250,000 city workers, plastered the capital with posters welcoming the US President to the city and recalling the wartime comradeship of Italian Partisans with US and Soviet troops.

The posters said that Italy's communists hoped that President Eisenhower's visit to Rome would "contribute to achieving an end of the 'cold war' and bringing about conditions for a system of peaceful co-existence among the nations."

Describing Mr. Eisenhower as a "harbinger of peace", the posters said that the historic talks between the US President and Mr. N. Khruschev at Camp David "have opened the way for humanity to be liberated from the nightmare of atomic destruction and the intolerable burden of re-armament."

Italy's Communist Party is the largest among the communist parties in Western Europe.

Audience With Pope:

Before he left Italy for Turkey on December 6, 1959, Mr. Eisenhower paid a visit to The Vatican where he had a 25-minute audience with the Pope.

During the audience, the Pope was understood to have praised Mr. Eisenhower for his work in the interests of world peace.

Joint Communique:

At the end of the talks between Mr. Eisenhower and the Italian Government leaders, a joint *communique* was issued on December 5, 1959 by the US President and President Gronchi declaring that the two leaders had found themselves in full agreement on the vital role which the North Atlantic Treaty Organization must continue to play.

The two Presidents also confirmed their firm belief that the way to world peace lay through full application of the principles set forth in the United Nations Charter.

The *communique* said: "They (the Presidents) exchanged views regarding appropriate ways and means to accelerate the economic growth of the less-developed countries with the purpose of increasing the combined economic strength of the 'free world' and the well-being of all peoples.

"The participants expressed their determination to pursue policies aimed at reducing the burden of armaments throughout the world."

Discussing the forthcoming visits to Russia of the two Presidents, the *communique* said: "They (the two Presidents) agreed that these visits are being undertaken in the hope that they will advance the cause of peace and contribute to the search for solutions to outstanding international problems."

In Ankara:

On landing in Ankara on December 6, 1959, Mr. Eisenhower said: "This visit will permit me to discuss with the leaders of your Government some of the problems that confront free nations to-day. We shall also take the opportunity to talk about opportunities that present themselves to achieve a world of plenty in which all nations can live, independent, prosperous and at peace with their neighbours.

"I want you to know that we in America greatly respect and highly regard our staunch friend and ally, Turkey. We know that you will be strong and persistent and dedicated in all efforts for peace and friendship in freedom."

Crowds estimated at half-a-million gave Mr. Eisenhower a big welcome when he arrived in Ankara.

Mr. Eisenhower, who stood in the car with arms outstretched to acknowledge the welcome, said later that it was the most stupendous welcome he had ever seen in a city of that size.

Soon after his arrival, Mr. Eisenhower held talks with the Turkish leaders.

The Turkish Foreign Minister, Mr. Fatin Zorlu, said that Turkey had full confidence in Mr. Eisenhower in his forthcoming meetings with Mr. Khruschev.

He added that in the absence of any disarmament agreement, Turkey would continue with her defence preparations, which would include the establishment of American rocket bases on Turkish soil.

Speaking at a banquet given in his honour by the President of Turkey, Mr. Celal Bayar, on December 6, 1959, Mr. Eisenhower said that America would continue its search for peace and would strive to reach agreements which could be enforced with leaders of the world communist movement.

He added: "With steadfast adherence to our principles and with faith in Almighty God, we will do our best to achieve the goal we are seeking."

He praised the achievements of modern Turkey and said he was confident that the United States, with other friends and allies, would continue to support the economic development and security of Turkey.

On the same day (December 6, 1959), Mr. Eisenhower received the honorary degree of Doctor of Political Science from Ankara University.

Joint Communique:

Mr. Eisenhower and the Turkish Government issued a joint *communique* in Ankara on December 7, 1959 which said that both the countries (USA and Turkey) had agreed that the lessening of international tensions, in order to be effective, should be based on justice and equality and provided with essential safeguards.

The *communique* which was issued at the end of the talks between Mr. Eisenhower, Mr. Celal Bayar, the Prime Minister, Mr. Adnan Menderes, and other Turkish leaders, said: "Since it is not possible to divide the many problems at present separating East and West into separate compartments, they recognized that *detente*, like peace, had to be considered as an indivisible entity. It was understood that an efficient controlled system of disarmament is necessary."

The *communique* said that the visit of the US President re-affirmed in the most impressive way the existing strong friendship and close co-operation between the Governments and peoples of Turkey and the United States.

It added: "President Bayar expressed his sincere appreciation of the admirable efforts made by President Eisenhower in order to reduce international tensions, and both the Presidents voiced the hope that these efforts would bear fruit for the benefit of the whole world."

The *communique* disclosed that particular attention was paid in their talks to the question of subversive activities in West Asia.

Mr. Eisenhower expressed confidence that USA would continue to support, in concert with other friends and allies, the economic development and security efforts of Turkey.

Regarding economic co-operation, hope was expressed that European efforts in this field could be directed to the assistance of the less developed areas of the European continent, like Turkey.

Farewell Statement:

In a farewell statement as he left Ankara for Karachi on December 7, 1959, Mr. Eisenhower said:

"Through you, President Bayar, and your Government, I should like to express to the Turkish people my very warm thanks for the extraordinary reception they accorded to my party and to me as we went through Ankara yesterday (December 6). I have been deeply touched, and I take the demonstration as a symbol of the true affection that exists between the peoples of America and Turkey.

"Our two countries have been friends for a long time. I think that they have been growing stronger and firmer friends every year, every month, every day. I am confident that this will continue to be so. We stand together on the major issues of the world that divide the world. I can see no reason why we shouldn't be two of the sturdiest partners always, standing together for security, for freedom and liberty and for the pursuit of peace."

In Karachi:

Mr. Eisenhower arrived in Karachi on the afternoon December 7, 1959.

The people of Karachi and Pakistan gave him a great welcome. An estimated half-a-million people lined the tarmac at the airfield and the 12-mile drive into the city.

Mr. Eisenhower was given a 21-gun salute as he came out of his plane.

Welcoming Mr. Eisenhower, the Pakistan President, Field-Marshal Mohammed Ayub Khan, said: "My country has been looking forward to receiving you joyously because, more than anybody else in this age, you symbolize in your person a dynamic manifestation and working of the principles of universal peace, freedom and goodwill.

"As you know, Mr. President, Pakistan is a firm and practical believer in the cause of world peace, and the fruitful partnership which has developed between our two countries in recent years is a heartening example of material and ideological co-operation between like-minded nations."

Replying, Mr. Eisenhower said: "We want to work together for peace, for our own mutual security, to work always for what is good, decent, just.

"Believing in our God, believing in the convictions that we have inherited from our forefathers, we will yet have a world in which a just peace will be the lot of men,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

in which they can realize and use the fruits of their own toil."

Nishan-e-Pakistan Awarded:

On December 7, 1959, F-M Ayub Khan awarded the highest civil award of the country—*Nishan-e-Pakistan*—to the US President.

The citation said: "The President, the Government and the people of Pakistan have the greatest admiration for the way in which you have always upheld individual freedom and human dignity as the President of the United States, your determination in upholding the traditions of the democratic life which is reflected in all your policies, your constant efforts in promoting the economic advancement of the community of free nations to better standards of life, your selfless dedication to the cause of social progress, your unfailing support to the Charter of United Nations to serve as a bulwark of peace.

"Your inspiring leadership in enabling the free nations to develop collective security against aggression has built a firm faith in the solidarity of our alliance with the great American nation.

"In recognition of your notable achievements for the free world in the cause of peace, and to give a heart-felt expression to our deep regard and cordial sentiments we present to you, Mr. President, a *Nishan* in the Order of Pakistan, which is the highest civil award in Pakistan."

State Banquet:

Speaking at a banquet given in his honour on December 7, 1959 by F-M Ayub Khan, Mr. Eisenhower said that America was a powerful nation, but she wanted to use her power for the good of mankind and to promote co-operation and goodwill among nations.

He added that he had taken it on himself as the Chief Executive of USA to clear up misunderstandings on the spot in the wider interests of peace, security and human dignity.

Speaking earlier, F-M Ayub Khan wished Mr. Eisenhower success in his great task of spreading peace.

Mr. Eisenhower found time on December 8, 1959 to watch the Cricket Test match between Pakistan and Australia.

In an informal meeting on December 8, 1959 with foreign and local newsmen covering the US President's visit at a reception given by him, F-M Ayub Khan said that it would be correct to assume that he had in his talks with Mr. Eisenhower given him a frank appraisal of Pakistan's views on Kashmir, developments in Afghanistan and the Chinese border incursions.

He also agreed with another newsman who suggested that Pakistan was hoping that Mr. Eisenhower would pass on these views to Mr. Nehru and might also use his own personal influence with Mr. Nehru in this respect. "That is the correct position. Mr. Eisenhower also realizes it."

He said that he had discussed with Mr. Eisenhower the question of arms supplies from USA to Pakistan. "We need a balancing up of our arms. We have got American and British arms all mixed up."

To a question whether he would like to have an all-American armament set up, he said: "We have got a lot of American arms, so it had better be all American."

Asked if Mr. Eisenhower would be putting forward certain proposals to Mr. Nehru on Kashmir, he replied: "How can there be any proposals? The other side must first be prepared to talk."

He said that Mr. Eisenhower's assessment was that the Chinese border incursions and growing Soviet influence on Pakistan's north-western border constituted a serious situation.

Asked what was Mr. Nehru's assessment of the situation, he said: "He has a different approach. Ours is more realistic."

Civic Reception:

The Karachi Municipality gave a civic reception to Mr. Eisenhower on December 8, 1959. About 15,000 people were present.

Addressing the gathering, Mr. Eisenhower said that there were signs of increasing demands that some system of progressive and enforceable disarmament be agreed to among the nations. There was no reason to hesitate in this great undertaking. There could be no winner in any future global war.

The whole world must insist, he said, that the conference table rather than force be used for settlement of international differences. "Every national leader worthy of his name must participate in this effort. The American people especially hope that Pakistan and other nations in South Asia will succeed in their efforts and improve relations among themselves."

It was his firm conviction that Pakistan-American friendship was lasting and built firmly. He assured Pakistan of American co-operation in the economic development of the country.

His conversation with F-M Ayub Khan, he said, had shown that USA and Pakistan were two nations with common interests and common goals which co-operated for mutual security. When he returned home he would tell his fellow-Americans that Pakistanis were a courageous, energetic and loyal people who loved peace but who put justice and freedom—as did the United States—before all else.

He said that USA would continue to review and give important consideration to military and economic assistance to Pakistan.

Speaking earlier, F-M Ayub Khan said: "President Eisenhower is the extraordinary Head of an extraordinary State. Never before in the history of man has one single country taken upon itself so much to preserve the peace and freedom of others as the United States of America.

"A major part of the 'free world' takes it for granted that the maintenance of peace and promotion of universal prosperity is the bounden duty of the United States of America.

"In spite of its stupendous military power and vast resources, the wisdom, sincerity and generosity with which the great American people are playing this difficult role is a practical proof of their complete dedication to the ideal of peace and freedom.

"As leader of peace, President Eisenhower's contribution to human progress and goodwill is unsurpassed. All that we can say to him from the core of our heart is 'God bless you'."

A silver replica of the Badshahi Mosque in Lahore was presented to Mr. Eisenhower on behalf of the citizens of Karachi.

Helicopter Tour:

Mr. Eisenhower and F-M Ayub Khan and their *aides* then boarded five helicopters for an aerial tour of the new Korangi township built for refugees.

The township is claimed to be one of the world's biggest low-cost housing projects. About 15,000 two-room houses have already been built. The colony will be self-contained, with its own shopping centres, industrial establishments and schools. Ultimately, it is to contain 75,000 houses capable of accommodating half-a-million people.

Press Briefing:

Mr. Eisenhower's Press Secretary, Mr. James Hagerty, told newsmen in Karachi on December 8, 1959 that Mr. Eisenhower and F-M Ayub Khan had discussed Kashmir in their review of Indo-Pakistan relations.

Pakistan's spokesman, Brigadier Fazlur Khan, was asked if it was hoped that Mr. Eisenhower would use his good offices in the Kashmir question with Mr. Nehru.

He replied: "Naturally, when you discuss these problems with another friendly country, it obviously follows that you do expect that one can exercise one's good offices within the framework of the requirements of the situation."

Mr. Hagerty broke in to add: "As President Eisenhower said before he left Washington, he is not on a negotiating trip. Neither is he going into any country and say, as President of the United States, what that country should do."

He said: "Should the Indian Government wish to discuss this matter with President Eisenhower, the US President would be more than happy to discuss it, but the initiative must come from the Indian Government."

Mr. Hagerty emphasized in reply to another question that President Eisenhower had no intention of telling Pakistan or India what they should do about Kashmir. President Eisenhower had no wish to be a negotiator but would be happy to discuss questions of importance with friends and allies.

A local newsman asked of Mr. Hagerty: "Why is President Eisenhower afraid to lend his weight in support of the country which he thinks is right in this dispute?"

Mr. Hagerty replied: "If there are going to be settlements of international disputes, they have to be primarily by the countries involved."

The same newsman then commented that Mr. Hagerty seemed to be sidetracking the question.

Mr. Hagerty retorted: "No, I am not sidetracking. I am afraid you are looking for headlines, which I am not going to give you."

Mr. Hagerty revealed that Pakistan had asked for more military and economic aid from USA.

Answering questions, he said he could not spell out the aid demanded because, before any such increase was made, Congress would have to agree. There would of course be no cut in the present quantum of aid.

Agreeing with a questioner, Mr. Hagerty said that Pakistan might hope for more aid from the United States in 1960.

He added that Presidents of USA and Pakistan had discussed the situation in Afghanistan and Russian activities there, but refused to discuss what President Eisenhower would talk to Afghan leaders at Kabul on December 9, 1959.

Joint Communique:

Following a series of talks between the US and Pakistan Presidents and their *aides*, a joint *communique* was issued in Karachi on December 8, 1959.

The *communique* said that the two Presidents had reviewed generally world-wide political questions and, in particular, problems of relations between the 'free world' and the Sino-Soviet bloc. They were in full agreement as to the essentiality of co-operation among the members of the family of free

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

nations in the interests of their mutual security.

It added: "They (the two Presidents, discussed relationship among the nations of the area and the urgent desirability of finding solutions to existing disputes. In this way, the energies of the people and Governments may be directed more fully towards constructive programmes adding to stability and progress and a greater degree of co-operation among them may be achieved.

"They re-affirmed their satisfaction with the increasingly close co-operation between Pakistan and the United States. Relations between the two countries are based upon mutual respect and friendship resting on the firm determination of both to work together for the achievement of the purposes and principles of United Nations.

"They emphasized anew the importance of CENTO (Central Treaty Organization) and S-EATO as major factors in preserving the stability and security of the area covered by them. They re-iterated the determination of the two Governments to continue strongly to support these regional collective security organizations in accordance with Article 51 of the United Nations Charter.

"They recognized the heavy financial burden placed upon Pakistan in her efforts to undertake substantial development projects and, at the same time, to maintain armed forces consonant with her national security. They reviewed various elements of technical, economic and military aid which is extended to Pakistan by the United States as part of the two nations' mutual assistance which contributes to the security of both.

"The President of Pakistan explained the steps taken by his Government during 1959 to strengthen the country. He outlined the 'Basic Democracies' plan and progress towards a new Constitution. The President of the United States stated that his Government was following Pakistan's venture with genuine interest.

"The two Presidents expressed their belief that the visit had led to an even closer understanding between Pakistan and the United States, had strengthened the strong ties already existing between the two countries and had underlined the need of continued co-operative programmes between them."

Mr. Eisenhower left Karachi on December 9, 1959 on a brief visit to Kabul.

In Kabul:

Mr. Eisenhower was welcomed in Kabul by King Zahir Shah of Afghanistan on December 9, 1959.

In his welcome speech at the airport, King Zahir Shah said: "I hope that the chill of our early Winter will be made up for by the warmth and affection with which our people greet Your Excellency and your honourable companions."

Mr. Eisenhower replied that "true friendship is not only desirable but essential in a world where jet planes flash from continent to continent at speeds near, or exceeding, the speed of sound".

Mr. Eisenhower got just as warm a welcome as he had at previously more populated stops on his tour. Crowds estimated at 200,000 lined the streets of Kabul as Mr. Eisenhower and King Zahir Shah drove through the City.

At a State luncheon the same day (December 9, 1959), Mr. Eisenhower proposed a toast to King Zahir Shah and said: "The peoples of America and Afghanistan share the steadfast determination to protect and defend their independence and heritage.

"Because we respect your independence as we do our own, we participate with you in mutual security measures. Most important of all, we share with the Afghan people a sense of great spiritual values deriving from our respective religious heritages and we are drawn together in devotion to abiding values of religion."

Joint Communique:

King Zahir Shah and Mr. Eisenhower issued the following joint *communique* on December 9, 1959:

"While President Eisenhower's visit was primarily an expression of goodwill, talks on questions of mutual interest were carried on.

"His Majesty Mohammed Zahir Shah, King of Afghanistan, explained Afghanistan's policy of independence and neutrality. Both sides agreed to work unstintingly and patiently toward the elimination of international friction and tensions. Note was taken of the strides that Afghanistan was making in economic development and social progress. President Eisenhower gave assurances of the American desire to continue to assist Afghanistan in her task of strengthening her economic and social structure.

"Both sides also agreed that in the present day it was imperative that international disputes be settled by peaceful means and further concurred in the need for world peace, especially to enable the energies of mankind to be channelled into the constructive pursuits of development and human fulfilment. They endorsed unqualifiedly the principles of the United Nations Charter as standards for international behaviour.

"His Majesty expressed high hopes for concrete results from the prospective 'summit' meeting of President Eisenhower with other Heads of Governments and from his forthcoming visit to the Soviet Union.

"Both sides further expressed hopes that a workable and enforceable basis for disarmament can soon be found. Both sides agreed that the visit of President Eisenhower to Afghanistan had strengthened the already warm and friendly relations between Afghanistan and the United States."

From Kabul, Mr. Eisenhower reached New Delhi the same day (December 9, 1959) and spent five days in India (for story see page 3074). He left New Delhi for Tehran on December 14, 1959.

In Tehran:

Mr. Eisenhower arrived in Tehran (Iran) on December 14, 1959 from New Delhi. He was welcomed at the airport by the Shah of Iran.

After thanking the Shah for his words of welcome at the airport, Mr. Eisenhower said that he was aware of Iran's problems, her strength, her genius, her vital role in the defence of the 'free world', and the golden future that was assured Iran and her people in a world of peace with justice.

He added: "Now I am here, bringing you from the American people their salute to your courage, their congratulations on your achievements, their best wishes for growth in the years ahead, their pledge of friendship for you and your people."

Address To Majlis:

Later in the day, (December 14, 1959), Mr. Eisenhower addressed the Iranian Parliament (Majlis) and said that increase in mutual understanding was one of the purposes of his visit to Iran.

He said: "My conversation this morning (December 14, 1959) with His Imperial Majesty, this convocation, and my knowledge of the state of relations between our two countries have been heartening assurances that we stand side by side. We see eye to eye when it comes to the fundamentals which govern the relations between men and nations.

"The message I bring you from America is this: We want to work with you for peace and friendship, in freedom. I emphasize freedom because without it there can be neither true peace nor lasting friendship among peoples.

"Consequently, Americans are dedicated to the improvement of the international climate. Although militarily we devote huge sums to make certain of the security of ourselves and to assist our allies, we do not forget that in the long-term, military strength alone will not bring about a just and permanent peace. The spiritual and economic health of the 'free world' must be likewise strengthened. All of us realize that while we must, at whatever cost, make freedom secure from any aggression, we could still lose freedom should we fail to co-operatively progress towards achieving the basic aspirations of humanity.

"The world struggle in which we are engaged is many-sided. In one aspect it is ideological, political and military; in others it is both spiritual and economic. As I well know, you and the people of Iran are not standing on the side-lines in this struggle. Without flinching, you have borne the forces of a powerful propaganda assault. [The reference here was to the Soviet broadcasts addressed to Iran, to which Iran had taken objection.]

"I know I speak for the American people when I say that we are proud to count so valiant a nation as a partner.

"Peace will be without meaning—it may even be unattainable—until the peoples of the world have finally overcome the national evils of humanity—hunger, privation and disease. The American people have engaged considerable resources in this work. The whole world must some day agree that suspicion and hate should be laid aside in the common interest.

"Here, I think, is our central problem. One practical step is, of course, an enforceable agreement on disarmament or, to be more exact, arms reduction. To achieve this, the Governments of the world have chosen a primary instrument—United Nations. It could be seen that, as the realities of the awful alternative to peace become clearer to all, significant progress in the reduction of the arms burden can be made. To such a realistic beginning, there is no feasible alternative for the world.

"In the meantime, we cannot abandon our mutual effort to support the Central Treaty Organization against the persistent dangers of aggression and subversion. This Organization has no ulterior or concealed purpose; it exists only to promote security. Such an effort erects a shield of freedom for our honour and our lives. With such a shield we preserve the cherished values of our societies.

"The impulse towards justice, towards the recognition of the worth and dignity of each and every human being, will not be denied. This is the mainspring of the movement towards freedom and peace."

Communique:

In the few hours on December 14, 1959 that Mr. Eisenhower stayed in Tehran, he found some time for serious discussions with the Shah and leaders of the Iranian Government.

The following *communique* was issued at the end of the talks:

"The feeling of the Iranian people shown during this significant visit demonstrated again the strength of the ties between the Governments and people of Iran and the United States.

"The visit attested to the confidence of both countries that their co-operation is of benefit both to themselves and to the world. His Imperial Majesty and the President discussed the CENTO Alliance and both emphasized the importance of CENTO in preserving stability and security in the area.

"They re-iterated the determination of their Governments to support CENTO and further recognized the usefulness of their Bilateral Military Agreement while, of course, continuing to participate in the action of United

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Nations for the furtherance of world peace. Both leaders emphasized their adherence to the goals of peace and freedom.

"In the course of their talks, the world situation was reviewed. Both leaders expressed their belief in the principles of negotiation as a means of finding just and peaceful solutions to problems which arise between nations.

"It was agreed that disarmament with adequate controls should be sought in the interests of lasting peace.

"His Imperial Majesty and the US President also exchanged views on various problems, especially those relating to West Asia. President Eisenhower recognized the significant contribution Iran was making to the stability of this important world area.

"His Imperial Majesty outlined the economic and social progress achieved in Iran and expressed appreciation of the help given by the American people.

"The US President congratulated His Imperial Majesty on the service which Iran was rendering to the 'free world' and for his vigorous efforts to sustain stability and to further economic development.

"President Eisenhower also expressed interest in the steps. His Imperial Majesty was taking to promote social progress.

"The US President said that the United States intends to continue to assist Iran in the mutual interests of both nations."

At the end of his brief visit, Mr. Eisenhower left Tehran for Athens on December, 14, 1959.

In Athens:

Mr. Eisenhower arrived in Athens (Greece) on December 14, 1959 and was given an enthusiastic welcome.

Addressing the Greek Parliament in Athens on December 15, 1959, he said: "The Greek and American people share a common and deep devotion to peace. We share further the conviction that we must sustain the conditions under which the goal of peace may be pursued effectively.

"We must be strong militarily, economically, spiritually. By developing and preserving such strength by forever repudiating the use of aggressive force, we shall win the sort of peace we want—I mean the peace that is creative, dynamic, fostering a world climate that will relieve men and their Governments of the intolerable burden of armaments, liberate them from the haunting fear of global war and universal death."

Joint Communique:

A joint *communique* issued after the talks between the American President and Greek Government leaders said that careful account was taken of Greece's special position in the Balkans, and the general situation in that area as well as in the Eastern Mediterranean was examined.

It was agreed that the two Governments should exchange views on matters of mutual concern involving this area. The prospective emergence of an independent Cyprus State was hailed with special satisfaction.

Both Greece and the United States affirmed their faith in the Charter of the United Nations and staunch support for the objectives of NATO.

The *communique* added that the Greek Prime Minister expressed the gratitude of the Greek people for the enduring interest and help being extended to them by the American people.

In Tunis:

President Eisenhower left Athens on December 15, 1959 on board an American cruiser for Tunisia.

Leaving Athens on a US warship on December 15, 1959, he cruised in the Mediterranean for two days and on December 17, 1959 took off from his ship in a helicopter and landed in Tunis for a brief visit to the President of Tunisia, Mr. Habib Bourguiba.

Welcoming the US President, Mr. Bourguiba said that the visit "will bring high hope and promise to the people of Africa fighting a decisive battle for human dignity".

Tunisia, he said, had not forgotten nor would forget the sympathy it found from the people of America at the time of its struggle for freedom and dignity.

Replying, Mr. Eisenhower recalled that the United States welcomed warmly the entrance of Tunisia into the family of independent nations.

He said that USA wished Tunisians good luck in all their endeavours and expressed the hope that in co-operation with free nations everywhere, the United States and Tunisia might be able to bring about peace with justice in the world.

Joint Statement:

The two Presidents had nearly an hour of private conversation.

In a Joint Statement issued later, the two Presidents agreed that the "achievement of self-determination by African and Asian peoples is one of the most important events of our times."

The statement also noted that the two leaders had examined the situation created by the difficulties in Algeria and agreed that the "fact that a solution has not yet been achieved there is a cause of grave concern".

The US President then flew back to his warship.

In France:

Mr. Eisenhower arrived in France on December 18, 1959 after a three-day cruise in the Mediterranean.

He was given a warm welcome when he landed at the port of Toulon.

Later, he travelled by train to Paris.

In Madrid:

Mr. Eisenhower arrived in Madrid from Paris on December 21, 1959 and a crowd estimated at 1,000,000 gave him a big ovation.

An official statement which was issued in Madrid after discussions between General Franco and President Eisenhower, said that the two leaders had discussed matters of international interest, including the Paris talks between the four Western Powers.

The statement expressed the hope that the forthcoming 'summit' meeting would help improve international relations.

Political opposition to Mr. Eisenhower's visit to Madrid was made known to the US Embassy in the Spanish capital by various underground elements.

Groups, including Monarchists and moderate Republicans, were active in the secret circulation of leaflets explaining why they objected to the US President's visit.

A Monarchist-inspired pamphlet said they were disappointed at the US President's decision to visit Madrid.

This disappointment, it said, arose from the fear that General Franco's Government would exploit the visit as a triumph for Spain's authoritarian State.

Spaniards who fought with the British Army during World War II —some of them under General Eisenhower's Allied Command—protested on December 20, 1959 against the US President's visit.

About 60 of them backed up their protest with a march to the Cenotaph in London's Whitehall—memorial to the dead of two World Wars.

The leader of these Spaniards, Mr. Jordi Vilanova, said: "We are not very happy about the visit of President Eisenhower to Spain because it would be contrary to all that these people fought for."

Mr. Eisenhower left Madrid for Casablanca (Morocco) on December 22, 1959.

In Morocco:

Mr. Eisenhower arrived in Morocco on December 22, 1959 from Spain on the last stage of his eleven-nation tour.

At Casablanca, he was welcomed by King Mohammed of Morocco. Large crowds cheered the US President and King Mohammed as they drove through the streets of Casablanca to the Royal Palace. President Eisenhower spent only a few hours in Morocco.

A *communique* issued after the talks between the two leaders said that President Eisenhower had agreed to the withdrawal of American forces from Morocco by the end of 1963 and that preliminary measures for the withdrawal would begin immediately.

The *communique* also referred to Algeria and said that the King and the President had noted with great satisfaction the progress made towards a peaceful solution of the problem through the acceptance of the principles of self-determination.

Mr. Eisenhower returned to Washington on December 22, 1959.

[Prev. ref. 1221:AOA:A, 2916:AOA:A, 2976:AOA:A]

B. **Resolution Asking UN To Convene A Conference On Peaceful Uses Of Outer Space In 1960 Or 1961:** The Western Powers and the Soviet Union agreed unanimously on December 11, 1959, after months of effort, on a joint resolution asking United Nations to convene a Conference on the peaceful uses of outer space in 1960 or 1961 and set up an Outer Space Committee.

The Soviet Union had boycotted the temporary 18-member Outer Space Committee set up by the UN General Assembly in 1958, complaining that the Committee was weighted in favour of the Western bloc.

The draft resolution tabled in the Political Committee on December 11, 1959 was sponsored by India, Brazil, Britain, Czechoslovakia, France, Japan, Poland, Rumania, Soviet Union, Sweden, United Arab Republic and the United States.

The agreement was attributed in UN Headquarters chiefly to painstaking efforts by Mr.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Henry Cabot Lodge (USA) and Mr. Arkady Sobolev (USSR), backed by negotiations in which the delegations of Australia and Canada had played a leading role.

The resolution called on the Assembly to set up a 24-member Committee with 12 Western members, seven Communist members (including Albania and Hungary, to which the Western bloc had originally objected) and five neutral members.

It said that the exploration of outer space should be only for the betterment of mankind and spoke of the desire to avoid the extension of the existing national rivalries into this new field.

Believing that UN should promote international co-operation in the peaceful uses of outer space, the resolution would establish a Committee on the peaceful uses of outer space composed of the following 24 members: Albania, Argentina, Australia, Austria, Belgium, Brazil, Bulgaria, Canada, Czechoslovakia, France, Hungary, India, Iran, Italy, Japan, Lebanon, Mexico, Poland, Rumania, Sweden, USSR, United Arab Republic, United Kingdom and United States.

It requested the Committee to review as appropriate the area of international co-operation and study practical and feasible means for giving effect to programmes in the peaceful uses of outer space which could appropriately be undertaken under United Nations auspices. These would include the organization of mutual exchange and dissemination of information on outer space research and encouragement of national research programmes for the study of outer space and the rendering of all possible assistance and help towards their realization.

The Committee would also be requested to study the nature of legal problems which might arise from outer space exploration.

The resolution would have the General Assembly note "with satisfaction the successes of great significance to mankind that have been attained in the exploration of outer space in the form of the recent launching of artificial Earth satellites and space rockets".

It added: "Attaching great importance to the development of international co-operation in peaceful uses of outer space, the General Assembly decides to convene in 1960 or 1961, under the auspices of United Nations, an International Scientific Conference for the exchange of experience in the peaceful uses of outer space".

A Belgian amendment to the 12-nation resolution would confine the conference to members of UN or its specialized agencies.

The Soviet delegate, Mr. Vasily Kuznetsov, called for international co-operation in outer space research and said that the knowledge gained by Russian scientists would become the property of mankind.

Opposing the Belgian amendment, he said that it would be unjust to deprive non-members of the possibility of taking part in this new venture of the joint study of outer space.

The US delegate, Mr. Henry Cabot Lodge, declared that outer space could not be any one's private preserve. International co-operation was imperative. Without international co-operation, the manifold activities in outer space would bring conflict.

He called for early concentration of efforts on international and technical co-operation. He supported the Russian suggestion of an international conference and welcomed it as a sign of the Soviet Union's willingness to share with other States the data it had obtained of its outstanding accomplishments.

Political Committee Passes Resolution:

The Political Committee recommended to the General Assembly on December 11, 1959 to establish a new 24-nation group to promote international co-operation in peaceful outer space research. It also recommended the convening of an International Scientific Conference in 1960 or 1961 for the exchange of experience in the peaceful uses of outer space.

There was no negative vote, but one of the 75 members voting cast an abstention. It was learnt that it was the Dominican Republic which abstained.

Earlier, the Political Committee adopted by 44 votes to 16, with 15 abstentions, the Belgian amendment which limited representation on the Scientific Conference to States which are members of UN or its specialized agencies.

Thus, China and East Germany, among others, would be barred from participation.

Members of the new Committee would be: Albania, Argentina, Australia, Austria, Belgium, Brazil, Bulgaria, Canada, Czechoslovakia, France, Hungary, India, Iran, Italy, Japan, Lebanon, Mexico, Poland, Rumania, Sweden, Soviet Union, United Arab Republic, United Kingdom and United States.

This Committee would be charged with the task of reviewing the area of international co-operation, studying practical means for giving effort to outer space programmes which could be undertaken under UN auspices, encouraging national research and studying the problems which might arise.

General Assembly Passes Resolution:

Later the same day (December 11, 1959), the General Assembly unanimously endorsed the resolution setting up a 24-member Committee on Outer Space.

It also agreed to convene an International Scientific Conference either in 1960 or 1961.

The new Committee would replace a temporary body of 18 members which the Soviet Union had boycotted.

(*UN Information Centre*, New Delhi, *The Hindu*, Madras and *The New York Times*)

[Prev. ref. 2779:AOA:K]

C. **UN Security Council Election —Poland Elected For One Year:** The UN General Assembly elected on December 13, 1959 Poland to the Security Council on the understanding that she would serve only half the regular two-year term and stand down at the end of 12 months to make way for Turkey.

This was a privately agreed compromise, breaking the deadlock between the two nations which had persisted through 51 previous ballots.

The agreement was worked out the previous night (December 12, 1959) in the office of the President of the General Assembly by the American, Soviet, Polish and Turkish delegations.

The seat which Poland will fill in 1960 on the eleven-member Security Council will be vacated by Japan at the end of 1959.

(*The Hindu*, Madras)

[Prev. ref. 3006:AOA:A]

D. **Elections To UN Trusteeship Council:** On December 13, 1959, the UN General Assembly discussed the fulfilment of the Charter provision that the Trusteeship Council shall consist of seven Administering Powers and an equal number of non-Administering Powers and that all permanent members of UN be on it.

This was in view of France and Italy ceasing to be members in 1960.

There was a five-hour bitter procedural wrangle in the Assembly on the election to the Trusteeship Council. In this process, there was a split in the Afro-Asian Group and this was reflected in the final voting.

The Soviet Union called for a special session of the Assembly in 1960 to consider the question, while Tunisia suggested voluntary resignation of members or the drawing of lots to determine as to who should withdraw.

India insisted on an immediate election and postponement of the procedural issue till it actually arose.

The Assembly rejected the Soviet and Tunisian proposals. In the voting, normally pro-Western Tunisia joined hands with the Soviet Union, while India was supported by the United Kingdom and the United States.

Eventually, India and Bolivia were elected to the two vacancies. But, as a result of the split in the Afro-Asian Group, out of 80 votes cast, India had to be content with 61 and Bolivia with 69, despite the fact that they were the only candidates in the field.

[Prev. ref. 2330:AOA:B]

E. **UN Special Fund Allocations To 35 Countries:** The Governing Council of the United Nations Special Fund approved on December 10, 1959 an expenditure of $23,710,910 for 31 work projects in 35 countries.

India would receive the highest amount of $3,012,800 to assist three projects.

The contributions to India would be $707,600 towards the establishing of a Mechanical Engineering Research Institute at Durgapur in West Bengal, $1.953,800 towards establishing power engineering research institutes at Bangalore and Bhopal and $351,400 towards establishing three Regional Labour Institutes in Calcutta, Madras and Kanpur.

The programme of allocations submitted by the Managing Director of the Fund, Mr. Paul Hoffman, was approved without amendment.

The Special Fund was established in 1958 to provide long-range financial aid to underdeveloped countries.

Pakistan would be the second biggest recipient of financial benefit of $2,283,100 towards two projects, a marine resources research institute and soil survey in East and West Pakistan.

Pledges of aid so far made for 1960 total $32,000,000. Continent-wise, Latin America would receive the most aid. It has 16 projects which would receive $8,826,260. Asia and the Far East would receive $8,448,150 for nine projects. Africa would get $4,285,500 for three projects; and West Asia $2,251,000 for three projects.

[Prev. ref. 3028:AOA:A]

F. **UN General Assembly Resolution On IMCO And India:** On December 7, 1959, the UN General Assembly endorsed a resolution from its Legal Committee which expressed the hope that the Inter-Governmental Maritime Consultative Organization (IMCO) would restore India to full membership at an early date.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The vote was 72 to one, with two abstentions.

The IMCO is United Nations' 12th and newest specialized agency.

It planned its work for the next two years concerning four important questions: safety of life at sea, prevention of pollution of the sea by oil, study of the international code of maritime signals to see if any revision was necessary and a study of tonnage measurements.

(*The Hindustan Times*, New Delhi)

[Prev. ref. 3017:AOA:C]

G. **France To Have Own Atomic Striking Force:** The French Armed Forces Minister, M Pierre Guillaumat, told the Senate in Paris on December 3, 1959 that France "must have her own atomic striking force to defend her interests and those of the community."

Speaking in the Senate debate on military credits for the 1960 Budget, he said, the first elements of the striking force would be atomic bombs and *Mirage IV* bombers. "Our technical and financial means will permit us to achieve this first step between 1963 and 1966. Our forces must be strong enough to have an effort on the international level. They must also be equipped to be able to have an important place in Atlantic defence."

(*The Egyptian Gazette*, Cairo)

[Prev. ref. 2778:AOA:E]

H. **British Atomic Scientists Separate Protactinium From Atomic Waste Material:** The United Kingdom Atomic Energy Authority issued a statement in London on December 8, 1959 to the effect that the rare radio-active element, protactinium, occurred in minute quantities in natural ores containing uranium, with which it was in radio-active equilibrium.

Its existence was recognized for many years, but it proved remarkably resistant to attempts to isolate it in significant amounts.

For this reason, protactinium was of considerable scientific and technical interest, and for some time work had been carried out by chemists at the Atomic Energy Authority's Windscale Works in order to separate it from certain waste materials occurring in uranium production.

These operations, it was said, had resulted in the successful separation of 100 grammes of protactinium from nearly 60 tons of waste material, and this amount probably represented the bulk of the world's supply at about £1,000 per gramme.

(*UK High Commission*, New Delhi)

[Prev. ref. 2838:AOA:B]

I. **World's First Radio-Optical Observatory For Tracking Space Vehicles:** The world's first known radio-optical observatory for instantaneous tracking of space vehicles by both sight and sound was opened by the General Electric Company at Schenectady, New York, on December 7, 1959.

The observatory combines a highly sensitive optical telescope with a radio-telescope, an electronic device with a radar-type antenna. Space data is received simultaneously by both telescopes and yields tracking information the moment it occurs.

The optical telescope is used in combination with a "see-in-the-dark" television camera. Previously, supporting data had to wait for photographic processing.

The observatory is operated by the Company's general engineering laboratory which used a small radio-telescope last Spring to track the US *Pioneer IV* rocket to a distance of more than 400,000 miles.

(*The New York Times*)

[Prev. ref. 2920:AOA:H]

J. **"Listening-in" To Nearby Stars By US Scientists:** A leading US astronomer, Dr. Frank Drake, said on December 24, 1959 that the United States would soon begin to "listen-in" to nearby stars to see if radio signals were being sent by other intelligent civilizations.

The astronomer, working at the National Radio Astronomy Observatory, said in an article in the current issue of Harvard College Observatory's journal that a special listening post would be set up in West Virginia early in 1960.

According to Dr. Drake, there was a good possibility that at least one of the 10,000 stars that would soon be in the reach of radio astronomy had a civilization using radio techniques.

He said that the first attempts to pick up possible signals from outer space would be made with an 80-foot antenna with a special device to eliminate radio interference and pick out signals from as far as 10 or 11 light years away. [A light year is the distance which light, travelling at 186,000 miles a second, travels in the course of a year.]

The Observatory calls the project *Ozma*—after the Queen of the imaginary land of Oz—a place far away, difficult to reach and populated by exotic beings. The antenna will be tried first on two stars 11 light years away.

(*The New York Times*)

[Prev. ref. 3093:AOA:E]

K. **New Island In Caspian Sea:** *Tass* reported from Moscow on December 26, 1959 that a new island, with an area of about 123 acres, had appeared in the Caspian Sea after an underground volcanic eruption on Christmas Day (December 25).

The eruption occurred near Svinoi Island, about 47 miles south of Baku. A 600-ft-high column of fire raged over the sea for 15 minutes while thick smoke covered the entire neighbourhood.

Tass quoted Prof. Mikhail Varentsov, a Corresponding Member of the Soviet Academy of Sciences, as saying that the unusual volcanic activity which led to the formation of the new island was evidence of large gas and oil deposits available in the area.

The island, he added, could probably be used as a base for oil and gas prospecting. The fuel and oil gases were accumulated at a depth ranging from 1,500 to 3,000 feet.

(*Tass*)

L. **Atomic Ice-breaker "Lenin" Certified:** It was announced in Moscow on December 20, 1959 that after two months of rigorous tests during which she sailed over 2,000 miles, the Soviet atomic ice-breaker *Lenin* had been given a certificate and registered with the Arctic Fleet.

A Government Commission declared the ship—the first of its kind ever built—safe and highly manoeuvrable and reported that according to its findings during searching tests, the atomic reactors were free of contamination risks for the crew. Not a single trace of radiation was detected in the water near the ship in the many tests made during the reactor's 1,500 hours of work.

Lenin, which was built at the Admiralty Shipyards in Leningrad in three years, would be used to clear a way through ice that hampers the Soviet merchant fleet's navigation in waters lying off the northern coasts of Russia and Siberia.

For the timber trade, the Arctic ports have always been important. New development projects under way in Siberia enhance the value of the northern outlet for the rich industrialized Central Siberia *via* the great rivers that flow into the Arctic Ocean.

(*Tass*)

[Prev. ref. 2622:AOA:G]

M. **Eleven-Nation Indian Ocean Project:** It was made known in Washington on December 17, 1959 that Mr. Robert C. Snider, a New York executive with wide experience in administrative posts with international research projects, had been appointed Co-ordinator of an eleven-nation scientific expedition to the Indian Ocean which was expected to bring large economic benefits to lands bordering the area.

Mr. Snider, who is President of the International Population Research Inc. and Chairman of a research panel on ocean resources, has established a co-ordinating office in New York.

Planning for the expedition, which would function under the Special Committee on Oceanic Research (SCOR), was under way. According to an announcement by SCOR, peak activity would be reached during 1962 and 1963 when 15 or more oceanographic ships "will be studying these least-known waters of the world".

The nations that have given notice of intent to participate in the project include India, Australia, Denmark, France, Federal Republic of Germany, United Kingdom, Indonesia, Japan, South Africa, Soviet Union and United States.

The purpose of the expedition will be to conduct basic research in physical and chemical oceanography, meteoreology, marine biology, geo-physics and submarine geology.

Besides contributions to basic knowledge, the expedition expects to provide "unusual benefits to the heavily-populated protein-deficient nations on the Ocean's perimeter".

It is pointed out that, first, the expedition could lead to increased fish harvest, and, secondly, "the expedition will offer these countries an opportunity to further their economic development by the training of marine scientists and technicians who can later be called upon to apply the general scientific findings".

ASIAN RECORDER

January 23—29, 1960

Regd. No. D-727
Vol. VI. No. 4

AFGHANISTAN

A. **Trade And Economic Co-operation With Yugoslavia.** The official Yugoslav News Agency *Tanjug* reported on January 6, 1960 that Yugoslavia had established direct trade relations with Afghanistan for the first time under Agreements signed in Kabul.

A Yugoslav Government delegation signed Agreements on trade and economic co-operation and on scientific-technical co-operation between the two countries.

Under the Agreements, Yugoslavia would buy Afghan cotton, wool, raw leather, furs and seeds in exchange for equipment, machinery and tools, industrial products and consumer goods.

Yugoslav firms would take part in investment building in Afghanistan, ore-prospecting, construction of hydro-electric stations and factories. Afghan workers and technicians would study in Yugoslavia while Yugoslav experts would go to Afghanistan to help.

(*The Times of India*, Bombay)

[Prev. ref. 109:AFG:A]

B. **Soviet Aid For Building Motor Road:** The Soviet and Afghan officials signed in Kabul on January 11, 1960 a contract providing for Soviet technical aid to Afghanistan for the construction of a motor road running from Kushka to Herat and Kandahar.

The road will be 750 kilometres long.

(*Tass*)

[Prev. ref. 2743:AFG:A, 2799:AFG:A]

BURMA

A. **Independence Day Celebrations:** The 12th anniversary of Burmese Independence was celebrated on January 4, 1960 with enthusiasm throughout the country and by Burmese Missions abroad.

The President, U Win Maung, took the salute at a march-past of the armed forces and announced titles and decorations to civil and military personnel in recognition of their meritorious services to the nation.

In his Independence Day message to the nation, he said that through the efforts of General Ne Win's "care-taker" Government to secure internal peace, insurgents had been disrupted and a large number of them had surrendered. The standard of living of the people had been raised and "economic insurgency" had also been eradicated.

(*The Nation*, Rangoon)

[Prev. ref. 1833:BUR:A]

B. **Supreme Court Ruling On Citizenship:** The Supreme Court held on January 9 that a person would be a "statutory citizen" of Burma under the Union Citizenship Act if his or her ancestors had permanently settled in Burma for two generations and if his parents and himself were born in Burma.

It said that such persons would be "statutory citizens" even if they were unlike Burmese in appearance and did not know the Burmese language. Applicants for citizenship who claimed to belong to this category should be afforded an opportunity to prove that they were Burmese citizens under the Act. "To deny them citizenship would be a violation of their fundamental right."

(*The Nation*, Rangoon)

[Prev. ref. 1909:BUR:A]

CAMBODIA

A. **Prince Norodom Sihanouk On Relations With Thailand And South Viet-Nam:** The Cambodian Prime Minister, Prince Norodom Sihanouk, said in an interview published in Paris on January 8 that unless Thailand and South Viet-Nam (RVN) recognized Cambodia's neutrality and stopped threatening her independence "we shall call on the communist Powers to make us communists."

In the interview published in *Le Monde Diplomatique*, Prince Norodom, who had just returned to Cambodia from official visits to the United Arab Republic, Yugoslavia and India, described Cambodia's relations with its neighbours as "dangerous".

He declared: "I wish that the Western friends of Thailand and South Viet-Nam (RVN), who are also ours, would make them understand that if Bangkok and Saigon persist in not admitting our neutrality and in threatening our independence and our territorial integrity, we shall call on the communist Powers to make us communists.

"I met in Prague and Warsaw people who did not like communism but who adopted it to protect themselves against Germany. And Cambodia would do likewise."

Prince Norodom returned to Pnom Penh on December 31, 1959 after nearly two months' absence.

In an interview at the New Delhi airport on December 27, 1959 he had said that Cambodia was having difficulties on its borders with Thailand and South Viet-Nam (RVN) and had deplored the "highly passionate Press campaign" in Thailand against his country.

(*The Statesman*, Calcutta)

[Prev. ref. 2515:CAM:A, 2953:RVN:A, 2959:CAM:B]

CEYLON

A. **Five Ministers Dismissed:** Five Ministers, belonging to the Sri Lanka Freedom Party, were dismissed on January 5 from the 'care-taker Government' of the Prime Minister, Mr. Wijayananda Dahanayake.

They were: Mr. R. G. Senanayake (Food, Commerce and Trade), Mr. J. C. W. Munasinha (Industries and Fisheries), Mr. C. A. S. Marikar (Posts and Broadcasting), Mr. Henry Abeywickreme (Works) and Mr. M. B. W. Mediwake (Local Government and Cultural Affairs).

Their places were immediately filled by five members who had filed their nominations to contest the forthcoming General Elections under the banner of the Prime Minister's newly-formed Lanka Prajathanthravadi Pakshya (Ceylon Democratic Party).

The new Ministers were: Mr. R. E. Jayatilleke (Transport, Power and Works), Mr. M. S. Kariapper (Posts, Broadcasting and Cultural Affairs), Mr. Layard Jayasundera (Local Government), Sir Razik Fareed (Commerce and Trade) and Mr. J. D. Weerasekera (Industries and Fisheries).

Mr. Dahanayake retained the portfolio of Food for himself.

No official reason was assigned for the Ministerial changes.

The changes were, however, anticipated in political quarters as soon as it was known that the five Ministers would not join the Prime Minister's party and that they would contest the Elections (due on March 19, 1960) as candidates of the late Mr. Bandaranaike's Sri Lanka Freedom Party.

This was the second group of five Sri Lanka Freedom Party Ministers dismissed by Mr. Dahanayake in four weeks. He had dismissed the first group in December, 1959 after he fell out with the Sri Lanka Freedom Party which expelled him from its ranks.

Security Ministry Set Up:

On January 20, the Governor-General, Sir Oliver Goonetilleke, announced the creation of a Ministry of Internal Security.

The Minister of Local Government and Housing, Mr. L. Jayasundera, was sworn-in to take charge of the new Ministry in addition to his portfolio.

The announcement did not specify the functions of the new Ministry, but it was presumed to be part of "the drastic action" the Prime Minister had said he would take to guard against "subversive activities."

Colombo sources said that the Department of Police would be transferred from the Ministry of Justice to the new Ministry as well as the direction of measures against illicit immigration.

It was presumed that the new Ministry would organize security arrangements for the March 19, 1960 elections.

The Governor-General also announced the appointment of Mr. Sidney de Zoysa, Deputy Inspector-General of Police (on leave preparatory to retirement from service) as Permanent Secretary of the new Ministry.

(*The Times of Ceylon*, Colombo and *The Hindu*, Madras)

[Prev. ref. 3059:CEY:A]

B. **New Army Chief:** Major-General H. W. G. Wijeyekoon assumed command of the Ceylon Army on January 1, 1960 in succession to Major-General Anton Muttukumaru, who has been appointed Ceylon's High Commissioner in Pakistan.

Major-General Wijeyekoon (49) joined the Army in 1935 and received his military training at institutions in India and United Kingdom.

(*The Times of Ceylon*, Colombo)

Digitized by Arya Samaj Foundation Chennai and eGangotri

C. **Barter Deal With China:** It was officially stated in Colombo on January 3, 1960 that agreement had been reached between Ceylon and China on exchange of rubber for rice.

Under the Agreement, Ceylon would sell 17,000 metric tons of rubber to China in return for 160,000 metric tons of rice in 1960.

China would also be allowed to buy an additional 5,000 tons of rubber in the Ceylon market, paid for in goods, and from the open market, paid for in acceptable currency.

The 1959 Agreement had provided for the sale of 30,000 metric tons of rubber and the purchase of 230,000 metric tons of rice.

(*The Hindu*, Madras)

[Prev. ref. 2743:CEY:A]

CHINA

A. **Aim Of Out-stripping UK:** The Peking newspaper *People's Daily* said on January 1, 1960 that the target of the Chinese people in the 1960's was to catch up with or surpass Britain in the output of major industrial items.

It said: "Of course, even by that time China's *per capita* output of industry and agriculture will still be very low, still very backward compared with Britain.

"In the past decade, China, led by the people's democratic dictatorship with the Communist Party as its leading core, has achieved unification of the whole country except Formosa.

"While economically and culturally speaking, China is still comparatively backward, the situation is incomparably better than the situation before liberation.

"The communes had become ever more sound organizationally, their superiority is manifesting itself ever more clearly and their prestige among the peasants is higher.

"Both agricultural and industrial output had surpassed their targets in 1959".

It added that it was "trash" to say that China would become a threat to her Asian neighbours, since she was loyal to the Five Principles of peaceful co-existence.

(*The Statesman*, Calcutta)

[Prev. ref. 2996:CHI:A]

B. **Militia Force To Be Organized:** It was disclosed on December 1, 1959 that China expected to complete by Spring (1960) the training of officers and men at the platoon level and above in its vast militia, destined to become the world's biggest military reserve force.

Drawn from the 27,000 peasant communes established in the Summer of 1958, the young men and women of the militia force, the Defence Minister, Mr. Lin Piao had said on October 1, 1959, would eventually total around 200 million. Besides bearing arms they would help in civilian construction.

China's regular armed forces total an estimated 3,000,000 men.

Hitherto unpublished details of the militia programme were disclosed on December 1, 1959 by Mr. Peng Hsieh-chung, First Secretary of a District Communist Party Committee in Kiangsi Province. They were reported by a Nanchang newspaper.

Mr. Peng revealed that it was planned to complete the training of basic militiamen within three years and to have every one know how to use a gun and fight a battle within five years.

"The militia," he said, "is the fundamental condition for the attainment of victory. Only when military service is universally carried out, thereby providing the State with a strong force, can the imperialists, once they invade our country, be defeated."

He made it clear that the Chinese leader, Mr. Mao Tse-tung, and his associates were taking no chances of this powerful, new weapon falling under the control of military men.

He said that the militia units would be organized by and be the primary responsibility of the Communist Party and not of the regular army.

The first step to be taken would be to coordinate the militia with production needs, "purifying the rank and file and obtaining the required number of cadres." The next step would be "to make appropriate preparations for war-time mobilization by organizing, in accordance with the orders of the upper level, reserve divisions and regiments and alerting the reserve forces to the call of the nation." The third phase would be the development of military training in the five-year period, and then "to strengthen the political education of the militiamen and arm them with the military thought of Mr. Mao Tse-tung."

[The Minister of Defence, Marshal Peng Teh-huai, was relieved in September, 1959. He was believed to have objected to Party interference in the army.]

(*The Times of India*, Bombay)

[Prev. ref. 2672:CHI:B]

INDIA

SUMMARY: Chinese Reply To Indian Letter And Note On Border; Registration Of Chinese Residents; Indian National Congress Session; Canadian Aid; Indo-Pakistan Decision On Western Border; Indo-Pakistan Financial Issues; India-Moscow Radio-Teletype Link; Road Link With Bhutan; Agreement With Japan On Avoidance Of Double Taxation.

A. **Chinese Reply To Indian Letter And Note On Border:** Replying to Mr. Nehru's letter of September 26, 1959 and the Indian Note of November 4, 1959, the Chinese Government sent a Note of over 10,000 words on January 2, 1960 asking India to recognize "the most basic fact" that the entire 2,500-mile boundary between the two countries had never been delimited and "is, therefore, yet to be settled by negotiations."

The Note asserted that the traditional border between India and China had been correctly depicted in the Chinese maps and denounced the MacMahon Line and the Indian delienation of the 1842 Treaty boundary as usurping 90,000 square kilometres of Chinese territory in N-EFA and 33,000 square kilometres in Ladakh.

It argued that there was "no alternative" to peaceful co-existence between India and China and accordingly urged an early meeting between the two Prime Ministers to lay down certain guiding principles for further discussion, presumably at a lower level.

Pending formal delimitation of the border, it re-iterated the plea for demilitarization of the border and no forward patrolling even in the disputed areas so as to avoid further incidents.

The Chinese Note set out a detailed historical narrative in reply to Mr. Nehru's letter of September 26 and the Indian Note of November 4, 1959. It was delivered to the Indian Embassy in Peking on December 26, 1959, was received in New Delhi on December 31, 1959. It was officially released by the Chinese Embassy in New Delhi on January 2.

The Note was firm and sweeping in its statements but moderate in language. The last few pages of it were devoted to the theme of the importance of Sino-Indian friendship, advocated in the interests of Asia and world peace and because there was no alternative. Both countries, it was said, also needed to concentrate on economic development.

The thesis that China's traditional expansion was asserting itself with the growth of her industrial power and the pressure of population was sought to be answered at some length with reference to the fact that there was currently a labour shortage in China, that food output had far out-stripped population growth, that despite industrial progress China would remain economically and culturally backward for decades, that half of China's vast territory was sparsely populated and that it had all the natural resources it wanted.

There were two other points of special interest. The first was a refutation as "sheer nonsense" of allegations that China wished to "encroach on" Sikkim and Bhutan.

It was admitted that the Sikkim-Tibet border had been formally delimited and there was no dispute about this sector. But a claim was made to north-eastern Bhutan.

The other noteworthy feature was the reiteration of an earlier proposition that "an overall settlement of the boundary question should be sought by the Chinese and the Indian sides, taking into account the historical background and the present actual situation."

The Chinese based their case on a wholly undelimited border on these points:

Ladakh: "The 1842 Treaty contained no provision or hint whatsoever about the concrete location of (the Tibet-Ladakh) boundary. In any case, 80 per cent of the disputed area of 33,000 square kilometres forms part of Sinkiang and, therefore, did not come within the ambit of the Treaty. Indian maps up to 1950 showed the border as undefined." Aksaichin was itself a Uighur name and had "all along been a place for pasturage and salt-mining for the Uighur and Kirghiz people." Since the mid-18th century, the Ching rulers had established check-posts to exercise jurisdiction over and patrol this area. More recently, the Tibet-Sinkiang highway was built along the old caravan route. "This area is the only traffic artery linking Sinkiang and western Tibet, because to its north-east lies the great Gobi desert of Sinkiang through which direct traffic with Tibet is practically impossible." The Indian maps cut across the Hotien river system and were, therefore, contrary to the watershed principle.

The UP-Himachal-Punjab Sector: The 1954 Sino-Indian discussions on Tibet were limited to trade and the border question was specifically excluded by mutual consent. India had, however, since occupied Shipki Pass, Kaurik, Bara Hoti, Sangcha and Lapthal. The British had earlier occupied Nilang and Jadhang. The Tibetan authorities had old land deeds and other records relating to Shipki, Nilang, Bara Hoti, etc. They had collected taxes and included them in the Tibetan census. The people were of Tibetan nationality and official Indian maps up to 1950 showed the border as undefined.

N-EFA: The MacMahon Line was wholly illegal. The Tibet-Assam border was drawn up in a secret Agreement between the British and Tibetan representatives and, far from being on the agenda of the Simla Convention,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

was entirely unknown to the Chinese delegate. Further, China never signed the Simla Convention. The Kuomintang Government repudiated the MacMahon Line in a Note delivered to the Indian External Affairs Ministry as late as November 18, 1949. Many authoritative maps published up to 1952 in India and up to 1958 abroad showed N-EFA border as undemarcated. The Chinese maps depicted the traditional and customary border correctly and supported this with geographical cultural, ethnic, linguistic and administrative evidence. The Tibetan administration always extended over the Tawang area and the Monba tribes. The sixth Dalai Lama came from these parts. The people continued to pay taxes and render *corvee* (forced labour) to the Lhasa Government until 1946. The 1853 Anglo-Monba Agreement was quoted to show Monba acceptance of Lhasa's sovereignty. The British treaties with other N-EFA tribes such as the Akans and Abors showed that their territories were not part of India.

Indian Reaction:

It was stated in New Delhi that two aspects of the Note were significant. The supreme importance of the Aksaichin highway as the sole (and geographically the only possible) line of communication between western Tibet and Sinkiang had been stressed in the Chinese Note more clearly than ever before. This was obviously the most vital portion of the disputed area, from the Chinese point of view.

The other aspect of interest was the reiteration that China was prepared to come to an "overall settlement" on the basis of "the historical background and the present actual situation."

The actual situation as stated by China was that it was in physical occupation of all but a very small part of the area claimed by her in Ladakh. The exception was in the Demchok area.

All this reasoning would lead to the possible suggestion that Peking may well be prepared to "barter" N-EFA for the disputed area of Ladakh subject to some adjustments as at Khinzemane or even Tawang area.

Despite the great length of the latest Note, the Chinese case still appeared at many points to rest on negative evidence.

It was alleged that the British treaties with the Akans and Abors showed that these tribal territories were not part of India. Therefore, China would argue, they must by definition be Chinese. There was no evidence to support the claim to 90,000 square kilometres in N-EFA and Assam extending as far south as the Brahmaputra plains.

Similarly, if Aksaichin was an Uighur word meaning "the desert of white stones", Kailas and Mansarowar are equally Indian names. This would prove nothing.

Again, if Mr. Nehru's *Discovery of India* carried a map incorrectly showing N-EFA as part of Tibet, then Marshal Chiang Kai-shek's *China's Destiny* published in the hey-day of the Kuomintang *regime* contained a map of China and adjacent areas in which Tibet was shaded as a separate entity.

If the sixth Dalai Lama came from the Tawang area, some of the other Dalai Lamas and Panchen Lamas had also been discovered outside Tibet.

If the Monbas and other Indian border people were of Tibetan stock, then the Chinese claim should extend to Nepal, Bhutan, Sikkim and the whole of Ladakh. The argument would seem absurd and unhistorical.

The latest Chinese Note claimed that geography—the watershed principle—supported its case in Ladakh. It quoted Hayward (1870), author of the *Sketch Map of Eastern Turkestan* as stating "explicitly what boundary ran along the main chain of the Karakoram mountains to the passes in Chang Chenmo." This position would appear to conflict with the Chinese acceptance of the Karakoram Pass as the Sino-Indian border in their Note of November, 1958.

It was also said that China had never once protested that the new Indian maps had incorporated Chinese territory. The most they had ever said was that their maps were based on older maps and could be corrected. The impression given all along was that only minor adjustments might be sought.

The Simla Convention was initiated by the Chinese delegation but was never formally ratified by China, it was said, only on account of differences relating to the borders between Inner and Outer Tibet. The MacMahon Line was never questioned even when the matter was re-opened in 1919.

The border was not physically demarcated on the ground along certain sectors. But it was said that it was delimited on the basis of treaty, custom and usage and the very significant and highly valid geographical principle of the watershed. In every sector from N-EFA to Ladakh, the Indian border, with a few recognized exceptions, followed the crest of the main mountain range divide between Central Asia and the tropical sub-continent.

Earlier, Indian maps sometimes did not mark every sector of the border. But there were very early maps such as Malker's Map of 1867 which did so. The more recent omissions had been filled in on the basis of accurate and up-to-date surveys and interpretation of data. In this process, India had given up portions of territory, such as the depression north of the Karakoram Pass, which were previously claimed by early Indian surveyors. The lines on the Chinese maps had travelled up and down through Ladakh, and very few editions of even recent maps showed the same line.

The Chinese Counsellor in New Delhi some years ago defined Bara Hoti as being "within India". He was later repudiated by his Government.

More recently, a Chinese delegation failed to give the exact latitude and longitude of Bara Hoti in the course of several weeks of negotiations in Delhi.

In an official Note on the historical data published in the September 16, 1959 issue of *China Today*, the Chinese claimed 42,000 square kilometres in Ladakh. The latest Note reduces this claim to 33,000 square kilometres.

Chinese Envoy Visits Indian Foreign Secretary:

The Chinese Ambassador in New Delhi, Mr. Pan Tzu-li met the Indian Foreign Secretary, Mr. S. Dutt, at the External Affairs Ministry on January 5, 1960. The meeting lasted about an hour.

This was the first time Mr. Pan Tzu-li visited the Indian External Affairs Ministry and talked to the Foreign Secretary since the Chinese incursions into Indian border.

Ill-treatment Of Prisoners—Chinese Denial:

Peking rejected the Indian protest on December 1, 1959 regarding the interrogation and treatment of the ten Indian policemen captured by Chinese forces in Ladakh.

The Chinese reply maintained that the prisoners were kept in tents and given blankets. They were treated on par with their own men, some of whom had also suffered frost-bite.

The Chinese denied that the Indians were repeatedly interrogated. On the contrary, they affirmed that the policemen volunteered their statements.

Ladakh-Tibet Treaty Of 1665:

In a series of articles published in the Srinagar newspaper *Martand*, Mr. J. L. Kilam, a retired Judge of the Jammu and Kashmir High Court, has said that the Indo-Tibetan border was not only well-known and understood on the basis of usage and convention but was clearly defined in the Treaty concluded in 1665 following a war between Ladakh and Tibet.

According to this Treaty, he has said, the border between Ladakh and Tibet was fixed as Lehiri Hill, separating the modern Indian border village of Demchok in south-east Ladakh and Toshigong. The Tibetan border-town, Lehiri Hill, runs north-south.

This Treaty was quoted by Hashamatullah Khan in his *History of Ladakh*, written during the time of Aurangzeb.

The articles also refer to the visit to Ladakh of two Italian missionaries in June, 1715, who went to Tibet in August, 1715, after crossing the border and stayed in Toshigong, opposite Demchok village. The Italians wrote their memoirs about their travels in Ladakh and Tibet.

By the Treaty between King Namgyal of Ladakh and the Dalai Lama, Ladakh ceded to Tibet the territory of Nagari Khorsum (south-west Tibet) for "lighting monasteries" in Tibet. References to Nagari Khorsum having been under Ladakhi control are also found in Ladakhi chronicles and literature.

By this Treaty also, Tibet not only agreed not to attack Ladakh again but also provide considerate treatment to Ladakhi traders engaged in pashmin trade with Tibet.

The Ladakh-Tibet border thus established was also recognized by Maharaja Gulab Singh when he conquered Ladakh in 1840.

After tracing the history of the independence of Ladakh since 975 AD, he maintained that the Chinese were nowhere on the Ladakhi scene and the earliest references to them were found in a *firman* issued in 1750 by the Emperor of China who, after claiming "sovereignty over the world" thanked the King of Ladakh for the services rendered to some Chinese.

Bhutan Reaction To Chinese Claims:

Commenting on the latest Chinese Note to the Government of India dated December 26, 1959 in which the Chinese had mentioned 'discrepancies' in the frontier line between Tibet and Bhutan, the Prime Minister of Bhutan, Mr. Jigme Dorji, said in Calcutta on January 8 that his country did not recognize any Chinese claim to any part of Bhutan.

He added: "We have had, however, no argument with China so far in this regard, but we are keeping our eyes open."

Mr. Dorji categorically denied the Chinese claim suggested by their maps and said that these territories were inhabited mainly by the Bhutanese for generations.

[The Chinese have also shown some territories in north-east and north Bhutan as parts of Tibet in some of their maps.]

Pakistan Claims On Ladakh Border Dispute Refuted:

India's Permanent Representative at UN, Mr. C. S. Jha, wrote to the President of the Security Council in reply to the letter from Prince Aly Khan, Pakistan's Representative at UN, on December 3, 1959 (published on December 30, 1959) informing him that the fact that the situation created by Pakistani aggression on Kashmir had still not been resolved due to the intransigence of Pakistan "does not in any way detract from the inherent rights" of India to take measures to resolve the situation created by Chinese incursions into Ladakh.

Prince Aly Khan had said in his letter that Pakistan would not accept any adjustment that might be made between India and China over the eastern part of Ladakh.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

He had also contended that the preservation of the international frontiers of the State of Jammu and Kashmir fell directly within the primary responsibility of the Security Council and that no Government could take any action with regard to these frontiers save in consonance with the decisions of the Security Council.

Mr. Jha said in reply that Pakistan's letter to the Security Council could have been sent only with one objective, namely, to put pressures on India and aggravate the situation caused by Chinese incursions into the Indian territory of Ladakh.

While doing their best to resolve, by peaceful means, the situation created by Chinese incursions, he added, the Government of India would, in pursuance of its inherent right of self-defence, take all such measures as might be necessary against any violation of its territory. The Pakistani Representative had sought to mislead the Council by making the suggestion that a sovereign authority to look after the security of the Jammu and Kashmir State had still to be evolved and that the responsibility for the security of the State had been assumed by the Security Council. But, the proposals made by the United Nations Commission for India and Pakistan (UNCIP) and the Security Council to resolve the situation created by Pakistani aggression were based on the sovereignty of the Jammu and Kashmir Government over the entire territory of Jammu and Kashmir and on the responsibility of the Union of India for its defence, including maintenance of law and order.

He said: "In his attempt to mislead the Council, the Permanent Representative of Pakistan has stated in his letter that the recommendations (which he refers to as decisions) of the Security Council and of the UNCIP provide that all outside forces shall be withdrawn from Jammu and Kashmir and the Government of India is entitled to maintain her armed forces for the observance of law and order. The Commission had specifically assured the Indian Prime Minister that 'law and order' includes adequate defence.

"A reference to the Security Council resolution of January 17, 1948 to the two UNCIP resolutions of August 13, 1948 and of January 5, 1949 and the assurances given by the United Nations Commission on behalf of the Security Council to the Prime Minister of India would show conclusively that the proposals made by the UNCIP and the Security Council to resolve the situation created by Pakistan aggression in Jammu and Kashmir were based on the sovereignty of the Jammu and Kashmir Government over the entire territory of Jammu and Kashmir and on the responsibility of the Union of India for its defence, including maintenance of law and order."

Uttar Pradesh Road Projects In Himalayas:

It was stated in New Delhi on December 26, 1959 that the Uttar Pradesh Government were taking up 12 road projects costing Rs. 65.84 crores to improve communications in the hill region bordering on Tibet.

The Government of India would pay half the cost of the projects and the State Government would bear the balance. One of the major projects would be the Jipti-Garbyang road costing Rs. 4.51 crores.

A hill track between Malari and Bara Hoti, one of the points claimed by the Chinese, along the Girthi and Hong rivers, would be built at a cost of Rs. 2.74 crores.

Work on another hill track, which leads from Nilang village to Nilang Pass, would be taken up at a cost of Rs. 5.25 crores.

The Narendranagar-Dharasu road would be widened and metalled at a cost of Rs. 7.50 crores.

Another major project would be the Khela-Darma bridle road costing Rs. 2.60 crores.

Bridges would be built at Gartang over the Janhavi at Kalchangad, Chouksa Chaudharagad near Nilang, Chakla Nagtar and near Pulling Sinhee at a cost of Rs. 25,00,000.

The Gadoliya-Maletha road, which is a section of the Tehri-Kirtinagar cart road, would cost Rs. 4 crores. The other projects were: Girgaon-Dung bridle road (Rs. 2.50 crores); Untadhura-Topidhunga-Lapthal-Balchadhura bridle road (Rs. 96,000,000); Topidhunga-Girthi-Malari bridle road (Rs. 96,00,-000); Dung-Untadhura bridle road (Rs. 75,00,-000); and the Garjia-Munshiari bridle road (Rs. 75,00,000).

Registration Of Chinese Residents:

It was officially stated in Calcutta on January 6, 1960 that about 8,000 Chinese residents, excluding children under nine years, had been registered so far in Calcutta. These registered Chinese had been given residential permits for a period of three months.

Citizens of foreign countries in India were recently asked by an order on December 5, 1959 to register with the local authorities and secure residential permits by February 5, 1960.

The screening of Chinese in Calcutta by the police revealed that a majority of them held passports issued by the Kuomintang Government of Formosa, which is not recognized by India.

Official sources said that those holding Formosa passports had been declared "State-less persons" and given three-month residential permits. Their cases would be "reviewed" after the expiry of three months.

The sources added that a "number of Chinese" had also applied for Indian citizenship, most of them being engaged in business.

At the request of the West Bengal Government, the Government had also extended by one month, to February 5, 1960, the period of grace for the completion of registration by foreigners. The registration of foreigners in other States was completed by January 5, 1960.

B. **Indian National Congress Session:** The 65th session of the Indian National Congress met in Bangalore on January 16 and 17 when its new President, Mr. N. Sanjiva Reddy, took over.

In his Presidential address, Mr. Reddy referred to the border dispute with China and said that aggression against India would have to be resisted. Though India had to adhere to her policy of *Panch Shila*, it had necessarily to be adapted to the new conditions created by the Chinese incursions.

He attacked the communists for their attitude in regard to Chinese incursions and issued an appeal to root out the elements which acted as an impediment in the defence of India.

He said that "our communist friends" had lost their moorings in the country and "have developed a pattern of mental outlook under which they owe allegiance to something that is foreign to us."

He made it clear to the communists that there could be no argument about loyalty to the State and the country of one's origin.

In a brief reference to Kerala, he said that the assumption of office by a communist Government there after the last General Elections was a tribute to the democratic outlook of the Congress. The problem of Kerala had, however, assumed such serious proportions that Central intervention in that State had become inevitable if the President of India were to discharge his constitutional responsibilities.

In the context of what had happened to the people of Kerala and the communist attitude towards the Chinese incursions, he said: "We have to be very vigilant not merely on our frontiers but also in every district and every village of our country." Fifth columnists and saboteurs should not be given any quarter. He had no doubt that the ensuing elections in Kerala would teach a telling lesson to the communists "which it will take them decades to forget."

He welcomed the new trends toward peace in the international field and the efforts being made through the 'summit' conference to solve the present deadlock in international relations. The two greatest and most powerful nations of the world, America and the Soviet Union, had started thinking seriously in terms of co-existence, it being the only solution if humanity were to survive. Some nations to whom India's policy of *Panch Shila* and non-alignment had appeared mystifying had now come to realize the value and wisdom of that policy.

He also made the following points:

Agricultural Organizational Pattern: It was particularly unfortunate, he said, that Mr. C. Rajagopalachari was associated with a movement to organize reactionary elements to oppose the reform proposed by the Congress at Nagpur. The Nagpur resolution provided for the establishment of service co-operatives with the object of starting joint cultivation in future on a voluntary basis. How anyone could oppose this policy was beyond his comprehension. Co-operation was not only a technique for greater production and better living but was also a way of life. He felt sure that given the effort, the country could increase food production at a much faster rate than hitherto. The criticism against slow progress on the agricultural front was much exaggerated and ignored the new conditions that were emerging in the country as a result of the Community Development movement, co-operatives and new development in favour of a decentralized rural economy. What was most necessary today was the implementation of all ideas and programmes so often laid before the country.

The Swatantra Party: It was difficult to deal with the policy or programme for which Mr. Rajagopalachari's party stood. The economic policy vaguely hinted at by this Party was no policy at all and appeared to resemble the idea which existed in some Western countries in the 19th century—that of unrestricted free enterprise. This idea had been given up even by those Western countries and it was peculiarly inappropriate at the present stage in India.

Private and Public Sectors: He was unable to appreciate that there was any real conflict between the two, provided both were looked at from the point of view of attaining the country's objectives and the Directive Principles of the Constitution. The major sector of the economy, including the basic and strategic industries had to be in the public sector. This, however, left a vast field for the private sector.

Plans: The Second Five-Year Plan, in spite of all manner of difficulties, was well on the way to fulfilment. The great problem now was how to draw up the Third Plan so as to increase the speed of progress towards a self-generating economy.

States Re-organization and Language: The formation of Andhra in 1953 had proved that a linguistic State could function very much better than a composite one. He was glad that the Congress had taken a correct decision in bifurcating the composite Bombay State. As regards the language issue, it had to be realized that a change from English to the regional languages was more important than a change from English to Hindi. The Prime Minister, Mr. Nehru, had given an assurance that English would remain as far as inter-State and Central Government communications were concerned. All the same, national honour and self-respect demanded that the country should develop one common Indian language and this could only be Hindi. But the change-over to Hindi should not be sudden and should not leave any trace of bitterness or ill-feeling. He was sure that Hindi would acquire a distinctive style in the South with its own idioms and modes of expression.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The Congress Organization: He was aware that there were many communal elements in the Congress. It was a great pity that the catholic outlook of the past leaders was not evident today. The question of indiscipline in the Congress had to be tackled vigorously and with a firm hand so that the organization could function effectively and dynamically. Congressmen should go out of their way to earn and preserve the good opinion of the opposition parties and so conduct themselves that they were not only honest but also considered honest.

Resolutions:

The plenary session adopted three policy resolutions on the implementation of programmes of planned development, international affairs and India's frontiers.

Earlier, the resolutions had been considered and approved by the Working Committee and the Subjects Committee.

A prominent participant in the discussions was Mr. Nehru who defended the Government's domestic and foreign policies and called on congressmen to concentrate on the development of national economy.

Implementation Of Planned Development:

The following is the text of the resolution on "Implementation of Planned Development":

"The Congress expresses its appreciation of the progress made in the economy of the country in spite of the stresses and strains experienced during the past years. This progress has taken place both in the agricultural and industrial spheres and has established a firm base for future advance. The general policies and programmes laid down by the Congress as well as by the Planning Commission, and adopted by the Government, both for agricultural and industrial development, have been widely appreciated and have justified themselves.

"Nevertheless, considering the magnitude of the problems and the growing population of the country, the rate of progress has not been fast enough. It is necessary that this rate should be rapidly stepped up in order to lead to a dynamic economy. Criticisms have been made that the programmes laid down are not fully carried out and in some cases even the installed capacity is not adequately used. There appears to be a gap between policies and programmes and their implementation which slows down the rate of progress. Steps must be taken to ensure that the programmes laid down are carried out without delay and the progress is speeded up. Towards this end, it is imperative to have speed, efficiency and integrity in the administrative set-up at all levels. The administrative services in India are competent, but they have to function under rules and procedures which cause delays and which are not suited for the purposes of rapid social and economic changes. These rules and procedures should be modified wherever necessary, and brought into line with the requirements of a rapidly changing economy. It should be understood that the mere laying down of right policies and programmes is not enough; the test is performance and implementation. It is by this test of performance that the work of the individual officers of all grades should be judged and praise or criticism given. Responsibility should be fixed for specific tasks in relation to the programmes on particular individuals in the administration, and methods and procedures which cause delay and hamper initiative should be changed. The Congress feels strongly that the temper of the administration as well as of the people generally has to change in order to face the great tasks before the country with faith, speed and determination.

"The broad policies and programmes laid down, which may need elaboration from time to time, are adequate; what is necessary is to concentrate on their implementation and to make such institutional changes as may be required. In a community which aims at major social and economic changes, it is inevitable that the administrative apparatus of the State should grow in size. But this growth should not be disproportionate, as an excess of officials is apt to come in the way of the very work for which they were intended. As the administrative apparatus grows in size it tends to become isolated from the people and often ceases to be responsive to their needs. It is essential that there should be intimate contacts between the people and the officials in every sphere, and this should be more especially so in the agricultural sphere. It is essential also for officials guiding policies and programmes to be aware of the problems of the people and to acquaint themselves with their real needs.

"The objective to be aimed at in the near future is for the country to attain a self-sustaining and self-generating economy, both in agriculture and industry. It is only by the achievement of such an economy that the country can advance rapidly towards a Welfare State and socialist pattern. The pace of progress has to be rapid enough not only to keep well ahead of the increasing population and provide basic necessities for the masses of our people who are in such dire need of them, but also to create an adequate surplus for investment for future growth. The advance already made has brought the country nearer the stage of a higher economy. Further quickening of the progress would call for a more intensive and rapid effort. The challenges and difficulties which have arisen on our north and north-eastern frontiers further necessitate such intensification and concentration on economic development. The defence of a nation ultimately depends on its economic strength. The Second Five-Year Plan must, therefore, be proceeded with to a successful completion, and the Third Plan should be of a magnitude which should ensure the country reaching the stage of a change-over to a self-generating economy.

"Such growth necessitates the rapid development of agriculture as well as of industry. Progress in agricultural production is vital and must take place at a much more rapid pace than hitherto. There can be no doubt that this can be done, as has been demonstrated wherever the effort has been made. The steps that should be taken to this end are well-known. What is now necessary is to carry them out with vigour and spread them all over the rural areas. Full utilization of the available irrigation facilities, better agricultural tools, use of good seeds, soil conservation and particularly contour-bunding, use of fertilizers, green manure and compost, and reclamation of water-logged areas and saline and other lands through methods which are now established, can all be done without any considerable expenditure of public funds, and only an organized effort is needed. While major irrigation schemes are necessary, there is greater need to concentrate on small schemes which are cheaper and bring quick results. All this should be reflected in a progressive increase in the yield per acre. This can be effectively achieved through the co-operation of the entire peasantry who should be made to realize the extent of benefit which they can derive for themselves from these measures. Such co-operation would become real only when the peasants themselves participate in the laying down of the programmes and targets of production. It is essential that officers of all grades in the rural areas should keep in intimate touch with the peasantry, take them into confidence and learn from them what their problems and difficulties are. More particularly, the village level workers must maintain this intimate touch. Their work must be judged by their achievements.

"There is an enormous potential and unutilized productive power in the vast rural population of India, and efforts should be made to release these productive forces. This should be achieved largely by the exercise of the peasants' own initiative and not by mere reliance on directions from above. Properly approached, the peasantry of India reacts favourably; if that reaction is not adequate, the approach has not been proper. What is needed is good husbandry and modernization of agricultural methods; the peasant takes to them as soon as he is convinced, and facilities are given to him for this purpose. For efficient agriculture, for improvement of the economic position of the peasant and for giving him fuller occupation it is essential that much greater attention be paid to animal husbandry and improvement of the cattle wealth of the country.

"The Community Development movement has done great good to our rural areas. Recent criticisms of it, though often exaggerated, have, however, considerable truth in them. Every effort should be made to re-vitalize this movement and, more particularly, to make the workers in it individually responsible for the tasks that are allotted to them. They must not function as officers from above, but as colleagues of the people they must serve.

"The last session of the Congress at Nagpur passed a resolution on the agrarian organizational pattern. This Congress re-affirms that resolution. It notes with appreciation the progress made in land reform as well as in co-operatives. It would stress, however, that the pace should be speeded up until every village has an efficient service co-operative which should not only help in agriculture but also play an ever-increasing part in the development of animal husbandry, and in processing, marketing, consumer industries and in consumer trade. The development of such industries is of major importance for strengthening the rural economy and expanding the employment opportunities for the people in the rural areas. While service co-operatives are the immediate programme for every village, co-operative farming should be developed wherever it is desired by the farmers concerned and is considered feasible. It should be realized that co-operation in all its forms is a voluntary movement.

"The Congress welcomes the movement for decentralizing rural economy and establishing a 'Panchayat Raj'. Some States have already implemented this programme, while some others are proceeding to do so. This development is of high importance, as it gives the people greater scope for the exercise of responsibilities and makes them self-reliant. In this way the foundations of democracy are strengthened.

"Real industrial advance depends upon the development of heavy industries, more especially of iron and steel and machine-building and of power. It is on this base that other industries grow. Part of this base is being laid by the great steel and power plants that are nearing completion and the efforts now in progress for installing plants for heavy machine-building. This process will have to continue throughout the Third Plan. At the same time, smaller industries as well as village industries should be encouraged and helped for the production of consumer goods. It is through these smaller industries that employment will be provided for many of those who are today unemployed or under-employed. In addition to this, the man-power resources of the country should be utilized with the help of special programmes, particularly where the incidence of unemployment is high.

"Agricultural and industrial workers are the basic and vital element in the community. They have to play the most important role in building up the economic strength of the country. Their welfare, therefore, should be properly looked after, and they must discharge their responsibilities by achieving a rising level of productivity. The nation cannot afford any interruption of production on account of strikes and lock-outs.

"The Congress organization has a crucial role in the effective implementation of these policies and programmes. It has a special part to play in bringing about the desired social and economic changes in the country. Congressmen should shoulder this responsibility and discharge this role more effectively. Congressmen should concentrate during the coming year on the formation of service co-operatives and the organization of village panchayats. Further, every Congressman must associate himself with at least one specific activity connected with development and, in rural areas especially, with some definite programme connected with agriculture.

"At this critical period in India's history, timing and achievements are vital. The best of policies and programmes prove ineffective if there is delay or slowness in their implementation. The strength of the nation is great if it is properly applied with discipline and unity. Factions and disruptive tendencies weaken national cohesion. They are particularly injurious to the nation's progress at this juncture, when the future of our country is at stake in many ways. Any step which comes in the way of production effort or of national unity is harmful. The Congress, therefore, earnestly hopes that the people of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the country will bend their mighty energies to these great tasks and work with unity, and strength of purpose for the achievement of the national objective."

International Affairs:

The following is the text of the resolution on international affairs:

"The Congress welcomes the developments in international affairs which have led to a lessening of tensions and which hold promise of further progress in this direction. The Congress offers its congratulations to the Great Powers who are endeavouring to break through the barriers of the 'cold war' in order to bring about some settlement of the problems which threaten the peace of the world. It trusts that at the 'summit' conference that is proposed, substantial progress will be made to this end and, more particularly, towards disarmament. These developments are in line with the policy of peace which India has pursued unwaveringly and are therefore particularly welcome to the Congress. It is widely recognized today that war, in this nuclear and inter-planetary age, is a total anachronism and cannot solve any problem but can only bring utter disaster to the world.

"The Congress particularly hopes that the testing, production and use of nuclear and like weapons will be totally banned. Any delay in taking this step will add to the difficulties of the problems and to the dangers that already exist.

"The Congress re-affirms its faith in India's policy of non-allgnment and avoidance of military alliances.

"The Congress welcomes the emergence into freedom of several new countries in Africa and sends its greetings and good wishes to them.

"The Congress deplores the continuance of the policies of racial segregation and discrimination in certain parts of Africa.

"The Congress regrets that the people of Algeria, who have gone through untold sufferings in their struggle for national independence, have not yet achieved their objective. It sends its full sympathy to them and trusts that a peaceful solution to this problem will be found soon.

"The Congress further re-affirms its conviction that the people of Goa will be liberated from foreign colonial rule, thus ending the last vestige of colonialism in India."

India's Frontiers:

The following is the text of the resolution on India's frontiers:

"The Congress welcomes the Agreements arrived at between India and Pakistan in regard to their eastern and western frontiers. This is a happy augury for better relations between the peoples of these countries, who have been so closely associated with each other in the past. It trusts that trade and commerce and other contacts will grow between India and Pakistan.

"While India's frontiers with Pakistan have become more peaceful, her frontiers with China have lately become danger-zones, and even the integrity of India has been violated. Aggression has taken place and parts of Indian territory have been occupied by Chinese forces. Incidents have occurred involving the loss of Indian lives. This has created a grave situation which requires all the wisdom, strength and determination of our people. The Congress supports the stand taken by the Government and its policy of peace and the settlement of disputes by peaceful methods. This policy does not and cannot mean, as has been made clear by the Government, submission to aggression or to anything which challenges the integrity and honour of India. While every step should be taken to settle these problems through peaceful methods, it has become incumbent that the country's defence organization should be strengthened with speed. The pace of India's economic progress must be quickened. The people of the country should face every challenge with unity, dignity and strength."

New Working Committee:

On January 18, Mr. Reddy announced the personnel of the new Working Committee.

They were: Mr. S. K. Patil (Treasurer), Pandit G. B. Pant, Mr. Morarji Desai, Mr. U. N. Dhebar, Mrs. Indira Gandhi, Mr. K. Kamaraj Nadar, Mr. S. Nijalingappa, Mr. Jagjivan Ram, Mr. Takhtmal Jain, Mrs. Sucheta Kripalani, Sardar Darbara Singh, Mr. Abdul Quayum Ansari, Mr. R. Sankar, Mr. Y. B. Chavan and Dr. Harekrushna Mahtab.

Mr. Sadiq Ali and Mr. G. Rajagopalan were named as General Secretaries. The name of a third General Secretary would be announced later.

(*The Hindu*, Madras, *The Times of India*, Bombay and *The Hindustan Times*, New Delhi)

[Prev. ref. 2451:INI:A]

C. **Canadian Aid:** The Canadian Secretary of State for External Affairs, Mr. Howard C. Green, announced in Ottawa on January 18 that India would receive $25 million (Canadian) as capital assistance from Canada during 1960-61.

The allocation represented an increase of $8,000,000 (Canadian) over that of the previous fiscal year but did not include the amount set aside to provide Canadian experts and training facilities under the Technical Co-operation Programme which would be continued and expanded during the coming year.

The announcement explained that in order to assist India to carry forward her programme of economic development, it had been decided to allocate a sum of $11,500,000 (Canadian) for the provision of urgently needed non-ferrous metals.

An additional $7,000,000 (Canadian) was made available as a wheat grant and $2,550,000 (Canadian) for the provision of fertilizers of various types which would assist in increasing food production.

A sum of $2,000,000 (Canadian) would be devoted to the provision of diesel switching locomotives to facilitate handling of cargo in India's major ports.

An amount of $75,000 (Canadian) was set apart to cover the initial expenses of a hydro-electric project to be agreed upon by the two Governments. A further sum of $130,000 would be used for cobalt beam therapy units for cancer treatment.

The Canada-India reactor at Trombay, which would be opened in 1960, was allocated an additional $700,000 (Canadian) towards its completion. Of the remainder, $250,000 (Canadian) would be used to provide radio-teletype equipment and $120,000 (Canadian) for the provision of raw asbestos used in the construction of factories and industrial housing.

(*The Hindustan Times*, New Delhi)

[Prev. ref. 2520:INI:F]

D. **Indo-Pakistan Western Border Talks:** The delegations of India and Pakistan began a five-day conference in Lahore on January 4, 1960 to settle outstanding disputes relating to West Pakistan-India border.

Pakistan's Minister for the Interior, Lt.-Gen. K. M. Shaikh, and leader of the Pakistani delegation presided.

India's Minister for Steel, Mines and Fuel, Sardar Swaran Singh, led the Indian delegation.

The Conference later split into two Committees—one Committee to deal with the dispute relating to the Chet Bet grazing ground in the Rann of Kutch bordering the Sind area of Pakistan and the Kutch areas of Bombay State, and the other to discuss issues relating to four disputed areas on West Pakistan-Punjab border.

The Conference shifted to New Delhi on January 7 and it was stated on January 10 that all disputes between India and Pakistan relating to the western border were resolved to the satisfaction of both sides.

The leaders of the two delegations, Lt.-Gen. Shaikh and Sardar Swaran Singh, also exchanged information about the eastern border, particularly the Tripura section, which was the subject of an earlier Agreement.

Joint Communique:

A joint *communique* issued in New Delhi on January 11 at the conclusion of the Conference announced the settlement of four of the five disputes relating to India's western border with Pakistan.

The four disputes settled concerned the Hussainiwala and Suleimanke Headworks and the villages of Chak Ladheke and Theh Sarja Marja. The only dispute left pending was in regard to the Rann of Kutch. This would be the subject of discussions to be held later when further data had been collected by the two countries on the subject.

The Agreement was signed in New Delhi on January 11 by the Commonwealth Secretary, Mr. M. J. Desai, for India and the Pakistan Foreign Office Joint Secretary, Mr. J. G. Kharas.

The following was the text of the *communique*: "In pursuance of the decision taken at the India-Pakistan Minister-level Conference in October, 1959, where a number of East Pakistan-India border questions were amicably settled, a Minister-level Conference was held at Lahore, Rawalpindi and Delhi from January 4 to 11, 1960 to discuss West Pakistan-India border questions. The Pakistan delegation was led by Lt.-General K. M. Shaikh and the Indian delegation by Sardar Swaran Singh.

"There were in all five areas of dispute in this region, viz., (1) Chak Ladheke, (2) Theh Sarja Marja, (3) Hussainiwala, (4) Suleimanke Headworks and (5) Kutch-Sind border. Of these, the first four dispute arose out of differences between the Governments of India and Pakistan regarding the interpretation of the Radcliffe Award. These were settled in a spirit of mutual accommodation.

"Pakistan gave up her claim to Chak Ladheke and India gave up her claim to the three villages of Theh Sarja Marja, Rakh Hardit Singh and Pathanke. In respect of Hussainiwala Headworks, it was decided that the boundary would be the district boundary between Ferozepore and Lahore districts. A settlement was also effected in respect of Suleimanke Headworks and an agreement about the adjustment in the district boundary was arrived at.

"Both countries agreed to collect further data in respect of the dispute regarding the Kutch-Sind boundary and discussions will be held later with a view to arriving at a settlement of this dispute.

"Agreement was also reached in respect of the Ground Rules which would be operative on the West Pakistan-India border.

"So far as the demarcation of the boundary between West Pakistan and Punjab (India) was concerned, it was decided that top priority should be given to this work which should be completed by the end of April, 1960. It was agreed that the return of the areas in adverse possession of either country in this sector will be completed by October 15, 1960.

"With the settlement of a large number of border questions both on East Pakistan-India and West Pakistan-India borders, yet another step has been taken by the two Governments for bringing about better and amicable neighbourly relations which the two leaders, the President of Pakistan and the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Prime Minister of India, had welcomed in their meeting on September 1, 1959."

E. **Indo-Pakistan Financial Talks—Agreement On Most Items:** According to a *communique* issued in New Delhi on January 4, 1960, a settlement had been reached between India and Pakistan on the figures relating to most of the items at the financial talks. The talks ended on January 3, 1960.

Some items, which could not be settled owing to lack of sufficient data, were referred to the Finance Ministers of the two countries who were expected to meet shortly to review the overall position. The date and venue of the meeting would be fixed later.

It was proposed at one time that the Indian Finance Minister, Mr. Morarji Desai, should visit Rawalpindi in January, 1960, depending on the progress of talks at official level.

The most controversial questions before the officials were division of assets of pre-Partition defence stores, public debt, provident fund and pensions. The officials were understood to have reached an understanding on the first two. The discussions on provident fund and pensions and a new item, income-tax arrears, remained inconclusive.

The officials also reviewed all other major outstanding financial issues and possible methods of resolving them.

These included Pakistan's cash claims of Rs. 160 crores in respect of payment of pensions to retired employees of pre-Partition Government of India now settled in Pakistan. Similarly, India has an outstanding claim of about Rs. 340 crores against Pakistan.

Text Of Communique:

The following is the text of the joint *communique*:

"Officials of the Pakistan and India Governments who began the final round of discussions on outstanding Partition issues between the two countries concluded their four-day discussions on January 3. The talks were conducted throughout in an atmosphere of cordiality and co-operation.

"The consideration of the various items and figures which are to enter the balance-sheets of the two Central Governments and of the divided provinces was completed. The figures relating to most of the items were settled in discussion and some items in regard to which the data available were not sufficient were left over for settlement after the Finance Ministers of the two countries have had an opportunity of considering them.

"The officials also reviewed all the other major outstanding financial issues and the possible methods of resolving them. The results of the discussions will be reported by them to their respective Governments. The whole position is expected to be reviewed at a meeting of Ministers, the date and venue of which will be settled in due course.

"The Pakistan delegation was led by Mr. H. A. Majid, Finance Secretary, and the Indian delegation by Mr. M. V. Rangachari, Special Secretary, Ministry of Finance".

(*The Statesman*, New Delhi)

[Prev. ref. 2829:INI:B, 2983:PAK:A]

F. **Delhi-Moscow Radio-Teletype Link For Meteorological Data:** A direct radio-teletype link between New Delhi and Moscow for the exchange of meteorological information was inaugurated on January 1, 1960.

This link was established in pursuance of a recommendation of the World Meteorological Organization for setting up a net-work of five centres for a round-the-clock exchange of meteorological data over the northern hemisphere. These centres are to be located in New York, Frankfurt, Moscow, New Delhi and Tokyo.

Thus, within a few hours each centre will have data pertaining to the entire northern hemisphere and will be able to prepare weather charts for making the necessary prognostications.

The establishment of a radio-teletype link between India and USSR is to be followed by a similar link between New Delhi and Tokyo for completing the northern hemispherical chain.

India will collect observations made every three hours at nearly 200 stations in South Asia over an area extending from Arabia to Burma. Soviet Russia, in its turn, will send similar observations taken eight times a day over a net-work of 250 stations.

The establishment of such links will provide vitally needed scientific data for service to international aviation, shipping, agriculture and other interests.

(*The Statesman*, New Delhi)

[Prev. ref. 3003 (corrected):INI:J]

G. **Road Link With Bhutan:** Work on the first road link between India and Bhutan began on January 13.

The 150-mile highway will extend up to Rimphung, the new name for the Bhutanese town, Paro, from Hashimara in Alipur Dooars of north Bengal.

The Government of India has allocated Rs. 65 crores for the project.

Bhutan has an extremely complicated border. The southern border is bounded by Assam and north Bengal, while Tibetan territory stretches across the entire northern boundary with the State of Sikkim dominating the west.

Access to Bhutan *via* Nathula Pass has been rendered impossible following the Chinese aggression because one has to cross Tibetan territory from Nathula to enter Bhutan.

The Bhutan Premier, Mr. Jigme Dorji, said recently that the 150-mile road was the beginning of a road net-work and that soon a number of feeder roads would be constructed to give a boost to the State's trade with India and Sikkim.

Although there was no deadline for completing the Hashimara-Paro road project, it was said that it would be ready for vehicular traffic before the end of 1961.

(*The Hindustan Times*, New Delhi)

[Prev. ref. 2903:INI:D]

H. **Nagas' Hostile Activities—Army Measures:** It was officially stated in Shillong on January 3 that units of the Indian Army and Assam Border Security Forces had gone into action in the hilly tracts on the Assam-Naga Hills border to comb the area for armed Naga hostiles who had in recent days been raiding the plains on 'missions of dacoity and loot.'

These forces, it was stated, had not so far met with any serious opposition from the hostiles though in one or two instances the Nagas had resorted to stray firing. Judging from the course of the operations, the hostiles appeared to have resorted to guerrilla tactics of "hit, loot and run."

The difficult mountainous terrain and the hostiles' "intimate knowledge" of the area were said to be helping the hostiles. Consequently, it was stated, the border forces would take time to clear the area of miscreants.

Official sources considered recent raids as "seasonal Winter activities" by the Naga hostiles. Compared with the incidents of previous years, the latest incidents were on a small scale and appeared to be a desperate bid by a small number of hostiles for survival.

The main motive behind these raids, they said, was "loot of property and arms and ammunition." There was evidence to show that the hostiles were not aided by Naga villagers in the interior of Naga Hills-Tuensang area.

According to indications available with the Border Security Forces, there were a few armed desperadoes of Nepali origin operating with the Naga hostiles. These desperadoes had been living in border villages for quite a long time and the "lure of loot" had attracted them to the fold of the hostile Nagas.

Two armed non-Nagas, captured by Border Security Forces early in December, 1959 in their raid on hostile hide-outs were actually found to be of Nepali origin who had settled down in border villages as tea garden workers.

Hostiles were also active in forest areas near the border of Naga Hills claiming them to belong to "Naga-land." They were reported to have warned a few woodcutters, whom they had kidnapped and later released, that they should not enter these forests since they belonged to Nagas.

Assam Governor's Notifications Of "Disturbed Areas":

The Governor of Assam, Gen. S. M. Shrinagesh, issued a notification in Shillong on December 30, 1959 declaring afresh three sub-divisions bordering on Pakistan as "disturbed areas" to deal adequately with the hostile Naga gangs reported to be moving about to create disorder.

Jowai sub-division in the United Khasi and Jaintia Hills and Silchar and Karimganj sub-divisions in Cachar district were originally declared "disturbed areas" on June 13, 1958, and this had now been extended by six months from December 23, 1959.

When these areas were first declared "disturbed", armed hordes of Nagas were reported to have tried to establish contact with Pakistani elements to extend their area of operations.

K. **Agreement With Japan On Avoidance Of Double Taxation:** An Agreement for the Avoidance of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Double Taxation of Income between India and Japan was signed in New Delhi on January 5, 1960.

Dr. Shiroshi Nasu, Ambassador Extraordinary and Plenipotentiary of Japan to India, and Dr. B. Gopala Reddi, Minister for Revenue and Civil Expenditure, Government of India, signed on behalf of their respective Governments.

According to an official Press release, the Agreement was required to be ratified after which it would become effective in India in respect of income of the previous year beginning on or after January 1 of the year in which the exchange of Instruments of Ratification took place.

The Agreement followed talks between the two Governments at official level in Tokyo in October, 1959 when a draft Agreement was initialled.

L. **New Envoy To Ghana:** It was announced in New Delhi on January 7 that Mr. Khub Chand, Indian Ambassador in Rome, had been appointed as High Commissioner for India in Ghana and concurrently as Commissioner for India in Nigeria.

Mr. Khub Chand would assume charge of his new assignment in March, 1960.

(*The Times of India*, New Delhi)

[Prev. ref. 2733:INI:C]

M. **Indian Science Congress Session:** The Prime Minister, Mr. Nehru, inaugurated the 47th session of the Indian Science Congress in Bombay on January 3.

In doing so, he said that India had turned to science to solve her gigantic socio-economic problems and to raise living standards. But, he added, science alone could not remove the curious mixture of anomalies in the country's social life.

Scientists from 23 countries attended.

Mr. Nehru emphasized that while a scientist was required to work in a spirit of complete detachment in search of truth, he could not disregard the consequences of his work on human welfare. Science had advanced to such a stage that it held out a promise of enormous good and also a fear of great disaster.

He said that he felt a certain amount of hesitation in addressing eminent scientists who had come together to discuss their own special subjects.

He said that he was more concerned with the social consequences of science than with science itself. India was faced with major problems, political and economic and, in the main, social. The growth of the population and of raising their standard of living had presented a vital problem. India could not solve the problem without recourse to science and application of science. Inevitably, the country had to turn to science and scientists for the solution of its major problems. That meant encouraging the growth of science in the country.

He noted that science had been growing fast in the country during the last ten or 12 years and was beginning to show significant results. He had no doubt that it would grow. All that was necessary was to give opportunities to the people to work for the advancement of science. The Government was doing all it could in that direction.

Prof. P. Parija's Presidential Address:

In his presidential address, Prof. P. Parija, Vice-Chancellor of the Utkal University, said that men of science all over the world should guard against the "inhibiting influences" of society over science if "probing into the mysteries of nature in search of truth is to continue unhindered."

He said: "Only by co-operation and not by unhealthy competition can the mysteries of nature be unravelled by men of science and through the application of their discoveries the welfare of the mankind will be assured."

Analysing the impact of society on science, he said that scientific discoveries had been utilized "so extensively for the advancement of social welfare in all its aspects that one was likely to overlook the restraining influence society had on science. Even today this influence is operating."

Sectional Addresses:

Next day (January 4,) six Sectional Presidents delivered their addresses.

Speaking on "Mathematics", Prof V. G. Iyer, Head of the Department of Mathematics of Annamalai University, drew attention to the backwardness of the country in mathematical development and stressed the need for establishing research institutes in higher mathematics on the lines of the National Laboratories.

He pointed out that the influence of non-academic people endowed with the authority to shape the course of higher education in the country was gaining "unhealthy proportions" and that the experienced teacher was allowed "very little voice" in the matter.

Dr. C. R. Rao, Head of the Division of Theoretical Research and Training, Indian Statistical Institute, dwelt on the technique of "multi-variate analysis" used for predicting an unknown variable with the help of measurements on other co-relux variables that may be already available or were nearly ascertained.

He said that statistical methods provided a scientific approach in a wide variety of situations and such techniques were now widely used in the selection of persons for jobs, admission of students for higher education, determining the best vocation for an individual, selecting high yielding plants for varieties in plant breeding work and other related problems. The researches carried out at the Indian Statistical Institute using what was known as 'Mahalanobis distance' or D-2, which was shown to provide a direct measure of the extent of discrimination possible between two groups, had yielded a very satisfactory solution to this problem.

Research contribution in various directions during recent years under the leadership of statisticians like Mr. R. A. Fisher in Britain, Mr. H. Hotilling in USA and Prof. P. C. Mahalanobis in India had elevated multivariate analysis to the position of a fairly comprehensive scientific methodology in fields of applied research.

Speaking on "Physics," Dr. S. Parthasarathy of the Division of Acoustics, National Physical Laboratory, New Delhi, envisaged the possibility of studying chemical reactions, influenced by or brought about with the help of ultra-sonic waves by thermo-sonic methods.

The thermo-sonic techniques, he said, had also been employed to study the trans-duction efficiency of a quartz crystal.

Another interesting outcome of the subject of thermo-sonics was the study of the amplitude of vibration of the transducer itself. The results obtained compared favourably with the theoretically expected values.

As a result of work done at the National Physical Laboratory, it had been established that a certain amount of sound energy, when fully absorbed by the medium, produced an amount of heat and, conversely, heat could also be converted into sound as was evidenced by the work on light scattering in liquid media.

Speaking on "Chemistry," Prof. A. K. Bhattacharaya, Head of the Department of Chemistry, Agra College, stressed the importance of the study of flow of a reference liquid under standard conditions in the exploration of organic sedimentary rocks for petroleum and in determining the changes in the character of soils.

He mentioned the importance of the flow characteristics of solvents in the standardization of absorbents and eluants in the technique of chromatography and claimed that the surface forces of the column, inter-facial tensions at the solid-liquid boundary characterized by the structure and functional groups of the liquid molecules should appreciably influence the size and shape of the pores of the absorbent columns on which the velocity of the flow of liquids would ultimately depend.

Dr. V. S. Dubey, Professor of Economic Geology, Banaras Hindu University, said that millions of years ago Australia, India and Africa formed a vast continent called Gondwanaland with almost the same period of folding and eruption of the lava.

He said that the place where the Himalayas stood now was covered by sea about 40 million years ago and the animals which lived then in the sea had been enclosed in the sediments as fossils.

The volcanic activity which hit the States of Bombay, Madhya Pradesh and part of Rajasthan, about 60 million years ago, with lava flows 500 ft. thick gave rise to black cotton soil. The oldest rock of India was in Kolar gold field in Mysore State. Three times in the history of the Earth, the climate became very cold and the whole land was covered with ice as was the case around the Poles now.

Nobody, he said, knew how long the present period of quietness would last and when the Earth would get into an "angry mood" again, put out lavas on a vast scale, destroying the whole civilization which was getting more and more materialistic.

Speaking on "Anthropology and Archaeology," Dr. M. L. Chakravarty, Professor of Physiology, Calcutta Medical College, said that adequate nutrition was necessary to produce good men on earth, good citizens, good nations and a happy and prosperous world. Anthropology could then fulfil its mission and serve the cause of science.

He added that an adequate answer to the question whether over-population was the cause of under-nutrition had not been obtained. The present confusion on the subject was a "definite impediment" in the solution of this problem.

On January 5, the nuclear physicist and Nobel Prize winner, Prof. Niels Bohr, said that scientists of the younger generation should pool their experimental evidence on nuclear science to unravel the mystery of the atom.

He added that there was tremendous scope for international co-operation and exchange of knowledge for the development of atomic science. A combined effort had to be made to "harness the atom in the service of mankind."

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Knowledge in nuclear science had reached a stage where it had created numerous problems, both scientific and psychological. Whatever expressions people of different nations used, they all betrayed a state of mind which revealed a sense of anxiety about the "new dangers" posed by the possibility of misuse of the colossal might of the atom. It was for scientists of all nations to dispel this anxiety.

He emphasized that scientists should not work and live in isolation in the pursuit of truth but should play their role in promoting the betterment of the peoples of the world.

Sir Howard Florey, co-discoverer of penicillin, who spoke on the "Development of Antibiotics," said that diseases were generally controlled by chemical methods, vaccination or by controlling bacteria.

He traced the development of antibiotics and said that after the discovery of penicillin it could not immediately be produced on a large scale. It was in USA that such production became possible during the War. Three factors contributed to this—deep fermentation, improved medium for growing penicillin culture and the production of new strains of penicillin.

Sir Ewart Smith, who spoke on "Science and Industry" stressed the need for "bringing scientific methods and analytical approach to every-day affairs."

He referred to the difficulties and disadvantages of "over-specialization" and said that over-specialization had resulted in people knowing "more and more of less and less."

Defining management as the organization and control of human activity directed to specific ends, he said that people with a broad-based knowledge of both humanities and science who were "not specialists" had a significant part to play.

(*The Times of India*, Bombay and *The Statesman*, Calcutta)

[Prev. ref. 2485:INI:D]

N. **New Andhra Ministry:** The Andhra Congress Legislature Party, meeting in Hyderabad on January 10, accepted the resignation of the Party leader, Mr. N. Sanjiva Reddy, who had taken over as President of the Indian National Congress and, in his place, unanimously elected Mr. D. Sanjivayya, to head the new Government.

Mr. Sanjivayya (38) is the first Harijan to head a State Government.

Following the Party decision, Mr. Reddy submitted the resignation of his Cabinet to the Governor of the State, Mr. B. Sachar, who then invited Mr. Sanjivayya to form a new Government.

Accordingly, a 14-member Cabinet headed by Mr. Sanjivayya was sworn-in by the Governor on January 11.

The following are members of the new Cabinet:

Mr. D. Sanjivayya (Chief Minister): General Administration and Law and Order;

Mr. K. V. Ranga Reddy (Deputy Chief Minister): Revenue, Registration, Stamps, Land Reforms and Jagir Administration;

Mr. Alluri Satyanarayana Raju: Public Works;

Mr. S. B. P. Pattabhirama Rao: Education and Transport;

Mr. Pidathala Ranga Reddi: Planning and Development, Local Administration and Information;

Mr. Kalluri Chandramouli: Religious and Charitable Endowments and Co-operation;

Mr. K. Brahmananda Reddi: Finance, Commercial Taxes, Law Courts and Prisons;

Mr. M. Narasinga Rao: Home;

Mr. M. Pallam Raju: Forests, Animal Husbandry and Fisheries;

Mr. A. C. Subba Reddi: Industries, Housing and Municipal Administration;

Mr. P. V. G. Raju: Health and Medical;

Mrs. Masuma Begum: Social Welfare, Salar Jung Estate and Muslim Wakfs;

Mr. N. Ramachandra Reddi: Agriculture, Food Production, Rural Indebtedness, Debt Relief, Marketing and Labour; and

Mr. Konda Laxman Bapuji: Small Industries and Excise.

(*The Hindu*, Madras)

[Prev. ref. 3057:INI:P]

O. **Oil Strike At Cambay:** It was reported from Ahmedabad on January 17 that Indian geologists and oil technicians drilling at Cambay's oil test well No. 4 had struck oil at the shallowest depth of 4,925 feet so far at Cambay.

Penetrating an oil-bearing strata with the help of shallow depth Rumanian drills, geologists regarded this as decisive evidence of the commercial potentialities of Cambay's oil basin.

A special feature of the oil strike was that the Rumanian rigs, specially imported by the Oil and Natural Gas Commission, had effected over 40 per cent economy in installation and were set up and commissioned in a record time of 30 days.

Two test wells were drilled on the periphery of Cambay's subterranean oil basin in December, 1959 and the Commission's initiative has paid quick dividends.

(*The Times of India*, Bombay)

[Prev. ref. 2708:INI:G]

P. **New Steel Process Plant At Rourkela:** The Central Minister for Steel, Mines and Fuel, Sardar Swaran Singh, inaugurated on January 12 at Rourkela a new plant to make steel by what is known as the L.D. process.

The Rourkela Steel Works would produce 750,000 tons out of its annual production of 1,000,000 tons of steel by the new process.

The remaining 250,000 tons would be produced by the conventional process, open-hearth furnace.

The L.D. process, which was developed in Australia, was stated to have the advantage of lower capital and operating costs, higher rate of production in space and ancillary equipment. It consists of blowing in of oxygen at supersonic speed directly on to the surface of molten pig iron.

[Prev. ref. 2649:INI:C]

Q. **Bridge Across The Brahmaputra:** The foundation stone of the first ever rail-cum-road bridge across the Brahmaputra was laid by the Prime Minister, Mr. Nehru, at Pandu in Assam on January 10.

The project, costing Rs. 10 crores, was one of the major bridge construction works to be undertaken by the Railways.

Mr. Nehru described the occasion as a "great and historic event." The bridge when completed would be "a great link between the northern and southern parts of Assam and with the whole of India.

The bridge would be 4,258 feet long.

(*The Statesman*, Calcutta)

R. **Umiam Dam Construction Inaugurated:** The Prime Minister, Mr. Nehru, inaugurated the construction of a dam on the Umiam river, near Barapani village, 12 miles from Shillong on January 9.

After the dam has been built, the waters of the Umiam river will (in three years' time) fill the bowl in the Khasi hills where now bamboo and rice grows.

The golden-brown bald hills on the edge of the bowl will then hold in captivity a four-square-mile expanse of water, which will perhaps be the highest artificial lake in the country.

The dam is being built across a narrow gorge at the end of the bowl of hills through which the Umiam stream flows.

The stored water will be utilized to generate 1,00,000 kw of power for opening new industries and electrifying distant towns and hill stations of Assam.

The Umiam Hydro-electric Project is the biggest project the Assam Government has yet undertaken. Its first stage of construction will cost the State Government Rs. 7,05,00,000. On the banks of the lake will be located a power station whose "firm power" capacity will be 25,000 kw and total installed capacity 36,000 kw.

The second stage of construction envisages the diversion of a portion of the stored water into the Umtru river basin by boring a two-mile-long tunnel through the hill which separates the Umiam Valley from the Umtru Valley. A small power station of 4,500 kw functions in the Umtru Valley at present.

The stored water, when it will flow through the steep tunnel, will be tapped at two or three places to produce another 64,000 kw of power to bring the total output of the Umiam project to 1,00,000 kw.

The first stage of construction will be completed in December, 1963, when the generators at Barapani will go into operation to produce 25,000 kw of power.

The Umiam, a small stream in the Winter, becomes a raging mass of muddy water in the Monsoon. The annual rainfall in the river's catchment area is 105 inches. It is the biggest river in the Khasi and Jaintia Hills.

Power generated by this project will be distributed to most parts of Assam. In the first stage, transmission lines from its generating stations will supply power to Shillong, Cherrapunji, Gauhati and lower Assam.

In the second stage, one of its transmission lines will supply power from Gauhati to Tezpur, another from Gauhati to Silghat *via* Nowgong, and yet another from Gauhati to Bongaigaon *via* Nalbari, Tihu and Barpeta. Towards the south, it will supply power from Shillong to Badarpur, in Cachar district. The work of laying transmission lines will begin in 1962.

Among the new industries and establishments the Umiam project will supply power to are the proposed cement factory at Cherrapunji, the oil refinery at Gauhati (which will also have its own generators), a steel re-rolling mill at Gauhati and a railway workshop at Bongaigaon. It will also supply power to the proposed ropeway from Amingaon to Cherrapunji.

The project will not supply power to Upper Assam, where the State Electricity Board proposes to generate power from the natural gas found in abundance in the Nahorkatia oil-fields.

(*The Statesman* and *The Hindusthan Standard*, Calcutta)

[Prev. ref. 1871:INI:D]

S. **Bhakra Dam Accident Enquiry Committee Set Up:** The Governor of Punjab, Mr. N. V. Gadgil, who is also Chairman of the Bhakra Control Board, constituted a Committee of five engineers on January 7, 1960 to enquire into the causes of the accident to the hoist chamber of the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

right diversion tunnel of the Bhakra Dam which occurred in August, 1959.

Dr. A. N. Khosla, a member of the Planning Commission, was appointed Chairman of the Committee.

The Committee was asked to submit its report within three months.

The members of the Committee were: Mr. Kanwar Sain, Administrator, Rajasthan Canal Project; Mr. M. S. Thirumale Iyengar, Chief Engineer, Hirakud Dam Project; Mr. A. C. Mitra, Chief Engineer, Rihand Dam Project; Dr. K. L. Rao, Member of the Central Water and Power Commission.

The terms of reference of the Committee would be: to enquire into the failure of works in the hoist chamber region resulting in the flow of water through the galleries of the Bhakra Dam and flooding of the left bank power houses, and to set out as far as possible the sequence of events before and after the mishap relevant to a full appreciation of the event; to determine the precise cause or causes of the said failure; to advise whether all precautionary steps that could be taken were duly adopted or not, prior to the failure; and to set out the lessons that may be learnt from the incident and, in particular, to advise whether any works or devices could have been provided, or should even now be provided, which could minimize damage in the event of the flooding of the dam galleries.

(*The Hindustan Times*, New Delhi)

[Prev. ref. 2862:INI:L]

T. **Road And Inland Water Transport Committee's Recommendations:** The Road and Inland Water Transport Advisory Committee which met in New Delhi in the first week of January, 1960, it was stated officially, had recommended the consolidation of all taxes on motor vehicles and that the tax should be collected by a single agency.

It recommended that State Governments should be advised not to raise taxation very high as it would adversely affect the development of road transport.

It re-iterated the principle of single-point taxation and called upon the States to take early steps to abolish double taxation.

The recommendations of the Masani Committee, as modified by the Conference of State Transport Commissioners, were generally endorsed.

The Committee recommended that enhanced priority should be given to development of transport by road and other modes in the Third Five-Year Plan and emphasized the need for adequate allocations of foreign exchange during the Third Plan period for the import of motor vehicles and spare parts and high tensile steel for construction of bridges.

(*The Statesman*, New Delhi)

[Prev. ref. 1914:INI:I]

U. **Panchayat Raj Plan In Kerala:** The Prime Minister, Mr. Nehru, inaugurated at Ernakulam on January 18 the Kerala "panchayat raj" scheme under which 146 of the 900 panchayats in Kerala will gain power to implement the development plans directly in areas under their jurisdiction.

The State Governor, Dr. B. Ramakrishna Rao, speaking on the occasion, said that the scheme marked the beginning of decentralization of administration at the village level. If the experiment succeeded it would be extended to all panchayats.

The inauguration of the scheme coincided with a State Panchayat Conference at Ernakulam on January 18, which suggested that a panchayat should have the status of a cabinet as distinct from an executive body in respect of its multifarious activities at the block-level in the new set-up.

The Conference recommended the formation of functional committees for the channelization of various schemes, particularly those relating to improved methods of cultivation for increasing agricultural production. These committees, it said, should form an essential part of the panchayats.

(*The Hindu*, Madras)

[Prev. ref. 2945:INI:V, 2960:INI:H]

V. **A-ICC On Kerala Elections:** An appeal to the people of Kerala to unitedly meet the common danger to democracy from the Communist Party and defeat the Communist Party's design to capture power in the States and at the Centre was made by the All-India Congress Committee in New Delhi on January 5, 1960.

With only about three weeks left for the General Elections, in Kerala, the A-ICC issued an elaborate statement on communist tactics.

Referring to the Communist Party's 27-month rule in Kerala which ended on July 31, 1959 and which created a widespread sense of insecurity in the State, the statement said: "Democracy cannot function in an atmosphere of fear, insecurity and terror. The straight issue facing the people there is whether democracy should function normally in the State and ensure the fundamental rights and liberties of the people and recognized political parties, or that the will of the Communist Party in power was the will of the State, whose resources could be arbitrarily utilized for making the will of the Party supreme and unchallengeable.

"There is deep and widespread suspicion among the people that the Communist Party had little faith in democracy, both as a system of government and as a way of life. If democracy is to succeed, we have to tell the people clearly what it means, what rights it confers and the obligations it imposes on them, what freedoms it guarantees and restraints it considers necessary and unavoidable. We have also to create a moral and spiritual atmosphere in which the cause of democracy can prosper."

INDONESIA

A. **Presidential Decree On Political Parties:** President Sukarno issued on January 12 a decree which, in effect, gave himself the power to dissolve political parties if he thought necessary.

The following were some of the main points of the decree:

"Each political party must have branches in one-fourth of the first level autonomous regions (provinces) and the number of the branches should be at least one-fourth of the total number of second level autonomous regions.

"A political party is not allowed to receive any aid in whatever form without the permission of the Government.

"Every Indonesian national of the age of 18 and above has the right to become a member of any political party. The President has the right to exert control and examine the administration, finance and assets of a political party.

"The Head of State, after hearing the Supreme Court, can ban or dissolve a political party whose principles and aims are in conflict with those of the State; which has a programme fundamentally counter to the State's principles and aim; whose leaders are involved in rebellions or who clearly support such rebellions, while the concerned parties do not formally condemn such activities of their members; which do not fulfil the requirements as provided in the President's decree.

"The parties which have to be dissolved based on the above provisions should do so in at least two days after the coming into effect of the Presidential decree.

"The parties recognized are those which had been established before the Presidential decree of July, 1959 and those that fulfilled the requirements as contained in the President's decree".

National Front Formed:

The same day (January 12), President Sukarno issued another decree announcing the formation of a National Front (which was described as a mass movement for mobilizing and uniting all revolutionary forces under the President) to execute his concept of 'guided democracy'.

Its work would be to co-operate with Government to complete the national revolution and to achieve a prosperous society and the return of West Irian to the Republic of Indonesia.

Any Indonesian can become a member of the Front provided he or she was imbued with the spirit of the August 17 Proclamation of 1945.

Alongside the National Front, a supreme State body called the People's Congress, was created with Dr. Sukarno as President. It would be composed of elected representatives from the Provinces, present members of Parliament and members of "functional groups" nominated by the President.

Lt-Gen. A. H. Nasution On Short-falls Of Democracy:

The Defence Minister and Army Chief of Staff, Lieut-Gen. Abdul Harris Nasution, told foreign correspondents in Djakarta on January 4 that Indonesia's past deterioration in political, military and economic fields had been "due to mistakes in implementing democracy."

He said: "The democratic concept we practised in the past was not consistent with the personality of the Indonesian people's historical heritage."

He said that President Sukarno had explained that liberal democracy had been abused in the past.

This abuse took the form of "opposing one another, the improper ousting of one another from office and sabotaging one another."

He said: "There were military commanders who violated military norms with the excuse of freedom of speech in democracy. There were papers which confused public opinion by circulating distortions under the pretext of democratic principles."

He said that he was not against democracy "but I deeply abhor indecent acts under the mask of democracy."

The present Indonesian Government, which gave much power to the President, his nominees and State bodies such as the Army, was "in agreement with history and Indonesian personality."

In Indonesian history, rulers had played an active part in all fields of public life. "In spite of this, they were no absolute rulers as all decisions they took were approved by the Council assisting them which was made up of Chief Ministers, statesmen, theologians and popular leaders. It is clear that Indonesian democracy is a democracy by consultation".

He said that an event of 1959 which he regarded as important was the participation of the Indonesian fighting Services in various

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

executive and legislative fields. This participation was not spurred by ambitious desires or militarist ideas but "derived from the idea that it is important for all groups to participate in our normalization endeavour."

(*The New York Times, The Straits Times*, Singapore and *Information Service Indonesia*)

[Prev. ref. 2820:IND:A]

B. **Nationalization Of Mineral And Oil Resources:** The Minister for Reconstruction, Mr. Chaerul Saleh, submitted to Parliament on January 6 a Bill providing for direct Government control of all oil and mineral resources in the country.

It was an amended version of a similar Bill introduced in Parliament late in 1959.

The new Bill provided for the establishment of State enterprises and enterprises jointly owned by the State and Indonesian private capital for the exploitation of natural resources.

Foreign companies now exploiting oil and mineral resources will be required under law to progressively release their capital to Indonesians and train Indonesian nationals to take over all the functions of companies within a time-limit to be specified.

According to the Bill, the Government also planned to close a number of territories for mining with a view to exploiting the country's mineral resources more equitably.

An explanatory Note said that the Bill was in conformity with the aspirations and goals of the Republic under the Revolutionary Constitution of 1945 proclaimed in 1959.

It said that the holders of oil exploitation concessions were obliged to meet the needs of the State and the Indonesian community on materials which came from oil.

Therefore, in principle, the oil produced in Indonesia must be refined in Indonesia while the oil products must be regarded as vital for the State defence or the industries must be manufactured in Indonesia in order to avoid Indonesia being dependent on other countries.

A foreign oil company official said that the new Bill seemed to make no change in the present situation of his own or other overseas firms.

The fields in oil-rich Indonesia are worked by the Shell Company in Borneo and the Standard Vacuum and Caltex companies in Sumatra.

[Prev. ref. 3087:IND:B]

C. **Trade Agreement With Australia:** The representatives of Indonesia and Australia signed in Djakarta on December 17, 1959 a Trade Agreement between the two countries.

It was the result of long negotiations between the two Governments and replaced an "agreed list" of items for trade signed in Canberra on December 3, 1957.

Under the new Agreement, Indonesia would export to Australia such items as tea, coffee, rubber, teak, bauxite, petroleum and capok.

In turn, Australia would export to Indonesia flour, structural steel, medicines, building materials, vehicles, machinery, tele-communications and electronic equipment.

(*Information Service Indonesia*)

[Prev. ref. 2713:IND:D]

D. **Dr. R. Subandrio On Chinese Attitude:** According to *Antara* news agency, the Foreign Minister, Dr. R. Subandrio, said in a Press interview on December 30, 1959 that China's "present attitude toward countries adhering to an independent foreign policy is detrimental to all of us."

He added that Indonesia was still hopeful that the Bandung spirit of co-operation and mutual respect among Asian and African countries would be restored.

Referring to the lately deteriorating relations of China with such un-committed nations as India, Yugoslavia, United Arab Republic, Burma and Indonesia, he said: "Frankly speaking, many other statesmen in Asia think that the attitude of People's China is a puzzle".

He, however, hoped that China might yet change its policy so that the Asian and African nations "need not be afraid of their neighbours".

China's present policy gave the impression that "the strong voice by the People's Republic of China is addressed to countries pursuing an un-committed policy and which not so long ago applied a foreign policy not so different to People's China's own.

"The consequences of this new policy of People's China certainly are detrimental to all of us."

Speaking about Indonesia's claim to the Dutch-ruled West Irian, he said: "We, Indonesians, not only have the duty to take West Irian but also the right to be there. The West Irian problem is not a part of the 'cold war' but the continuation of Indonesia's struggle for national freedom."

(*The Times of India*, Bombay)

[Prev. ref. 3071:CHI:A]

IRAQ

A. **Political Parties To Be Recognized:** The Prime Minister, General Abdel Karim Kassem, issued a law on January 2, 1960 under which political parties and organizations would be recognized and would have a legal status.

This began on January 6—Army Day.

[Political parties were so far not allowed to function for five years.]

The new parties, to be licensed on the decision of the Interior Minister, must not be run on military lines, and their objectives must not conflict with the country's independence, national unity or republican system.

They should not aim at producing cleavages between the various nationalities and religious groups in Iraq and must produce their own newspapers.

The law prohibited school students, Army personnel, judges, Foreign Service personnel and Government administrative directors from the membership of political parties.

The parties rejected by the Interior Minister could appeal to the Supreme Court.

(*The Egyptian Gazette*, Cairo)

[Prev. ref. 2800:IRQ:A]

B. **Technical Training Agreement With USSR:** Under an Agreement signed on December 27, 1959, Russia would assist in establishing 10 centres in Iraq to train over 4,000 workers in various industrial fields, including oil, radio, transport, metal sheet cutting, weaving, spinning and electricity.

Russia would supply technicians as well as equipment and, according to a spokesman of the Iraqi Ministry of Education, the cost of constructing and equipping these centres would be about 3,000,000 dinars.

This Agreement was said to be within the framework of the Iraqi-Soviet Economic and Technical Co-operation Agreement of March, 1959.

(One Iraqi dinar is equal to £1 sterling.)

(*Middle East Economic Digest*, London)

[Prev. ref. 2524:IRQ:B]

C. **Liquid Sugar Factory To Be Built:** According to a Press statement issued by the Ministry of Industry in the third week of December, 1959, an old-standing project to build a factory for the production of liquid sugar and molasses from dates would be implemented soon.

The plant would be situated near Kerbala. Work on it would begin in the Summer of 1960 and was expected to be completed early in 1962. The total cost of the plant was estimated at 1,458,000 dinars.

An Agreement for the construction of the plant was arrived at with the West German firm of R. Wolff of Bucknau in June, 1958, but was not proceeded with pending overall consideration of Iraq's sugar industry.

(One Iraqi dinar is equal to £1 sterling.)

(*Middle East Economic Digest*, London)

[Prev. ref. 2124:IRQ:A]

D. **Celebration Of Army Day:** Iraq celebrated Army Day on January 6, 1960.

Iraqi Peace Partisans headed hundreds of thousands of people who marched past the Ministry of Defence in Baghdad in a great demonstration.

The march-past, which, according to a Baghdad Radio commentator, expressed solidarity between the Army and the people under the leadership of the Prime Minister, Gen. Abdel Karim Kassem, represented all elements in Iraq.

The marchers carried aloft 45 different slogans painted on banners. They also carried large portraits of General Kssem. One slogan urged "death to Imperialism, traitors, plotters and those coveting our homeland". Another referred to Iraq struggling against the "reactionary Central Treaty Organization".

The celebrations marked the 39th anniversary of the formation of the Iraqi Army.

[Prev. ref. 2800:IRQ:A]

ISRAEL

A. **Government Gives New Definition Of "Jew":** The Israeli Government issued new regulations defining a "Jew" on January 3, 1960.

A decree, signed by the Interior Minister, Mr. Moshe Schapiro, said that henceforth only those people born of a Jewish mother or converts having complied with Rabbanical usage (circumcision for men, ritual bath for women) would be considered Jews.

The new decree supersedes the Edict of 1958, which stipulated a simple declaration that the applicant belonged to no other faith.

JORDAN

A. **Powers To King Hussein To Prolong Life Of Parliament:** The Jordan Parliament approved measures on January 16 giving King Hussein the right to prolong Parliament for another one or two years and so avoid an election campaign which might create differences.

Both the Lower and Upper Houses held emergency meetings to revise a provision that General Elections should take place within four months of the dissolution of the Lower House.

The last General Election in Jordan was held in October, 1956.

Deputies said that the revision to prolong the term of the House if necessary was due to the situation in the Middle East in recent years and events which had threatened Jordan's existence and independence.

(*Amman Radio*)

[Prev. ref. 1115:JOR:A]

B. **US Subsidy:** On January 2, 1960, the United States paid Jordan $4,100,000 as the fifth instalment of a $40,500,000 grant to cover her budgetary expenses.

This instalment brought the total amount paid to Jordan by USA to $32,300,000.

(*The Egyptian Gazette*, Cairo)

[Prev. ref. 2469:JOR:A, 2801:JOR:A]

KOREA (South)

A. **Soviet Charge Of Attack On Survey Ship:** *Tass* said on December 30, 1959 that a South Korean warship had attacked and severely damaged the Soviet warship *Ungo* off the North Korean coast on December 28, 1959.

It said that the "predatory attack" on the *Ungo*, which was engaged on hydrographical (ocean survey) work, occurred in the East Korean Bay, 36 miles from the north-east border of Korea.

Tass said it had been empowered to warn that any such "piratical attacks in future will be met with adequate measures, going as far as annihilation." The attack was made by a ship of what it called the larger *Hunter* class, No. 205.

[South Korea's Navy includes the 338-ton *Hwaseong* PCS 205, a former US Navy submarine-chaser, now on patrol duty. It carries 140mm. and 22mm. guns.]

In Seoul, on December 31, 1959, South Korea's Navy and Coast Guard both denied that any of their ships had fired on the Soviet vessel.

A Republic of Korea (ROK) Navy spokesman said, however, that South Korean vessels had sighted gun-fire in the area where a Soviet hydrographical vessel claimed that it had been attacked and suffered heavy damage and casualties.

The spokesman, who declined the use of his name, said that it was very likely that the gun-fire was between North Korean ships and the Soviet vessel and that the communists were trying to make South Korea a scape-goat.

Account Of Incident:

In another report released on January 1, 1960, *Tass* said that one man had been killed and four injured in the *Ungo* incident.

Tass was quoting an interview with members of the crew of the *Ungo* published in the Soviet Navy newspaper *Sovetsky Flot*.

The seamen said that the *Ungo* had been engaged in normal hydrographic work when she was attacked. The first time they knew of it was when some shells were fired over the ship shortly after dusk. None of the seamen thought that the shells were directed against the Soviet ship which flew the Soviet hydrographic flag and had all navigation lights on. The Master immediately ordered extra lights to be switched on and one of the searchlights was directed on to the Soviet hydrographic flag. At that time, an unknown vessel, flying no flag, appeared. The ship, ignoring signals, drew nearer to the *Ungo*. The Soviet seamen directed their searchlights on the ship and saw that she was a South Korean ship of the *Hunter* type, No. 205. After nearing the side of the *Ungo* the ship turned away. Soon, two blacked-out ships were noticed in the distance. The ship with No. 205 painted on her side again turned towards the *Ungo* and opened fire. Direct hits damaged the compass, holed the aerial, destroyed a life-raft and a dinghy. The Master gave orders to reduce speed and to light up the ship's flag again. The attack, however, continued. A direct hit killed the helmsman, and four were injured. The South Korean vessel once more went into attack against the Soviet ship and more shells exploded on the *Ungo's* deck.

South Korean Denial:

On January 4, 1960, the South Korean Navy had claimed that one of its boats had witnessed what it believed to be a North Korean *Adol* boat attack an unidentified ship, believed to be Russian, off the Korean coast.

It said this in a Press release issued to counter the "false propaganda" that a South Korean ship had attacked a Soviet survey ship *Ungo* on that date.

It added that the South Korean ship sighted the unidentified ship ten miles north of the South Korean patrol line, running along the 38th Parallel.

Another ship, believed to be a North Korean Navy patrol boat, was seen to approach the unidentified ship later and after using about ten flare-bombs, fired various shells, including light tracers.

[Prev. ref. 2557:JAP:A]

LAOS

A. **Army Take-over:** An Army *communique* issued in Vientiane on January 1, 1960 said King Savang Vathana had asked three Army Generals "to assure and maintain order and security in the Kingdom" following the resignation of the Government headed by Mr. Phoui Sananikone.

It said that the Generals had renewed their assurances of their "indefectible devotion to the King and their determination to face the situation with the maximum of goodwill and patriotism."

The three officers received by the King were: Lieut.-General Southone Pathammavong, the Armed Forces Commander-in-Chief; Brigadier-General Quan Ratikoun, Chief of Staff; and Brigadier-General Phoumi Nosavan, Inspector of the Armed Forces.

Vientiane, the capital of Laos, was quiet after the resignation of Mr. Sananikone's Government.

Military patrols and sentries were, however, on duty outside the power station, post office and the broadcasting station.

The crisis began in December, 1959 when Mr. Sananikone got rid of seven Ministers belonging to the extreme Right-wing "Committee for the Defence of National Interests" and showed signs of trying to reach agreement with the Left-wing Pathet Lao rebels, who, if they came to power, it was feared would make a new civil war almost certain.

[The Government of Mr. Sananikone had handed its resignation to King Savang Vathana on December 30, 1959, saying that it was impossible to continue to conduct the affairs of the kingdom. The resignation was refused that day but accepted two days later and the King charged Mr. Sananikone with forming a new Government.]

Earlier, on December 27, 1959, tanks and trucks loaded with armed troops patrolled through the main streets of Vientiane and halted for several minutes outside the National Assembly building.

Observers said that the demonstration had been carried out without the authority of the then Premier and Defence Minister, Mr. Phoui Sananikone.

US Reaction:

In Washington, on January 4, 1960 the US State Department expressed the hope that the new Government would continue Laos's traditional neutrality in foreign affairs.

The State Department spokesman, Mr. Lincoln White, made this statement at a news conference when he was asked to comment on what a newsman called the Laotian Army's "take-over" of Government affairs.

Mr. White replied: "I would not describe it as an Army take-over. The Laotian Army has been charged by the King with maintaining order and security during the interim period between the resignation of the old Government and the formation of the new".

He added that he did not want to comment on the new Government since it was still in the process of being formed.

But, he added: "We hope that there will be no change in the policies of the Laotian Government which would affect its international position of peace and neutrality."

Asked whether this meant that the United States preferred a neutral Laos to a Western-oriented Laos, he replied: "The communists attempt to make propaganda by claiming that Laos was doing the bidding of the West, but history clearly refutes those charges. It has always maintained an international position of being a peaceful nation and a neutral nation—in the Swiss sense of neutrality."

ASIAN RECORDER

January 30—February 5, 1960

Regd. No. D-727
Vol. VI. No. 5

JAPAN

A. New Mutual Co-operation And Security Treaty With USA: The Prime Minister, Mr. Nobusuke Kishi, and the US Secretary of State, Mr. Christian A. Herter, signed in the White House in Washington on January 19, a new Mutual Co-operation and Security Treaty which replaced the 1951 Security Treaty.

Unlike the 1951 Treaty which did not bind USA to defend Japan, the new Treaty provided that an attack on either party on Japanese territory would be met by both.

The key clause of the Treaty granted USA the right to continue to occupy military bases in Japan.

It consisted of 10 Articles and would be in force for 10 years at the end of which either party might terminate it by giving one year's notice.

Under Article 5 of the Treaty, the United States recognized that an armed attack against the United States forces in Japan "would be dangerous to its own peace and safety" and undertook to act "to meet the common danger".

Article 5 said: "Each party recognizes that an armed attack against either party in territories under the administration of Japan would be dangerous to its own peace and safety and declares that it would act to meet the common danger in accordance with its constitutional provisions and processes."

Under separate agreed Minutes exchanged between the two countries, Japan undertook, in the event of an armed attack against islands over which Japan possessed residual sovereignty, to explore with the United States measures which it might be able to take for the welfare of the islanders.

The United States agreed, in consultation with the Japanese Government, to take necessary measures for the defence of these Islands and to do its utmost to secure the welfare of the islanders.

The controversial question of United States holding prior consultations with Japan over the deployment of its forces and arms was covered in Notes exchanged between the two countries concerning the implementation of Article 6 of the Treaty under which Japan granted the use of facilities and areas in Japan to the United States forces. Under this, the United States agreed that "major changes in deployment in Japan of the United States armed forces, major changes in their equipment and use of facilities and areas in Japan, bases of military-*cum*-operations to be undertaken for Japan....shall be the subjects of prior consultation with the Government of Japan."

Article 4 of the Treaty also provided for the re-establishment of a "Japanese-American Committee on Security" regarding the implementation of the Treaty.

The Committee would meet "at the request of either party whenever the security of Japan or international peace and security in the Far East is threatened."

The Committee replaced a similar Committee on security which the two Governments established in 1957. Membership of the new Committee would be the same as that of the old Committee, namely the Foreign Minister and the Director-General of Defence Agency for Japan and the United States Ambassador to Japan and the Commander-in-Chief of the Pacific for the United States.

The two countries undertook in the Treaty to refrain from threat or use of force "against the territorial integrity or political independence of any State or in any other manner inconsistent with the purposes of United Nations."

They also agreed to eliminate conflict in their international economic policies and to encourage economic collaboration between them.

The Treaty would come into force upon ratification by both sides. Instruments of Ratification would be exchanged in Tokyo.

Mr. C. A. Herter said later that the new Treaty served "as a notice of our solidarity to those who would attack or subvert the freedom which is a most precious possession."

He expressed confidence that the Treaty would establish the basis for close co-operation between the two countries in the political, economic and security fields.

American officials said that the four chief differences between the 1951 Security Treaty and the new Treaty were:

(1) The United States now had made a formal pledge to meet an attack on territories under the administration of Japan. The old Treaty said only that United States forces in Japan "may be utilized" to contribute to the maintenance of international peace and security in the Far East and to the security of Japan against armed attack.

(2) The new Treaty placed the United States defence commitments within the framework of United Nations for the first time. The old Treaty was signed before Japan, as an occupied country, became a United Nations member.

(3) The new Treaty contained a clause on economic co-operation—Article 2—almost identical with the clause in the North Atlantic Treaty.

(4) The new Treaty also emphasized that the new defence arrangement had been entered in conformity with Article 51 of the United Nations Charter, which permits regional and bilateral defence alliances between its members.

Kishi-Eisenhower Communique:

President D. D. Eisenhower and the Japanese Premier, Mr. N. Kishi, agreed in a joint *communique* issued in Washington on January 20 that the new Treaty between Japan and the United States would "materially strengthen peace and security in the Far East and advance the cause of peace and freedom throughout the world."

The *communique* was issued following talks between the two leaders at the White House prior to the formal signing of the Treaty.

Mr. Kishi and Mr. Eisenhower looked ahead "to continued close co-operation" between the two countries within the framework of the Treaty.

They declared that closer relationship between the two countries in the light of the current international situation was "essential for the achievement of peace in justice and freedom."

They were convinced that the partnership and co-operation between the two nations was "strengthened by the new Treaty which has been drawn up on the basis of principles of equal sovereignty and mutual co-operation."

Concerning the controversial question of "prior consultation" on deployment abroad of Japan-based United States forces, Mr. Eisenhower assured Mr. Kishi that the United States had no intention of acting in a manner contrary to the wishes of the Japanese Government.

Referring to the situation in Asia, they agreed that "Japan's increasing participation in international discussion of problems of Asia will be in the interests of the free world."

They also agreed that economic progress and elevation of the living standards in the lesser developed countries "are of paramount importance and will contribute to the stability and progress so essential to the achievement of peace in the world."

Referring to the economic relations between the two countries, they agreed on the need for avoidance of arbitrary and new unnecessary trade restrictions and said that "active measures to remove existing obstacles" were essential for the well-being and progress of both the countries.

Background:

In Japan, the Left-wing Socialists and students' organizations had been conducting an intensive campaign against the Treaty. There had been many demonstrations, and an unsuccessful attempt was made on January 16 to prevent Mr. Kishi from leaving Tokyo for Washington.

Meanwhile, on January 14, in Peking, the Chinese Foreign Ministry issued a statement condemning the conclusion of the new Treaty.

It said that the conclusion of the Treaty must rouse "the serious vigilance of the people of Asian countries".

China opposed the Treaty and "believed that the Japanese people would carry on a resolute struggle to frustrate the schemes of USA and Japanese reactionaries".

It said: "Since Mr. Kishi came to power, the Chinese Government has...continually pointed out the danger couched in the active revival of Japanese militarism and outward expansion by the Japanese reactionaries with the support of US imperialists.

"Now, the Chinese Government cannot but point out solemnly that this danger has become a real one, and that the conclusion of the Japan-US Treaty of Military Alliance signifies the revival of Japanese militarism and Japan's openly joining the US aggressive military bloc".

It said that the US-Japan Treaty was in total contravention of solemn international agreements reached by the Allies after the War.

In Washington, on January 15, American officials said that they viewed the Chinese statement as an incitement to Japanese opponents of the Treaty.

They felt that the statement was timed to encourage Left-wing groups who had threatened to use violence at Tokyo airport to prevent Mr. Kishi from flying to Washington.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The State Department spokesman, Mr. Lincoln White, limited his comment to a rejection of the implication in the Chinese statement that the Treaty contained secret military clauses.

Mr. Kishi said in Tokyo on January 14 that he believed that USA would take no action to deploy troops now stationed in Japan to other Far East areas without first consulting Japan.

[Prev. ref. 2308:JAP:B]

B. Fund For Economic Co-operation: The Ministry of Trade said on January 13 that the Japanese Government would create a special fund with 4,300 million yen to promote economic co-operation with South-East Asian countries.

A large part of the fund, it said, would be used to facilitate exports of Japanese surplus goods for local currencies. The local currencies thus acquired would be loaned back to the importing countries for economic development.

The fund would be established during the financial year beginning April 1, 1960.

Surplus goods exportable under this system would include nitrogen fertilizer, ammonium sulphate and textiles.

Under the present plan, the loans in local currencies would bear an interest of between two and three per cent.

They would be repayable in 10 to 15 year instalments after an initial period of three to five years.

The Ministry added that it would see to it that exports under this plan were not competitive with, but complementary to Japan's normal exports, reparations and economic and technical assistance through other channels.

(*The Nation*, Rangoon)

[Prev. ref. 2632:JAP:B]

C. Increase In Exchange And Gold Reserves: The Ministry of Finance reported in Tokyo on January 6 that Japan's exchange and gold reserves at the close of 1959 stood at $1,332 million.

This was an increase of $461 million over the figure for 1958.

The reserves had almost trebled since September, 1957 when they dropped to an all-time low of $455 million.

(*The Times*, London)

[Prev. ref. 2632:JAP:A, 3100:JAP:A]

D. Friction In Trade Relations With Burma: Late in December, 1959, Burma suddenly suspended the opening of letters of credit destined for Japan in token of protest against what she called the slow purchase by Japan of Burmese rice.

Burma, it was stated, linked this action with Japan's attitude toward revision of the Burma-Japan Reparations Agreement. Burma wanted to increase the amount of war reparations from Japan.

It was disclosed in Tokyo on January 5 that the Japanese Foreign Ministry had filed a protest with the Burmese Government on her trade policy.

The protest pointed out that the Burmese move would kill Japan's enthusiasm for revising the Reparations Agreement.

Tokyo reports said that the Burmese Ambassador, U Tun Shein, to whom the protest was handed over, had replied that Burma was at the moment more interested in the rice question than the reparations issue.

Reparations Issue:

The Foreign Ministry in Tokyo announced on December 19, 1959 that Burma and Japan had agreed on the fifth-year implementation programme of the 10-year $250,000,000 Reparations Agreement between the two countries.

It said that negotiators for the two signatories fixed a total of about $54,166,666 in goods and services for the one year period beginning on October 1, 1959 to September 30, 1960.

The new programme included four categories—plant equipment, heavy machinery, other goods and services.

Japan and Burma had signed on November 5, 1954 a World War II War Indemnity Pact by which the Japanese would pay $200,000,000 in pure reparations and $50,000,000 in economic co-operation loans over a 10-year period.

During the four-year period, Japan paid Burma about $66,472,000.

(*The Nation*, Rangoon)

[Prev. ref. 2724:JAP:A]

E. Mr. N. Kishi On Foreign Policy: The Prime Minister, Mr. Nobusuke Kishi, told a news conference at Atami, 40 miles from Tokyo, on January 3, 1960 that his Government's foreign policy in 1960 would be to continue co-operation with the countries of the 'free world.'

He said that his Government would not adopt a hostile policy towards the communist nations but hoped rather for the establishment of friendly ties through mutual respect.

He said that Japan should take positive measures to help bring about world peace and the development of her economy this year.

LAOS

A. Army Returns Powers To King: The Army Command issued a *communique* in Vientiane on January 6 announcing that, having completed its task, it was handing back to King Savang Vathana the powers which it had assumed on January 3.

The *communique* said: "The General Officers of the Royal Armed Forces were received by the King at three o'clock this afternoon (January 3). During this audience, the Command handed a letter to His Majesty in which it was stated that the Command considered its task of re-establishing legality and averting all risk of confusion and trouble in exceptional circumstances, to be now completed.

"The High Command consequently declares that it has decided to return to the King the powers which legally devolve on him in the absence of the National Assembly and to ask him to nominate a Government entrusted with managing the affairs of the Kingdom while at the same time arranging for General Elections in the shortest possible time. The General Officers have renewed to His Majesty the assurance of their loyal attachment, the devotion of the Armed Forces to his august person, and their full respect for the kingdom's democratic constitution."

It was signed by General Souvanthone Pathammavong.

[The Army took over power on January 3 when the Government of Mr. Phoui Sananikone resigned and three Generals were appointed "to assure and maintain order and security in the Kingdom."]

New Government Formed:

On January 7, the President of the King's Council, Mr. Kou Abhay, was designated by the King as Prime Minister with the following as his Cabinet members:

Mr. Nhouy Abhay—Vice-Premier and Minister for Education and Fine Arts;

Mr. Ngon Sananikone—Minister for Justice, Religious Affairs, Sports and Youth;

Mr. Khamphan Panya—Minister for Foreign Affairs;

Mr. Leuam Rajasombath—Minister for Finance, National Economy and Agriculture;

Mr. Nouphat Chounramany—Minister for Information and Social Affairs;

Mr. Tiao Somsanith—Minister for Home Affairs;

Gen. Phoumi Nosavan—Minister for National Defence;

Mr. Chau Souvath Sayavong—Minister for Health; and

Mr. Oudong Souvannavong—Minister for Public Works, Plan, Transport and Telecommunications.

The new Cabinet held its first meeting on January 11.

In a policy statement broadcast on that day (January 11), the Prime Minister, Mr. Kou Abhay, said that the new Government would see to it that Laos remained peaceful and neutral.

In fact, one of the main goals of the new Government, he said, was to arrange for General Elections as soon as possible in order to bring peace to the country's internal affairs.

He said that his Government, "born in difficult circumstances" had set itself only a few essential goals which it would try to achieve in the shortest possible time.

About foreign policy, he said: "We proclaim without ambiguity that our country is free and independent. We proclaim that this independence and freedom can exist only in conditions of peaceful co-existence, and we declare and support our country's being and remaining in a state of vigilant neutrality.

"Our membership in United Nations and our fidelity to its peaceful principles have shown in a particularly fine way that we can and should count on and depend on that high world organization. Thus, we cannot fail to call for its aid whenever it is necessary".

He then paid "grateful homage" to the friends of Laos—France, Britain, United States and "other countries which help us as best they can to live and prosper in peace and independence".

He disclaimed any personal ambition and added: "I have served my country for 45 years. I long ago reached the culmination of my career. Appointed by His Majesty, I accept the fatigue and concerns of power because, for me, nothing is finer than to serve one's country impartially to bring peace and harmony to it".

A *communique* issued by the Royal Embassy of Laos in New Delhi on January 15 said that the political basis of the Government remained unchanged.

In its domestic policies, it added, the new Government would continue to concentrate on national reconstruction, adhere to democratic principles and promote the participation

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of all classes of population in the nation's recovery work.

In foreign relations, the Government would remain one of neutrality and co-operation with UN. Laos would respect the international agreements to which she had subscribed.

(*The Nation*, Rangoon and *The Royal Embassy of Laos*, New Delhi)

PAKISTAN

SUMMARY: Sardar Mohammed Naim's Visit; Dr. Tage Erlander's Visit; Trade Agreement With Burma; DLF Loan To PICIC And Railways; Central Cabinet Portfolios Re-allocated; Preliminary Evaluation Of First Five-Year Plan Achievements; Education Commission's Report.

A. **Sardar Md. Naim's Visit:** The Foreign Minister of Afghanistan, Sardar Mohammed Naim, who arrived in Rawalpindi on January 10, had a two-hour talk on Afghan-Pakistan differences with the President of Pakistan, F-M Mohammed Ayub Khan and four other members of the Pakistan Presidential Cabinet on January 11.

After the meeting, Sardar Naim told newsmen that they had informal and friendly discussions about the possibilities of solving political problems and prospects of creating friendly relations between the two countries.

Asked to give details of the problems involved, he said: "They are well known."

The Pakistan Foreign Minister, Mr. Manzoor Qadir, said that the discussions were very frank and cordial, and he expressed the hope that similar exchanges of view would take place in the near future leading to improvement of relations.

Three other Pakistan Ministers present at the talks were Lt.-General Azam Khan, Minister of Rehabilitation, Food and Agriculture; Mr. Mohammed Shoaib, Minister of Finance; and Mr. F. M. Khan, Minister of Communications.

Sardar Mohammed Naim left Rawalpindi on January 12.

Background:

Afghanistan's support to the movement for a separate Pushtoo-speaking State, which would push Pakistan's frontier back from the Durand Line (which divides the two countries) had embittered their relations for several years.

Before he left Rawalpindi, Sardar Md. Naim told newsmen that Afghanistan had no territorial claims on Pakistan.

Later at Peshawar, before leaving for home, he said that he was convinced of the sincere desire of the Pakistan President to develop better relations between Pakistan and Afghanistan.

He added that the outstanding problems between Afghanistan and Pakistan could be solved, but not as easily as had been assumed in the Pakistan Press. He had not come to Pakistan for negotiations, but only for an exchange of views. If it was desired by both sides, high-level talks could be held in the future.

In an interview with the *Bakhtar News Agency* in Kabul on January 13, he said that his country was anxious to promote friendly relations with Pakistan and to bring about an amicable settlement of the differences between the two countries.

He said that Pakistan's leaders had agreed that the possibilities of frequent exchange of visits by the leaders of the two countries should be explored.

(*Dawn*, Karachi and *Kabul Radio*)

[Prev. ref. 2867:AFG:A, 3011:PAK:C]

B. **Dr. Tage Erlander's Visit:** The Swedish Prime Minister, Dr. Tage Erlander, and Mrs. Erlander arrived in Karachi on December 31, 1959 from India on a visit to Pakistan.

Dr. Erlander told newsmen at the airport that he had no specific problems to discuss with the Pakistan Government.

He arrived in Lahore on January 1, 1960 and in Rawalpindi on January 2. He had talks with the President, Field-Marshal Mohammed Ayub Khan, and other Government leaders.

Visit To Iran:

Dr. Erlander returned to Karachi on January 4, and left for Tehran on January 6 on his way back home. During his brief stay in Tehran he held talks with Iranian leaders.

Before leaving for Tehran, he told newsmen in Karachi that his talks with F-M Ayub Khan had been of a general nature concerning the international situation and economic co-operation between Sweden and Pakistan.

[Prev. ref. 3095:INI:A]

C. **Agreement With Burma On Trade And Outstanding Financial Issues:** It was announced in Rangoon on January 9 that Pakistan and Burma had reached agreement on trade and other outstanding financial issues.

A *communique* issued in Rangoon at the conclusion of a series of meetings over 15 days between the delegation of the two countries said that the Trade Agreement between its separation from the sub-continent in 1937, had been renewed for a further period of three years.

Under the Agreement, Pakistan would buy about 600,000 tons of Burmese rice.

The *communique* added that a satisfactory solution had also been found to the question of separation debt payable to Pakistan by Burma, but gave no particulars of the solution.

Burma owed India Rs. 484,500,000 following its separation from the sub-continent in 1937. Out of this amount, about Rs. 170,000,000 went to Pakistan after the Partition of India.

(*Dawn*, Karachi)

[Prev. ref. 1061:BUR:A, 1342:BUR:D]

D. **US Development Loan Fund Loan To PICIC:** The Director of the United States Development Loan Fund, Mr. Vance Brand, signed in Karachi on January 15 a $10,000,0000 Loan Agreement with Mr. E. T. Kulper, General Manager of the Pakistan Industrial Credit Investment Corporation (PICIC).

This was the largest loan made in the private sector by DLF in Pakistan. It was the second loan made to PICIC, a private investment corporation.

After signing the Agreement, Mr. Brand said in a statement: "The signing of this Loan Agreement today (January 15) is proof positive that the US Development Loan Fund is as interested in making loans in the private sector as it is in the public sector to assist our friendly developing nations in their economic progress.

"We want to support private businessmen in Pakistan who will add their own financial resources to the assistance we can provide."

(*Dawn*, Karachi)

[Prev. ref. 2766:PAK:B]

E. **US Development Loan Fund Loan For Railways:** Under an Agreement signed in Rawalpindi on January 16, the United States Development Loan Fund (DLF) undertook to give Pakistan a loan of $22,000,000 for rehabilitation and development of railways.

This was the second DLF loan advanced to Pakistan Railways. The first loan of $9,100,000 was negotiated in February, 1959.

(*Dawn*, Karachi)

[Prev ref. 3080:PAK:C]

F. **F-M Ayub Khan To Seek Vote Of Confidence:** A *communique* issued from the President's Secretariat on January 7 said that President Ayub Khan, on the recommendation of his Cabinet, had agreed to seek a vote of confidence from the 80,000 representatives elected to the Basic Democracies in the country.

The following is the text of the resolution adopted by the Presidential Cabinet in Rawalpindi on January 7 in this respect:

"Whereas it is necessary to make provision for the introduction of constitutional machinery in Pakistan as early as possible and whereas, for that purpose, it is desirable to obtain the consent of the people for such machinery to be devised by the President,

"And whereas it is essential that the people be given an opportunity to affirm their confidence in the President:

"Now therefore, we, the members of the Presidential Cabinet, would respectfully request the President that,

"As soon as conveniently may be, upon the completion of the first elections under the Basic Democracies Order, 1959, the persons who are declared to have been elected as members of the Union Councils, Union Committees and Town Committees, be asked, by secret ballot, to be conducted by the Election Commission of Pakistan, to vote in respect of their confidence in the present President of Pakistan.

"If the majority of the votes cast are affirmative, it should be treated as a mandate for the President to take the necessary steps forthwith to make provision for establishing a constitutional machinery in Pakistan, and he should also be deemed to have been elected as the President of Pakistan for the first term of office under the Constitution to be so made".

(*Dawn*, Karachi)

[Prev. ref. 3008:PAK:A]

G. **Central Cabinet Portfolios Re-allocated:** At a Cabinet meeting held in Rawalpindi on January 7, the port-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

folios of the Ministers were re-allocated. No major change was, however, made except that a new portfolio of 'Basic Democracies' was created.

The following were the portfolios as re-allocated among the Ministers:

Mr. Manzoor Qadir: Foreign Affairs and Commonwealth Relations;

Lt-Gen. K. M. Shaikh: Interior;

Mr. Mohammed Shoaib: Finance and Economic Affairs;

Lt-Gen. W. A. Burki: Health and Social Welfare;

Mr. Hafizur Rehman: Commerce;

Mr. Habibur Rehman: Education;

Mr. F. M. Khan: Communications;

Mr. Mohammed Ibrahim: Law;

Lt-Gen. Azam Khan: Food and Agriculture, Works, Irrigation and Rehabilitation;

Mr. Zulfiqar Ali Bhutto: Information, Broadcasting, National Reconstruction, Village Aid, Basic Democracies, Tourism and Minorities; and

Mr. Abdul Khan Kassem: Industries and Power.

The President, F-M Ayub Khan, continued to hold the Defence portfolio.

A *communique* issued in Rawalpindi explained the re-allocation of portfolios as:

"With the coming into existence of the Basic Democracies, the reduction in rehabilitation work and the growing emphasis on national reconstruction, and the adoption of the Education Commission's report, which will lead to a complete overhaul of the educational system of the country, the President has been pleased to re-allocate the business of Government between his Ministers."

(*Dawn*, Karachi)

[Prev. ref. 2365:PAK:A]

H. **Preliminary Evaluation Of First Five-Year Plan Achievements:** A preliminary official evaluation of the achievements of Pakistan's First Five-Year Plan was released in Karachi on January 19.

Below is a summary of the evaluation.

Pakistan would have spent only about Rs. 4,500,000,000 in the public sector in the first four years of the Plan against the proposed outlay of Rs. 7,500,000,000.

Against the aimed increase of 15 per cent in national income and 7½ per cent in *per capita* income, the national income in 1958-59 was only moderately above that of the base year, 1956-57, and *per capita* income had grown very little because of the increase in population. The national income estimates actually indicated a decline in *per capita* income, but it was felt that the increase in incomes had been under-estimated.

Although statistics revealed insufficient progress in several sectors, there had been substantial progress in others. The Plan aimed at the creation of 2,000,000 job opportunities. Although employment data was inadequate to support clear findings, probably new job opportunities were lagging behind additions to the labour force.

The effort to accelerate development expenditure without keeping down non-development outlays led to an amount of deficit-financing which proved to be excessive.

Economic development of the less-advanced regions in both zones of the country was given particular emphasis because of marked disparities in levels of living and geographical immobility of goods and people between different parts of the country. Available evidence would suggest that the disparity between the income levels of less and more advanced regions in both Wings of the country had not diminished.

In many spheres, the Public Services had acted commendably in the discharge of their responsibilities. However, certain shortcomings in the administration had come to prominent notice in the analysis of the causes of shortfalls. Among these were inadequacies of organizational policy in certain spheres to cope with the evolving requirements of developmental programmes, insufficiency of trained personnel, inefficiency of budgeting and sanctioning procedures, absence of effective co-ordination of foreign exchange allocations with rupee budgeting, absence of strong administrative follow-up to assure the execution of schemes in accordance with the Plan and woeful inadequacy of reliable statistical data.

(*Dawn*, Karachi)

[Prev. ref. 2071:PAK:A, 2643:PAK:G]

I. **Report And Recommendations Of Education Commission:** The Pakistan Cabinet accepted the recommendations of the Education Commission on January 9.

One of the Commission's main recommendations was that free and compulsory primary education should be introduced throughout the country. The programme should be spread over 15 years. During the first ten years, the Commission's recommendations called for the introduction of five years of primary schooling. In the subsequent five years, free education should be extended to the middle standard.

It laid stress on technical education and recommended that it should be made an integral part of basic education. The curriculum of general education should be diversified by including practical courses in technical subjects like agriculture, commerce and home economics.

It also recommended the establishment of six more universities possibly in the next five years. Two of these would be for agricultural education and two for engineering.

It suggested that the financial burden of expanding primary education should be shared equally by the local communities and the Government.

There should be a gradual and co-ordinated change of the medium of instruction at the University level from English to Urdu and Bengali over a period of 15 years.

Preparatory work should be undertaken to develop Urdu and Bengali in Roman script to meet modern requirements.

It emphasized that secondary education should be recognized as a complete stage in itself and organized as a separate academic and administrative unit.

It suggested that military training should be provided in the form of a National Cadet Corps with an initial strength of 20,000 cadets. The Corps should have separate wings for Army, Navy and Air Force, and should include separate divisions for boys and girls.

In regard to the medium of instruction, it recommended that English should be taught as a compulsory subject from Class VI onwards to the degree level.

Detailed recommendations were made with regard to salaries and facilities for university and school teachers.

It recommended that the course of study for the bachelors' degree should be extended from two to three years by transferring the present Intermediate classes from the jurisdiction of the universities to that of the Board for Secondary Education.

It observed that religion was the most vital civilizing force in the history of mankind. Therefore, religious education should be an integral part of the education system. Several religious faiths were professed and practised in Pakistan, and their teaching should be confined to those who professed them.

It mentioned three stages in religious instruction. These were the compulsory stage, the optional stage and the research stage.

F-M Ayub Khan's Broadcast:

In a broadcast to the people of Pakistan on January 8 the President, F-M Mohammed Ayub Khan, said that the educational system recommended by the Education Commission and accepted by the Government, if pursued diligently, would revolutionize the individual as well as the collective life of the people.

He said that the new educational plan aimed at developing a character pattern capable of producing hundreds and thousands of properly trained young men and women to provide that quality of leadership which could give a correct direction to the affairs of the country and visualize and implement plans for its constantly expanding and growing future.

He described the educational plan as "one more landmark in the forward march of our country" and commended it to the people for giving it solemn, realistic and objective thought. The plan "shows us how to retain our identity as Muslims and overcome some of the problems that exist in Pakistan because of its separation into two halves, and also because of the great diversity of languages".

He said that the plan aimed at ensuring that the end products of the educational system in arts and sciences should be comparable in competence and achievement with the end products of any other system in the world.

(*Dawn*, Karachi)

[Prev. ref. 2438:PAK:A]

J. **Regional Meeting Of Asian Members Of UNESCO—Plan For Primary Education:** Inaugurating the Regional Conference of Asian members of UNESCO in Karachi on December 28, 1959, the Education Minister of Pakistan, Mr. Habibur Rehman, suggested that UNESCO might create an international fund for supporting compulsory primary education in Asian countries.

The Conference was attended by delegates from Afghanistan, Burma, Cambodia, Ceylon, India, Indonesia, Iran, Formosa, Laos, Malaya, Nepal, Japan, Philippines, Pakistan, South Korea and South Viet-Nam.

The decisions of this Conference would be reviewed later by UNESCO's National Commission for Asia due to meet in Manila from January 18, 1960.

The Assistant Director-General of UNESCO, Dr. M. S. Adiseshiah, said that the situation in Asian countries was "very grim." In the 15 countries surveyed by UNESCO, there were some 45,000,000 children deprived of educational facilities. A large number of children going to school had to be satisfied with a very limited amount of education offered under conditions of great hardship and poverty.

He said that the problem was qualitative as well as technical.

He asked the various delegations to find out how to plan and administer free and compulsory primary education in the most economic and efficient way.

The Minister of Education of Madhya Pradesh (India), Mr. S. D. Sharma, said that in approaching the problem of spreading education in Asian countries, it was necessary to use methods which were not strictly orthodox but which might prove

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

substantially inexpensive to be practicable.

He warned that illiteracy was a danger not only for the countries concerned but for humanity as a whole.

The Conference appointed a five-man Committee to draft a final document containing its recommendations to be submitted to UNESCO and to the respective Governments attending the Conference.

The Committee completed its work the following day and presented its report to the Conference on January 9.

The report of the Committee was based on the reports of four Commissions set up earlier by the Conference to make recommendations on different aspects of the introduction of compulsory primary education in the countries of Asia.

The reports submitted by the Commissions dealt with the following aspects of the problem: Planning and Finance; Curriculum, Teaching methods, Teachers' training etc; Girls' Education, Education in tribal areas, educational research, administration and supervision, and school buildings and text-books.

Plan For Primary Education:

The Conference ended on January 9 after evolving a working plan for the provision of universal, compulsory and free primary education for South and South-East Asian countries, costing 64 billion dollars (or nearly $3,200,000,000 a year) and spread over 20 years.

The plan proposed to extend schooling facilities to about 20 per cent of the total population by the end of 1980.

The Conference suggested that each member-Government should prepare a national plan for the provision of universal compulsory education and free primary education within its area.

It also recommended that the administrative machinery for primary education should be adequately strengthened and staffed by competent officers.

It felt that every improvement made in securing a well-educated, well-trained and well-paid teacher for the children of this region would be the most effective method for raising the standard of primary education in this area.

It viewed with regret the plight of educational programmes in the area and urged serious attention to the provision of a larger number of school buildings, including teachers' quarters, and adequate equipment and teaching aids.

It also urged arrangements to meet paper shortage and attention to the preparation of text-books and necessary reading material for children as well as teachers.

The number of teachers needed for the implementation of the plan was 8,280,000 for the entire period of 20 years, or 414,000 per year. The number of educators would also proportionately increase from the existing strength of 19,000 to 116,000 in 1980.

The plan visualized the enrolment of 156,000,000 additional children, the construction of 5,500,000 classrooms, 2,000,000 quarters for teachers and provision of furniture, text-books and other reading material on a scale proportionate to the total enrolment of 22,000,000.

(*Dawn*, Karachi)

[Prev. ref. 2460:AOA:A, 3044:AOA:M]

K. **New Chamber Of Commerce And Industry To Be Formed:** A two-day Convention of Pakistan business-men and industrialists which ended in Karachi on January 6 decided to form a new all-Pakistan Federation of Chambers of Commerce and Industry.

The Convention appointed a nine-man *ad hoc* Committee with full powers to draft a constitution for the new Federation.

It decided that the new Federation should be called the Federation of Pakistan Chambers of Commerce and Industry. [The existing Federation is known as the Federation of Chambers of Commerce and Industry (Pakistan). It will cease functioning as soon as the new Federation is registered with the Government after the framing of its constitution.]

The Convention unanimously elected Mr. Nurul Huda of East Pakistan who is Vice-President of the existing Federation as its Chairman. The Executive Secretary of the present Federation. Mr. Tufail Ahmed Khan, was unanimously elected Secretary.

During its two-day session, the Convention prepared directives for the *ad hoc* Committee to be kept in view while framing the constitution.

Some of the important directives were: (1) The President of the Federation would be alternately from West Pakistan, Karachi and East Pakistan for a period of one year; (2) The President would be from industry and commerce every alternate year; (3) The President would be elected by direct elections; and (4) There would be no office of General Secretary or Joint Secretary. Instead, there would be the office of a full-time paid Secretary.

(*Dawn*, Karachi)

TURKEY

A. **Hirfanli Dam Inaugurated:** President Celal Bayar inaugurated on January 8 what is claimed to be the biggest dam of its kind in Europe (Turkey is now officially in Europe) at Hirfanli on the Kizilmirmak river, 90 miles south-east of Ankara.

The project, which cost £23,000,000 and took 4½ years to build, was the work of two British firms. Messrs. George Wimpey built the dam and carried out the accompanying civil engineering, while English Electric Company were responsible for the design and construction of the electrical installation.

The Hirfanli dam is described in an official brochure as "capable of resisting secondary earthquakes". The dam is what is known as the rock and earth fill type, 270 feet high and 1,200 feet long. Behind it a new lake has been created, 46 miles long and nine miles wide. The lake has already had a profound effect on local weather conditions by making the air of Turkey's arid central plateau moist. Fourteen villages were submerged and the inhabitants have been compensated by the Government.

The main purpose of the project is to provide hydro-electric power for Turkish industry and light for domestic use. Irrigation is a somewhat secondary prospect.

Hirfanli is one of six barrages planned on the Kizilmirmak river.

The foundation of a smaller dam 15 miles lower down the river was laid on January 8.

(*The Times*, London)

[Prev. ref. 2328:TUR:C]

UNITED ARAB REPUBLIC

A. **Col. G. A. Nasser Inaugurates Construction of First Stage Of Aswan High Dam:** On January 9, 1960, President G. A. Nasser inaugurated the construction of the first stage of the Aswan High Dam on the river Nile. He pressed a button to set off a dynamite charge to blow up 20,000 tons of rock at the site of the Dam.

Col. Nasser then laid the foundation stone of the Dam.

As soon as the dynamite charge went off, bull-dozers and other mobile building equipment roared into the Dam site.

Present at the ceremony, among others, were the King of Morocco and the Soviet Minister of Electric Power, Mr. Ignaty Novikov.

In his speech inaugurating the construction of the Dam, Col. Nasser said: "You have won the battle for the High Dam."

The Dam, he said, was an example for the whole world, and, particularly, the nations of Asia and Africa, that a small nation could win against the Great Powers despite their "provocations, attacks, aggression and blockades". It was a symbol of the liberated will of a nation, a symbol for Asia and Africa.

He thanked the Soviet Government and people for the "disinterested and unconditional aid that they have given us and are continuing to give us in the construction of the High Dam".

He added that the United Arab Republic harboured no resentment nor hate towards those who had opposed the Aswan High Dam project.

He referred to the Dam as the "result of a long and persistent struggle carried on with courage and determination by a people who had decided to win." Now, victory had been won with the aid of the whole Arab nation and was, therefore, "their victory as well as ours".

At the ceremony, Mr. Ignaty Novikov said that the Soviet Government and people were very glad to have provided equipment and experts to help the Arabs.

He added: "We feel pleasure that friendly relations have been established between UAR and Russian experts."

[The Dam is being built in two stages. The first stage is going up with Soviet financial and technical aid and is expected to cost £ (E) 25,000,000. The construction of this phase will take about four years, and of the rest of the Dam another six years.]

Together with the Bhakra Dam in India, the Aswan High Dam ranks among the great river dams of the world.

When completed it will supply irrigation water to vast tracts of agricultural land in Egypt throughout the year and generate great quantities of hydro-electric power.

Hydro-electric Power Switched On For First Time:

The waters of the Nile were used to generate power in Egypt for the first time on January 10 when President Nasser switched on a turbine at a British-built Aswan Dam power plant.

When the plant is in full operation, it will generate 1,860,000,000 kilowatt hours annually.

Col. Nasser paid tribute to the foreign engineers who had helped complete the project.

Russian Aid For Second Stage:

It was announced in Cairo on January 18 that Russia had agreed to finance the second stage of the new Aswan High Dam as well. The Soviet Union would finance the second stage on the same basis as the first.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The agreement was contained in letters exchanged by President G. A. Nasser and the Soviet Prime Minister, Mr. Nikita Khruschev.

The announcement followed a two-hour meeting in Cairo on January 17 between the Soviet Minister for Power, Mr. I. Novikov and President G. A. Nasser. During the meeting, President Nasser was handed a message from Mr. Khruschev.

In the exchange of letters, President Nasser and Mr. Khruschev referred to the Aswan High Dam as a symbol of the lasting friendship between the people of the United Arab Republic and the Soviet Union.

The second stage includes the construction of the main Dam and eight huge turbines in the power station, leaving only the completion of the power station with a further eight turbines for the third stage.

The announcement would indicate that this gigantic project would be exclusively an UAR-Soviet achievement.

Shortly before the 1956 Suez crisis, the United States had withdrawn a tentative offer of financial aid for the building of the High Dam. Similar offers by Britain and the World Bank had also failed to materialize.

Two years later, Russia announced that she had agreed to lend UAR 400,000,000 roubles in credits to finance the construction of the first stage of the High Dam.

According to authoritative sources in Cairo, Russia would advance a loan equivalent to £(E)90,000,000 at 2½ per cent interest for the construction of the second stage.

These sources added that President Nasser, after holding discussions with the Soviet Minister for Power and other Soviet experts, had decided that the Aswan Dam project should be executed as an integrated one and not divided into stages. Under the integrated scheme, work on different stages would be taken up simultaneously and the Dam would be completed in seven years instead of ten as estimated earlier.

Cairo newspapers splashed the news of the Soviet undertaking to construct the second stage of the Dam on January 19 as a new triumph for the United Arab Republic.

The editor of *Al Ahram*, a close friend of President Nasser, said in his paper that Egypt had asked Russia for this aid to prevent the question becoming a "football at the Great Powers' feet".

He added that President Nasser did so because the Soviet Union had helped with the first stage and its technicians were closer to Egypt, because the second stage was interlocked with the first, the Soviet Union had proved that she could fulfil her obligations to Egypt and because the conditions offered by the Soviet Union were "most just and equitable".

USA Pledges Aid:

President D. D. Eisenhower told a news conference in Washington on January 13 that the United States would support World Bank financing of further stages of the Aswan High Dam.

He was asked whether the United States was considering offering help to the United Arab Republic for the building of further stages of the Dam, and he replied that America was now trying to help UAR through the World Bank.

He described the Bank as the most knowledgeable instrument available to the West to support such public works.

Mr. Nehru's Message:

In a message to President Nasser on the occasion of the inauguration of work on the Aswan Dam, the Prime Minister of India, Mr. Nehru, said that the great Aswan Project held the key to the happiness and prosperity of millions of people in Egypt.

Mr. Nehru added: "We in India are particularly happy that your birthday should almost coincide with the inauguration of the work on the Aswan Dam which has been made possible by your imagination and perseverance. May you live long in the service of your country and your people".

(*The New York Times, The Egyptian Gazette*, Cairo and *The Statesman*, Calcutta)

[Prev. ref. 2916:UAR:A, 2953:UAR:E, 3028:UAR:A]

B. **Five Ministers Resign In Egyptian And Syrian Regions:** President G. A. Nasser accepted the resignation of Mr. Khalil Kallas, Economy Minister in the Syrian Region on January 3, 1960. No reason was given for his resignation.

Mr. Kallas was the fifth member of the Baath Socialist Party to resign from the Central Government of the United Arab Republic or from the Government of the Syrian Region.

On December 30, 1959, two Ministers of the Central Government and two Ministers of the Syrian Government had resigned. No reason was given for their resignations as well, but they were said to be the leading members of the Baath Party, which was dissolved when Syria and Egypt united in 1958 to become United Arab Republic.

Some political commentators in Cairo thought that the Ministers had resigned after refusing to give up political activities and continuing to support Baathist elements after President Nasser had ordered the establishment of a non-Party State with a single national union merging all political tendencies.

(*The Statesman*, Calcutta)

[Prev. ref. 2931:UAR:B, 3012:UAR:B]

C. **Morocco King's Visit:** King Mohammed V of Morocco arrived in Cairo on January 7 on a 12-day visit to the United Arab Republic.

The King was welcomed at the Cairo airport by President G. A. Nasser. He was given a 21-gun salute.

He was President Nasser's guest of honour at the ceremony on January 9 marking the start of the building of the Aswan High Dam.

King Mohammed was awarded the honorary degree of Doctor of Laws at a ceremony in Cairo University on January 13.

Speaking at a banquet given in his honour by the Arab League in Cairo on January 14, King Mohammed said that Morocco would not spare any effort for the independence of the Arab nations which were not yet self-governing.

He said that the Arab people, in the present era of blocs, had realized that their aims would not be achieved unless they closed their ranks under the banner of an organization which worked for the achievement of the Arab aims.

He added that he would like to see the Arab League Charter amended to harmonize with the new reality of Arabism.

President Nasser was one of the guests at the banquet.

King Mohammed arrived in Damascus, capital of the Syrian Region of the United Arab Republic, on January 16 on a brief visit.

Communique:

President G. A. Nasser and King Mohammed issued a joint *communique* in Cairo on January 19 demanding independence for Algeria and criticising French plans to test a nuclear device in the Sahara.

The *communique* also supported the return of Palestine refugees to their former homeland which now lies in Israeli territory.

It added that the talks between the two leaders covered developments in the international situation and matters of particular interest to Arabs. The two leaders expressed satisfaction at the present serious attempts by the Big Powers for easing international tensions and settling outstanding differences.

(*The Egyptian Gazette*, Cairo)

D. **Indian Proposal To Save Historical Monuments Threatened With Submersion By Construction Of Aswan High Dam:** The Director-General of UNESCO, Dr. V. Veronese, disclosed at a news conference in New Delhi on January 15 that India proposed to send an archaeological mission to Nubia in the Egyptian Region of UAR to excavate the archaeological sites there in response to the joint call of Egypt and Sudan for international co-operation in the preservation of these historical monuments which were threatened with submersion by the construction of the Aswan High Dam.

He said that information to this effect was given to him the previous day (January 14) by the Indian Minister for Scientific Research and Cultural Affairs, Dr. Humayun Kabir, and he had been told that the measures India was taking were being considered as "an expression of solidarity with the Dam Project and friendship with the United Arab Republic."

Dr. Veronese added that he proposed to issue an appeal in March, 1960 for international co-operation in preserving historical and archaeological monuments, particularly the monuments of Nubia, about which Egypt and Sudan had given a call.

Among the treasures of Nubia was the famous temple of Abu Simbel and monuments located on the Island of Philae which were likely to be submerged for ever. There were other undiscovered archaeological sites as well.

He said it was beyond the capacity of Egypt and Sudan to preserve them with their own resources. They were treasures not of any one nation but of entire humanity, and all nations had a responsibility. The task ahead of UNESCO was two-fold. One was that archaeological missions should be invited from as many countries as possible to excavate the areas to be submerged. The missions should receive from the Governments concerned half of the product of such excavation. The second was the construction of special dams to protect the temple of Abu Simbel and the Island of Philae which were expected to cost roughly $40,000,000.

Fourteen UNESCO experts who visited the Aswan Dam site and the area 200 miles beyond during the second week of October, 1959 had suggested that a 150-foot-high earthen dyke should be built round Abu Simbel not only to protect the famous temple there but also to house

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

other and similar monuments which could be shifted there from sites in adjacent Nubia.

As the scheme would cost a tremendous lot of money, it had been suggested that Abu Simbel should be covered with sand and excavated 500 years later when the accumulating silt would have changed the course of the Nile. This, however, is regarded as a counsel of despair.

To make things easier, the Egyptian authorities promised excavators willing to undertake exploration the right to carry away half of their finds in what is regarded as the most generous give-away offer in archaeological history.

Although scores of Egyptian museums are crammed literally from vault to roof by Nubian treasures, it is estimated that nearly nine-tenths of the historical remains have yet to be excavated.

[Prev. ref. 2953:UAR:E]

ASIA OUTSIDE ASIA

SUMMARY: East-West 'Summit' Meeting — Dates Agreed Upon; NATO Ministerial Council Meeting; Mr. D. D. Eisenhower's "State Of The Union" Message To US Congress; Cameroons Achieve Independence; US Relations With South-East Asian Countries; ICFTU Congress; UNESCO Education Project.

A. East-West "Summit" Meeting —Dates Agreed Upon: The President of France, General Charles de Gaulle, the President of the United States, Mr. D. D. Eisenhower, the Prime Minister of Britain, Mr. Harold Macmillan, and the Chancellor of West Germany, Dr. Konrad Adenauer, began what was called their "Western summit" meeting in Paris on December 19, 1959 and issued the following *communique* on December 21, 1959:

"The President of the United States of America, President of the French Republic, Prime Minister of the United Kingdom and the Chancellor of the Federal Republic of Germany met in Paris and at Rambouillet on December 19, 20 and 21, 1959 and exchanged views on various subjects of common interest.

"In the course of these meetings, consideration was given to the views expressed by the member-Governments of the North Atlantic Treaty Organization at the meeting of the Council held in Paris from December 15 to 17, 1959.

"Among the subjects discussed were East-West relations, disarmament and problems relating to Germany, including Berlin. On the last point, the Heads of States and Governments re-affirmed the principles set forth in the four-Power *communique* of December 14, 1958 and the Declaration of the North Atlantic Council of December 16, 1958 on Berlin.

"The Heads of States and Governments agreed on the desirability of a four-Power Conference with the Chairman of the Council of Ministers of the Union of Soviet Socialist Republics. The purpose of this Conference would be to consider a number of questions of mutual concern.

"President D. D. Eisenhower, General de Gaulle and Mr. Macmillan have sent letters to Mr. Khruschev proposing such a meeting beginning on April 27, 1960 in Paris. These letters were delivered in Moscow this morning (December 21, 1959).

"The Heads of States and Governments have agreed on the procedures to be followed in preparation for the proposed meeting and have issued the necessary directives to this end.

"The North Atlantic Council will be informed of the results of the present conversations at the Ministerial meeting which will take place on December 22, 1959 and the Council will be regularly consulted during the course of the preparatory work.

"The Heads of States and Governments express the hope that the proposed Conference will contribute to the strengthening of peace with justice."

Letters To Mr. N. Khruschev:

The letters sent to the Soviet Prime Minister by President Eisenhower, General de Gaulle and Mr. Macmillan were identical in content.

The following is the text of the letter from President Eisenhower to Mr. Khruschev delivered in Moscow on December 21, 1959:

"As you are aware, I have just met with President de Gaulle and Prime Minister Macmillan. Among the subjects we discussed was the possibility of our having a meeting with you to consider international questions of mutual concern.

"We agreed that it would be desirable for the four Heads of States and Governments to meet together from time to time in each other's country to discuss the main problem affecting the attainment of peace and stability in the world.

"I, therefore, wish now to express my readiness to meet with you, President de Gaulle and Prime Minister Macmillan at the earliest feasible time.

"In view of the engagements of all of us as they are known to me, we had thought that the opening date for the proposed Conference could be April 27, 1960 and that Paris would be the most appropriate place for the first meeting. I very much hope that this proposal is acceptable to you".

Mr. N. Khruschev Accepts Invitation:

Russia accepted the "Big Three" Western Powers' invitation to attend a "summit" conference in Paris but found it difficult to accept April 27 as the date for it. This was announced in letters which Mr. Khruschev sent on December 25, 1959 to Mr. Eisenhower, Mr. Harold Macmillan and Gen. de Gaulle.

The text of Mr. Khruschev's letter to President Eisenhower read:

"I have received your letter re-affirming your readiness to take part in a four-Power meeting at the highest level and informing me that agreement on this point has been reached between you, Prime Minister Macmillan and President de Gaulle.

"I should like first of all to express profound satisfaction that you, Prime Minister Macmillan and President de Gaulle consider it desirable that with a view to discussing the major international problems 'summit' meetings should be held from time to time in countries which are parties to such conferences.

"The Soviet Government cannot but welcome such a statement. We have always believed that it is precisely through personal meetings between statesmen at the highest level that ripe international problems can be solved most effectively.

"The Soviet Government expresses readiness to attend a meeting at the highest level in Paris. Unfortunately, the date indicated for this meeting, April 27, 1960, is inconvenient for the Soviet Government.

"In this connexion, I should like to suggest as possible dates for such a meeting April 21 or May 4. The Soviet Government hopes that one of these dates will be acceptable to the Government of USA as well as to the Governments of Britain and France and that this proposal will cause no difficulties in choosing a final date for the meeting of Heads of Governments. I hope, Mr. President, that these proposals will be acceptable to you."

A Soviet Government spokesman explained at a news conference in Moscow on December 26, 1959 that April 27, 1960 was inconvenient because the May Day celebrations in Moscow required the presence of the Head of the Soviet Government.

In identical letters on December 29, 1959, Mr. Eisenhower, Gen. de Gaulle and Mr. Macmillan told Mr. Khruschev that they were happy that the Soviet Prime Minister had agreed to take part in a "summit" conference in Paris.

Mr. Eisenhower's letter to Mr. Khruschev read in part:

"I can well understand the difficulty of arriving at a date commonly acceptable to the four of us.

"I have been in touch with Mr. Macmillan and Gen. de Gaulle in regard to the alternative dates which you suggest. Unfortunately, due to other engagements, both Gen. de Gaulle and I could not find it possible to meet on April 21. I further understand that Mr. Macmillan has prior commitments which run from May 3 until mid-May.

"Provided that this is acceptable to you, the best announcement would seem to be for the meeting of the Four Powers to open in Paris on May 16.

"I trust, Mr. Chairman, that this will not present any difficulty to you and that we may agree to meet in Paris on that date".

The following day (December 30, 1959), Mr. Khruschev sent letters to the leaders of the three Western powers agreeing to their suggestion of May 16 for the meeting.

Mr. Khruschev's acceptance was welcomed in the three Western capitals.

NATO Communique:

A NATO *communique* issued in Paris on December 22, 1959 welcomed the close consultations between the Western Heads of States and Governments and the NATO Ministerial Council on preparations for an East-West 'summit' conference.

It said: "The Council heard an account by the Minister for Foreign Affairs of France, speaking on behalf of the Governments of the United States, France, the United Kingdom and the Federal Republic of Germany, of the conclusions reached by the Heads of States and of Governments during their discussions in Paris from December 19 to 21, 1959 in regard to East-West relations. During the detailed discussions which followed, the Council recognized that the views expressed by the four Governments fully reflected those which had been expounded by its members on December 15, 1959.

"The Council gives its full support to the position adopted by the four Governments."

The Council re-affirmed the NATO Ministerial Council's Declaration of December, 1958 re-iterating the Western "Big Three" Powers' decision to stay on in Berlin as long as their responsibilities required, their statement that the Berlin question could be solved only in the framework of a German settlement and that no solution jeopardizing Western occupation rights or free communication with Berlin was acceptable.

It also welcomed the plans made for further consultations with NATO before the Western "Big Four" negotiate at the projected 'summit' conference with Mr. Khruschev in Paris.

B. NATO Ministerial Council Meeting: The Foreign Ministers of the 15-nation North Atlantic Treaty Organization began a three-day Conference in Paris on December 15, 1959 to prepare policies for the East-West "summit" conference in Paris in 1960.

The Norwegian Foreign Minister, Mr. Halvard Lange, presided at the opening session.

Opening the session, the French Prime Minister, M Michel Debre, said that the NATO alliance must develop and re-juvenate itself.

The US Secretary of State, Mr. Christian A. Herter, urged NATO to plan for "a decade of peace with security".

He said that the ultimate aim of the Russians was dissolution of NATO and withdrawal of US troops from Europe. The imperative thing for NATO was to remain firm and not retreat an inch from its principles.

He denied Press reports that USA had any intention of withdrawing troops from Europe. But, he said, USA was concerned whether it was today having to bear more than its fair share of the burden. Europe had regained its vitality and the European members of NATO could assume a greater share of it.

The British Foreign Secretary, Mr. Selwyn Lloyd, said that great changes seemed to be taking place in Russia and this was one reason why Mr. Khruschev wanted an easing of world tensions.

The other three reasons for Mr. Khruschev's peace offensive which Mr. Lloyd gave (according to conference sources) were the Soviet Prime Minister's realization of the dangers of a nuclear war, his desire to play a historic role and the fact that Mr. Khruschev was not exactly a doctrinaire type.

Referring to NATO's military position, he said that Britain accepted the view of Mr. Herter about inter-dependence. Inter-dependence must be the basis of the Alliance. The division of labour and production would save NATO resources.

The Belgian Foreign Minister, M Pierre Wigny, was quoted as saying that the NATO nations must adopt a positive attitude towards Mr. Khruschev's disarmament proposals.

On December 16, 1959, Britain's Defence Minister, Mr. Harold Watkinson, promised the Council that Britain would keep its present level of 55,000 troops in Germany for the time being.

Under an Agreement concluded in 1958, Britain had the right to cut these forces by 10,000 in 1960.

A NATO spokesman said that Mr. Watkinson made two other important points—that Great Britain would encourage standardization of weapons in Europe and would give sympathetic consideration to NATO's views on the future of the RAF Second Tactical Air Force in Europe, which it had the right to withdraw in 1961.

The West German Defence Minister, Herr Franz-Josef Strauss, said that his Government was determined to achieve a target of twelve divisions by 1963 which was laid down two years ago. At present, West Germany had only seven divisions.

France's attitude towards NATO came in for sharp criticism during the afternoon session on December 16, 1959.

The French Defence Minister, M Pierre Guillaumat, who spoke at length in the morning session, jumped up from his chair on several occasions to interrupt the critics of his country.

The US Secretary of State, Mr. C. A. Herter, in another statement said that no American troops would be withdrawn from Europe.

The US Secretary of Defence, Mr. Thomas Gates, said on December 16, 1959 that USA was confident of her present nuclear superiority both in respect of nuclear weapons and their delivery.

He said it was no secret to the Soviet Union that American-made inter-continental and intermediate-range ballistic weapons were now operational.

Mr. Gates' statement followed a report published in Paris that Soviet missiles of both categories had been in operational service since July, 1958.

Communique:

At the end of its meeting late on December 17, 1959, the NATO Ministerial Council issued the following *communique*:

"The Council devoted three days to a thorough discussion of the affairs of the Alliance beginning with a review of the international situation. The Ministers unanimously re-affirmed their confidence in the North Atlantic Alliance and agreed that it will remain indispensable during the coming years. They instructed the Permanent Council to undertake long-term planning to cover the next ten years on the objectives of the Alliance in the political, military, scientific and economic fields, and in regard to arms control.

"The Council also agreed that various economic problems, as they relate to NATO, should form the subject of further study in the Permanent Council.

"The Council examined the military situation. It took cognizance of the fact that Soviet military strength continues to grow. Current NATO defence plans, therefore, remain valid.

"In view of this, and in the light of the annual review, the Ministers agreed that a determined effort is required to guarantee the necessary strength of the Alliance.

"The Council re-affirmed that general and controlled disarmament remains the goal of the West. Every opportunity will be taken to make progress in this direction. Until this goal is achieved, however, the Alliance cannot afford to neglect the measures necessary for its security.

"The Ministers had a full discussion on the forthcoming negotiations between East and West and agreed on the procedures whereby NATO will continue to participate in the preparations for these negotiations. The Council will resume these discussions on December 22, 1959 after the meeting of Heads of Governments.

"The Council concluded by expressing the hope that the forthcoming negotiations between the East and West will advance the solution of important problems and thus serve the ideals of peace and security which the Alliance has always upheld and defended."

Soviet Comment:

Commenting on the *communique*, the official Soviet News Agency *Tass*, said: "It is apparent that ignoring the present international thaw, the North Atlantic bloc has adopted a policy of a continued build-up of NATO's military strength. The authors of the *communique* are trying to justify this bellicose policy by speaking about the continued growth of Soviet military power."

(*The New York Times, The Statesman*, Calcutta and *Tass*)

[Prev. ref. 1827:AOA:A, 2810:AOA:E, 2814:AOA:Q]

C. Mr. D. D. Eisenhower's "State Of The Union" Message To Congress: President D. D. Eisenhower declared in the "State of the Union" message to the US Congress on January 7 that USA was always ready to take part with Russia in any serious discussion that might lead to peace with justice.

He said that in his final year of office he was ready to devote his full energies to the tasks at hand, "whether these involve travel for promoting greater world understanding, negotiations to reduce international discord, or constant discussions and communications with Congress and the American people on issues both domestic and foreign."

He said: "Recent Soviet deportment and pronouncements suggest the possible opening of a somewhat less strained period in the relationships between Russia and the 'free world.'

"If these pronouncements be genuine, there is brighter hope of diminishing the intensity of past rivalry and eventually of substituting persuasion for coercion.

"Whether this is to become an era of lasting promise remains to be tested by actions.

"In the past year, Russia has expressed an interest in measures to reduce the common peril of war.

"While neither we nor any other 'free world' nation can permit ourselves to be misled by pleasant promises until they are tested by performance, we approach this apparently new opportunity with the utmost seriousness.

"We must strive to break the calamitous cycle of frustrations and crises which, if unchecked, could spiral into nuclear disaster—the ultimate insanity."

He announced that he would present to Congress for the 1961 fiscal year beginning next July 1 a balanced Budget.

He said that defence expenditures would continue at the record peace-time levels of the last several years and space expenditures would be practically doubled.

He began his message as: "Seven years ago I entered my present office with one long-held resolve over-riding all others. I was then, and remain now, determined that USA shall become an ever more potent resource for the cause of peace—realizing that peace cannot be for ourselves alone but for peoples everywhere. This determination is shared by the entire Congress—indeed, by all Americans."

He expressed the hope that an avenue towards "the true foundation of peace" might be found through the re-opening on January 12, 1960 in Geneva of negotiations between USA, Britain and the Soviet Union on a controlled nuclear test ban. "I am hopeful that as new negotiations begin, truth—not political opportunism—will be the guiding light of the deliberations".

Still another avenue might be found in the field of disarmament. One obvious road on which to make a useful start was in the widening of communications between the West and Russia.

The initiative for peace had recently been successful in the Agreement between 12 nations, including the Soviet Union, providing for the exclusively peaceful use of Antarctica, insured by a system of inspection. "America is always ready to participate with the Soviet Union in serious discussion of these or any other subjects that may lead to peace with justice.

"Certainly, it is not necessary to repeat that USA has no intention of interfering in the internal affairs of any nation; likewise we reject any attempt to impose its system on us or on other peoples by force or subversion."

Other points made in the message were:

(1) Mr. Eisenhower believed that the industrial countries were ready to take part actively in supplementing the efforts of the developing countries to achieve progress. The

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

immediate need for this kind of co-operation was underscored by the strain on US international balance of payments.

(2) No matter how earnest the quest for guaranteed peace, USA must maintain a high degree of military effectiveness while negotiating the issue of arms reduction. "Until tangible and mutually-enforceable arms reduction measures are worked out, we will not weaken the means of defending our institutions. America possesses an enormous defence power."

(3) The US military missile programme did not suffer from its present lack of very large rocket engines which were necessary for distant space exploration. "I am assured by experts that the thrust of our present missiles is fully adequate for defence requirements."

(4) This year promised to be the most prosperous year in US history. "Yet we continue to be afflicted by nagging disorders." Among current problems requiring solution were the continuing threat of inflation, the denial of equal protection of law to some citizens, the "persistent refusal" to come to grips with the farming problem and the need to protect the public interest in industrial disputes.

(5) He expressed his relief at the steel strike settlement and said that it was gratifying that the major steel producers had announced that there would be no increase in prices at this time.

The message bore a clear imprint of his recent visit to India in December, 1959—a call to the world to help her raise her standard of living. India was not mentioned by name. But, on more than one occasion, he came close to doing so.

Talking about the needs of South Asia, he said that in two nations alone there were "almost 500 million people all working, and working hard, to raise their living standards and in doing so make of themselves a strong bulwark against the spread of an ideology that would destroy liberty." Out of the 500 million, 400 million lived in India.

There was a tremor in his voice when he added: "I cannot express to you the depth of my conviction that in our own 'free world' interest we must co-operate with others to help these people achieve their legitimate ambitions as expressed in their different multi-year plans."

He asked every nation in a position to help to face squarely this "titanic challenge."

Again, for the first time, he specially mentioned "uncommitted nations." In their progress all the peoples of the 'free world', he said, had a great stake.

(*The New York Times* and *The Times of India*, New Delhi)

[Prev. ref. 2478:AOA:C]

D. **Cameroons Achieve Independence:** A new independent State of some 3,000,000 people came into existence in West Africa on January 1, 1960 under Agreements with France.

The Agreements, recognizing the independence of the French Cameroons and making provisional arrangements for diplomatic, military, economic and technical co-operation, were signed by M Michel Debre and M Amadou Ahidjo, French and Cameroon Prime Ministers respectively on December 25, 1959.

M Debre's office announced that France recognized the independence of the Cameroons from January 1, 1960 when her UN trusteeship over the former German colony expired.

Background:

The Trust territory of French Cameroons had suffered years of colonial rule and would now be known as the Republic of the Cameroons.

With the independence of the Cameroons, the number of independent African States rises to ten.

The Republic of the Cameroons lies in West Africa, but its eastern and southern borders touch those areas of the French community which were once called French Equitorial Africa. Its area is 167,000 sq. miles—about one-eighth of India—and has a population of over three million. There are also some 14,000 Frenchmen and other Europeans. The Africans belonging to various tribes are Bantu-speaking Negroes in the south and Sudanese-speaking Negroes (Moslems) in the north.

The Cameroons was a German Protectorate from 1884 till 1914. With the defeat of the Germans in World War I, the British and the French took possession of the Protectorate and divided the 'booty' among themselves—four-fifths of the area going to France while Britain was content with the remainder. The Treaty of Versailles confirmed this division and it was decided that the two colonial Powers should henceforth administer their respective portions of the Cameroons under the Mandate of the League of Nations. With the creation of United Nations, these mandatory areas came to be known as UN Trust territories, and France and Britain continued to rule over their respective areas as Administering authorities. The French Cameroons has all along been administered as a separate unit, while the British have for administrative convenience tagged it on to Nigeria.

After World War II, following the general nationalist upsurge in West Africa, there has been a clamour in the two Cameroons for independence and also a very popular demand for the unification of the two peoples. During the past few years, UN, among other issues, has been seized with the problem of Trust territories and several member-States have condemned the ruthless colonial rule in the Cameroons. The French Trust territory has been more in the news as political organizations there sent petitions and delegations to UN to lay stress on the 'misdeeds' of France.

(*The Times*, London, *The Statesman* and *The Hindustan Times*, New Delhi)

[Prev. ref. 2598:AOA:C]

E. **US Relations With South Asian Countries:** The US State Department said in a background pamphlet released in Washington on January 8 that the United States maintained "a strictly impartial position" towards disputes between India and Pakistan and disputes between other nations in South Asia.

The pamphlet was drawn up in November, 1959 before President D. D. Eisenhower's tour of some Asian countries but was made available on January 8.

It dealt with the five nations of the subcontinent of South Asia—Afghanistan, Ceylon, India, Nepal and Pakistan.

It said that "unfortunately, the relations of the nations of South Asia with one another had been troubled by a number of disputes and problems" and commented that problems which had troubled India-Pakistan relations included the status of Kashmir, India's fear that US arms aid to Pakistan might be used against India and the demarcation of borders between India and Pakistan.

Other problems in the area were the Pakhtoonistan issue between Afghanistan and Pakistan and the question of the status of Indians who had settled in Ceylon which, it said, was a problem of long standing between India and Ceylon.

It added: "In the matter of these particular questions at issue between various nations of South Asia, USA has maintained a strictly impartial position.

"We seek by every available means to encourage a peaceful settlement of the questions in a manner which satisfies the legitimate interests of all parties.

"For USA seeks to maintain its ties of friendship with all the nations of South Asia and regrets the existence of these regional problems which have in some cases been a hindrance to economic progress and to international co-operation among the nations of the area."

Dealing specifically with relations between India and Pakistan, it said: "In the past, India and Pakistan have been divided by misunderstanding and mutual suspicion and despite our friendship for both nations and our position of strict impartiality on the various India-Pakistan disputes, the disagreements of these two nations have tended to complicate US relations with them.

"Since Pakistan is a member of both the South-East Asia Treaty Organization and the Central Treaty Organization, USA has granted military as well as economic assistance to enable Pakistan to fulfil its defensive obligations as a member of these alliances.

"Despite Agreements which provide that our military aid to Pakistan be used only for defensive purposes, India has regarded this aid with suspicion, fearing that American arms might be used against her.

"By the latter part of 1959, however, considerable progress had been made towards settling various matters at issue and USA is hopeful that the relationship of these two great South Asian nations will become more cordial in future.

"South Asia has a crucial role in world affairs because it is the communications centre between the Mediterranean and the South China Sea.

"It has a commanding position over one of the world's great commercial sea lines. It contains vast amounts of important raw materials and has great untapped production potential.

"But more important than its potential power or its strategic position is the fact that South Asia is a testing ground for the 'free world'. In this area will be determined whether nations can surmount tremendous economic and social problems, can achieve far-reaching changes in their pattern of life without resorting to the totalitarian system of communism.

"US policy towards the nations of South Asia is based on our desire to see these nations remain independent of foreign domination so that they can work out the economic and political institutions which can best satisfy their own aspirations.

"It is based on our desire to see these nations continue to make progress towards developing sound economies which will support decent living standards for all their peoples.

"And we seek to strengthen the traditionally cordial relations which have existed between our Governments and to promote mutual understanding between our peoples."

(*The New York Times*)

[Prev. ref. 3072:INI:A]

F. **United States Gives $15,000,000 For Two UN Aid Funds:** The United States gave United Nations on January 6 $15,000,000 for two aid funds for industrially under-developed countries.

Of this, $10,000,000 was for an expanded programme of technical assistance and the rest was the initial US contribution to the 1960 programme of the UN Special Fund for economic projects.

(*The New York Times*)

[Prev. ref. 3028:AOA:A]

G. **USA Re-states Policy On Nuclear Weapons Tests—Position Of Other Powers:** The United States Government announced its policy on resumption of nuclear tests on December 29, 1959.

President D. D. Eisenhower issued the following statement:

"The negotiations with respect to the cessation of nuclear tests have now been in progress for 14 months. While now recessed,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

they would soon be resumed. No satisfactory agreement is yet in sight.

"The prospects for such an agreement have been injured by the recent unwillingness on the part of the politically-guided Soviet experts to give serious scientific consideration to the effectiveness of seismic technique for the detection of underground nuclear explosions. Indeed, the atmosphere of the Geneva talks has been clouded by the intemperate and technically unsupportable Soviet annexure to the report of the technical experts. The distinguished American group of scientists who compose the US delegation will make public from the *verbatim* records of the Conference the facts which will completely refute this Soviet document.

"We will resume negotiations in a continuing spirit of seeking to reach a safeguarded agreement. In the meantime, the voluntary moratorium on testing will expire on December 31, 1959.

"Although we consider ourselves free to resume nuclear weapons testing, we shall not resume nuclear weapon tests without announcing our intention in advance of any resumption.

"During the period of voluntary suspension of nuclear weapon tests, the United States will continue its active programme of weapon research, development and laboratory-type experimentation."

The President's statement followed a conference in Augusta (Georgia) on December 29, 1959 between President Eisenhower, the Secretary of State, Mr. Christian A. Herter; the Secretary of Defence, Mr. Thomas Gates; and the head of the US Atomic Energy Commission, Mr. John McCone.

Other Powers' Position:

Britain's policy, it was stated in London, was not to explode further nuclear weapons while useful talks on the abolition of nuclear tests continued at Geneva.

France has planned to explode her first nuclear bomb in the Sahara on an unspecified date.

The Soviet Prime Minister, Mr. Nikita Khruschev, said on January 3, 1960 that the Soviet Union would not resume nuclear tests unless the Western Powers did so.

H. **US Atom-powered Submarine Commissioned:** The *USS Halibut*, an atom-powered submarine capable of firing the *Regulus* guided missile, was commissioned at Vallejo in California on January 4, 1960.

The 3,555-ton submarine, which has a torpedo battery as well as missiles, was launched on January 9, 1959 and had made several successful trials. She is the first submarine ever designed from the keel up as a guided missile carrier.

(*The New York Times*)

[Prev. ref. 2958:AOA:D]

I. **Aluminium - Coated Inflated Sphere Launched In USA:** The United States National Aeronautics and Space Administration (NASA) launched on January 16 an aluminium-coated sphere from Wallops Island in Virginia to a height of 250 miles, where it shone brighter than the stars. The sphere was sent up folded inside the nose of a rocket. When the device reached a height of 250 miles, it was inflated to a diameter of 100 feet.

The purpose of the launching, the latest of a series, was to test the practicability of ejecting a folded plastic sphere at a high altitude and inflating it.

The sphere was seen in the sky for about 10 minutes before it sank below the horizon. It later fell into the Atlantic and no effort was made to recover it.

(*The New York Times*)

J. **Russians Work Out Route For Rocket Flight To Mars:** The Director of the Sternberg Institute of Astronomy in Moscow, Prof. Dmitri Martynov, broadcasting from Moscow Radio on January 8, 1960, said that the Soviet authorities had already worked out the route for a rocket flight to Mars.

He said that conditions which a space-man would have to endure on Mars had also been studied. Temperatures had been calculated as relatively moderate—up to 68 degrees Fahrenheit during the day on the Martian equator and falling to minus 30 degrees Fahrenheit at night. Life was possible on Mars and there were signs of vegetation, possibly even micro-organisms. The atmosphere contained carbon dioxide, oxygen and a certain amount of water. It was in fact the only planet in the Earth's solar system where man could find acceptable living conditions. It was not a coincidence that the planet was attracting so much attention from astronomers all over the world.

He added that it would take 272 days to reach Mars. People who land on the planet would have to remain there for about a year awaiting a favourable opportunity for the return trip.

(*Tass*)

[Prev. ref. 3040:AOA:A]

K. **Indian Students Abroad And Foreign Students In India:** According to a UNESCO publication entitled "Study Abroad" made public at UN Headquarters on January 5, the majority of Indian students who seek higher education abroad obtain it now in the United States.

The publication said that there were 4,966 Indian students in 1957-58 in Australia, Austria, Belgium, Denmark, France, West Germany, Italy, Japan, the Netherlands, Switzerland, United Kingdom, United States and The Vatican.

Of these, 2,585 were in the United States. The United Kingdom came next with 1,511 Indian students, followed by West Germany (504), The Vatican (91), Australia (83), France (71), Switzerland (38), Italy (37), Austria (21), Japan (12), Netherlands (7), Belgium (4) and Denmark (2).

The number of foreign students in India, it said, had been increasing steadily. In 1952-53, for instance, there were 1,795 foreign students in India. By 1956-57, the number had risen to 2,620.

There were 180,000 foreign students in institutions of higher education throughout the world in 1957-58—an increase of 15,000 over the previous year. Foreign students comprised about two per cent of the total enrolment.

In India, the proportion of foreign students was estimated at 0.5 per cent of the total enrolment in higher education.

(*The Times of India*, Bombay)

L. **ICFTU Congress:** The Congress of International Confederation of Free Trade Unions (ICFTU) met in Brussels from December 6 to 11, 1959.

The Indian delegate, Mr. G. D. Ambekar, told the opening session that in order to strengthen the real democratic trade union movement in Asian countries, "we will have to educate the workers to stand on their own legs and create their own leadership".

He said that India, like other Asian countries, wanted peace not for its own sake but for the development of the whole Asian region. "But, to the surprise of the whole world, my country has been attacked by China without any provocation. This should open the eyes of all those who believe in the declarations of peace and freedom of communist China. Communist China has exposed herself as having imperialist designs."

He said that this should serve as a warning to other Asian countries and free trade unions. "We should under no pretext or excuse be a party to any joint or united front even in the name of a good cause with the communists or their 'fellow-travellers'."

Addressing the Congress on December 4, 1959, the General Secretary of the Kenya Federation of Labour, Mr. Tom Mboya, said that more vigorous action should be taken in those parts of Africa where the workers did not have the right to organize and negotiate.

Racialism in some countries and apartheid in South Africa, he said, made it impossible for trade unions to organize as effectively as they would like. In South Africa, the worker was not recognized by law. As a result, he was not allowed to organize trade unions and as such was not allowed trade union rights, freedom of association or freedom of assembly. In some areas of Rhodesia and Nyasaland, trade unions had to be organized on a racial basis. The struggle in those areas, therefore, was not between workers and employers but as between workers themselves. In other African areas, trade union rights were limited because of political conditions.

The President of the United States AFL-CIO, Mr. George Meany, told the Congress on December 8, 1959 that it was dangerous to speak of "a great thaw in the 'cold war'."

He said: "The Soviet Union has sought to exploit the mood engendered by such talk in order to prevent criticism of its criminal aggression against liberty-loving peoples."

He added that peace and freedom were today in an even graver danger than a decade ago.

Mr. Harry Douglas, General Secretary of the British Iron and Steel Trades Confederation, said that peaceful co-existence or its alternatives had to be considered.

Resolutions And Election Of Office-bearers:

At its concluding session on December 11, 1959, the Congress passed a resolution directing the Executive Board to take further steps to reorganize the Federation's structure to make it more adequate and responsive to the tasks ahead.

Emphasis was placed on the need for building effective trade union organizations and for dealing with the problems of workers in Asia, Africa, Latin America and other parts of the world where the struggle was the hardest and the need greatest.

It authorized the Board to take immediate action to carry out the directives in time to report on the results by the next Congress in June, 1960.

The new Executive Board re-elected Mr. J.H. Oldenbroek, a Dutch Socialist, as Secretary-General.

The Board also re-elected Mr. Arne Geijer of Sweden as the Confederation's President for 1960.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Among the seven Vice-Presidents re-elected by the Board were Sir Vincent Tewson, General Secretary of Britain's Trade Union Congress; Mr. George Meany, President of the American Federation of Labour-Congress of Industrial Organizations; Mr. Walter Reuther, Vice-President of the American AFL-CIO; M. M. R. Bothereau (France); Mr. E. Jensen (Denmark); Mr. Khatib (Pakistan); and Mr. Willi Pichter (West Germany).

In addition to re-electing the seven Vice-Presidents, the Board chose Mr. A. Tlili (Tunisia) as Vice-President representing Africa and Mr. S. Marcovecchio (Argentina) to represent Latin America.

It also chose a new Sub-Committee, which included Mr. G. D. Ambekar of India and Mr. Tom Mboya of Kenya.

The new-comers to the Executive Board itself were: Mr. Tom Mboya and Mr. A. Esie (Nigeria), both for Africa; Mr. Hernandes (Philippines) for Asia; Mr. A. Cgiha (Lebanon) for West Asia; and Signor B. Storti (Italy) for Europe.

Background:

Immediately after World War II, Trade Union leaders from many countries, including Russia, Britain and America, formed the World Federation of Trade Unions. [In the United States, the Congress of Industrial Organizations joined it, but the American Federation of Labour remained outside.]

There was constant friction between communists and non-communists in the Federation. Early in 1949, the non-communist centres broke away from the World Federation of Trade Unions. In December, 1949, delegates from 70 trade union organizations in 53 countries, including the American Federation of Labour and the Congress of Industrial Organizations met in London and formed the International Confederation of Free Trade Unions.

The Confederation's aims are to improve the living standards of workers everywhere, to further political and economic freedom and to achieve lasting peace. Their slogan is: "Bread, Peace and Freedom."

On January 1, 1959, ICFTU had 137 affiliated organizations in 97 countries with a membership of 55,955,881. The membership included 25,416,357 in Europe, 14,692,060 in North America, 6,346,583 in Latin America, 6,252,223 in Asia, 1,286,121 in Africa, 1,047,309 in Australia, 728,745 in West Asia and 186,483 in the West Indies.

There are Regional Offices in Brussels, Mexico and New Delhi. In addition, the East, Central and Southern areas of Africa are served by an Area Office in Nairobi, and West Africa by the Accra Information and Advisory Centre. A regional organization for the whole of Africa is being considered. Its other offices are located in Singapore, Tokyo, Djakarta, Port of Spain, Rio de Janeiro and Beirut.

ICFTU's offices in Geneva, Paris and New York maintain contact with inter-governmental organizations. It has a recognized status with UN, ILO, UNESCO and other bodies.

ICFTU is said to be in constant rivalry with the World Federation of Trade Unions, now wholly communist-dominated, in all parts of the world, and firmly refuses to have any contact with them.

Its income from affiliation fees and a levy in 1958 amounted to about £280,000 which was somewhat less than its expenditure. There is also an International Solidarity Fund which is expected to reach £2,000,000 by the end of 1960.

[Prev. ref. 1392:INI:D]

M. **UNESCO's Education Project:** The January issue of *Chronicle*, a UNESCO publication, reported that the launching of a project for the extension of compulsory primary education in Asia was under the consideration of UNESCO.

It would be UNESCO's fourth major project, supplementing those being conducted in relation to compulsory primary education in Latin America, research on problems of arid lands and mutual appreciation of cultural values of the Occident and the Orient.

The possibility of the project was referred to in an article on "the preliminary programme and budget of UNESCO for 1961-62," written by the Assistant Director-General Mr. Rene Maheu.

He said: "The question has arisen of the desirability of launching in 1961 a fourth major project on the extension of compulsory primary education in Asian countries. Preliminary studies are proceeding in Asia.

"It will be recalled that similar inquiries are being pursued, concurrently, on needs in regard to school education in the Arab States and tropical Africa.

"It is with these various considerations in mind that a decision will be taken when the final proposed programme is prepared in the light of the conclusions reached as a result of the inquiries and consultations now proceeding in the member-States concerned. But, whatever the decision may be—and it will mainly relate to the form of the Organization's action—the purpose of and the means of that action are already secured."

Dr. V. Veronese On Project:

In New Delhi, on January 15, the Director-General of UNESCO, Dr. V. Veronese, told a news conference that the UNESCO Education project would be spread over 20 years and would cost $64 billion.

The project aimed at increasing the present primary school children's attendance from 65 million in 1960 to 220 million in 1980. This would require over 8,000,000 teachers.

He explained that apart from providing for the enrolment of 156 million additional children by 1980, the Project "which allows for population increase," visualizes the construction of 55 million additional class-rooms and two million additional houses for teachers.

The project, also described by him as "modest" and one estimated to cost a little over $3 billion per annum, envisaged the greater part of these resources to be provided from the national Budgets, "which will continuously increase with the economic development of the countries."

However, it called for about $10 billion of external assistance during the 20-year period —or $500 million of such assistance annually. This assistance was for meeting non-recurring expenditure related to school buildings, teachers' houses, furniture and teaching equipment.

He said that the Karachi Regional Conference of UNESCO had called on the economically developed countries of UNESCO and UNESCO itself through bilateral, regional and multi-lateral arrangements to help and provide this external finance.

This was "an extremely important and challenging demand" and was "as precise and imaginative" as the whole plan. It was on this aspect that he looked forward to the directives and guidance of the General Conference of UNESCO. He was ready to serve Asia and India "in this bold and urgent" project.

Indeed, he was also proposing to the General Conference that "a considerable sum of money be set aside from UNESCO's regular Budget for 1961-62 to help Asian member-States with expert assistance, fellowships, educational equipment and, in some cases, financial grants to aid the pilot projects and regional programmes in the plan recommended by the Karachi Conference."

N. **World Running Behind Time—Calculations By Soviet Astronomers:** According to Soviet astronomers, the world has been running behind time since the beginning of this century. Soviet astronomers have corrected the inaccuracy, which has been accumulating since the early years of this century.

Mr. Kheino Potter, Head of the Ephemerid Time Service at Pulkovo Observatory (near Leningrad) told *Tass* on December 30, 1959 that the time inaccuracy resulted from unevenness in the rotation of the Earth round its axis. This unevenness could be studied by observing the orbital movement of the Moon.

Using a lunar camera with which the position of the Moon could be photographically established, the staff of the Ephemerid Time Service had obtained about 300 plates showing the Moon and surrounding stars.

Nearly 100 photographs had already been measured and Soviet astronomers had established that 31 seconds should be added to the world time.

According to *Tass*, scientists in various countries would, by 1960, be able to use the re-adjusted time for their scientific work.

O. **Bernard Shaw's Prize For New English Alphabet Shared By Four Persons:** It was announced in London on December 31, 1959 that four persons would share the prize of £500 offered by the British Public Trustee under the Will of George Bernard Shaw for a new English language alphabet.

The four winners were: Mrs. Pauline M. Barrett of Halifax, Nova Scotia; Mr. John Frederick Magladh, an insurance broker; Dr. Sydney Lancaster Pugmore, a psychiatrist; and Mr. Kingsley Read, a retired letter-designer.

The Public Trustee, Mr. R. P. Baulkwill, who made the announcement, said that there were 467 entries from all parts of the English-speaking world.

The four winners would share the prize equally (£125). They would collaborate with Mr. T. A. D. MacCarthy, Professor of Phonetics at Leeds University (UK) to evolve a final alphabet, probably of 40 letters.

Mr. Baulkwill said that when a new alphabet was finally decided upon, pamphlets explaining it would be distributed to public and national libraries throughout the English-speaking world.

It was also planned to issue an edition of *Androcles and the Lion*, one of Shaw's plays, in the new alphabet.

Under the terms of Shaw's Will, there is no intention of replacing the present 26 letters.

One of the provisions of the Will was for a new alphabet containing at least 40 letters enabling the English language—assuming the pronunciation to resemble that recorded by the late King George V—to be written without indicating single sounds by groups of letters or by diacritical marks instead of by one symbol for each sound.

In February, 1957, the legacy of £10,000 which Shaw left for the purpose was judged an invalid Charitable Trust. Before an appeal could be heard, a compromise was reached, and a Public Trustee was appointed to carry out Shaw's Will.

A prize of £500 for the best design for the new alphabet was offered in 1957. Entries closed on January 1, 1959.

About half the entries came from the United Kingdom, 16 from the United States, 14 from Canada, 13 from Australia, 11 from India, 10 from Germany, six from Ireland and a number of single entries from individual countries.

P. **Soviet "Snowman" Expedition Returns:** It was stated in Moscow on January 10 that a Soviet Scientific Expedition had returned from a nine-month unsuccessful search in the Pamir Ranges—the "roof of the world"—for signs of the "Abominable Snowman."

Tass said that the Expedition, led by Prof. Kyril Stanyukovich, had been set the task of establishing whether there was any truth in the legends of the "Snowman" which received publicity at the time of the conquest of Everest by Sir Edmund Hillary and Tenzing Norkay in 1953.

The Pamirs, with peaks over 20,000 ft., lie north of Afghanistan, and about 1,000 miles north-west of Everest.

The Soviet Expedition consisted of botanists, zoologists, archaeologists and ethnographers, and was accompanied by experienced mountaineers, local snow-leopard hunters and specially trained tracker-dogs.

They set up hidden observation posts equipped with the latest types of telescopes, set traps baited with sheep and goats, laid out nets, and spread anaesthetic substances. But no "Snowman" was discovered, and the team concluded that there was no reason to believe that he lived in the Pamirs.

Q. **Mr. Charles Roberts Swart Appointed New Governor-General Of South Africa:** It was formally announced on December 6, 1959 that Mr. Charles Roberts Swart, Minister of Justice in the South African Government, had been appointed Governor-General of the Union in succession to the late Dr. Ernest Jansen.

Dr. Jansen died of leukaemia in Pretoria on November 25, 1959. He was 78.

Mr. Swart, like Dr. Jansen, a former lawyer, has, at one time or another, also been a Hollywood actor, journalist, farmer and university lecturer. He was first elected to Parliament in 1933 as a staunch supporter of Dr. Daniel Malan's Republican Nationalist Party. He became leader of the Party in the Orange Free State in 1940, and in 1948 became Minister of Justice, a post he has held ever since. Mr. Swart was appointed acting Prime Minister during the illness in 1958 of the late Prime Minister, Mr. Johannes Strijdom.

(*The Hindu*, Madras)

R. **Russian Antarctic Expedition Reaches South Pole:** A train of sledge-tractors of the Soviet Antarctic Expedition reached the South Pole at noon (Moscow Time) on December 26, 1959.

This trek from the Antarctic shore of the Indian Ocean, where Russia's Southern Polar station of Mirny is located, lasted three months. During this time, members of the Expedition had covered about 1,670 miles.

The Expedition was led by Mr. Alexander Dralkin.

At the South Pole, the Russian Expedition met the American scientists at the Amundsen-Scott Research Station.

The Russians were expected to stay at the American station for two days before starting the final leg by way of the Sovietskaya Base at the Pole of Inaccessibility to the Soviet coastal station of Lazarev on Queen Maud Land.

The Soviet Expedition was the fourth to reach the South Pole overland. The first was Amundsen's in 1911, followed by Scott's in 1912. The third expedition was led by Sir (then Doctor) Vivian Fuchs and Sir Edmund Hillary in 1958.

The Soviet News Agency *Tass* said that the Expedition did not try to break any records. It stopped for about every 70 miles to make scientific observations for a meridional cross-section of the ice covering the continent and traverse areas never before trodden by man.

Polar aviation had actively helped the trans-Antarctic trek. Aircraft from the Expedition had made many flights into the heart of the Antarctic and delivered many tons of equipment to the Komsomolskaya and Vostok Soviet scientific stations and directed the Expedition.

It was announced on December 28, 1959 that the Soviet Expedition had decided to return to Vostok base instead of pushing across the continent as originally planned.

In a despatch from the Soviet base at Mirny, *Tass* said that after completing scientific observations at the Geographic Pole, the team would return to Vostok.

(*Tass*)

[Prev. ref. 1875:AOA:A]

S. **International Tin Council Meeting—Fixation Of Quotas:** The International Tin Council met in London from December 1 to 4, 1959.

The countries attending were: Australia, Austria, Belgium, Belgian Congo, Ruanda-Urundi, Bolivia, Canada, Denmark, France, India, Indonesia, Israel, Italy, Korea, Malaya, the Federation of Nigeria, the Netherlands, Thailand and the United Kingdom.

The Council put the total permissible export amount for the six producing members of the Agreement during the ninth control period—January 1 to March 31, 1960—at 36,000 tons. This compared with 30,000 tons for the quarter October-December, 1959, and 25,000 tons for July-September, 1959.

The Council extended to the end of March, 1960 the authority it had granted on previous occasions to the buffer stock manager to operate within the middle range of prices (£780 to £830 per ton) in the Agreement.

It gave formal agreement to the arrangement made with the Government of the United Kingdom regarding the disposal, through the buffer stock manager, of 2,417 tons of tin which represents the balance of the United Kingdom strategic stock-pile of tin.

(*UK High Commission*, New Delhi)

T. **UNESCO Survey Of Newspapers In World:** A Report published by the United Nations Educational, Scientific and Cultural Organization (UNESCO) on December 15, 1959 on the world's newspapers and periodicals, based mainly on statistics collected from 146 countries in 1955 and 1957, revealed that India had the third largest number of daily newspapers in the world.

It said that USA published more daily newspapers (1,820) than any other country. West Germany was second with 481 and India a close third with 476.

In respect of all classes of newspapers—dailies and non-dailies—the first six in order were: United States, Soviet Union, Argentina, United Kingdom, Brazil and Canada, all of them publishing over 1,000 newspapers. Among them, the United States published 8,512 newspapers, the Soviet Union 5,114, Argentina 1,674 and United Kingdom 1,456.

It estimated the total circulation of the world's daily newspapers at over 250,000,000 copies, the figure working out at roughly [illegible] copies per 1,000 inhabitants.

Non-daily newspapers were estimated [illegible] have a total circulation of about 200,000,000 or about 72 copies per 1,000 inhabitants.

There were some 30,000 newspapers published in the world, of which about [illegible] were dailies. About one-third of all newspapers were published in America and another third in Europe, including the Soviet Union. Europe, including the Soviet Union, probably accounted for nearly half the total circulation of all daily newspapers.

(*UN Information Centre*, New Delhi)

SPORT

A. **Asian Lawn Tennis Championships:** The 1959 Asian Lawn Tennis Championships concluded in Calcutta on January 3 when R. Krishnan (the second Indian to win the Men's Singles title) beat Barry Mackay (USA) 7-5, 4-6, 6-3, 6-4.

The first Indian winner of the title was Dilip Bose who beat Sumant Misra in the final in 1949—the first year of the Championships.

The Mixed Doubles title was won by Naresh Kumar (India) and Miss Margaret Hellyer (Australia) beating the Russian pair Thomas Leyous and I. Russanova 7-5, 6-1.

In the Men's Doubles, R. Krishnan and N. Kumar beat W. A. Knight (UK) and Warren Woodcock (Australia) by 6-3, 6-2, 3-6, 8-6.

Miss Hellyer annexed the Women's Singles title, beating Mimi Arnold (USA) by 3-6, 6-1, 7-5.

(*The Statesman*, Calcutta)

[Prev. ref. 1832:SPO:A]

B. **National Table-Tennis Championships:** Gautam Diwan won the National Table-tennis Singles title for the fourth year in succession in Calcutta on December 31, 1959 with a 3-2 win over K. Nagaraj. The scores were 20-22, 13-21, 21-16, 21-16, 21-10.

The only other player to have won the title for three years was Uttam Chandrana, but he did not have more than two consecutive successes.

Meena Parande, India's woman international, won the triple crown. In addition to retaining the Women's Singles title, she won the Women's Doubles event in partnership with Rachel John and the Mixed Doubles title with J. M. Banerjee as her partner.

The following are the results of the finals:

Men's Singles: G. R. Diwan beat K. Nagaraj 20-22, 13-21, 21-16, 21-16, 21-10.

Women's Singles: Meena Parande beat Usha Sunderraj 21-8, 16-15, 6-5 (time limit).

Junior Singles: R. R. Kamath beat Nitin Shah 21-17, 21-12, 21-8.

Mixed Doubles: Meena Parande and J. M. Banerjee beat Urmilla Khanna and Inder Prakash 21-12, 21-13, 12-21, 21-9.

Women's Doubles: Meena Parande and Rachel John beat Urmilla Khanna and Indira Iyengar 21-23, 26-25 (time limit), 21-13, 21-12, 21-12.

AFGHANISTAN

A. **Agreement With USSR For Construction Of Jalalabad Irrigation Canal:** An Agreement on Soviet technical aid to Afghanistan in the building of the Jalalabad Irrigation Canal was signed in Kabul on January 19.

The construction includes a hydraulic power station of 11,000 kilowatts, dams, a 70-kilometre-long canal, five bridges, three aqueducts and other works.

The scheme will irrigate 25,800 hectares of land, of which 20,600 hectares are not under cultivation at present.

The whole project is expected to be completed in four years.

The aid from USSR for this project is stated to be $22,400,000.

[Prev. ref. 2743:AFG:A, 2799:AFG:A]

CHINA

A. **Increase In Production:** The official *Hsinhua* news agency reported on January 22 that China had reached the main targets of her Second Five-Year Plan (1957-62) three years ahead of schedule.

It attributed the success to "opposing Rightist tendencies and exerting full efforts."

The achievements quoted were an increase of 31 per cent in industrial and agricultural output compared with 1958 and a 16 per cent increase in retail sales, allied to a 21 per cent increase in the national income.

It said: "The supply of a small number of commodities was tight during the first half of 1959 owing to rapidly increasing purchasing power, but for quite some time this tight situation has now ceased."

Other output increases noted were: steel 13,357,000 tons (up by 67 per cent); pig iron 20,500,000 tons (up 115 per cent); coal 347,800,000 tons (up 29 per cent); crude oil 3,700,000 tons (up 63 per cent); cement 12,270,000 tons (up 32 per cent); timber 41,200,000 cubic metres (up 18 per cent); chemical fertilizer 1,333,000 tons (up 64 per cent); metal working machine tools 70,000 tons (up 40 per cent).

Budgetary outlay for investment in capital construction in 1959 totalled 26,700 million yuan—an increase of 24.5 per cent over 1958.

National Economy:

Meanwhile, a report on national economy was given by the Vice-Premier, Mr. Li Fu-chun, in an article in the first issue of 1960 of *The Red Flag*, a fortnightly publication of the Central Committee of the Chinese Communist Party.

According to the article, China, in 1959, achieved a continued "big leap forward" in the development of her national economy for the second year in succession and, as a result, a comprehensive nation-wide system of industry was rapidly taking shape, centred on iron and steel and machine-building, and integrating big, medium-sized and small enterprises.

The imbalance in the economic development of various areas of the country was being gradually changed and China could now by itself design and build modern enterprises involving relatively complicated techniques. As a result, a "completely solid foundation" had already been laid for a "high speed and proportionate leap forward in the development of the national economy."

He wrote that, on the basis of preliminary statistics, the total output value of industry had far surpassed the target of over-fulfilling that of 1958 by 25.6 per cent which had been set by the eighth preliminary session of the Central Committee of the Communist Party. Steel production had exceeded 13,000,000 tons, surpassing the planned target of 12,000,000 tons. Coal output had also markedly exceeded the planned target of 335,000,000 tons, although no exact figure was given.

He claimed that the total output value of agriculture had "by far surpassed the planned target" despite the fact that in 1959 the country had suffered some of the most serious natural calamities in history which had affected over 40,000,000 hectares of land, or over one-third of all farm land in the country.

He, however, gave no figures for agricultural production.

During the same year, he claimed, capital construction had also fulfilled the budgeted total investment.

The Second Five-Year Plan called for the total output value of industry to approximately double itself by 1962 as compared with 1957, the first year of the Second Plan. Item-wise, it set the following production targets for 1962: steel, between 1.05 and 1.2 crore tons; coal, between 19 and 21 crore tons; electricity, between 4,000 and 4,300 crore kw hours; metal cutting machine tools, between 60,000 and 65,000 units; cotton yarn between 80 and 90 lakh bales; grain, about 50,000 crore catties (25 crore tons); and cotton, about 24 lakh tons.

He said that during 1959, industrial products had greatly increased in varieties and markedly improved in quality, while costs had been considerably reduced. An integrated and all-round development of agriculture, forestry, animal husbandry, side-occupations and fishery had been attained and the production of grain, cotton, oil-bearing crops, flax, tea, tobacco, sugar-cane and sugar beet, silk, fruit, vegetables, medicinal herbs and sundry crops had greatly increased without exception.

Communications and transportation, it was claimed, had developed at an even quicker tempo than other branches, while commerce was described as "brisk".

He said: "With the continued big leap forward in 1959, a completely solid foundation has already been laid for our high speed and proportionate leap forward in the development of the national economy, which began in 1958".

The output of nearly all heavy industrial products had been more than doubled and a complete nation-wide system of industry was rapidly taking shape. It was centred on iron and steel and machine-building, integrating big, medium-sized and small enterprises and a relatively more rational geographic distribution. The imbalance in the economic development of various areas was being gradually changed. China could now, by itself, design and build modern enterprises involving relatively complicated techniques.

[Prev. ref. 3019:CHI:A]

B. **Ratification Instruments Exchanged:** An Indonesian Embassy official said in Peking on January 21 that Indonesia and China had exchanged ratification instruments bringing into force the Treaty between the two countries on dual nationality.

According to him, the Chinese Foreign Minister, Mr. Chen Yi, and the Indonesian Ambassador, Mr. Sukardjo Wirjopranto, exchanged the documents at a ceremony held at the Foreign Office in Peking on January 20.

The exchange of documents was regarded as a step towards settling the dispute between China and Indonesia over the treatment of Chinese traders in Indonesia.

Under the Treaty on dual nationality, Chinese living in Indonesia have to choose within two years whether to be nationals of one country or the other.

The quarrel between the two countries flared up in November, 1959, over the Indonesian regulation banning alien shopkeepers —mostly Chinese—from rural areas from the beginning of 1960.

The ban was estimated to affect about one-fifth of Indonesia's Chinese population, estimated at about 2,500,000.

China complained that the regulation resulted in great numbers of Chinese losing their livelihood and homes and brought discrimination and persecution against them.

INDIA

SUMMARY: Republic Day Celebrations; Indian Brochure On Border With China; Mr. Nehru And F-M Ayub Khan On Kashmir Issue; Austrian Credit Offer; Bhilai Steel Plant Expansion; All-India Businessmen's Convention; Jurists' Report On Communist Regime In Kerala; Mr. C. Rajagopalachari On Socialism.

A. **Republic Day Celebrations:** The tenth anniversary of India's Republic Day was celebrated in New Delhi with the usual military parade and cultural pageant on Rajpath on January 26.

The President, Dr. Rajendra Prasad, took the salute at the march-past.

An interested spectator at the parade was the Soviet President, Marshal K. Voroshilov, who sat on the right of Dr. Prasad's dais. Another distinguished visitor was the Prime Minister of Nepal, Mr. B. P. Koirala.

The day was also celebrated in all State capitals and other cities and towns throughout the country with military or police parades and other festivities.

It was celebrated by all Indian Missions abroad.

Greetings on the occasion were received from world leaders and statesmen.

President's Broadcast:

In a message to the nation broadcast on January 25, the President of India, Dr. Rajendra Prasad, called on the nation to be "vigilant and united" in the absence of "desired appreciation" by China of India's anxiety to "remain friendly and avoid resort to force" to settle the border issue.

He declared that while "hoping for the best" and re-affirming the country's faith in peace and peaceful co-existence, India could not afford to ignore the fact that eternal vigilance was the price of freedom.

China, he added without actually naming her, had by its encroachment on India's border areas threatened to strain the latter's belief in *Panch Shila* which she herself had helped to propound. India, despite popular resentment, continued to rely on negotiations for a peaceful settlement.

At the same time, he assured the nation that "side by side with meeting the requirements of defence necessitated by recent events, we are determined to spare no efforts in implementing our big nation-building projects."

The following is the text of the broadcast:

"Let me greet my countrymen on the eve of the 10th Republic Day and wish them good luck and happiness in the coming year. Every year we exchange greetings on this happy occasion and felicitate one another and also look around to see the state of the nation, its growing economy and its fast-developing resources. We have weighed these developments against our long-term plans and our cherished dreams to turn an under-developed nation of teeming millions into a prosperous State in which every citizen, assured of life's essential needs, leads a reasonably happy life. The whole machinery of the State, nay, the entire resources of the nation, are being mobilized to give shape to this ideal.

"Since we became free and took charge of the affairs of State we have remained mainly occupied with setting our house in order, that is to say, with dealing mostly with our internal problems, though, as is well known, we have throughout been following a foreign policy which we have thought to be the best for India. Respecting other nations' independence, cherishing friendly feelings for all peoples, firm belief in every country's freedom to live in the manner considered best by it, to abjure violence and aggression and to work for the maintenance of world peace—these are some of the important elements in our foreign policy. This policy which came to be known as that of peaceful co-existence has been subscribed to by a good many other nations of the world.

"Something has happened which threatens to strain our belief in these principles. One of our neighbours with whom our relations have throughout been friendly and who has been with us in propounding the theory of *Panch Shila*, has thought it fit to encroach on our frontiers and occupy fringes on the border areas falling within Indian territory. In the face of provocation and the rising popular resentment we have continued to rely on negotiations and settle whatever dispute there be in a peaceful and friendly manner. Our anxiety, however, to remain friendly and avoid resort to force has not so far evoked the desired appreciation from the other side. While hoping for the best, we have to be vigilant and united. Though our faith in peace and peaceful co-existence remains unshaken as ever, we cannot afford to ignore the fact that eternal vigilance is the price a nation pays for its freedom.

"Side by side with meeting the requirements of defence necessitated by recent events, we are determined to spare no effort in implementing our big nation-building projects. Some of these projects have already been completed or are nearing completion. Work on others is proceeding according to schedule. During last year we had the Ganga Bridge opened to traffic, linking North Bihar and Assam with South Bihar and West Bengal. Encouraged by this remarkable feat of engineering we now propose to span the mighty Brahmaputra near Gauhati, and our Prime Minister has laid the foundation of the new bridge only this month. Work on Bhakra, Nagarjunasagar, Chambal, Neiveli and Kundah hydro-electric projects continues to progress. The three major Steel Plants at Rourkela, Bhilai and Durgapur have begun functioning in part. These are expected to supply more than our present requirements of steel.

"At one time during the year the food situation threatened to worsen, but the price level was soon brought down as a result of efforts to ease the supply situation and opening of foodgrain shops throughout the country. The situation since then has shown signs of improvement and there is reason to believe that this trend will receive further support from the present re-assuring crop position and foreign imports to build up adequate reserves."

President's Broadcast To Indians Abroad:

In a message to Indian nationals residing abroad, Dr. Rajendra Prasad promised "quite a few pleasant surprises" for them when they returned home.

He told them that the surprises were: electrified villages, new roads, and railways, new canals lacing the rural areas with their bounteous waters, three giant steel plants "spitting molten ore round the clock" and Community Development and social welfare centres spread all over the land.

He said: "I know you will feel happy to see all this. But let me tell you, it is no more than a beginning. The journey to our great destination is long and arduous. However, faith in India's destiny inspires us and the determination of our people provides the necessary sinews for the job. An undertaking like this cannot be without its own hazards and difficulties and, be sure, we are no longer strangers to them, though with God's grace we are bound to get the better of them and achieve our cherished goal."

He added: "Whatever preoccupations we have at home, our thoughts often go to you, and your well-being is close to our hearts. You too, brothers and sisters, must be thinking of your country today. I would like you to think also of the high moral and spiritual ideals from which we draw inspiration in our home and foreign policies."

President's Reception:

The President, Dr. Rajendra Prasad, gave two receptions at Rashtrapati Bhavan in connexion with Republic Day on January 25 and 26.

The receptions were attended, among others, by the USSR President, Marshal K. Voroshilov, and party, Lady Mountbatten, Central Ministers, judges of the Supreme Court, members of the diplomatic corps, officers of the three Services, members of delegations to various conferences then being held in New Delhi and teachers who received the National Awards.

Messages Of Greetings:

World leaders sent India messages of greetings on the occasion of the Republic Day.

They were, among others, from President Eisenhower, King Mahendra of Nepal, Marshal Tito, President Ngo Dinh Diem of South Viet-Nam and the King of Cambodia.

Mr. Liu Shao-chi, Chairman of the Chinese People's Republic, and Mr. Chou En-lai, Prime Minister of China, also sent messages.

Mr. Liu Shao-chi's message, dated January 23, to Dr. Rajendra Prasad said:

"On the happy occasion of the tenth anniversary of the National Day of your country, I would like, on behalf of the Chinese people and in my own name, to extend warm congratulations to Your Excellency and the great Indian people.

"I sincerely hope that the traditional friendship between the Chinese and Indian peoples will continue to grow stronger and develop. I wish well-being to the Indian people and prosperity to their country."

Mr. Chou En-lai's message, dated January 23, to Mr. Nehru read:

"On the occasion of the tenth anniversary of the National Day of the Republic of India, I would like, on behalf of the Government of the People's Republic of China, and in my own name, to extend warm congratulations to Your Excellency and the Government of your country.

"Sino-Indian friendship is in the interests of the peoples of our two countries as well as in the interests of Asian and world peace.

"We are deeply convinced that, through the joint efforts of our two sides, our friendly relations will be further consolidated and continue to develop on the basis of the principles of peaceful co-existence and the Bandung spirit."

At the Indian Embassy reception in Peking, the Chinese Premier, Mr. Chou En-lai, clinked glasses and posed smilingly for photographs with the sari-clad wives of Indian Embassy officials.

A few minutes earlier, raising a glass of fruit juice, he proposed a toast to "greater development of friendship between the great Chinese and Indian peoples on the basis of the Five Principles of peaceful co-existence."

Mr. Chou En-lai also proposed a toast to the health of Mr. Nehru.

With the Foreign Minister, Mr. Chen Yi, Mr. Chou En-lai walked among 500 guests in the big banquet hall of a Peking hotel where the reception was held.

Then Mr. Chen Yi led the way to a corner of the hall where he and Mr. Chou En-lai joined a group of Indian women. Mr. Chou En-lai laughed as Mr. Chen Yi called his wife to join them.

Earlier, Mr. Chen Yi said in a speech that there was close friendship between the Chinese and Indian peoples.

In what observers interpreted as a reference to the border dispute, he added: "It is true there are some issues between our two countries inherited from history.

"However, provided that the Five Principles (of peaceful co-existence) are adhered to reasonably, a solution can be achieved on any issue between the two countries through peaceful and friendly negotiations.

"At the moment, when imperialists and reactionaries are resorting to all methods to sabotage and sow discord in relations between China and India, we should all the more attach importance to Sino-Indian friendship and continue to safeguard the friendship of the two peoples.

"This is not only in the interests of our two peoples but also in the interests of all in Asia and world peace."

Mr. N. Khruschev sent a message to Mr. Nehru stressing the "unbreakable friendship and close co-operation" between the two countries.

During the past decade, he said, India had made substantial progress in the political, economic and cultural spheres and had shown what could be done by a nation that had rid itself of "colonialist fetters." The Soviet people, who deeply respected and liked the Indian people, rejoiced at these successes. The Soviet people valued India's contribution to the struggle for the triumph of the principles of co-existence and for the development of international co-operation. "We are glad to note that the past 10 years were a period of the consolidation and development of So-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

viet-Indian friendship, which is an important factor in the improvement of the international climate and the ending of the 'cold war'."

He expressed his firm conviction that "close and unbreakable" co-operation between India and the Soviet Union "will continue to develop for the good and happiness of the people in the two countries."

The following were some of the messages:

President Tito: "Most cordial congratulations and best wishes for India's happiness and prosperity on its 10th Republic Day anniversary, I wish ever greater success in India's development and for the growth of prosperity to mark the brilliant future of India, which, like Yugoslavia, pursues a consistent policy of peace and co-existence."

Field-Marshal Ayub Khan: "The Government and people of Pakistan join me in offering to the Government and people of India our warm felicitation and sincere best wishes on the occasion of the National Day of India. We wish the people of India continued peace and prosperity."

King Mahendra: "I am confident that the ties of friendship and co-operation so happily existing between our two countries will be further strengthened to our mutual benefit with the passage of time."

Decorations:

On the occasion of the Republic Day, the President of India announced 31 awards to persons who had excelled themselves in the fields of education, science, music, sport, social service, art and literature. They were one *Padma Vibhushan*, 10 *Padma Bhushan* and 20 *Padma Shri*.

The only award of *Padma Vibhushan*, which is given for exceptional and distinguished service in any field, including service rendered by Government servants, was made to Mr. N. R. Pillai, Secretary-General, Ministry of External Affairs.

Two poets, two Speakers of State Legislative Assemblies, two Sanskrit scholars and two doctors were among those getting the *Padma Bhushan* given for distinguished service of a high order in any field, including service rendered by Government servants.

Mr. Vijay Hazare and Mr. Jasu Patel, both cricketers, and Miss Arati Saha, the first Indian and Asian woman to swim the English Channel were among those awarded *Padma Shri*.

The names of the recipients were published in the *Gazette of India* Extraordinary of January 26, 1960.

The following were the awards:

Padma Vibhushan: Mr. Narayana Raghavan Pillai, Secretary-General, Ministry of External Affairs.

Padma Bhushan: Mr. Ayyadevara Kaleswara Rao, Speaker, Andhra Legislative Assembly; Pandit Balkrishna Sharma (Navin), poet, New Delhi; Ustad Hafiz Ali Khan, musician, New Delhi; Mr. Haridas Siddhanta Vagish, Sanskrit scholar, Calcutta; Kazi Nazrul Islam, poet, Calcutta; Dr. Nilakantha Das, Speaker, Orissa Legislative Assembly; Dr. Rabindra Nath Chaudhuri, Director, School of Tropical Medicine, Calcutta; Panditraj Rajeshwardatt Shastri Dravid, Sanskrit scholar, Banaras; Mr. Shiv Pujan Sahai, Hindi scholar, Patna; Dr. Vithal Nagesh Shirodkar, Gynaecologist, Bombay.

Padma Shri: Dr. Adinath Lahiri, Director, Central Fuel Research Institute, Dhanbad; Mr. Anil Kumar Das, Deputy Director-General, Kodaikanal Observatory; Miss Arati Saha, Channel swimmer, Calcutta; Dr. Artaballav Mohanti, retired professor, Utkal University; Mr. Ayyagiri Sambasiva Rao, Head, Health Physics, Air Monitoring, Reactor Control and Electronics Divisions, Atomic Energy Establishment, Trombay; Mr. Bellary Shamanna Kesavan, Librarian, Calcutta; Mrs. Bina Das, social worker, Calcutta; Mr. Dahyabhai Jivanji Naik, social worker, Bombay; Mr. Harkrishan Lal Sethi, lately General Manager, Ganga Bridge Project; Capt. Harmandar Singh, Political Officer, Kameng Frontier Division, N-EFA; Mr. Jasu Patel, cricketer, Ahmedabad; Mr. Kalpathy Rama Iyer Doraiswami, Director, Premier Radiological Institute and Cancer Hospital, Mylapore, Madras; Mrs. Kulsum Sayani, social and educational worker, Bombay; Mr. Nanabhai Bhatt, educationist and social worker, Saurashtra; Mr. Nuthakki Bhanu Prasad, Head, Reactor Engineering and Reactor Operation Divisions, Atomic Energy Establishment, Trombay; Mr. Rustom Merwanji Alpaiwala, President, National Association for the Blind, Bombay; Mrs. Sofia Wadia, social worker, Bombay; Dr. Vidyanatha Subrahmanyan, Director, Central Food Technological Research Institute, Mysore; Mr. Vijay Hazare, cricketer, Baroda; Mrs. Vir Vati, sculptress, Delhi.

New Medals For Armed Forces Instituted:

The institution of six new medals and a new clasp to the existing General Service Medal for the armed forces was notified in the *Gazette of India* on January 25.

They were: Services (Sainya Seva) Medal, Overseas (Videsh Seva) Medal, Army (Sena) Medal, Navy (Nao Sena) Medal, Air Force (Vayu Sena) Medal and Distinguished Service (Vishisht Seva) Medal, while the clasp is the Naga Hills clasp to be worn with the General Service Medal (1947).

After Independence, apart from the Bharat Ratna, the Government had instituted only three series of medals (including those for gallantry), namely the Vir Chakra, Ashok Chakra and Padma series.

Many of the armed forces personnel have been in continuous service under difficult conditions in Jammu and Kashmir, the Naga Hills and N-EFA.

In order to give adequate recognition to the services rendered by the armed forces, it is stated, the Government has decided to institute these new awards.

The Services Medal will be awarded to armed forces personnel in recognition of non-operational service under conditions of hardship and vigour. This award will have effect from August 15, 1947.

The Overseas (Videsh Seva) Medal will be awarded to personnel for such service outside the territories of the Union of India as may be recognized from time to time by the Government for purposes of this award.

In respect of these two medals, a suitable clasp on which will be inscribed the name of the place where service is rendered will be given with every medal awarded to a person for the first time, a clasp only being given if the same recipient again qualifies for the same medal on subsequent occasions.

The Army, Navy and Air Force medals will be awarded to all ranks in recognition of such individual acts of exceptional devotion to duty or courage as have a special significance for the respective Services. A bar will be given to a person in lieu of every subsequent award of the medal.

The Distinguished Service (Vishisht Seva) Medal will be awarded to all ranks of the armed forces personnel in Classes I, II and III in recognition of distinguished service of "the most exceptional", "an exceptional", and "a high" order respectively. The awards of all the new six medals may also be made posthumously.

The Naga Hills clasp to the General Service Medal (1947) will be awarded for service in operations in the Naga Hills.

(*The Statesman* and *The Times of India*, New Delhi)

[Prev. ref. 2472:INI:A]

B. Sino-Indian Border Not Undelimited—Government of India's Brochure: The Government of India published a nine-page brochure on January 12 on the India-China border problem rejecting the Chinese contention that the entire Sino-Indian border was undelimited and said that it was not prepared to enter into any negotiations with China on this basis. It was, however, dated December 22, 1959.

The brochure stated that despite recent provocations, the Government of India was willing to explore the possibilities of a peaceful settlement but only on the basis of "existing borders and such minor rectifications of the frontier as may be considered necessary by agreement."

Its three other conclusions were:

(1) India's traditional frontier with China was well-known, being based on Treaty, agreement and custom. Till recently, no Chinese Government had ever challenged it.

(2) The present controversy over the frontier arose because the Chinese Government, for the first time, laid claims to extensive areas of Indian territory in Premier Chou En-lai's letter of September 8, 1959.

(3) The tension on the India-China border had increased in the last few months because Chinese forces had been pushing forward to assert their claims which resulted in clashes involving the death of many Indian personnel.

Although the brochure was compiled before the receipt of the latest Chinese Note of December 26 (delivered to the Government of India on January 2, 1960) it answered many of the points contained in it.

It also contained the following points:

"Both the Simla Convention and the map attached to it were signed by Ivan Chen, the Chinese representative. Although the Chinese Government later repudiated his signature, the objections to the Simla Convention listed in their memoranda of April 26, May 1 and June 13, 1914 and May 30, 1919 were solely in regard to the boundary between Inner Tibet and China and between Inner Tibet and Outer Tibet. China neither protested against the boundary between India and Tibet nor did she seek modification of it after the Simla Convention. It is significant too that the Chinese Government agreed in 1956-57 to consider the eastern sector of the MacMahon Line, which for about 120 miles forms the boundary between Burma and China, as the traditional boundary between the two countries.

"The boundary between Ladakh and Tibet, long sanctified by custom, was re-affirmed by the Treaty of 1842 signed by the representatives of Kashmir on the one hand and the Dalai Lama and the Emperor of China on the other. The Tibetan text of the Treaty confirms that China was a party to it. It is true that the Treaty did not define the boundary but referred merely to the 'old established frontiers.' This was because these frontiers were well known and did not require any formal delimitation. In 1847, the Chinese Government informed the British Government that as the boundary was sufficiently and distinctly fixed, there was no need for additional measures for fixing them. The area was surveyed by Indian officials and, once a detailed first-hand knowledge was obtained of the region, official Indian maps began to show the boundary with precision. Even an official Chinese map of 1893 showed the boundary in this area as depicted in official Indian maps today.

"For many years after 1949, when the People's Republic was established, there was no reason to believe that the Chinese authorities were either unaware of the traditional boundary or disputed its alignment. In 1950, the Chinese Government expressed its gratification over the desire of the Government of India 'to stabilize the Chinese-Indian border' and the Government of India replied that 'the recognized boundary between India and Tibet should remain inviolate'. The Chinese Government questioned neither the location nor the recognition of this boundary, and the Government of India saw no reason to assume that there was any doubt regarding the border. On various occasions in 1951 and 1952 Indian interests in Tibet were discussed, but

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the Chinese Government never suggested that there was any frontier issue to be negotiated."

Mr. N. Khruschev On Dispute:

The Soviet Prime Minister, Mr. N. Khruschev, told an Indian journalist, Mr. K. A. Abbas (a report of which appeared in the Indian Communist Party organ *New Age*), that the Sino-Indian border dispute was "due to some misunderstanding" and added: "It is necessary to continue the efforts to remove whatever misunderstanding may have arisen and restore good friendly relations between the two countries."

Mr. Khruschev said he was sure that "neither India nor China pursued aggressive aims or meant to grab some territory."

The Soviet people, he said, would welcome a settlement between India and China, "for we have unbreakable bonds of brotherhood linking us with China and our friendly relations with India continue to develop."

Anti-Indian "Letter" From Hong Kong:

A 3½-page cyclostyled "letter" under the name of "the Anti-Expansionist Association of the People's Republic of China" was received in the office of *The Statesman* in New Delhi on January 25. It was air-mailed from Kowloon, Hong Kong, on January 22.

While broadly following the line of two such pro-Chinese propaganda sheets received by the same newspaper in 1959—one of them was air-mailed from Colombo—the latest "letter" attacked Mr. Nehru and his China policy.

Addressed to "Indian friends", the "letter" accused Mr. Nehru of "cherishing an expansionist ambition" and "practically instigating the revolt of the Tibetan rebels."

References were made in it to the October 24, 1959 incident (Chang Chenmo incident) which was described as having taken place "this year"—indicating that the "letter" was probably cyclostyled some time ago.

The incident was referred to as "apparently a military challenge contrived by the Indian expansionists." "As a punishment to the aggressors, the Chinese Liberation Army had mercilessly smashed the invading Indian troops within several hours."

The statements made by Mr. Nehru at his news conferences and in Parliament following the October 24, 1959 incident were alleged to have "more than once revealed that his anti-Chinese adventurous undertakings have the support of the American imperialists."

Giving the warning that this policy of Mr. Nehru might lead to a full-scale war with China, the "Indian friends" were advised to "line up with the Indian communists" to demand a change in the Government's policy.

Among the other "advices" given to "Indian friends" were that the "Chinese people" would "never recognize" the MacMahon Line and would not give up "one inch of territory which belongs to China", that the presence of Tibetan refugees in India "constitutes the basic cause of Sino-Indian conflicts" and Indian Government leaders and officials should not feel "elated" by President Eisenhower's visit to India.

Road Construction In Ladakh Area:

It was stated in Srinagar on January 24 that a 500-mile strategic road construction programme would be launched soon by the Jammu and Kashmir State Government to link important regions in Ladakh.

The programme was being stepped up in view of developments on the Himalayan frontier.

The work would start early in Summer (1960) on the strategic Leh-Chusul road and its feeders connecting Leh, chief Ladakhi town, with Chusul airfield village (14,000 ft.) and other border regions. The main Leh-Chusul road would be about 125 miles long.

The Government of India was also considering linking the Kulu Valley in Himachal Pradesh with Ladakh *via* the Zanaskar division of Ladakh. If taken in hand, this road would pass through Baralacha Pass (21,000 ft.). The survey of this road was completed in 1956, but ever since then nothing was done.

Utmost importance was being given in the execution of this programme to the completion of Kargil-Leh road linking Srinagar with Leh. Work on the road, which would be over 150 miles, was started in 1954, two years before the Chinese embarked on the construction of their Sinkiang-Tibet highway which cuts across India's Aksaichin plateau in north-east Ladakh, now under Chinese occupation.

The Chinese completed their highway in 1957 and had ever since added scores of important feeder roads to it both in Tibet and in occupied portions of north-east Ladakh.

The Kargil-Leh road would be open for jeep traffic in July, 1960, five months ahead of the target date.

Construction work on this road was suspended for nearly two years until October, 1959. The slow pace of construction progress was also attributed to scarcity of labour. The total population of Ladakh is hardly 40,000 and its intense cold compels suspension of work for nearly six months in a year.

Despite these difficulties, the Kargil-Leh road was said to be nearly ready. The 69-mile-long Khalsi-Leh section of the road was said to be already jeepable. Some patches totalling about 30 miles in Lamayuru area were yet to be completed.

Following Chinese incursions in north-east Ladakh last Autumn, work on the Lamayuru section was resumed after two years of inactivity and work continued until the end of November, 1959 despite sub-zero temperatures.

Besides the construction of these patches in Lamayuru area, a giant bridge over the river Indus at Khalsi would also be constructed.

[Prev. ref. 3116:INI:A]

C. **Mr. Nehru And F-M Ayub Khan On Kashmir Issue and Chinese Threat:** In a filmed television interview in London on January 27, Mr. Nehru said that there were no signs of a settlement of the Kashmir dispute between India and Pakistan but added that India would on no account resort to military measures with Pakistan.

Both Mr. Nehru and the Pakistan President, Field-Marshal Mohammed Ayub Khan, appeared in the TV interview and were questioned about the chances of agreement between India and Pakistan over their differences on Kashmir.

Asked if there were signs of some sort of a settlement, Mr. Nehru said: 'No. Each party feels strongly that it is in the right.'

He said: "I do not know" when asked whether the people of Kashmir would opt to join Pakistan if they were given the right to decide whether to join India or Pakistan.

He, however, added that on no account would India resort to military measures with Pakistan.

Answering further questions, he said: "I think there is no territorial threat from Russia. I do not think China threatens Pakistan. I cannot say what will happen in the future. My point is that it is far better to strengthen Pakistan economically than give her a few big guns."

F.-M. Ayub Khan was asked whether the chances of an agreement with India over the Kashmir dispute had improved in the light of China's threatened aggression, and he said that he did not think a defence pact was possible with India before a solution was found to the Kashmir problem.

He was then asked: "How real is the military threat to Pakistan from China?"

He replied: "If you ask that on account of China's activity in Tibet, I say there is no great danger immediately."

Asked which country should make the major concession in settling the Kashmir question, he said: "I think India. We have got to be realistic. At present, Mr. Nehru is not being realistic and is not listening to his military advisers."

He added that India needed Pakistan and Pakistan needed India, but under 'no circumstances' would Pakistan accept the cease-fire line as the dividing line in solving their differences.

(*The Hindu*, Madras)

[Prev. ref. 2149:PAK:A, 3031:INI:A]

D. **Supreme Court And Election Commission Jurisdiction Extended To Jammu And Kashmir State:** Further formal integration of the State of Jammu and Kashmir with the rest of India was brought about by an Order promulgated by the President of India to come into force from Republic Day, January 26.

The Order issued under Article 370 of the Constitution, which embodied special provisions in regard to the State of Jammu and Kashmir, was made with the concurrence of the Government of the State and extended the provisions of the Constitution in respect of the Supreme Court and the Election Commission to the State.

Hitherto, Article 136 of the Constitution was not applicable to the State of Jammu and Kashmir. It has now been made applicable so that the Supreme Court will have jurisdiction to grant special leave to appeal against any judgment, decree, sentence or order passed by any court including the High Court of Jammu and Kashmir.

The appointment of judges of the High Court in the State will be made by the President as in the case of other high courts in India and their conditions of office will be identical with those of the High Court judges in other States. The transfer of the judges of the High Court of Jammu and Kashmir will be made after consultation with the Sadr-i-Riyasat.

The superintendence, direction and control of elections in the State has been vested in the Election Commission as is the case with the rest of India and the provisions of the Indian Constitution relating to elections have been made applicable to the State.

India, and Mr. James Keen, Resident Representative of the UN Technical Assistance Board, and Dr. Vittorino Veronese on behalf of UNESCO.

Under this Agreement, India would receive assistance from the Special Fund, channelled through UNESCO, to the tune of over $2.62 million and India would raise the rupee equivalent of over $5 million.

These are the first projects to be implemented with special assistance since the Fund was created by the UN General Assembly in 1958.

Under the Agreement, UNESCO would provide three experts for the Durgapur project over a period of three years, four two-year fellowships and equipment worth more than $400,000. Its total commitment in this connexion would be to the tune of $691,000.

For the Bhopal and Bangalore organizations, UNESCO would provide two experts, one for three years at Bangalore and the other for two years at Bhopal, three two-year fellowships and five two-year fellowships for Bangalore and Bhopal respectively.

In addition, the Bhopal establishment would receive equipment worth $1.46 million and the Bangalore factory $295,000, the overall commitment being a little over $1.92 million.

F. **Austrian Credit Offer:** The Austrian Finance Minister, Dr. R. Kamitz, told newsmen in New Delhi on January 20 that his Government's offer of $20 million (Rs. 9.5 crores) credit to India for next year was only the first instalment of a programme which they hoped could be continued on a long-term basis.

Depending on how the proferred aid arrangements worked out, he said, his Government would be ready to make similar sums available to India every year over the next four or five years, or even longer.

He also announced that Austrian experts were working out a scheme of Austrian participation in the expansion programme of the Rourkela Steel Plant. This would include steel-making and some other processes. The cost was likely to be somewhere between $20 million and $30 million.

Part of the credit needed for this scheme might be included in the initial offer of $20 million, but as the Rourkela expansion would be spread over a number of years, the bulk of the loan would be available for other projects as well.

As a result of the discussions he had with Ministers and economic officials in New Delhi, Dr. Kamitz said, the Austrian Government would re-examine the original proposal for the first instalment of $20 million in order to accommodate India's desire for long-term loans on low uniform interest rate.

This sum would be provided by a group of Austrian banks on the guarantee of the Austrian Government. As proposed, this would include loans of varying terms and interest rates ranging between 2½ per cent and six per cent. The re-examination would aim at maximizing the long-term loans with a re-payment period of ten years or more, and arriving at a consolidated low interest rate. Re-payment would be in convertible currency.

It was obvious that in order to enable India to take advantage of this offer, efforts would have to be made to expand the trade between the two countries on a more or less balanced basis. This was important because apart from long-term loans, there would be some proportion of short-term loans as well as some cash sales.

Austria's principal needs by way of imports from India were tea, pig iron and coir; in turn, she was in a position to help with equipment and technical know-how for the manufacture of steel (Rourkela), tractors, ball-bearings and fertilizers. Last year (1959), the trade between the two countries, including imports and exports, was of the order of $8 million.

Asked about the prospects of equity capital from Austria participating with Indian entrepreneurs, he said that India provided a good field and his Government would encourage Austrian investors to come to India.

A great deal, however, depended upon the conditions for such participation, particularly the proportion in which foreign equity could participate in combined ventures. At present, in some cases, the Government of India insisted on a majority share for the home investor and in others for the foreign capitalist. This position should be more clearly defined.

In answer to a question, he said, his Government would be prepared to consider an investment guarantee scheme should this be considered necessary or advisable.

G. **IAC Agreement For Fokker Friendship Aircraft:** The Indian Airlines Corporation signed an Agreement with the Royal Netherlands Aircraft Factories, Fokker, in New Delhi on January 29 for the purchase of five *Fokker Friendship* aircraft.

The Agreement was signed by Air Vice-Marshal P. C. Lal on behalf of IAC and by Mr. F. J. L. Diepen on behalf of the manufacturers.

The delivery of the aircraft would be made early in 1961 and IAC would put them into service mainly on its eastern India routes.

The foreign exchange requirement for the purchase of the aircraft would be met by an increased export of manganese-ore and other goods from India to Holland.

Capable of carrying 40 passengers, the Fokker is powered by two Rolls-Royce Dart turbo-prop engines and cruises at a speed of 275 miles per hour at a height of 20,000 ft.

[Prev. ref. 2888:INI:D]

H. **Trade, Payments And Credit Agreements With Yugoslavia:** India and Yugoslavia signed in New Delhi on January 21 a three-year Trade and Payments Agreement as well as a Credit Agreement.

The Trade Agreement seeks to regulate the trade between the two countries and provides for payment of all commercial and non-commercial transactions in non-convertible Indian rupees. It ensures balanced trade on a higher level.

The Credit Agreement provides for a credit line by Yugoslavia to India of $40 (US) million for purchases of capital goods, heavy electrical and other equipments and ships for projects to be included in the Third Five-Year Plan.

The Trade Agreement took effect from January 1, 1960, the last Agreement of 1956 having expired on December 31, 1959.

Besides traditional goods, India will export to Yugoslavia items like textiles, woollen fabrics, leather manufactures, plastic goods, sports goods, linoleum, textile machinery and accessories, spectacle frames, fountain-pens and light engineering goods, including sewing machines.

Imports from Yugoslavia to India will mainly consist of essential machinery items like textile machines and automatic looms, complete installations and plant, heavy chemicals, electric instruments, transformers and meters, cine-projectors, underground power and telephone cables.

The Credit Agreement provides that the re-payment of this credit will be effected through exports of Indian commodities.

I. **US Export-Import Bank's Loan To Joint Indo-American Venture:** It was announced in New Delhi on January 27 that the US Export-Import Bank had approved its first loan to-date to a joint Indo-American venture.

The loan amounting to $13.6 million is for the Hindustan Aluminium Corporation, Limited, of India—a joint venture of the G. D. Birla Associates and the Kaiser Aluminium and Chemical Corporation of USA.

This is the first Export-Import Bank loan made in India since the $150 million Export-Import Bank credit of 1958 to the Government of India in 1959.

[Prev. ref. 2254:AOA:A]

J. **Bhilai Steel Plant Expansion:** Speaking at a function in honour of Mr. F. R. Kozlov's visit to Bhilai on January 23, the Central Minister for Steel, Mines and Fuel, Sardar Swaran Singh, announced that India and the Soviet Union had agreed in principle that the capacity of the Bhilai Steel Plant be expanded to 2,500,000 tons a year and that detailed planning had been taken in hand for the purpose.

The Soviet Union, he added, had extended a line of credit to India following his visit to Moscow last Summer (1959) as the first gesture of co-operation to assist India in her Third Five-Year Plan.

He said that the Third Plan would be of even greater significance than the previous Plans as steel would continue to be a major sector of development. "We propose to expand the three plants in the public sector to their maximum capacity."

He described the Bhilai plant as a symbol of Indo-Soviet friendship and co-operation and paid tributes to the excellent work done by all concerned, both in the Soviet Union and by Soviet experts and technicians working in India.

The happy co-operation between Indian and Soviet technicians and workers had been a bright feature of the construction of the Bhilai steel plant.

K. **Steel Plant In South India—Technical Committee Appointed:** The Central Minister for Steel, Sardar Swaran Singh, said in Madras on January 19 that the Government of India had constituted a Technical Committee, consisting of representatives of the concerned Central Ministries and Madras State to go into the technical aspects of the feasibility of establishing a steel plant in South India.

He added that if a suitable and effective method of smelting iron-ore with the aid of lignite could be economically developed, the possibility of establishing a steel plant in South India could be said to be reasonably bright. The iron-ore in Salem was no doubt rich, but the main difficulty appeared to be non-availability of coking coal. A great deal would depend on the outcome of the experiments now being conducted at the Fuel Research Institute at Dhanbad and the Low Shaft Furnace in Jamshedpur on the suitability of lignite briquettes for smelting purposes.

The Technical Committee would consider all these matters and advise the Government

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

L. Petroleum Advisory Committee Set Up: It was announced on January 23 that a 15-man Committee had been constituted by the Government of India to advise on problems of common interest concerning petroleum products and, in particular, patterns of demand, supply, distribution and consumption of oil.

The Minister for Mines and Oil, Mr. K. D. Malaviya, is the Chairman of the Committee. Its other members are: Mr. Feroze Gandhi MP, Mr. S. Nijalingappa, Mr. A. K. Roy, Mr. O. Pulla Reddi, Mr. S. Ranganathan, Mr. Kirpal Singh, Mr. Tarlok Singh, Dr. Nagendra Singh, Mr. K. K. Sahni, Mr. L. D. Mudie, Mr. J. W. Sinclair, Mr. J. R. Price, Mr. W. P. G. Maclachlan and Mr. S. R. Kothavala.

The terms of reference of the Committee include the following:

"Preparation of forward estimates product-wise and then area-wise, of consumption of various petroleum products with periodical revision; at least once a year if not once in six months, of such forward estimates; determination from time to time of the extent of likely deficit regarding particular products for the country as a whole, and, in particular, areas, after taking into account the likely effect of plans in other spheres of the economy and the effectiveness of measures to curb or discourage consumption of such deficit products.

"Examination of ways and means to reduce or eliminate surplus in any particular product through increase in their consumption or exports or development of potential new uses for such products (or the distillate concerned); preparation of product-wise forward estimates of refinery production and periodical review and assessment of actual production so as to suggest ways and means of reaching the realizable product pattern best suited to the consumption pattern in the country, including modifications in existing specifications with due regard to quality control and safety.

"Determination, first on freight basis, of the area of economic supply for each refinery (existing and future) and after assessing the relative deficits and surpluses of each product in the area which could be linked to the refinery concerned, examination of further adjustments in actual supply areas to reduce such deficits or surpluses while avoiding cross haulage; assessment of the changing pattern of imports to meet such overall deficits and yet to minimize the actual out-go of foreign exchange and of improvements that may be needed in the existing port facilities for the handling of petroleum products.

"Ways and means to ensure the fullest utilization of ocean-going and coastal tankers flying the Indian flag to reduce out-go of foreign exchange on freight.

"Assessment of the needs of tanks, wagons and other railway facilities to meet, in time, the movement requirements for petroleum products and, also, the possibility of having product pipe-lines to relieve the Railways."

(*The Statesman*, New Delhi)

[Prev. ref. 3004 (corrected):INI:Q]

M. All India Businessmen's Convention: A two-day Convention of All-India Businessmen, sponsored by the Federation of Indian Chambers of Commerce and Industry, was held in New Delhi on January 24 and 25.

It was intended to enable businessmen connected with all branches of trade, industry and banking to consider problems of common interest. It was the first of its kind to be held in the country and was largely attended.

In his speech, the President of the Federation of Indian Chambers of Commerce and Industry, Mr. Madanmohan R. Ruia, said that in spite of the shortage of raw materials and foreign exchange and difficulties in transport, there had been a continuous rise in production.

Businessmen, he pointed out, did not want scarcity conditions. "We say: avoidable and unnecessary regulations stand in the way of improving business conditions so vital for the welfare of the people as a whole. Let the administrative machinery of the Government be more responsible to the public. May a climate be created in the country which helps the growth of business—big and small—and provide the necessary encouragement to young people to enter business."

The business community, he added, was "greatly handicapped in contributing its best to the nation's economic growth by some of the policies adopted by the Central and State Governments in the fields of taxation, industrial policy, labour legislation."

Mr. G. D. Birla, in his speech, criticized the Government's industrial and taxation policies and said that the entire business community was "highly discontented" by the bureaucratic control exercised over every aspect of business and industry and over increasing taxation.

He added: "It may be right or wrong, but the fact is that it (the community) is discontented. The discontentment may be exaggerated. A pin-prick is more painful than shooting.

"Despite all these difficulties, the private sector was progressing. The Government machinery is said to be cracking. Some of my friends may take objection to it, but I find that responsible Ministers feel this way. Even the Prime Minister thinks that something is wrong with the Administration."

The first thing necessary "to heal the crack" was for the Government to realize that it was essential to simplify the existing legislation and, at the same time, stop making new laws for the present. If this was not done, the public sector would suffer more than the private sector. "If you make more laws, chaos is inevitable. The whole structure of administration will be ruined and progress will stop."

He said that France, Argentina and Turkey had suffered because of highly regimented administrations. But those countries were now making progress by "breaking the chains of regimentation." It was significant that even the Soviet Union was gradually relaxing administrative control on trade and was giving it a greater measure of freedom.

Not only this, the Government had become unpopular because of "regimentation and high taxation." Even good legislation, if administered badly, would bring unpopularity to Government.

He, however, appealed to businessmen not to weaken the Government. The present leadership was the best.

Dr. A. Ramaswamy Mudaliar, in his speech, urged Government to consult Chambers of Commerce as far as possible in matters affecting the business community.

He said that he was not one of those who believed that the public sector and the private sector could not co-exist. But, both sectors should get the same conditions and same treatment from the Government. There were many inconveniences to both sectors and unless they were removed neither sector would thrive as it ought to.

He also called for "less haste and more precision" in legislation.

He said that laws were now being codified "with such furious rapidity" that there was no time to properly consider either the drafting or their application in respect of existing laws. Even the courts were "completely confused by this plethora of laws with which they try to adjust as far as possible."

He said: "I do not want the lobbies that exist in the Congress and Senate in USA to be repeated in this country. But it must be the legitimate duty of a Member of Parliament to study and educate himself about the provisions of a technical Bill which only those engaged in the particular trade or industry can know about."

He said that Members of Parliament were "afraid" of having consultations with leaders of industry and trade because there was an attempt at suggesting that such discussions were "improper activities." The misconception that the business community was an "unnecessary middle-man" should be removed.

Mr. Nehru's Address:

Next day (January 25), Mr. Nehru exhorted the industrialists and traders attending the Convention to help the country develop a self-generating economy.

The last 12 years of progress, he said, had brought the country to the door-step of such a phase. It could be accomplished only when science and technology struck firm roots in the life of the people, especially among the stewards of industry. In concrete terms, it meant the establishment of heavy plans for machine-making and other basic industries.

He took note of the difficulties created by controls, high taxes, foreign exchange shortage and administrative checks and delays, but asked the industrialists and traders to judge them in the larger setting of India's developing economy and the needs of the community.

He put down shortages as the basic factor which compelled the Government to adopt certain restrictive measures. They were not pleasant, but they were unavoidable. He conceded, however, that these should be the minimum, just enough to meet the compulsions of a given situation.

While not committing himself either way about the concrete grievances raised at the Convention, he explained that controls should not be equated with a bias for the socialist ideology. An American economist had told him a few days ago that there were more controls in USA than in India. Control on food could be found in other capitalist countries also. Certain features of socialist thought had entered the general social fabric even of USA.

Turning to the Indian scene, he asked the industrialists to grasp the inner compulsions of the present transitional phase of the Indian economy and said that India could not lay the foundations of a self-generating economy as leisurely as Britain and other European nations did some 150 years ago. The political rights in those days were limited to a handful who decided the fate of the vast multitude; so, by the time people achieved their political rights—and that would not go further back than three decades ago—the industries were able to produce enough to meet the growing demands of society.

The conditions in India today presented a contrasting picture. India achieved political freedom, along with full political rights for every adult, at a stage when it was economically backward. There was a cry for more benefits from all sections of the society.

The task in India was two-fold: of quick production and equitable distribution. These two needs often pulled in opposite directions. There could be no development unless one saved a part of the produce and ploughed it back for further production, and yet the demands for distribution were so pressing that one could save only at the cost of growing discontentment.

Conclusions:

The Convention ended on January 25.

Among the conclusions it arrived at were that the difficulties of businessmen engaged in trade and small-scale industries were particularly great because they had no resources either to understand the implications of the intricate and complex laws nor the capacity to comply with them. The problems emanating from Sales-tax Acts, Industrial Disputes Act, Shops and Establishments Act, Company Law, Income-tax Act and the like added to the hardships faced by the business community.

Besides, the incursions by the State in trading activities either in the form of the State Trading Corporation or through co-operative agencies or the so-called fair-price shops had distorted the normal trade channels and displaced persons engaged in trade without serving the consumers.

It gave particular thought to commodity controls, such as those on sugar and iron and steel, which were un-called-for in the present context. For instance, the control on sugar militated against increased production and resulted in loss of national wealth. As far as the trading establishments were concerned, they were also not in a position to deliver the goods to the consumer.

It recorded its strong opposition to the present sales-tax policies pursued by different States which resulted in the levy of tax on the same product more than once and suggested the merger of sales-tax with excise, as is now done in the case of cloth, sugar and tobacco.

The Convention was convinced that it was on account of the different regulations that there was no accord between the business community and the authorities at different levels, and they resulted in conditions conducive to malpractices, harassment and corruption. Even with a view to improving the normal tone of society, it was imperative that these regulatory measures were removed as early as possible and, in any case, reduced to the minimum forthwith.

Generally speaking, the need to reduce red tape to the minimum and maximize direct contacts between the different governmental agencies and potential entrants in the industrial field could not be over-emphasized. Unless procedural delays were reduced, even developmental assistance would prove to be ineffective and only induced greater discontent.

(*The Statesman* and *The Times of India*, New Delhi)

N. **Jurists' Inquiry Committee's Report On Kerala:** A three-man Committee of Inquiry on Kerala, appointed by the Indian Commission of Jurists in September, 1959, in its report published on January 23, recommended that there should be a provision in the Constitution for the impeachment of Ministers and civil servants as in UK and USA.

The Committee, headed by Mr. N. H. Bhagwati, a former judge of the Supreme Court, had as members Mr. M. P. Amin, a former Advocate-General of Bombay, and Mr. M. K. Nambiar, a senior advocate of the Supreme Court.

It also recommended the appointment of a Director of Public Prosecution of the status of a High Court judge, with powers of supervision over all criminal investigations and prosecution, to ensure the administration of impartial criminal justice.

These two recommendations of the Committee followed from its findings, after a detailed inquiry, that during the communist regime in Kerala (terminated by President's proclamation on July 31, 1959) there was "a gross and systematic violation of the rule of law."

The communist rule, it said, was primarily for the benefit of the Party members with the main objective of "securing communist hegemony over the whole of Kerala."

The non-communist citizens, it added, were denied fundamental rights to form associations or unions, to hold property and to carry on trade or business.

Moreover, the communist 'cell courts' subjected the citizens to the jurisdiction of extra-judicial courts which did not have the sanction of any law in force. These 'cell courts' enforced their decisions by illegal methods.

Similarly, the police policy, as enunciated by the communist Chief Minister, Mr. E. M. S. Namboodiripad, in July, 1957, laid down a code of conduct in violation of the provisions of the relevant legislative enactments in force. It amounted to the abrogation of the relevant provisions in conflict with or in dispensation of such laws, which the communist Government had no legal authority or jurisdiction to ordain.

It further stated that neither the police nor the Ministers were above the law; and Ministers who promulgated orders in contravention of the law or instigated acts or omissions by the police or the statutory authorities contrary to law were themselves privy to a breach of the law and were liable to be proceeded against.

In view of these findings, the Committee suggested to Parliament to consider whether the administration of justice, of public order and enforcement of criminal law should not be transferred to the Concurrent List.

The Committee was also of the view that if, at the end of the term of the Presidential rule, no Ministry could be found to form a stable Government for any reason whatever, or, the Ministry so formed should pursue policies in violation of law, the Presidential rule should again be imposed and continued for the full term of five years after making the necessary constitutional amendments.

The Indian Commission of Jurists is a non-political organization of leading lawyers "whose main concern is the upholding and strengthening of the rule of law."

(*The Statesman*, New Delhi)

O. **Mr. C. Rajagopalachari On Unsuitability Of Socialism For India:** Mr. C. Rajagopalachari said at Kancheepuram, near Madras, on January 23 that it had become his duty to point out even at the risk of his good name and friendship with the Congress leaders that socialism would not suit India.

He added that if the Congress would give up socialism, he would have no quarrel with it. But socialism was the basis of the Five-Year Plans. No Plan could succeed without *dharma* and God. And the Swatantra Party came into existence to remind the Congress of *dharma*. "The Congress oven is smoking and the Swatantra Party seeks to light it again by blowing into it just now. If, however, the oven goes out completely we have to take it up later."

He referred to the nationalization of insurance, bus services and railways and said that without the competition and profit motive in such undertakings the public stood to lose and suffer. Slowly, the Government was trying to take over more, one after another. The State was trying to take over agriculture, which was far worse than taking over the other trades.

He said that the resolutions of the Bangalore session of the Congress were "toned down" and the voices of speakers were in a lower pitch than before—all due to the Swatantra Party. "We say that the individual needs freedom and happiness because he has a soul. The Government should be there only to protect the people."

P. **Mr. D. Sarmah Resigns From Assam Ministry:** Assam's Minister without Portfolio, Mr. Debeswar Sarmah, resigned from the Cabinet and the Governor accepted his resignation on January 23.

Mr. Sarmah told newsmen later: "The responsibility for my resignation is not mine; it is the Chief Minister's. I hope to be able to take the public into confidence before long."

Asked about his future programme, he said: "I have been in the Congress since 1920 when I came out of the Law College and placed my services at the disposal of the people and the country. I propose to continue to do the same."

(*The Hindusthan Standard*, Calcutta)

[Prev. ref. 1824:INI:E, 3098:INI:N]

Q. **Dr. C. V. Raman On "Perception Of Light And Colour":** Dr. C. V. Raman, Nobel Prize winner in Physics, delivered a lecture in Bangalore on January 21 on "The perception of light and colour" in which he reported "further noteworthy advances in our understanding of the problems of human vision."

He said that a remarkable fact about the human vision was that the sensitivity of the eye to light was great in a particular part of the spectrum located at 5,560 angstroms in the greenish-yellow region and falls off rapidly on either side of it. The maximum of visual intensity was "so very pronounced" that large changes in the nature of the emission from the source of light do not produce any observable displacement of the position of the maximum of visual intensity in the spectrum.

"It is the same case in the spectrum of a tungsten filament lamp and in that of sunlight. The existence of such a pronounced maximum and its position are both explicable on the new theory. The wavelength of greatest luminosity is identical with the wavelength at which the absorption of light by haemoglobin is a maximum. Haemoglobin is an extremely strong absorber of light in the greenish-yellow region, and the great importance of the role which it plays in vision is thus readily understood".

The theory now put forward also accounted in a very natural way for the existence of anomalies in colour vision which were noticeable in a fair proportion of individuals when their vision was examined in detail.

Such anomalies had their origin in the fact that the ferrous and ferric forms of the blood pigment were both necessary for normal colour vision. A total absence of the ferric form would lead to the type of anomaly known as colour blindness in which the observer was unable to perceive the red end of the spectrum. On the other hand, a sight excess of the ferric pigment above the normal or a slight deficit would lead to less serious disturbances of the normal colour vision. The consequences of such excess or deficit as indicated by the theory were fully in agreement with the results of the numerous studies which had been made in the past regarding such anomalies in colour vision.

R. **Ashoka Chakra Awards:** It was announced in New Delhi on January 13 that the President of India had approved the award of five new *Ashoka Chakra* decorations for acts of gallantry.

The recipients were: Captain Sampuran Singh Grewal of the Indian Airlines Corporation, Lt-Col. Jamshed Burjorji Dorabji, Havildar Uzir Singh Gurung and Jamadar Dhan Bahadur Gurung of the Assam Rifles, and Mr. Mehtab Singh, Staff car driver of the Directorate of Postal Services, New Delhi.

Captain Sampuran Singh Grewal, Lt-Col.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

J. B. Dorabji and Havildar Uzir Singh Gurung were awarded *Ashoka Chakra* (Class II) for outstanding skill in flying, initiative, extreme tact and exemplary courage in securing a peaceful surrender of weapons from about 1,000 Tibetan refugees who crossed into India in April, 1959.

Jamadar Dhan Bahadur Gurung was awarded *Ashoka Chakra* (Class III) for his tact in persuading 5,000 Tibetan refugees to surrender their arms after they had crossed the border post at Topgey-Chuna in the Kameng frontier division in Upper Assam.

Mr. Mehtab Singh, a civilian driver of the office of the Director of Postal Services, showed rare presence of mind and exemplary courage while chasing a bandit in Delhi, who, escaping with a large sum of public money, shot at him a number of times. The driver was awarded *Ashoka Chakra* (Class III) for devotion to duty.

INDONESIA

A. **Dr. A. Sukarno Takes Over As War Administrator:** The President, Dr. A. Sukarno, took over as the Highest War Administrator of the Indonesian Army on January 22.

In a decree announcing this step, Dr. Sukarno also abolished the Office of Central War Administrators which consisted of the Chiefs of Staff of the Armed Forces.

By this, the military chiefs lost their power to issue their own regulations in areas commanded by them.

Meanwhile, *Antara* quoted the newspaper *Berita Indonesia* on January 21 as saying that the Government would not allow newspapers and news agencies to publish or dispatch news inconsistent with its principles and policies.

According to the newspaper, a senior official of the Information Ministry said that any newspaper or news agency that did not follow the Government's requirements would be closed down.

Among the requirements, according to the official, one was that the newspapers and news agencies must be capitalized by Indonesian nationals. All newspapers and news agencies in Indonesia must also accept President Sukarno's "guided democracy" as the Republic's foundation.

He added that the Government would soon announce legislation to enforce these requirements for newspapers and news agencies.

[Prev. ref. 3079:IND:A]

JAPAN

A. **Participation In Aid Programmes:** Winding up a 24-hour visit to Ottawa on January 22, the Prime Minister, Mr. Nobusuke Kishi, told a news conference that USA and Canada had agreed that Japan should participate in the new Western aid programmes for under-developed countries.

He said that agreement had been reached in his talks with President Eisenhower in Washington on January 19 and the Canadian Premier, Mr. John Difenbaker in their talks earlier in the day (January 22) on the subject.

Th Canadian Finance Minister, Mr. Donald Fleming, he said, had given him a full briefing on the decisions taken at the Western economic talks held in Paris a week earlier.

[At those talks, the United States, Canada and the Western European countries had agreed to study proposals to create a super-organization to stimulate economic co-operation and develop plans to increase long-term economic assistance to under-developed areas.]

Mr. Kishi said: "As a member of the Colombo Plan, Japan is very much interested in economic co-operation for the economic development of South-East Asia. At the same time, emphasis has been placed recently on even greater assistance for the development of these countries.

"In my discussions in Washington and Ottawa, there was agreement that, in view of Japan's industrial strength and position, we should naturally participate in assistance for the development of less-developed countries and that, when agreed plans were put into operation, Japan would participate in them."

He was asked for views on China's role in the forthcoming East-West talks on disarmament in view of Peking's attitude that it would not be bound by any disarmament agreement in which it had no part, and he replied: "I think it is only natural for the Chinese communists to make such a statement and, therefore, in studying the problem of disarmament, I think we should recognize that China will be a problem."

A Soviet correspondent asked: "Does the new Japanese-United States Security Treaty leave any room for the expansion of trade between the Soviet Union and Japan?"

Mr. Kishi replied that there was no relationship between Japanese-Soviet trade and that the Soviet Union and Japan had been having negotiations to revise their Trade Agreement and said that the revision would make possible a 50 per cent increase in trade between the two countries.

NEPAL

A. **Mr. Bharat Shamsher On Chinese Incursions:** Mr. Bharat Shamsher, leader of Gorkha Parishad, Nepal's main Opposition party, warned in Khatmandu on January 17 that there had been Chinese incursions "amounting to aggression" into Nepal and urged the Prime Minister, Mr. B. P. Koirala, then on a visit to India, to initiate a move with the Indian Prime Minister, Mr. Nehru, for "joint defence talks" with South-East Asian countries.

He told a news conference that the Chinese had taken some parts of Nepalese territory. "They have entered with a survey party in Lipu area north of Tinker in Baitadi district and have also taken over an area from our territory beyond a river north of Olanchak Gola (in eastern Nepal)."

He said that Gorkha Parishad's present plan was to campaign against Chinese communist agents in Nepal and "smash their activities."

He asked the Government to activize its "intelligence against all subversive elements, especially against the swarming Tibetan refugees" and to move the army to the north near the border and alert the frontier check-posts.

Giving another instance of the incursions, he alleged that in Limi area of Jumla district in the far north in western Nepal, Chinese survey parties had come and told the people there that they would build a road linking Taklakot in Tibet with Khojarnath in Nepal. The road would take away from Nepal a considerable chunk of her territory.

In another place, he alleged that the Chinese had come to collect "personal taxes" from the Nepalese, which by custom were payable to Deva Raja of Taklakot monastery, who was in a Chinese prison. [In this area, the Nepalese used to pay revenue tax to Nepal and a personal tax to Deva Raja.]

He said that he was satisfied with the authenticity of the reports of the incursions from his own party sources and asserted that he was making his statement despite Government's various denials of such reports.

Mr. S. P. Upadhyaya's Reply:

Replying to Mr. Bharat Shamsher, the Home Minister, Mr. S. P. Upadhyaya, said in Bareilly on January 20 that Chinese troops had not come to Nepal's border nor had they crossed into Nepal at any known points.

He added: "My Prime Minister (Mr. B. P. Koirala) has got an invitation from the People's Republic of China and I hope his visit will clarify the situation. The fact is that China has not yet crossed into Nepal.

"The Nepalese Government is quite vigilant about the border. It is a good thing to be vigilant, to remain on guard and alert, but to create a scare and panic among the people is positively not desirable".

When asked about the suggestion of Mr. Bharat Shamsher that India and Nepal should initiate a move for "joint defence" arrangements among the South-East Asian countries, he said: "The Gorkha Parishad leader does not seem to be quite aware of the fact that Mr. Nehru pleads always against such defence pacts."

The leader of the Communist Party in Nepal's Parliament, Mr. Tulsilal Amatya, said in Khatmandu on January 20 that the Communist Party of Nepal was not prepared to give an inch of territory to the Chinese or others nor did he believe that the Chinese would enter or occupy any part of Nepal.

Replying to Mr. S. P. Upadhyaya on January 22, Mr. Bharat Shamsher demanded an all-party fact-finding Commission, "parliamentary or otherwise," to visit the northern border areas and find out facts about Chinese intrusions.

He added: "I am not a suckling baby to be fed on a thumb."

Recalling that a responsible Cabinet Minister (whom he did not name) had stated that there was concentration of Chinese troops along Nepal's northern borders and that the Deputy Chief Whip and the General Secretary of the ruling Nepali Congress Party had "confirmed reports of subversion at Namche Bazar and other areas," he said that the Government should appoint a fact-finding commission to

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

visit the border areas and find out "the real situation".

B. **Diplomatic Relations With Czechoslovakia:** It was announced on January 20 that the Government of the Czechoslovak Republic and the Kingdom of Nepal had decided to establish diplomatic relations on the level of ambassadors in their respective capitals.

(*Tass*)

C. **Nepal Airlines Inaugural Flight To Calcutta:** The inaugural flight of the Royal Nepal Airlines Corporation on the Khatmandu-Calcutta route *via* Biratlagar arrived in Calcutta on January 19 with 30 passengers including Mr. K. P. Upadhyaya, Speaker of the Lower House of Nepal, Mr. Damber Bahadur Singh, Chairman of the Upper House, and Mr. Y. P. Upadhyaya, Secretary of the Nepalese Ministry of Transport and Communications.

The Khatmandu-Calcutta service will operate twice weekly, on Tuesdays and Fridays.

The Khatmandu-Calcutta route is called the Everest Route as the plane flies parallel to the eastern Himalayan range.

(*The Statesman*, Calcutta)

[Prev. ref. 2963:NEP:A]

D. **East-West Road Survey By Russians:** It was stated in Khatmandu on January 5, 1960 that Russian experts had completed the preliminary survey of an east-west road which is to run through the entire length of Nepal.

According to the Russians, who have submitted their report to the Nepal Government, the road will be 750 miles if a circuitous alignment is followed to open up certain additional areas and about 519 miles if a shorter route is preferred.

The Soviet experts, who began their job about three months ago, conducted aerial and ground surveys.

The survey project was part of Russia's 30-million rouble aid programme to Nepal.

In accordance with this programme, the Soviet Union is committed to the setting up of a cigarette factory, a sugar factory, an hydro-electric installation and a hospital in Nepal.

The construction of the east-west road is not within the scope of the present Agreement. However, Russian surveyors are expected to return to Nepal next year for a more detailed undertaking.

E. **Mongolian Honour For Grand Lama Of Nepal:** It was announced in Ulan Bator on January 4, 1960 that the Buddhist Central Council of the Mongolian People's Republic had honoured the Grand Lama of Nepal, Amritananda Thera, by conferring on him "the highest dignity of Gegen."

The Grand Lama of Nepal is the Vice-President of the World Buddhist Association.

The honour was conferred on the Grand Lama as "a token of appreciation of his great work in the name of everlasting peace, happiness and friendship among all nations of the world".

PAKISTAN

SUMMARY: Second Plan Outline; Import Policy; Rehabilitation Of Refugees Completed; First Tug Built In Karachi.

A. **Outline Of Second Five-Year Plan:** The Pakistan Government announced the Outline of its Second Five-Year Plan (1960-65) on December 30, 1959 fixing the target at Rs. 19,00,00,000. This was Rs. 8,500-000,000 more than the outlay on the First Five-Year Plan.

Before its release, the Plan Outline was approved by the Pakistan National Economic Council, presided over by the President, Field-Marshal Mohammed Ayub Khan.

The Council meeting was attended by all Cabinet Ministers, the Governors of East and West Pakistan, the Chairman of the Planning Commission, Mr. G. Ahmed, and the Chairmen of the Water and Power Development authority of both the Wings of Pakistan.

Out of the total expenditure envisaged in the Outline Rs. 11,500,000-000 would be in the public sector and Rs. 7,500,000,000 in the private sector.

Development expenditure in the Second Plan was thus increased by more than 50 per cent compared with the First Plan target and 60 per cent compared with the estimated expenditure during the First Plan period.

The Second Plan would be financed to the extent of Rs. 10,000,000,000 from domestic resources and Rs. 8,000,000,000 from foreign aid, loans and investment.

Food production was proposed to be increased by 20 per cent by the end of the Plan to make the country self-sufficient. The increase in industrial production was envisaged at 50 per cent in large-scale industries and 15 per cent in small-scale industries.

Among the long-range goals, the Plan aimed at an overall increase in the national income to the extent of 28 per cent by 1965. But, after allowing for an expected increase in population of about nine per cent, the Plan would only bring about an increase in the *per capita* income of about 10 per cent.

The total proposed investment in agriculture, including irrigation and drainage was Rs. 5,530,000,000, about 30 per cent of the whole Plan. Targets for increased production included rice 22 per cent, wheat 17 per cent, maize 45 per cent, jowar and bajra 9 per cent, barley 14 per cent, gram and other pulses 11 per cent and sugarcane 35 per cent. A production target of 2,300,000 bales of cotton was set for the last year of the Plan.

The proposed investment in the public sector for water and power development during the Second Plan was Rs. 3,140,000,000.

To re-organize and expand the educational system, it made an allocation of Rs. 790,000,000 as against the First Plan estimated expenditure of Rs. 400,000,000. The number of children in primary schools was expected to be increased by 55 per cent and in secondary schools by 40 per cent.

It envisaged primary education to all children of school-going age within the next 15 years. Six new universities were also proposed to be established during the Plan period.

It recommended an additional taxation of Rs. 1,000,000,000, the emphasis being placed on indirect taxes on articles of consumption.

A hand-out giving the Plan Outline said:

"The Plan places considerable reliance on institutions of 'Basic Democracies' for bringing the masses of people into effective participation in economic and social effort. The aim of the Plan is to maintain financial stability in economy. The Plan advocates a decisive switch-over from direct controls to a policy of regulation of economy through suitable fiscal and monetary controls and greater dependence on market mechanism."

President's Broadcast:

Broadcasting from Rawalpindi on December 30, 1959, the President, Field-Marshal Ayub Khan, said that the Plan was "a challenge to all Pakistanis" because the tasks set were not easy and would call for high endeavour.

He said that Pakistan must increase its wealth by determined effort to raise the country's agricultural and industrial production. In agriculture, the primary aim was to grow enough food at home to feed the country, and industry to make substantial but selective development.

Pakistan must earn its own living in the world by exporting more of what other countries wanted to buy from Pakistan, provide work for the people, improve social services and check effectively the rapid growth of services and of population.

Pakistan should increase its foodgrains production by one-fifth or more in the next five years to achieve self-sufficiency. To this end, the Plan had recommended radical improvements and extensions in agricultural operations. Fertilizer production would be increased 12-fold in the next five years.

(*Dawn*, Karachi)

[Prev. ref. 2949:PAK:C]

B. **Import Policy For First Half Of 1960:** The Chief Controller of Imports, Mr. Ali Gauhar, announced on December 29, 1959 Pakistan's import policy for the first half of 1960.

He announced larger provision for the import of iron and steel than in the past and took off from the list of imports newsprint which Pakistan had started manufacturing.

Mr. Gauhar said that the aims of the new policy was to increase production and provide larger supplies of consumer goods. While the general level of the licensing of most items remained the same as in the last shipping period, larger provisions had been made for iron and steel, metals, tools and workshop equipment, machinery, spares, wood and timber, hardware, chemicals, dyes, raw rubber and tyres, motor vehicles and auto-spares and scientific equipment.

Licensable list for the next shipping period remained the same as that of the previous shipping period.

Out of 200 items in the list (to be published later) seven items were meant specially for East Pakistan.

The Government had also decided to place the licensing of drugs and medicines on an automatic approval system, which would virtually mean open general licence.

[Prev. ref. 2795:PAK:O]

C. **Rehabilitation And Settlement Work Of Refugees Completed:** The Minister for Rehabilitation, General Mohammed Azam Khan, announced over Radio Pakistan on December 31, 1959 that the rehabilitation and settlement work of refugees in Pakistan had been completed.

He said that what had not been achieved in the previous 12 years had been done in a short period of 12 months. "The democratic

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

institutions have now come into existence and there will be no distinction between refugees and others."

General Azam Khan warned all those who were still in unlawful possession of evacuee property to surrender it to Government.

D. **First Tug Built At Karachi Shipyard:** The first tug built at the Karachi shipyard, the *Suljug*, was launched on December 29, 1959 by Mr. Habibur Rahman, Minister of Education, Information and Broadcasting.

The 700-ton tug would be used as a salvage-*cum*-harbour tug in Chittagong Port.

Fitted with two engines of a total of 1,200 h.p. the tug has a maximum cruising speed of 11 knots.

[Prev. ref. 2950:PAK:E]

SAUDI ARABIA

A. **New Fiscal Regulations:** A large-scale financial re-organization was announced in a series of royal decrees issued on the eve of the new fiscal year which began on January 1.

The most important move was the re-adjustment of the rate of exchange of the Saudi riyal at 4.5 riyals to the US dollar and its stabilization at this rate instead of the official rate of 3.75 to the dollar.

Other regulations provided for the introduction of a new paper currency for the expansion of the functions of the Saudi Arabian Monetary Agency which became in fact if not in name, a Central Bank, and for the establishment of an official gold parity and currency backing.

The new rate of exchange of the riyal to the dollar was fixed as the basis for calculating the State revenue. This measure was the subject of a statement by the Prime Minister, Prince Emir Faisal, on January 3.

He explained that the new exchange rate was in fact the present value of the riyal in the free market and had been chosen after consultations with international financial experts who had advised that the higher value of the riyal at the present moment would have entailed the continuation of the policy of austerity in force since the middle of 1958. This was not considered justifiable in view of the improvement of the financial position of the country.

Prince Emir Faisal's statement described the stabilization programme of the previous 18 months as a complete success. It recalled that 18 months ago the backing of the currency had fallen to 14 per cent, the deficit in the general Budget was 300,000,000 riyals, and the rate of exchange in the free market had fallen to 6.7 riyals per US dollar.

It was also announced that the Saudi Arabian Monetary Agency would issue a new paper currency to replace the "pilgrim receipts" now in circulation, which will be gradually withdrawn from circulation.

The gold Saudi Guinea would cease to be legal tender. No date had been fixed for the introduction of the new paper currency. The paper riyal would be divided into 20, instead of 22 piastres, thus conforming to the decimal system. Its official gold parity would be 0.197482 grammes of the fine gold. It would have full backing in gold or transferable foreign currencies.

(*Middle East Economic Digest*, London)

[Prev. ref. 2120:SUA:A]

B. **Budget For 1959-60:** According to a Mecca Radio broadcast on January 1, 1960, King Saud had approved his country's annual Budget for the fiscal year 1959-60, including appropriations of 191,000,000 Saudi riyals (about £13,500,000) for defence and 54,000,000 riyals (about £3,800,000) for the National Guards.

The Budget amounted to a total of 1,405,000,000 riyals (about £100,000,000).

(*Mecca Radio*)

[Prev. ref. 2497:SUA:A]

SINGAPORE

A. **Dr. Toh Chin Chye On Relations With Neighbours:** Writing in the January 5 issue of the Chinese edition of *Petir*, a weekly organ of the ruling People's Action Party, the Deputy Prime Minister, Dr. Toh Chin Chye, said that Singapore must maintain friendly relations with her neighbours if she wanted to survive.

Though foreign relations, he wrote, was constitutionally in British hands, Singapore could not ignore conditions in the neighbouring countries.

He said: "Only if Singapore is standing in the midst of friendly nations can its geographical position be advantageous. If, for instance, Indonesia is antagonistic towards us, then Singapore, cramped by political and economic sanctions, will find it difficult to survive".

He added that though it was at the moment striving to build one nation out of its multi-racial populace, yet, the fact remained that the bulk of its people was Chinese. "It, therefore, behoves us to study the situation between Indonesia and China and the Sino-Indian dispute. There are also the bans on Chinese imposed by the Thai and Philippines Governments."

He pointed out that because it was predominantly Chinese, Singapore must ensure that it was not "dragged into these purely domestic disputes" in these countries.

(*The Nation*, Rangoon)

[Prev. ref. 2740:SGP:A]

TURKEY

A. **Cyprus Ministerial Conference In London:** The Cyprus Ministerial Conference opened in London on January 16.

The Conference was attended by the President-elect of Cyprus, Archbishop Makarios; the Vice-President-elect, Dr. Fadhil Kutchuk; the Greek Foreign Minister, Mr. Evangelos Averoff; and the Turkish Foreign Minister, Mr. Fatin Zorlu. The Governor of Cyprus, Sir Hugh Foot, was also present.

The Conference was called to remove disagreements on the size of British military bases in Cyprus after granting Independence to the Island.

After the day's session, a British spokesman said that the Conference had agreed to set up two sub-committees, one to work on financial administration of the Island and the other on trade and commerce.

He claimed that there was already 'near-agreement' on a British proposal to establish a Joint Cypriot Water Board to control water supplies both in the British bases and throughout the Island.

The main subterranean water table lies under the areas which Britain proposes for its military bases. Fears had been expressed that the Cypriot population would not have full control over their water supplies. Britain, therefore, proposed a Joint Board.

On January 17, the British Foreign Secretary, Mr. Selwyn Lloyd, laid before the delegates what he called "the irreducible minimum" of the British claim for sovereign bases in the Island, amounting to some 122 square miles.

It was understood that Mr. Lloyd emphasized that this offer was the minimum to meet Britain's military requirements.

Top-level eve-of-Conference exchanges in London on the future of Cyprus disclosed marked differences of stand-point between the British and other delegates.

The British Foreign Secretary, Mr. Selwyn Lloyd, conferred separately on January 15 with Archbishop Makarios and Dr. Fadhil Kutchuk.

Both these leaders were understood to be firm that British claims for sovereign bases on the Island and other powers must be restricted.

The Conference adjourned on January 18.

A *communique* issued at the end of the Conference said that the Conference had decided that the independence of Cyprus should be postponed for one month, from February 19 to March 19, 1960.

It said that the Conference had made progress, but added: "The Conference has not, however, been able to complete the consideration of all outstanding matters which must be settled before the independence of Cyprus is attained."

The adjournment of the Conference was decided on following deadlock on the size of Britain's sovereign military bases in Cyprus. The Cypriots offered some 36 square miles for these bases, whereas Britain insisted that the area should be about 122 square miles.

[Prev. ref. 3082:TUR:A]

B. **US Surplus Food Agreement:** Under an Agreement signed in Ankara in the last week of December, 1959, Turkey will receive from the United States 300,000 tons of wheat, 25,000 tons of maize and 50,000 tons of cotton-seed or soya bean oil.

The cost is $35,000,000, including transport charges, payable in Turkish currency. More than half the counterpart funds will be used to finance Turkish projects.

It was officially stated in Ankara that this Agreement brought the total value of US supplies of surplus food products to Turkey since 1954 to $249,879,560.

Nam bordering on China was inaugurated on November 5, 1959 after two years' construction.

This was one of the power plants supplied by the Soviet Union. It was provided with a modern chain system and equipped with up-to-date safety appliances.

A power plant of the same size also supplied by the Soviet Union has been completed in Vinh, provincial capital of Nghe-an in north-central Viet-Nam.

Meanwhile, it was stated that the construction of a chemical factory had started in the Viet-tri industrial centre, about 80 kilometres north-west of Hanoi.

It is among 10 industrial enterprises to be built under the Three-Year State Plan on an area stretching for more than two kilometres along the Red River.

The Viet-tri Chemical Factory, supplied in aid by China, is the first of its kind to be built in North Viet-Nam. It will cater for various consumer goods factories and will also supply 1,000 tons of insecticide per year to peasants.

A wood processing factory was also completed in Vinh on November 16, 1959, forty days ahead of schedule.

This is the second modern wood factory in North Viet-Nam, built with the assistance of the Czechoslovak Republic. The first was inaugurated in July, 1959 at Cauduong, ten kilometres north of Hanoi.

(Consulate-General of the Democratic Republic of Viet-Nam, New Delhi)

[Prev. ref. 2565:VND:A]

ASIA OUTSIDE ASIA

A. Russian Decision To Reduce Her Armed Forces: The Soviet Prime Minister, Mr. N. Khruschev, announced in the Supreme Soviet on January 14 that the strength of the Soviet armed forces would be reduced by 1,200,000 from their present strength of 3,623,000.

This was a unilateral action, he said, irrespective of the outcome of disarmament negotiations. Because of the growth of Soviet rocket power, the Air Force and Navy had lost their former importance. The Soviet Air Force was to be replaced by rockets almost completely. In the Navy, the submarine fleet was becoming increasingly important. He estimated that this cut would yield an economy of between 16 and 17 billion roubles a year.

He said that the forces had been largely switched to rocket-nuclear arms and had such fighting power as no other army ever had. The Soviet Union was ahead of all other countries in inter-continental missiles of all kinds.

The Soviet Union would continue perfecting its rocket and nuclear weapons until they were outlawed by international agreement but would not re-start nuclear tests if the Western Powers did not start them.

He went on: "I must say once again that the Soviet Union has accumulated so many nuclear, atomic and hydrogen weapons, so many rockets to deliver nuclear heads to the territory of a possible aggressor, that in the event of any mad man trying to attack our State or any other socialist State, it would be able literally to obliterate from the face of the earth an attacking country or countries.

"Though the weapons we have now are formidable weapons indeed, the weapon we have today in the hatching stage is even more perfect and even more formidable. The weapon which is being developed, and is, as they say, in the portfolio of our scientists and designers, is a fantastic weapon.

"The Soviet Government has decided to reduce the armed forces not because of its economic or budgetary weakness, but because of its might and strength. We are guided in this by the peace-loving aspirations of our people. If our Western partners do not agree to follow our example, this will disappoint all peoples. The Soviet Union sincerely hopes that the other countries will also follow the road of further reducing their armed forces".

After expressing a desire for a useful and fruitful 'summit' meeting, he said:

"Given the goodwill of all sides, any active international question can be solved in the interests of peace. If agreement is reached on total and universal disarmament, setting free tremendous funds, these funds can be used for rendering extensive aid to all the under-developed nations."

He quoted the first official figures of the strength of the Soviet armed forces given since the early days of the October Revolution and said that after the civil war the Soviet Government had demobilized most of the Army and re-organized it. As a result, 586,000 men were serving in the Red Army and Navy by 1927. Japanese aggression and the rise of the power of Fascist Germany had caused the Soviet Union to increase its armed forces, which, by 1937, had reached 1,433,000 and by 1941, 4,207,000.

The World War II had compelled USSR to bring the strength of its armed forces up to 11,365,000 by May, 1945. By 1948, the strength was down to 2,874,000.

As a result of the setting up of "the aggressive NATO bloc in the West and the atomic bomb blackmail at the time when the Soviet Union did not have that bomb", Russia had been compelled to increase the strength of her troops which, in 1955, had totalled 5,763,000, but they were again reduced to their present strength of 3,623,000.

In the past four years, the Soviet Union had unilaterally reduced the strength of its armed forces by a total of 2,140,000 men. Troops had been withdrawn from Rumania, and those in East Germany, Poland and Hungary had been reduced considerably.

The re-settlement of demobilized personnel would take one to two years. The majority would have to start in civilian occupations.

The Government and the Party were now studying the problem of re-organizing the Army on a territorial basis. Some men would do their military duties in their spare time.

The latest fascist outrages and anti-semitism in Germany proved that the forces of reaction were being revived there.

One could only wonder why such countries as France, Britain and other nations which had suffered from Nazi aggression support the military preparations of the Federal Republic of Germany.

After the launching of the Soviet Sputniks and rockets, the Americans had come to realize that the United States was no less vulnerable to attack than any other country. "I wish to emphasize that this is not a threat. The Soviet Union's task is to continue delivering blows at the 'cold war' champions and unmask them."

Marshal R. Malinovsky's Speech:

The Defence Minister, Marshal Rodin Malinovsky, in his speech, said that rockets with nuclear war-heads formed the basic armament of the Soviet Army. At the present moment, it was impossible to destroy a ballistic missile in flight.

He said that the Soviet armoury included rockets capable of striking any part of the globe in any weather. The Soviet Union had two types of rockets—a tactical rocket with a range of tens to hundreds of kilometres and a strategic rocket with practically unlimited range.

He thought that a surprise attack would be the most likely start of a conflict.

He added: "If a war is imposed on us, we underline that it will be carried out with a total utilization of atomic arms."

Supreme Soviet Approves Decision:

The session of the Supreme Soviet ended on January 15 after adopting unanimously the law for further reduction of the USSR armed forces by 1,200,000 men within one to two years.

The session also unanimously adopted an appeal to the Parliaments and Governments of all countries of the world urging them to respond to the new peaceful initiative of the Soviet Union.

In the discussion on Mr. Khruschev's report on "Disarmament—The Way To Secure Peace And Friendship Among Nations", all the speakers supported Mr. Khruschev's proposal for the reduction of the Soviet armed forces.

The Soviet Government announced on January 19 that it would use a large part of the funds saved from the cut in the armed forces in protecting the health of the Soviet population, including cancer research.

One thousand million roubles would be spent over the Seven-Year Plan targets on new hospitals, medical research centres and the pharmaceutical industry between 1961 and 1965.

American Reaction:

In a statement, the US State Department challenged the Soviet Union to agree to an international system of inspection and control as a means of testing the sincerity of Mr. Khruschev in his undertaking to reduce the Russian military forces.

It observed that the cut of 1,200,000 men and the consequent re-adjustments in conventional armaments during the next year or two could lessen one of the causes of the existing world tensions.

It added: "As in the case of previous unilateral Soviet announcements, the proposed reduction can be taken only as an intention, since there will be no verifiable means of setting any actual reduction. An opportunity to achieve controlled international measures of disarmament will be offered at the general disarmament negotiations scheduled for the early part of this year. At these negotiations, the United States will be prepared to go as far towards safeguarded disarmament as any other country.

"It is hoped that this announcement by the Soviet Union is an indication of its willingness to participate in the forthcoming negotiations in the same spirit so that world accord can be established through concrete and verifiable measures of disarmament, thereby removing suspicions and building real security".

Mr. R. Nixon's Views:

Addressing a gathering at the University of Florida on January 16, the US Vice-President, Mr. Richard Nixon, said that Mr. N. Khruschev's announcement should not lead to cuts in US defence policy. "Under no circumstances should the United States and its allies reduce their strength."

Discussing the motives for the Soviet cut, he said that Mr. Khruschev might have been influenced by some internal problem, such as the need for man-power to accomplish the Soviet Seven-Year Plan; or the cuts might stem from the strategy that ground forces were no longer needed because of the many new types of weapons.

Commenting on the statement of Mr. Khruschev that Russia was developing a mighty new weapon, he said that no conceivable Russian weapon could destroy US striking power.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

He added: "No one knows what weapons they have. But I would point out that we have a striking power of sufficient quality and quantity that no weapon that we can conceive of would be sufficient to destroy our retaliatory power even in a surprise attack or reduce Mr. Khruschev's fear of what might happen if he started something".

Dr. Ralph Lapp's View:

Mr. Khruschev's remark about a new Russian weapon of fantastic power inspired speculation from Dr. Ralph Lapp, the American nuclear scientist, to the effect that the Russians might be working on an "orbital hydrogen bomb" which could be stationed in space and launched or recalled at will.

He observed that a recallable bomb in orbit round the Earth would have a tremendous impact as a psychological terror-weapon.

He suggested that the Russians might have developed a long-range missile of superpower and super-accuracy capable of delivering a 100 megaton war-head on targets in distant countries. This would have the explosive violence of 100 million tons of TNT. (The atom bomb which destroyed Hiroshima had a power of 20,000 tons.)

He added that such a weapon could destroy every home in New York city with its blast alone. Detonated at high altitude, it might start conflagrations that would devastate half a continent. It would truly be a scorched-earth weapon.

British Reaction:

A British Foreign Office spokesman formally welcomed the Soviet announcement on a cut of its armed forces on January 15.

He said at a news conference: "We naturally welcome the news that the Soviet Union intends to make a further reduction in its conventional forces."

Kuomintang And South Viet-Nam Views:

The Kuomintang President, Marshal Chiang Kai-shek and President Ngo Dinh Diem of South Viet-Nam, issued a joint *communique* in Taipeh on January 19 contending that Russia's disarmament announcement was nothing but a deception.

"Tass" Reply To Western Reaction:

The official Soviet news agency *Tass* accused certain Western quarters of resorting to all sorts of tricks and ruses to weaken the impression produced by the "bold unilateral act" of the Soviet Union in reducing the strength of her armed forces.

These quarters, it said, had reacted in this way because they had been greatly embarrassed by the tremendous political repercussions caused by the Soviet decision. One American State Department official, Mr. Lincoln White, could not think of anything more convincing than to say that the West would have no reliable means of checking any actual reduction of Soviet armed forces. Mr. White's numerous colleagues had no doubts about the realistic nature of the Soviet decision. They were trying to explain this great cut in Soviet armed forces by attributing to Russia imaginary economic difficulties and man-power shortage.

China's Stand:

In a statement at a session of the Standing Committee of the National People's Congress (China's Parliament) in Peking on January 21, the Chinese Foreign Minister, Mr. Chen Yi, declared that China wanted an equal say with other Big Powers in any talks on global disarmament.

After pledging China's firm support for the Soviet proposals to reduce her armed forces by one-third and Russia's appeal to other countries to follow suit, he said: "China is ready unhesitatingly to commit herself to international obligations to which it agrees.

"However, any international disarmament agreement which is arrived at without the formal participation of the Chinese People's Republic or the signature of its delegates cannot of course have any binding force on China."

Afterwards, the Standing Committee passed a resolution on the subject.

Mr. Chen Yi's speech was the first official public statement by China of her attitude towards the forthcoming disarmament talks.

The State Department in Washington said on January 21 that it would be logical to include China in any disarmament agreement if she was willing to join in a programme of workable controls.

However, American officials said that any inclusion of communist China in a Disarmament Treaty would not affect US policy towards the recognition of the Peking Government.

[Prev. ref. 2529:AOA:A, 2989:AOA:B]

B. **US Budget For 1960-61:** President D. D. Eisenhower presented to the US Congress on January 18 the Budget for 1960-61. [The American fiscal year begins on July 1.] The Budget totalled $79,800,000,000.

He estimated that America's expanding economy would produce record-breaking revenues of $84,000-000,000 and thus result in a surplus of $4,200,000,000.

He urged that this surplus should be used for the reduction of the national debt, which stands at $284,-500,000,000.

The Budget did not call for any changes in existing income-tax rates, but it renewed proposals for a tax increase on aviation fuels, an equivalent tax on the hitherto untaxed jet fuels, a further half-per cent tax on petrol and a one per cent increase in first class and air-mail postal rates.

He also recommended $41,000,000-000, more than half of the revenue, for defence expenditure, which was slightly higher than the 1959-60 level.

He said the Budget would give the American nation the strong and versatile defence which it required under the prevailing world conditions. As he put it, the Budget was "a test of our resolve, as a nation, to allocate our resources prudently to maintain the nation's security and to extend economic growth into the future without inflation."

He recommended an increase of the total foreign aid expenditure by $100,000,000.

Non-military "space expenditure" under the National Aeronautics and Space Administration (NASA) was virtually doubled to $600,000,000. This included the development of the "Saturn" Project, the new rocket booster with which the United States hoped to reduce within a few years some of the lead gained by the Soviet Union in space research.

He recommended that funds for aircraft procurement, excluding research and construction, should be reduced to a total of $4,753,000,000. On the other hand, he sought new authority for $3,825,000,000 for missile procurement, excluding research and construction. This was $581,000,000 higher than the 1959-60 figure.

In the coming fiscal year, additional quantities of *Atlas*, *Titon* and *Polaris* missiles would be procured.

Foreign military assistance for 1960-61 was estimated at $1,750,000,000, a decrease of $50,000,000 from the previous year's estimate. Economic assistance expenditure was estimated at $1,700,000,000, an increase of $150,000,000.

He asked Congress to vote an extra $23,000,000 for research into manned space flights and to build a new rocket launching pad at Cape Canaveral.

He told Congress that of the non-military space projects under way, the "Mercury" Project (launching of a manned satellite) had high priority and America should be ready to attempt actual manned space flight within the next two years.

In a message to Congress, President Eisenhower said that the first *Atlas* ICBMs were now operational. The first two *Polaris* submarines were expected to become operational during 1960, and the first *Titan* ICBMs in 1961. The *Minuteman*—a solid fuel long-range missile—was planned to be operational about mid-1963.

The development of the four ballistic missile systems during the 1961 fiscal year, together with the manned bomber force, carrier-based aircraft, intermediate-range ballistic missiles and the tactical aircraft deployed abroad ensured to America continued capabilities to retaliate effectively in the event of an attack on USA or its allies.

He added: "Our hope is that the heavy burden of armaments on the world may be lightened. But we should not delude ourselves. In this era of nuclear weapons and inter-continental missiles, disarmament must be safeguarded and verifiable.

"While seeing the true road to peace and disarmament, we must remain strong. Our aim at this time is the level of military strength which, together with that of our allies, is sufficient to deter war, large or small, while we strive to find a way to reduce the threat of war. This budget, in my judgment, does that."

ASIAN RECORDER

February 13—19, 1960

Regd. No. D-727
Vol. VI. No. 7

CHINA

SUMMARY: Border Agreement And Treaty Of Friendship With Burma; Views On Disarmament Talks—National People's Congress Standing Committee Resolution; East German Delegation's Visit.

A. Border Agreement With Burma: On the invitation of the Government, the Burmese Prime Minister, Gen. Ne Win, paid a visit to Peking from January 24 to 29 to discuss Burma's border dispute with China.

Gen. Ne Win was accompanied on the trip by the Foreign Minister, U Chan Tun Aung, the Attorney-General, U Ba Sein, the Vice-Chief of Staff at the Defence Ministry, Brigadier Aung Gyi, and the Permanent Secretary of the Foreign Office, Mr. J. Barrington.

Burma's border dispute with China involving areas along a rugged frontier had been dragging on for years. The areas were scattered over three sectors into which the entire border could be broadly divided.

The sectors were: (1) The Burmese part of the MacMahon Line up to the Isu Raze Pass, or the Irrawaddy watershed, now being called the traditional boundary. (2) The area from the Isu Raze Pass to the south along the Kachin State border. Here, the Chinese had claimed three villages—Hpimaw, Gawlum and Kangfung. (3) The southern sector up to the Laotian border. A sizeable tract of Namwan in this region, leased in perpetuity to Burma by the Chinese for a nominal rent, was sought to be exchanged by China for certain areas in the eastern Shan States of Burma, although China had accepted the boundary with the Shan States after negotiations with the British rulers of Burma in 1941.

Gen. Ne Win's mission was the third to go to Peking to discuss the border question. The first was headed by U Nu, the former Prime Minister, in 1956. The second was in 1957 led by U Myint Thein, representing U Nu. But both ended in impasse.

Protracted correspondence between Burma and China had prepared the ground for Gen. Ne Win's mission.

U Nu, when he handed over the administration to Gen. Ne Win on September 26, 1958, had also entrusted to him an offer by the Chinese Government to settle the border question. Within two months, Gen. Ne Win took counsel from the frontier people—Kachins and Shans—and formulated the concrete terms of a settlement and presented them to the Chinese Government. That laid the basis for the present meeting.

At the conclusion of the talks in Peking on January 29, Gen. Ne Win and the Chinese Prime Minister, Mr. Chou En-lai, signed an Agreement for the delimitation of the border as well as a Treaty of Friendship and Non-Aggression.

Joint Communique:

The following was the text of the joint *communique* issued on January 29 on the conclusion of the talks between the two Prime Ministers:

"On the invitation of Mr. Chou En-lai, Gen. Ne Win paid a friendly visit to the People's Republic of China from January 24 to 29. Gen. Ne Win was accompanied by U Chan Tun Aung, Minister for Foreign Affairs, and other high-ranking officials of the Government of the Union of Burma.

"During his visit to Peking, Gen. Ne Win was received by Mr. Liu Shao-chi, Chairman of the People's Republic of China.

"Mr. Chou En-lai and Gen. Ne Win held free and frank discussions on matters of common concern to the two countries and, in particular, questions concerning the consolidation and further development of friendly relations between China and Burma.

"Also taking part in the talks were Marshal Chen Yi, China's Vice-Premier and Minister of Foreign Affairs, U Chan Tun Aung and other high-ranking officials of both countries.

"The talks were marked by a spirit of utmost cordiality and full mutual understanding and paved the way for the conclusion by the two sides during Gen. Ne Win's visit to China of the Treaty of Friendship and Mutual Non-aggression between the People's Republic of China and the Union of Burma and the Agreement between the Government of the People's Republic of China and the Government of the Union of Burma on the question of the boundary between the two countries.

"These two important documents will be published simultaneously in Peking and Rangoon on the return of Gen. Ne Win to Burma.

"The two Premiers reviewed with satisfaction the remarkable advance made in recent years in the friendly relations between China and Burma. This advance fully demonstrates the great vitality of the Five Principles of peaceful co-existence jointly initiated and firmly adhered to by the two countries.

"The two Premiers were convinced that the conclusion of the above-mentioned Treaty and Agreement will be a lasting monument to the growing friendship and mutual understanding between New China and New Burma.

"The two Premiers pledged that the two Governments will ceaselessly strengthen friendly co-operation between the two countries and continue to make joint contributions to the promotion of solidarity among Asian and African countries and the safeguarding of Asian and world peace."

Friendship And Mutual Non-Aggression Treaty:

The text of the Treaty of Friendship and Mutual Non-aggression was as follows:

"The Government of the People's Republic of China and the Government of the Union of Burma.

"Desiring to maintain everlasting peace and cordial friendship between the People's Republic of China and the Union of Burma.

"Convinced that the strengthening of good neighbourly relations and friendly co-operation between the People's Republic of China and the Union of Burma is in accordance with the vital interests of both countries.

"Have decided for this purpose to conclude the present Treaty in accordance with the Five Principles of peaceful co-existence jointly initiated by the two countries, and have agreed as follows:

"*Article* 1: The contracting parties recognize and respect the independence, sovereign rights and territorial integrity of each other.

"*Article* 2: There shall be everlasting peace and cordial friendship between the contracting parties who undertake to settle all disputes between them by means of peaceful negotiation without resorting to force.

"*Article* 3: Each contracting party undertakes not to carry out acts of aggression against the other and not to take part in any military alliance directed against the other contracting party.

"*Article* 4: The contracting parties declare that they will develop and strengthen the economic and cultural ties between the two States in a spirit of friendship and co-operation, in accordance with the principles of equality and mutual benefit and of mutual non-interference in each other's internal affairs.

"*Article* 5: Any difference or dispute arising out of the interpretation or application of the present Treaty or one or more of its Articles shall be settled by negotiations through the ordinary diplomatic channels.

"*Article* 6: (1) The present Treaty is subject to ratification and the Instruments of Ratification will be exchanged in Rangoon as soon as possible. (2) The present Treaty will come into force immediately on the exchange of the Instruments of Ratification and will remain in force for a period of ten years. (3) Unless either of the contracting parties gives to the other notice in writing to terminate it at least one year before the expiration of this period, it will remain in force without any specified time limit, subject to the right of either of the contracting parties to terminate it by giving to the other in writing a year's notice.

"In witness whereof the Premier of the State Council of the People's Republic of China and the Prime Minister of the Union of Burma have signed the present Treaty.

"Done in duplicate in Peking on the 28th day of January, 1960 in the Chinese and English languages, both texts being equally authentic."

Border Agreement:

The text of the Border Agreement was as follows:

"The Government of the People's Republic of China and the Government of the Union of Burma,

"With a view to promoting an overall settlement of the Sino-Burmese boundary question and to consolidating and further developing friendly relations between China and Burma.

"Have agreed to conclude the present Agreement under the guidance of the Five Principles of peaceful co-existence and have agreed as follows:

"*Article* 1: The contracting parties agree to set up immediately a joint committee composed of an equal number of delegates from each side and charge it, in accordance with the provisions of the present Agreement to discuss and work out solutions on the concrete questions regarding the Sino-Burmese boundary enumerated in Article 2 of the present Agreement, conduct surveys of the boundary and set up boundary markers and draft a Sino-Burmese Boundary Treaty. The joint committee shall hold regular meetings in the capitals of the two countries or at any other place in the two countries.

"*Article* 2: The contracting parties agree that the existing issues concerning the Sino-Burmese boundary shall be settled in accordance with the following provisions:

"(1) With the exception of the area of Hpimaw, Gawlum and Kangfang, the entire undelimited boundary from the high conical peak to the western extremity of the Sino-Burmese boundary shall be delimited along the traditional customary line, that is to say, from the high conical peak northward along the watershed between the Taiping, the Shweli, the Nu (Salween) and the Tulung

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

(Taron) rivers on the one hand and the Nmai Hka river on the other, up to the place where it crosses the Tulung (Taron) river between Chingdam and Nhkumkang, and then along the watershed between the Tulung (Taron) and the Tsayul (Zayul) rivers on the one hand and all the upper tributaries of the Irrawaddy river, except for the Tulung (Taron) river, on the other, up to the western extremity of the Sino-Burmese boundary.

"The joint committee shall send out joint survey teams composed of an equal number of persons from each side to conduct surveys along the above-mentioned watersheds so as to determine the specific alignment of this section of the boundary line and to set up boundary markers.

"(2) The Burmese Government has agreed to return to China the area of Hpimaw, Gawlum and Kangfang which belongs to China. As to the extent of this area to be returned to China, it is to be discussed and determined by the joint committee in accordance with the proposals put forward and marked on maps by the Governments of Burma and China on February 4, 1957, and July 26, 1957 respectively. After determining the extent of this area to be returned to China, the joint committee shall send out joint survey teams composed of an equal number of persons from each side to conduct an on-the-spot survey of the specific alignment of this section of the boundary line and to set up boundary markers.

"(3) In order to abrogate the perpetual lease by Burma of the Meng-Mao triangular area (Namwan assigned tract) at the junction of the Namwan and the Shweli rivers, which belongs to China, the Chinese Government has agreed to turn over this area to Burma to become part of the territory of the Union of Burma. In exchange, the Burmese Government has agreed to turn over to China to become part of Chinese territory the areas under the jurisdiction of the Panhung and Panlao tribes, which are west of the boundary line from the junction of the Nam Ting and the Nampa rivers to the No. I marker on the southern delimited section of the boundary as defined in the Notes exchanged between the Chinese and the British Governments on June 18, 1941. As to the extent of these areas to be turned over to China, the Chinese and the Burmese Governments put forward proposals marked on maps on July 26, 1957, and June 4, 1959 respectively. The area where the proposals of the two Governments coincide will definitely be turned over to China. Where the proposals of the two Governments differ as to the area under the jurisdiction of the Panhung tribe, the joint committee will send out a team composed of an equal number of persons from each side to ascertain on the spot as to whether it is under the jurisdiction of the Panhung tribe so as to determine whether it is to be turned over to China. After the extent of the areas under the jurisdiction of the Panhung and Panlao tribes to be turned over to China has been thus determined, the joint committee will send out joint survey teams composed of an equal number of persons from each side to conduct an on-the-spot survey of the specific alignment of this section of the boundary line and to set up boundary markers.

"(4) Except for the adjustment provided for in Paragraph (3) of this Article, the section of the boundary from the junction of the Nam Ting and the Nampa rivers to the No. I marker on the southern delimited section of the boundary shall be delimited as defined in the Notes exchanged between the Chinese and the British Governments on June 18, 1941.

"The joint committee shall send out joint survey teams composed of an equal number of persons from each side to carry out delimitation and demarcation along this section of the boundary line and set up boundary markers.

"*Article 3:* The contracting parties agree that the joint committee, after working out solutions for the existing issues concerning the Sino-Burmese boundary as enumerated in Article 2 of the present Agreement, shall be responsible for drafting a Sino-Burmese Boundary Treaty, which shall cover not only all the sections of the boundary as mentioned in Article 2 of the present Agreement but also the sections of the boundary which were already delimited in the past and need no adjustment.

"After being signed by the Governments of the two countries and coming into effect, the new Boundary Treaty shall replace all old treaties and Notes exchanged concerning the boundary between the two countries.

"The Chinese Government, in line with its policy of being consistently opposed to foreign prerogatives and respecting the sovereignty of other countries, renounces China's right of participation in mining enterprises at Lufang of Burma as provided in the Notes exchanged between the British and Chinese Governments on June 18, 1941.

"*Article 4:* (1) The present Agreement is subject to ratification and the Instruments of Ratification will be exchanged in Rangoon as soon as possible. (2) The present Agreement will come into force immediately on the exchange of the Instruments of Ratification and shall automatically cease to be in force when the Sino-Burmese Boundary Treaty to be signed by the two Governments comes into force.

"Done in duplicate in Peking on the 28th day of January, 1960 in the Chinese and English languages, both texts being equally authentic."

[Prev. ref. 1569:BUR:B]

B. Overseas Chinese—Directive On Their Settlement: The State Council in Peking issued a directive on February 2 ordering the establishment of a Commission for receiving and accommodating the Chinese who had returned from overseas.

The directive defined the attitude of the Government on the issue of overseas Chinese.

It advised overseas Chinese who had settled abroad for a long time to "choose to become nationals of the country they live in on the principle of voluntariness."

As for those overseas Chinese who voluntarily retained Chinese nationality, the Government advised them "to abide by the laws of the countries in which they are living and to contribute energetically to the economic and cultural development of these countries."

It said that the Chinese Government had always been willing to settle all questions concerning overseas Chinese, including the issue of dual nationality "through consultations in accordance with the Five Principles of peaceful co-existence."

It assured those overseas Chinese who retained their Chinese nationality that their legitimate rights and interests would be "effectively protected."

It said: "This has always been the policy of the Chinese Government and will remain so in future."

The Commission would be in charge of arranging for suitable work, accommodation and other facilities for the Chinese returning from overseas.

It expressed regret over the recent "anti-Chinese activities and discrimination against Chinese" in "certain South-East Asian countries" and said that "large numbers of overseas Chinese were persecuted for no reason."

It added: "In view of these conditions, the Chinese Government has decided to accommodate all overseas Chinese who are homeless, have no means of livelihood or are unwilling to continue living abroad."

It said that China did not have excess manpower but a shortage and, therefore, "we warmly welcome the return of all overseas Chinese who want to come back and contribute to the building up of the socialism of their Motherland."

Receiving agencies were to be set up at Canton, Swatow, Tsamkong and Hoikow, ports of entry for overseas Chinese.

This was the first time since the assumption of power by the communist Government that China officially clarified her position on the question of overseas Chinese.

This move was linked by diplomatic observers with the recent uprooting of the overseas Chinese in Indonesia from their retail trades in the interior districts. A considerable number of such Chinese settlers might want to return to China and the establishment of the Commission was believed to be for the purpose of facilitating the return of such Chinese.

However, what was regarded as of greater significance was the fact that this signified another gesture on the part of China of her willingness to settle problems with its South-East Asian neighbours.

Attention was drawn to the fact that this move followed closely on the heels of two other similar friendly gestures by Peking in a fortnight, namely ratification of the Dual Nationality Agreement with Indonesia and the Agreement with Burma on the border issue.

According to these observers, the latest move would be welcomed by all South-East Asian countries with large Chinese minorities. It would be especially of great import to Malaya and Singapore, where overseas Chinese constitute two-thirds of the total population and, as such, its effect will be felt with considerable force there.

(*The Hindu*, Madras)

[Prev. ref. 3099:CHI:A]

C. Disarmament Talks—Attitude Explained: Addressing the Standing Committee of the National People's Congress in Peking on January 21, the Foreign Minister, Mr. Chen Yi, pledged China's full support for the Soviet proposal to reduce her armed forces by one-third and appealed to other countries to follow suit.

He said: "China is ready unhesitatingly to commit herself to international obligations to which it agrees. However, any international disarmament agreement which is arrived at without the formal participation of China or the signature of its delegates cannot, of course, have any binding force on China."

[Western observers interpreted the statement as a notice to the world that China wanted an equal say with other Big Powers in any talks on world disarmament. They noted that the statement came two days after China had officially expressed the hope that an East-West 'summit' conference in May—at which China will not be represented—would reach agreement on "concrete measures for disarmament" on the basis of the Soviet proposal for general disarmament. That statement was contained in a joint *communique* issued at the end of a visit by an East German delegation.]

Mr. Chen Yi attacked the "ruling circles of the United States," who, he said, in contrast to the "persistent peace measures" of the Soviet Union, had persisted in expanding their armaments, war preparations and aggressive activities. They had repeatedly obstructed "the solution of the disarmament question, using every kind of hindrance and sabotage against all the disarmament proposals put forward by the Soviet Government and even taking a perfidious and scoundrelly attitude to the very so-called disarmament proposals which they themselves put forward under pressure. More recently, the ruling circles of the United States, under pressure, have had to affect a peace posture while in reality continuing their military expenditure for the next fiscal year at peak peace-time level, concentrating all efforts on speeding up the development and production of rockets and actively building up and expanding their net-work of guided missile bases abroad."

NPC Standing Committee Resolution:

Later in the day (January 21), the Standing Committee adopted the following resolution:

"The fourth session of the Supreme Soviet of USSR, on January 15, 1960, adopted a Bill

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

on the reduction of the Soviet armed forces by 1,200,000 men and made an appeal to the Parliaments and Governments of all countries on the question of disarmament. This is another important action for peace taken on her own initiative by the Soviet Union to promote universal disarmament, following her proposal on general and complete disarmament put forward on September 18, 1959. The Standing Committee of the National People's Congress of the Chinese People's Republic warmly welcomes and supports this peaceful proposal of the Soviet Union. It is confident that the proposal will have a favourable effect on further relaxing international tensions.

"But, in contrast to the unremitting efforts of the Soviet Union for universal disarmament, the ruling circles of the United States are holding fast to armament expansion and war preparation, using all means to obstruct agreement on arms reduction. For instance, the United States recently announced openly that it would resume nuclear weapon testing whenever she pleased. She is continuing her military expenditure in the next fiscal year at peak peace-time level. She is accelerating the development and production of rockets and actively extending her guided missile bases abroad. Moreover, while accelerating the militarization of West Germany and strengthening various existing aggressive military blocs, she has signed a Treaty of Military Alliance with Japan, reviving Japanese militarism. This situation, as predicted by the Sino-Soviet Treaty of Friendship, Alliance and Mutual Assistance, threatens the security of the people of all Far Eastern countries and peace in Asia. All this completely exposes the vaunted peace professions of the US ruling bloc as false. In the guise of peace, it is actually making preparations for war. All peace-loving people must heighten their vigilance.

"The Chinese People's Republic has been carrying out a peaceful policy all along and has spared no efforts within its capacity to promote universal disarmament. The Chinese People's Volunteers, on their own initiative, withdrew from Korea in 1958 in spite of the US rejection of the reasonable proposal put forward by the Korean and Chinese side that all foreign troops should withdraw from Korea. Although the US military forces still occupy our territory of Taiwan (Formosa), US military bases encircle half of China and US naval and air forces have been repeatedly intruding into China's territorial seas and air space, China has nevertheless successively taken a series of measures since 1951 that have greatly reduced her armed forces. These great efforts by China have won the sympathy and support of all peace-loving countries and people.

"Disarmament is now an important question in preserving world peace. The Standing Committee of the National People's Congress would welcome the countries concerned speedily reaching agreement on the question of universal disarmament. China has always favoured universal disarmament and will unhesitatingly commit herself to international obligations to which it agrees. However, it must be pointed out that any international agreement concerning disarmament, without the formal participation of the People's Republic of China and the signature of her delegate, cannot of course have any binding force on her. At the present time, in spite of obstruction and sabotage of disarmament by the imperialists, the strength of the people's demand the world over for universal disarmament is gaining greater and greater momentum. The Chinese people will carry out an unswerving struggle, together with the Soviet Union and all peace-loving countries and people, for the realization of general and complete disarmament and lasting peace."

US Reaction:

In Washington, on January 22, the US State Department said:

"At this Conference (East-West Disarmament), the first thing to establish will be the intention of the communist countries to join with us in workable and adequately-controlled disarmament programme. If this should prove to be the case and substantial progress is made toward controlled disarmament during the course of the discussion, then it would be logical to consider participation in such a disarmament programme by other countries including Red China."

British Reaction:

The same day (January 22), a spokesman of the British Foreign Office told newsmen in London that Britain supported the US view that it would be "logical" to include China in any "disarmament programme" if this materialized.

He declined further comment on the statement by Mr. Chen Yi that the Chinese Government would not regard itself bound by any agreement reached without the formal participation of China.

He declined to clarify whether the US reference to a "disarmament programme" meant previous negotiations or an eventual agreement.

Unofficially, British sources said that it was important to get the 10-Power East-West Disarmament Conference started in Geneva on March 15 and see what prospects of success it had.

Diplomatic observers in London said that Britain and USA did not contemplate China being an initial participant in the Geneva negotiations.

The Western side at the Geneva talks would be Britain, France, USA, Canada and Italy. The communist bloc would be represented by Russia, Czechoslovakia, Poland, Rumania and Bulgaria.

A French Foreign Ministry spokesman told a news conference in Paris that the French Government had always thought that a general and controlled disarmament agreement should include Chinese forces.

[Prev. ref. 3133:AOA:A]

D. **East German Delegation's Visit:** A German Democratic Republic (East Germany) Government delegation headed by the Vice-Chairman of the Council of Ministers, Mr. Heinrich Rau, paid a visit to China from January 9 to 19 at the invitation of the Government of the People's Republic of China.

The delegation visited industrial enterprises, people's communes and cultural and scientific institutions in Peking, Chengchow, Wuhan and Shanghai.

Mr. Rau and other members of the delegation were received by the Chairman of the Communist Party, Mr. Mao Tse-tung, the Chairman of the People's Republic, Mr. Liu Shao-chi, and the Prime Minister, Mr. Chou En-lai.

A joint *communique* issued in Peking on the delegation's visit on January 19 said:

"The two delegations exchanged views extensively on international questions of common interest and on questions of socialist construction of the two countries and reached fully agreed views.

"The two parties pointed out with emphasis that West German and Japanese militarism which has been revived with the support of the United States constitutes a grave danger to world peace. This danger is now further aggravated by the fact that the West German militarists are playing the part of planners of aggression in the NATO bloc and that a Japan-US Treaty of Military Alliance will soon be signed.

"The two parties were of the agreed view that the atomic armament carried out by the West German and Japanese militarists with the support of the United States is directed against the easing of the international situation and is incompatible with the interests of all peace-loving people. The two parties unanimously pledged that they would fight unremittingly against such action, which seriously endangers peace, and in defence of world peace.

"The proposal of the Soviet Union for general disarmament conforms to the will of all peace-loving people. The two parties expressed the hope that agreement will be reached at the forthcoming 'summit' conference on concrete measures for disarmament on the basis of the Soviet proposals. The People's Republic of China supports the stand of the German Democratic Republic that the 'summit' conference should, with the participation of German representatives, settle the question of the conclusion of a Peace Treaty with the two German States and that of the normalization of the situation in West Berlin.

"During the visit of the Government Delegation of the German Democratic Republic in the People's Republic of China, the two sides held talks on the question of further strengthening economic co-operation between the two countries.

"Taking part in the talks on the side of the German Democratic Republic were: Mr. Heinrich Rau, Mr. Paul Verner, Mr. Otto Winzer and Mr. Paul Wandel, members of the Government Delegation, and economic experts: Mr. Werner Tulpe, Departmental Director of the Ministry of Foreign and Inter-German Trade, and Mr. Frite Neubert, Commercial Counsellor of the German Democratic Republic in the People's Republic of China.

"Taking part in the talks on the side of the People's Republic of China were: Mr. Li Hsien-nien, Vice-Premier of the State Council, Mr. Tseng Yung-chuan, Vice-Foreign Minister, Mr. Lin Hai-yu, Vice-Minister of Foreign Trade, Mr. Liu Ming-fu, Vice-Chairman of the State Planning Commission, and Mr. Wu Heng, Vice-Chairman of the State Scientific and Technological Commission.

"As a result of the talks, the two countries signed the Treaty between the People's Republic of China and the German Democratic Republic on Commerce and Navigation, and the Agreement between the Government of the People's Republic of China and the Government of the German Democratic Republic on the Exchange of Goods between 1960 and 1962.

"The two parties were deeply convinced that the visit of the Government Delegation of the German Democratic Republic and the signing of the Treaty and Agreement had made new contributions to the further strengthening of friendly co-operation between the two countries."

FORMOSA

A. **Power Plant Opened:** The Prime Minister, Mr. Chen Cheng, formally opened near Keelung on January 24 a thermal power plant which, on completion of the entire project, would be the largest of its kind in Formosa.

It will have two generators with a total capacity of 200,000 kw. One of them, with a capacity of 75,000 kilowatts, was put into operation on January 24.

The generator was installed at a cost of more than $18 million. USA provided financial and technical aid.

The second generator, with a capacity of 125,000 kw, will be put into operation in 1962.

During Third And Fourth Plans; Kerala Police Re-organization Committee's Report; Jan Sangh Annual Session.

A. Marshal K. E. Voroshilov's Visit: The President of USSR, Marshal Kliment E. Voroshilov, accompanied by the First Deputy Chairman of the USSR Council of Ministers, Mr. F. R. Kozlov, and a Deputy of the USSR Supreme Soviet, Madame Ye A. Furtseva, arrived in New Delhi on January 20 on a two-week visit to India at the invitation of the Government of India.

Eighteen *Hunter* jet fighters ceremonially escorted Marshal Voroshilov's *Ilyushin* from Ambala, about 110 miles from Delhi. A 21-gun salute was fired by a field regiment of the Territorial Army.

He was received by the President of India, Dr. Rajendra Prasad, and the Prime Minister, Mr. Nehru, other Ministers and a huge gathering.

Extending a warm and cordial welcome to Marshal Voroshilov in Hindi, the President, Dr. Rajendra Prasad said that they had been looking forward to greeting the President of a great and friendly country. It was the fulfilment of a long-cherished wish.

Replying, Marshal Voroshilov said that the Soviet people wished the "sun of mutual friendship to shine upon our countries" and hoped that his visit would enhance inviolable friendship between the two countries.

He added: "The Soviet Union firmly believes that all controversial issues of international relations can and must be solved by peaceful means solely. The Soviet Union is doing all that is necessary to remove the threat of war and consolidate peace."

He concluded with the words: "Hindi-Russi Bhai-Bhai."

Both the Presidents' speeches were translated into Russian and Hindi respectively.

Marshal Voroshilov later drove to Rashtrapati Bhavan in an open car accompanied by Dr. Rajendra Prasad and Mr. Nehru. Nine motor-cycle outriders from the Army, Navy and Air Force police provided an escort to the presidential motorcade. Over 1,00,000 persons had lined the route from Palam airport to Rashtrapati Bhavan to greet the visiting dignitary. The entire route was decorated with flags, festoons and buntings. Arches had been put up proclaiming "Welcome Voroshilov."

The Soviet President's party consisted of 86 persons.

State Banquet:

The same evening (January 20), Dr. Rajendra Prasad entertained Marshal Voroshilov at a State banquet.

In his speech at the banquet, Dr. Prasad referred to the "new problems" faced by India and declared that India "remained resolute and determined to seek peaceful solutions in our traditional spirit of negotiation and conciliation."

Speaking in the context of the ideal of world peace through disarmament, which was common to both countries, he referred with satisfaction to the drastic reduction in her armed forces announced recently by the Soviet Union and expressed his gratitude for the help rendered in generous measure by the Soviet Union in India's programme of reconstruction and development.

In his reply, Marshal Voroshilov spoke of the common aspirations of the peoples of India and USSR for world peace and the friendly relations that had existed between them.

Indo-Soviet friendship and co-operation, he said, was an important factor for the relaxation of international tensions.

Affirming the Soviet Union's desire to develop friendship with all the countries of the world as "the only path to the high road of mankind's development," he declared: "We are convinced that despite all the vicissitudes of history, all the nations of the world will sooner or later live as one friendly family."

He spoke of the "stable and inviolable friendship" between India and the Soviet Union and said: "The Soviet Government believes that the further strengthening of Soviet-Indian co-operation is a substantial factor in the relaxation of international tensions and the creation of the conditions necessary for a peaceful solution of pressing international issues."

The visit of the Soviet delegation testified to the joint desire of the two States to develop still further the friendly relations and co-operation that had already become traditional. Their relations had never been darkened by any unpleasantness. On the contrary, with every passing year they were becoming more and more profound and imbued with the spirit of complete mutual understanding and trust.

A sentence in Marshal Voroshilov's speech at Palam airport and another in Dr. Rajendra Prasad's speech at the State banquet were taken by political circles as significant references to the strained relations between India and China.

Replying to Dr. Rajendra Prasad's welcome address at Palam airport, Marshal Voroshilov had said: "The Soviet Union firmly believes that all controversial issues in international relations can and must be solved by peaceful means solely."

Dr. Prasad said at the banquet: "On our own horizons we face unfortunately new problems, but I can assure Your Excellency that we remain resolute and are determined to seek peaceful solutions in our traditional spirit of negotiation and conciliation."

Whether Dr. Prasad meant this as a reply to what Marshal Voroshilov had said at the airport may be a matter of conjecture, but political circles were of the view that these references were of great significance in the context of Mr. Khruschev's visit to India on February 12.

Discussion With Planning Commission:

On January 21, it was stated, the Indian approach to the Third Five-Year Plan was discussed at a meeting between the Planning Commission members and high-ranking members of the Soviet delegation, including the First Deputy Chairman of the Council of Ministers, Mr. F. R. Kozlov, First Deputy Foreign Minister, Mr. V. V. Kuznetsov, and Soviet Ambassador in India, Mr. I. A. Benediktov.

The discussion related particularly to the development of agriculture and heavy industry and the programme of oil exploration.

The Soviet delegation was understood to have indicated the possibility of increasing Soviet help in the form of technical know-how, equipment and machinery.

Mr. Nehru (who is Chairman of the Planning Commission and was present at the discussion) explained that the Indian economy was approaching a period of technological development which necessarily involved difficulties and burdens. Once this stage was over and agriculture and basic machine-building facilities had been developed, progress would be faster and living standards would rise rapidly.

Visit To World Agriculture Fair:

Later the same day (January 21), Marshal Voroshilov, with Dr. Rajendra Prasad, visited the World Agriculture Fair and stressed the importance of developing peaceful co-operation, understanding and friendship between nations.

Marshal Voroshilov appreciated the efforts made in India to increase agricultural production with the help of modern techniques and said he was convinced that the Fair and similar other measures would help develop peaceful co-operation and understanding between nations.

Mr. F. R. Kozlov, who also spoke on the occasion, said that the Soviet Union had made tremendous progress in agriculture as in other fields and she was always ready to share her experience with the people of India.

He referred to the unilateral reduction of the armed forces by his country and said that if this example was followed by others enormous sums of money would be released which could be used for purposes like construction of schools, hospitals, production of more food and the like.

Marshal Voroshilov's Banquet To Dr. R. Prasad:

Next day (January 22), Marshal Voroshilov gave a banquet in honour of Dr. Rajendra Prasad at which he said that peace was "extremely necessary" for India and all the States of the East for developing their economies and raising the standard of living of their peoples.

The foreign policies of both India and Russia, he said, were directed towards maintaining peace and ensuring the security of their peoples. "Peace is essential to the Soviet people in order to successfully build her (the country's) bright future."

In a brief reference to Soviet assistance to India, he said that his country was happy at India's success in implementing her Second Five-Year Plan and would continue to share her scientific and technological knowledge with India.

In his reply, Dr. Rajendra Prasad declared that India attached great value to Russia's goodwill.

The Soviet Union, he said, had already given "proof of her earnestness" in ending the 'cold war' by announcing a unilateral reduction of her armed forces. "Let us hope that the world, weary of war and anxious to get rid of the fear of armed conflict, will receive this move with enthusiasm."

He hoped that the Indo-Soviet collaboration in agriculture and industry would continue to grow to the benefit of the two countries.

Earlier in the day (January 22), Marshal Voroshilov went to Agra to see the Taj Mahal and, returning to New Delhi, saw a pre-view of Beating the Retreat by the combined bands of the three Armed Services.

On January 23, he was to have gone to Bhilai to see the Bhilai Steel Plant put up by Russian aid but could not do so owing to slight indisposition. Instead, Mr. F. R. Kozlov went to Bhilai.

Madame Ye A. Furtseva went to Madras on January 23 and returned to New Delhi on January 25.

Civic Reception:

Next day (January 24), however, Marshal Voroshilov was perfectly fit and attended a Civic Reception given to him by the citizens of Delhi in the Red Fort.

Speaking at the reception, he recalled that USSR had unilaterally

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

reduced her armed forces but underlined that there could be no "unilateral peace."

"Peace," he maintained, "should be consolidated by all the States and for all the peoples of the world."

He re-affirmed the Soviet Union's preparedness to "destroy its rockets and nuclear and other weapons" and abolish its armed forces if other nations agreed to it and acted upon the Soviet proposal for universal and complete disarmament.

On January 25, he went to Chandigarh and, returning to New Delhi the same afternoon, attended an "At Home" given by the President of India on the occasion of India's Republic Day and later another reception given by the Indo-Soviet Cultural Society.

On January 26, India's Republic Day, he witnessed the Republic Day Parade and attended an "At Home" given by the President of India.

Next day (January 27), he left for Bombay where he was given a civic reception on January 28.

On January 29, he went to Bangalore where also he was given a Civic Reception. He arrived in Madras on January 30 and in Calcutta on February 1.

From Calcutta, he left for Khatmandu on February 3 and returned to New Delhi on February 5.

Mr. F. R. Kozlov's News Conference:

Immediately after arriving in New Delhi on February 5, the Soviet Deputy Premier, Mr. F. R. Kozlov, addressed a news conference and said that he had no doubt India would be able to put her economy on a sound footing in the very near future.

This, he said, depended on the Indian people and their Government—on how national effort was channelled. The country was rich in natural resources like iron-ore, coking coal, fuel and the Indian people were industrious and diligent.

The first half of the 50-minute news conference related to impressions gathered by the Soviet delegation during their stay in the country. These were interspersed with references to the progress made by the Soviet Union amidst great difficulties and hostility from the West.

He declared that Russia had won those struggles to rise to the status of a "mighty industrial socialist Power." Today, she led Europe and was second only to USA in terms of industrial output. In some fields of production as well as in many branches of scientific and technical advancement, she had outstripped even America.

Referring to the increasingly friendly relations between India and the Soviet Union during the last few years, he said that the forthcoming visit of Mr. Khruschev to India would "add a new and bright page" to this record of amity.

He evaded questions aimed at drawing him out on the subject of Sino-Indian relations and contented himself with a reference to the *Tass* statement and the two speeches made by Mr. Khruschev on the subject.

Asked whether, in his opinion, it would be correct to describe Indians as 'expansionist' and 'imperialistic', his only comment was that in his opening statement (in which he had expressed appreciation of India's efforts for peace and building up her economy) he had clearly given his views regarding the Indian people and the Indian Government.

Question: "What steps do the Soviet Government propose to take to bring about cordial relations between India and China?"

Mr. Kozlov: "I have nothing to add to the statement made by Mr. Khruschev in which he has expressed his opinion clearly."

A correspondent asked if he thought that the atmosphere created by the Prime Minister, Mr. Nehru and President Eisenhower for the success of a 'summit' meeting would be spoiled by China's expansionist tendencies.

Mr. Kozlov: "I have already replied to that question and I have nothing further to add."

Question: "Is it a fact that Mr. Khruschev is on a secret visit to Peking?"

Mr. Kozlov: "I have no information. If you have anything, please pass it on."

Farewell Message:

In a farewell message broadcast on February 5, Marshal Voroshilov declared that the "inviolable friendship" between the peoples of the Soviet Union and India "serves the cause of strengthening peace in South-East Asia and throughout the world."

He said: "May Soviet-Indian friendship, which is deep and vast as the Indian Ocean, high and unselfishly pure as the summits of the Himalayas and strong as the steel smelted at Bhilai, live and prosper for all time."

In his only reference to China, he said: "The friendship between our peoples serves the cause of strengthening peace in South-East Asia and throughout the world. As far back as in 1923, Vladimir Ilyich Lenin wrote that the countries which constituted the bulk of the population of the earth, including India and China, were being drawn into the struggle for their liberation with an unusual speed. This liberation, prophetically predicted by the great Lenin, has come. The talented, freedom-loving Indian people have recently celebrated their glorious 10th anniversary of the enactment of their Constitution and the proclamation of the Republic of India. From the bottom of their hearts, the Soviet people congratulated the great Indian people on their great national holiday and wished the friendly Republic of India new successes and prosperity".

Praising India's progress in the economic field, he said that in the "short period" of ten years since the proclamation of the Indian Republic, the Indian people, working enthusiastically, had achieved considerable successes.

On India's international prestige, he said: "The international prestige of your country is growing from year to year. The Soviet people understand well the legitimate pride of the citizens of the Republic of India in their achievements."

Referring to his stay in India, he said: "Our trip has given us an idea of the considerable successes achieved by the Republic of India during the comparatively short period of its existence and of the friendliness and great hospitality of the Indian people".

He described Bhilai as a "splendid symbol of Soviet-Indian friendship" and praised the oil exploration work in Cambay and the activities in other industrial spheres.

He laid stress on the urgent need for disarmament and said that the Soviet Union had on her part submitted her proposals to achieve it in the quickest possible time.

Joint Communique:

During their stay in New Delhi, Marshal Voroshilov and his party had several conversations with Mr. Nehru and other Indian Ministers and officials on various topics of common interest.

They resulted in a joint *communique* issued by Marshal Voroshilov and Mr. Nehru on February 5.

The following is the text of the *communique*:

"Marshal K. E. Voroshilov, Chairman of the Presidium of the Supreme Soviet, USSR, Mr. F. R. Kozlov, First Vice-Chairman of the Council of Ministers of USSR, Mme. Furtseva, Deputy of the Supreme Soviet, USSR, were in India from January 20 to February 6, 1960 on a goodwill visit at the invitation of Dr. Rajendra Prasad, President of the Republic of India, and the Government of India.

"They were accompanied by Mr. V. V. Kuznetsov, First Deputy Minister of Foreign Affairs, USSR, Mr. N. N. Danilov, Deputy Minister of Culture, USSR, Mr. A. I. Imamov, Minister of Culture of the Tadjik SSR, Mr. V. I. Likhachov, Head of the South-East Asia Division, Ministry of Foreign Affairs, USSR, Mr. V. I. Avilov, Deputy Chief of the Press Department of the Ministry of Foreign Affairs, USSR, and Col. V. Ya. Chekalov.

"During their travels in India, Marshal Voroshilov, Mr. Kozlov and Mme. Furtseva were accompanied by Mr. I. A. Benediktov, Ambassador of USSR in India, Mr. K. D. Malaviya, Minister of Mines and Fuel, and Mr. K. P. S. Menon, Indian Ambassador in USSR.

"The Soviet representatives were given a warm reception by the Indian public in Delhi and in all other places which they visited. These popular demonstrations of welcome and goodwill were an expression of the regard and friendliness of the Indian people towards the people of the Soviet Union and evoked a cordial and generous response from the Soviet visitors. The Soviet guests expressed deep thankfulness and appreciation to the Government of India and the Indian people for their warm and hearty welcome. From their side they were happy to have had the occasion to convey personally to the people and the Government of India the feelings of sincere brotherly friendship which the people and the Government of the Soviet Union have towards them.

"In Delhi, Marshal K. E. Voroshilov, Mr. F. R. Kozlov, Mme. Ye A. Furtseva and others accompanying them were present at the celebrations on the occasion of the Republic Day of India. Thereafter, they made a rapid tour of the country, collectively or in groups. Besides the large cities of Calcutta, Bombay, Madras and Bangalore, their journey took them to many places of interest, including, in particular, Suratgarh, where a large mechanized State farm has been established with the aid of machinery and equipment given as a gift by USSR; Bhilai, where a steel plant built with Soviet co-operation has gone into production; and Cambay, where exploration for oil is going on with Soviet technical assistance with progressively encouraging prospects. In the course of their tour, they also visited community centres and a number of industrial and other developmental projects. They thus had an opportunity of seeing for themselves the results of the great effort that India is making in all fields of economic and social activity to develop her national economy and raise the standard of living of her people as rapidly as possible.

"Marshal Voroshilov, Mr. Kozlov and Mme. Furtseva met and had talks in a friendly, cordial atmosphere with Dr. Rajendra Prasad, President of India, Mr. Jawaharlal Nehru, Prime Minister, and other members of the Government of India. Their talks with Prime Minister Nehru covered matters of mutual interest to the two countries, including major aspects of the current international situation, and touched also on India's development plans, present as well as prospective.

"Both sides expressed their gratification at the development of the relations between India and the Soviet Union in a spirit of goodwill and friendship as a result of their common adherence to the principles of peaceful co-existence and active pursuit of peace. These provide an expanding basis of co-operation between the two countries in the international field in the interest of world peace. The two countries, moreover, are united in their conviction that disputes between nations must be solved by peaceful means alone, and not by recourse to arms.

"Both sides noted with satisfaction the recent trend towards a lessening of international tension and welcomed the agreement reached on the holding of a 'summit' meeting in May next. This meeting and the exchanges of visits by the leaders of the Big Powers have raised high expectations throughout the world. The Indian and the Soviet sides expressed

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

their earnest hope that the forthcoming meeting would result in substantial progress in the solution of the problems facing the world today and thus pave the way for the achievement of further success by co-operative international effort.

"Both sides stressed the importance of disarmament as an essential pre-requisite to a permanent and lasting peace and to the banishment of the fear of war. Through disarmament also lay the path to world prosperity, for the technical skills, the productive effort and the human and material resources released from the manufacture of armaments could be diverted to peaceful purposes—and more specially to the development of countries which have lagged behind in the race towards material progress. Though discussions had been going on for years, little had been accomplished by way of advance towards an international agreement on disarmament, but the prospects seemed more favourable at the present time than ever before. Reference was made in this context to the proposal recently put forward by Mr. N. S. Khruschev for total and universal disarmament ,and the Prime Minister of India acclaimed the proposal as a courageous and far-sighted one which demanded the close attention of all other countries. The Government of India welcomed the latest substantial reduction of the armed forces of the Soviet Union as an important step towards peace.

"Both sides stand for the prohibition of thermo-nuclear weapons and other means of mass destruction. Similarly, they are in favour of a very early agreement between the Great Powers possessing nuclear weapons for an immediate cessation of the tests of these weapons with effective international control, and call upon these and other Powers to abstain voluntarily from carrying out such tests. In this connexion, satisfaction was expressed from the Soviet side that the Government of India showed commendable initiative in presenting the question of the cessation of nuclear tests at the 14th session of the UN General Assembly.

"A review was made of the economic and cultural relations between the two countries. The Trade Agreement concluded in 1959 for a five-year period, resulting in increased commercial exchanges between the two countries, the projects for the establishment of certain new industries through mutual collaboration and the fresh credit recently offered by the Soviet Union of 1,500 million roubles had helped to strengthen the economic relations between India and the Soviet Union. A similar gratifying improvement was also to be found in the sphere of cultural relations. In order, however, further to develop these relations, in accordance with planned and defined ends, a Cultural and Scientific Agreement is being concluded between the two countries.

"Marshal K. E. Voroshilov, the Chairman of the Supreme Soviet, USSR, and Mr. Jawaharlal Nehru, the Prime Minister of India, expressed their pleasure at having been able to meet again after the lapse of almost five years. Marshal Voroshilov, Mr. Kozlov and Mme. Furtseva and Mr. Jawaharlal Nehru had an opportunity to exchange their points of view and to declare the common determination of their two countries to strive ceaselessly for world peace and for better understanding between nations. The visit of Marshal Voroshilov, Mr. Kozlov and Mme. Furtseva and those accompanying them to India, their talks with the members of the Government of India and others, were fruitful and will further promote the understanding and friendship between India and the Soviet Union. Both sides are confident that the friendly relations existing between India and the Soviet Union will continue to strengthen and develop for the benefit of the peoples of both countries and in the interests of peace throughout the world."

Marshal Voroshilov and party left New Delhi on the morning of February 6 for home.

[Prev. ref. 1305:INI:A]

B. **Mr. B. P. Koirala's Visit:** The Prime Minister of Nepal, Mr. B. P. Koirala, accompanied by his wife, Mrs. Sushila Koirala, and the Nepal Home Minister, Mr. Surya Prasad Upadhyaya, arrived in Patna on the forenoon of January 17 on a fortnight's visit to India at the invitation of the Government of India.

From Patna, he went to Bhainsaelotan, Jamshedpur, Bareilly, Khatima, Phoolbagh, Agra, Poona, Khadakvasla, Bangalore and Mysore before arriving in New Delhi on January 24.

At Palam airport in New Delhi, he was received by the Prime Minister, Mr. Nehru, and other Cabinet Ministers.

He told newsmen at the airport: "I am very happy to be here."

From the airport Mr. Koirala drove in an open car with Mr. Nehru to Hyderabad House where he stayed. In another car went Mrs. Koirala and Mrs. Indira Gandhi.

Mr. Koirala and Mr. Upadhyaya called on the President, Dr. R. Prasad, and remained with him for about 25 minutes. Mr. Koirala also paid a visit to the Training Institute for Nepalese officers in New Delhi.

State Banquet:

The same evening (January 24), Mr. Nehru entertained Mr. Koirala at a State banquet.

Speaking at the banquet, Mr. Nehru emphasized the age-old bonds of culture, religion, history and geography between India and Nepal and said that because of this close relationship, it was natural for India to consider any threat to Nepal as a threat to herself, just as any threat to India would be a threat to Nepal, whatever its nature.

He described the relationship between the two countries as something similar to that of two brothers. They might get estranged at times, but the relationship between them was never broken.

He hoped that neither country would do anything that would obstruct the solution of the problems facing them.

He particularly emphasized the need for close co-operation between the two countries for their mutual development and said that he had no doubt that both countries were wedded to a policy of world peace without which no progress was possible.

In his reply Mr. Koirala praised the "ceaseless efforts" of Mr. Nehru for the "establishment and promotion of world peace and freedom of all nations."

He referred with appreciation to the friendly co-operation Nepal had been receiving from India in her development projects and said he was confident that "we will continue to receive similar co-operation from you in our great endeavour to create a new Nepal".

In this context, he also expressed the hope that the extent of co-operation in the technical and economic spheres between the two countries would be further expanded.

He described the friendly relations between India and Nepal as "invincible, indestructible and everlasting" and said that India was always ready to help Nepal in her difficulties.

He was confident that these friendly relations would continue to "further develop and prosper".

The banquet was attended by 37 guests including the Defence Minister, Mr. V. K. Krishna Menon, the Ambassadors of France, Germany, Switzerland, Japan, China, Yugoslavia and Nepal, the High Commissioners of Malaya and Ceylon and the three Service Chiefs.

On January 25, Mr. Koirala went to Jaipur and returned to New Delhi the same evening to attend a dinner given to him by the Chief Justice of India, Mr. B. P. Sinha.

On January 26, he witnessed the Republic Day Parade, attended a lunch given by the Ambassadors accredited to Nepal and resident in New Delhi and was at an "At Home" given by the President of India on the occasion of Republic Day.

Speech To Indian School Of International Studies:

Addressing the Indian School of International Studies in New Delhi on January 27, Mr. Koirala said that Nepal firmly believed that "peaceful negotiation was the only way to settle disputes and ensure goodwill among nations."

He added that the solving of conflicts between nations by discussion and negotiation and strict adherence to the Five Principles of peaceful co-existence alone could lead to world peace. Though Nepal had just come into the international field and never claimed any "major contribution" to world affairs, "our small efforts are there to promote the cause of friendship and peace in the world. In our own humble way, we will continue to contribute our share to the international effort of lessening tensions and building up world peace".

Civic Reception:

Mr. Koirala was given a Civic Reception at the Red Fort by the citizens of Delhi on the afternoon of January 27, at which he was presented with a silver samovar and Mrs. Koirala with a Kashmiri shawl.

Speaking at the Reception, Mr. Nehru declared: "We will not give over the Himalayas as a gift to anyone. The Himalayas are pieces of our hearts and parts of our lives, as in the case of Nepal. We shall always share in your (Nepal's) trials and triumphs."

He added: "The welcome you have received here is not of the type we accord a foreign dignitary. It is something more. It is a welcome to a good and dear friend from a land with which we have age-old ties."

He assured Mr. Koirala that India would continue to offer all possible help to Nepal in her development. But ultimately Nepal herself would have to shoulder her burden just as India, despite the aid she received from other countries, was shouldering her own burden. External help would in no way lessen the weight of that burden.

Nepal and India, he said, were facing the same problems and were trying to solve them in the same way. Their approach on international affairs was also identical. They walked together as allies on the same road. The Himalayas served to cement the ties between the two countries. They were important not from the geographical point alone. The Himalayas were part of India's history, culture and religion. Their ties were of a silken thread, stronger even than ropes or chains.

Mr. Koirala said in his speech that the bonds between Nepal and India were so close that there was no further need to strengthen them. It was an obvious fact known to all. Therefore, he felt that repeated references to those ties were not neces-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

sary. They were close historically, culturally and also through religion. Now they were facing the same problems, and Nepal too was adopting the same means as India in her march ahead.

He said that from the warmth of the welcome he and his party had received in the capital and elsewhere they could sense that it was a welcome given to a member of the family, a home-coming brother. Nepal and India, they felt, were but members of the same family. History proved that both countries had all along maintained the closest of relations. They would be together always, now and in the future.

Mr. Koirala's Banquet To Mr. Nehru:

The same evening (January 27), Mr. Koirala gave a banquet in honour of Mr. Nehru.

In his speech at the banquet, Mr. Koirala traced the close bonds existing between India and Nepal and said: "This special relationship between our two countries of always marching together hand-in-hand for the noble cause of independence and self-dignity is both a historical and cultural reality.

"To me, India is not a new country nor is Delhi a far-away city. I have spent a long time in India. The Indian war of independence was a matter of supreme inspiration to the exploited and oppressed classes of all the countries of the world. The Father of the Indian Nation, Mahatma Gandhi, had given the lofty ideal of independence and self-respect not only to the people of India but to all the people of the entire Asian continent. A large section of the Nepalese youth had given co-operation for the independence of India and I also had the opportunity of association with you all. The independence of India is, therefore, as dear to me as to my Indian friends. For the cause of democracy in my Motherland, Nepal, moral support and inspiration were also obtained from innumerable Indian friends. Hence, this special relationship between our two countries of always marching together hand-in-hand for the noble cause of independence and self-dignity is both a historical and cultural reality. Our two countries have always manifested to the world the unique example of ever-continuing cordial relations subsisting among sovereign and independent nations.

"Today also, in the respective democratic systems of our two countries, our goal and methods of achieving economic development and social justice are not fundamentally different. By the course of history our conditions bear a similar aspect. Any attempt, therefore, to explain or interpret the intimate relationship between brothers or among friends is rather unnatural. Such matters are self-proving and obviously natural.

"For the cause of sovereignty and independence in the past, the Nepalese and the Indian people have always advanced together. Now, in this revolutionary task of creating a new society also, our two countries have got to assist each other. In consideration of the fact that we are lesser-developed nations, mutual goodwill, I am sure, will prove priceless in the development of our respective countries. Your Excellency (Mr. Nehru) has always been a great friend and well-wisher of Nepal. We greatly appreciate your highest regard and respect for our sovereignty and independence and we are convinced that your best wishes will always be there for the promotion of the dignity and respect of Nepal.

"During my present visit to India, I have observed everywhere new activities and a unique spirit of construction. I have seen a new India coming up at a quick pace and this remarkable progress has greatly impressed me."

In his reply, Mr. Nehru said: "It has been our good fortune in India to have friendly relations with all countries. Even sometimes when difficulties have arisen, we have tried to maintain these friendly relations and we have deliberately set before ourselves the policy of being friendly with other countries, even though we might differ from them. There is no other way I believe. At any rate, that is the policy, as you know, which we have adopted.

"While that applies to all countries, I think I can say with some assurance and a great deal of truth that our relations with Nepal have been something rather special, not of my making or anybody's making, but because of history, tradition, geography, cultural contacts and the like and, therefore, inevitably it had to be that India and Nepal should be intensely interested in each other's present and future and should grow ever closer.

"In the course of the last nine or 10 years, many changes have come to Nepal and India. Very soon after we attained our independence and before this new change had come over Nepal, or the beginning of the change, we were anxious to re-assert our friendly relations with Nepal. The then Government of Nepal was of the old type. It was not our concern what Government another country has; that is, we may prefer something or not, but it is entirely that country's concern what methods, what Government it has. And even then, in those days, as most people will know, soon after our independence, we approached the Government of Nepal for a renewal, or renewed Treaty of Friendship, and that Treaty was signed, I forget the exact date, about 10 or 11 years ago.

"A little after that, a change came over Nepal, and the internal structure of Government underwent a considerable change. That process of change continued for some time, and in this case it took a big turn, I cannot say a final turn, but anyhow a major turn, a year or more ago when a new Constitution was adopted by Nepal and His Majesty the King of Nepal promulgated a new Constitution and Elections took place as a result of which the party represented by the Prime Minister obtained a great majority in their Parliament, and naturally the leader of that party, that is the present Prime Minister of Nepal, took up this high office.

"While, as I said, it was not for us to, shall I say, desire changes in another friendly country, that is entirely the business of the people of that country; nevertheless, it is perfectly true that we welcomed this change greatly, because we felt that it was the right thing for Nepal to develop on democratic lines and thereby come nearer to us in our general outlook. And so it has been that we have been close to each other, broadly speaking, in our broad internal outlook and close to each other in our broad external outlook. Whether from the national or international point of view, we have been very largely in agreement and without any effort on the part of either to influence or push the other country. By the very nature of circumstances, our past and present, our outlooks, we have largely marched in step in these national and international affairs. That itself shows how close our mutual interests are, apart from our outlooks; and that is bound to be so in two neighbouring countries like India and Nepal. Therefore, that is an assurance about the future also.

"So, whatever may happen in the future, good fortune or even ill-fortune sometimes, we stand together and share both of them, and in sharing them try to help each other to share the burden and join in celebrating the victories of our internal policies which bring a growing measure of welfare to our respective peoples."

Earlier on January 27, Mr. Koirala and Mr. Nehru had discussions on common problems facing both the countries. These were in continuation of the talks they had on January 26.

Indo-Nepal Friendship Association Meeting:

On January 28, Mr. Koirala addressed the National Conference of the All-India Indo-Nepal Friendship Association at which he declared that his country would always pursue activities which were beneficial to both Nepal and India.

He said that the views of India and Nepal on internal as well as external problems were so close that there was no need to stress the affiliations of the two countries. "Ours are not only friendly relations, but even more intimate and warmer. We have been one culturally, historically and in many other ways. Even more important are the present links, one of which is our determination to progress through democratic means."

Some people in both countries, he said, had doubts regarding the close relations of the two countries because of some misunderstanding. Some sections of the Press were responsible for creating this misunderstanding.

While speaking of his and other Nepalese leaders' association with the Indian freedom movement, Mr. Koirala seemed very moved and stood still for a while in an effort to stop his tears. Unable to proceed further, he ended his speech abruptly and resumed his seat.

Mr. Nehru reciprocated by declaring that the friendship of India and Nepal was as firm as the Himalayas.

He associated himself with Mr. Koirala's view that the past links between the two countries were not enough by themselves if they did not jointly consider the problems before them at present.

Joint Communique:

The same evening (January 28), the Prime Ministers of India and Nepal, issued a joint *communique* re-affirming that India and Nepal "have a vital interest in each other's freedom, integrity, security and progress" and agreeing that the two Governments should maintain close consultations in matters of common interest.

The *communique* announced that at Nepal's request India would provide financial assistance to the extent of Rs. 18 crores to help Nepal's development programmes. Of this sum, Rs. 4 crores would be out of the previous grant of Rs. 10 crores which was not likely to be utilized during Nepal's First Five-Year Plan period.

It also revealed that agreement had been reached on the terms of a new Indo-Nepal Treaty of Trade and Commerce whereby Nepal would manage its foreign exchange account and regulate her foreign trade both of which had so far been interlinked with those of India.

Although the *communique* mentioned only in general terms the discussions between the two Prime Ministers on "the present international situation as it affects the two countries," they were known to have covered comprehensively the developments on the northern borders of Nepal and India.

Mr. Nehru was understood to have been told that while there had been no planned incursions into Nepalese territory by Chinese troops, a propaganda campaign had been unleashed in the frontier tracts highlighting the identity of interests of the Mongoloid peoples living in Nepal, Tibet and China and their coming "liberation" by China. The Chinese troops who did enter Nepalese territory on a few occasions had stated that they had done so by mistake and had readily retraced their steps across the border.

Mr. Nehru, it was learnt, gave an account of the recent developments in Sino-Indian re-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

lations and was said to have indicated that while India was always anxious for a peaceful settlement of the disputes which had arisen, he was awaiting some concrete indication by the Chinese that they were also like-minded.

In the context of these exchange of views, informed circles attached great significance to the emphasis in the *communique* that India and Nepal had a "vital interest in each other's freedom, integrity and security." This reference was also said to be in accordance with the Indo-Nepalese Treaty of Friendship.

The new financial aid which India had now pledged would be used, it was learnt, for the general development of Nepal. Apart from the expenditure of three to four crores of rupees on the East Kosi Canal project for irrigation purposes, the new grant would assist in developing road communications, small industries and the expansion of health services and primary education in Nepal.

The Agreement reached on the revision of the Trade Treaty was also considered to be of political importance.

The following is the text of the joint *communique*:

"At the invitation of the Government of India, His Excellency Mr. B. P. Koirala, Prime Minister of Nepal, accompanied by Mrs. Sushila Koirala, His Excellency Mr. Surya Prasad Upadhyaya, Home Minister, and senior officials of His Majesty's Government of Nepal, have been visiting India from January 17 and will go back to Khatmandu on January 31, 1960.

"During their tour, they have visited industrial establishments and development projects, the National Defence Academy and many other places in India. They have also been present in New Delhi on the occasion of the celebrations of the 10th anniversary of the Republic of India. They have been welcomed everywhere with popular enthusiasm, reflecting the close friendship and neighbourly relations and the community of culture and outlook subsisting between Nepal and India.

"The Prime Minister and the Home Minister of Nepal have had frank and cordial discussions with the Prime Minister and other Ministers of the Government of India. The discussions covered a wide range of subjects, including the present international situation as it affects the two countries, economic and other matters affording opportunities for co-operation between His Majesty's Government of Nepal and the Government of India.

"These discussions have revealed afresh a similarity of approach to international problems by the two Governments and their desire to co-operate with each other in regard to them. The two Governments attach great importance to the furtherance of peace in the world and are determined to work to this end.

"They trust that the efforts being now made by the Great Powers for the lessening of world tensions and a settlement of international conflicts through peaceful methods will lead to success.

"The two Prime Ministers recognized that Nepal and India have a vital interest in each other's freedom, integrity, security and progress and agreed that the two Governments should maintain close consultations in matters of common interest.

"The Prime Minister of India assured the Prime Minister of Nepal of the Government of India's sympathetic interest in the plans of His Majesty's Government for the social and economic regeneration of Nepal by democratic means. The two Governments are already co-operating in schemes of economic development and they propose to continue and accelerate this co-operation.

"At the request of His Majesty's Government, the Government of India has readily agreed to afford financial assistance for Nepal's development programme to the extent of Rs. 14 crores. The Government of India has also undertaken to construct the East Kosi (Chatra) Canal at a cost of Rs. 3 to 4 crores.

"Thus, the Government of India has expressed its readiness to assist the development programmes of Nepal to the extent of Rs. 18 crores. This amount includes Rs. 4 crores out of the previous grant, which is not likely to be spent during the First Plan period.

"It was further agreed that adequate arrangements should be made in order to co-ordinate and expedite the execution of projects financed under these programmes.

"Advantage was taken of the presence of the Prime Minister and the Home Minister of Nepal to have a broad discussion on the terms of a new Treaty to replace the existing Treaty of Trade and Commerce. The two Governments agreed that the new Treaty should provide for the separation of Nepal's foreign exchange account and the regulation by the Government of Nepal of its foreign trade.

"In view of the close connexion between the economies of India and Nepal, the two Governments agreed to work out details which would facilitate the expansion of Nepal's trade with India and other countries and promote co-operation between India and Nepal in the field of economic development."

On the evening of January 28, Mr. Koirala and party left for Simla.

News Conference:

Addressing a news conference in Chandigarh on January 31 before leaving for Khatmandu, Mr. Koirala said that he could never imagine a war between India and China and hoped that the border dispute between the two countries would be resolved soon.

He said he had based his hope on the fact that the international climate had changed for the better and tension was "declining rapidly." He did not envisage a joint defence between India and Nepal as military alliances were "worse than useless", especially between these two countries which were such great friends. A joint defence between India and Nepal was absolutely unnecessary.

Asked what contribution Nepal would make for resolving the Sino-Indian border dispute, he said: "We do not want to do anything that will create any difficulties for our neighbours (China and India)."

Q: "The recent joint *communique* had said that both India and Nepal were vitally interested in each other's freedom, integrity and security and would maintain close contact on matters of common interest. Will you kindly elucidate what contribution you propose to make in case of an attack on India from China?"

A: "You are thinking in terms of war, I can never imagine a war between India and China. There will be no war."

Q: "The joint *communique* had said that there was a similarity of approach between India and Nepal to international problems and they desired to co-operate with each other in this respect. Could you explain this point?"

A: "We adhere to the policy of neutrality enunciated by Mr. Nehru. In the context of the Sino-Indian dispute, we are friendly to both the countries. We want an amicable settlement between the two."

Q: "Has China been in touch with the Nepal Government through diplomatic channel sounding their view-point on the Sino-Indian dispute?"

A: "No."

Nepal's Home Minister, Mr. S. P. Upadhyaya, intervening, said: "China will not try to embarrass us."

Mr. Koirala said that the question of Asian countries sitting in a conference on the Sino-Indian dispute did not arise. "We believe that the question can be settled amicably between India and China and Mr. Nehru is quite competent to settle it."

He added: "It is in our own interest that this dispute should be settled amicably and through negotiations. It does not help if the area of dispute is enlarged and other nations get themselves involved and start sitting in judgment."

Q: "Don't you think that the maintenance of the integrity of the Himalayas is a matter of common concern between India and Nepal?"

Mr. S. P. Upadhyaya, intervening, said: "Nobody is going to cultivate the Himalayas."

Asked if he had any information about the movement of Chinese troops on the other side of the Nepal border, Mr. Koirala said: "We do not know what is happening across the border. No incursion has taken place on the Nepal border."

Answering a question about communist influence in Nepal, Mr. Koirala said that the communists had four representatives in Parliament. "Our approach to the communists is the same as that of Mr. Nehru's Government in India. We will tolerate them so long as they adopt constitutional methods for propagating their ideology, but they will not be allowed to adopt violent methods."

Q: "Do you think that aggression against India has taken place?"

A: "I do not know. We, however, view with concern that our two big neighbours should fall out. There are differences between the two countries (India and China) about certain areas. But they are of a minor nature. Nepal does not apprehend any danger from China. We have no border dispute. But, we have some minor border differences dating back to 60 years. These will be resolved soon."

Farewell Message:

In a farewell recorded message broadcast by All-India Radio on January 30, Mr. B. P. Koirala said that the "noble gesture" of the Indian Government in providing further economic aid to Nepal and full co-operation to promote and develop Nepal's trade with other countries (contained in the joint *communique*) were "unique examples of India's affection and deep regard for the progress and prosperity of Nepal."

He added that such "generous help and assistance," for which he was very grateful to Mr. Nehru and the Government of India, "will definitely prove immensely helpful to us in our great endeavour to create a new Nepal on democratic lines similar to yours."

[The Government of India has agreed to give financial assistance for Nepal's development programme to the extent of Rs. 14 crores.]

Describing the bond of friendship between the peoples of Nepal and India as "indissoluble", he said: "History tells us that we have faced countless difficulties and yet remained greater friends. Today also, our co-operation in various spheres is increasing and the similarity in our democratic and socialistic aims and objects to regenerate our respective countries is bringing us still closer to each other. In the process of the development of our friendly relations, it is my hope that this visit of mine will further promote and strengthen the existing friendship between our two countries."

On January 31, Mr. Koirala left Chandigarh for Khatmandu.

C. **Tibetans Ordained Monks:** On January 19, about 283 Tibetans (who had fled from Tibet after the revolt) were ordained monks and administered the vow of celibacy in the 1,700-year-old Mahabodhi temple at Bodh Gaya. Nineteen of them were below 10 years of age.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The new entrants to monkhood entered the temple in a procession led by Tibetan lamas.

They went round the temple and then sat under the sacred Mahabodhi tree under which the Buddha attained Enlightenment 2,500 years ago.

After they were ordained, the new monks offered milk, rice, fruit and flowers to the Mahabodhi tree.

D. Modernization Of Small-Scale Industries—Japanese Team's Report: A team of five Japanese experts, which visited India in 1959 to study small-scale industrial enterprises in the country, led by Mr. Teruhiko Iwatake, has submitted its report to the Government of India recommending systematic mechanization of small-scale industries and expansion of technical, financial and other facilities for them.

It expressed the view that the Government's policy for the development of small-scale industries should be one of "guidance and encouragement" rather than one of "protection and fostering."

It observed that the Government of India's policy in regard to the development of small-scale industries had been worked out with thoroughness and that the steps taken by it compared favourably with those taken by the Japanese Government. The impact of the measures taken, however, had yet to make itself felt.

With regard to financial assistance, it expressed the view that despite the various steps taken by the Government of India, a cautious and conservative policy was still being followed by its financial agencies and private banks.

The steps suggested by the delegation to overcome the handicaps experienced by small-scale industries included:

(a) Adoption of a credit guarantee system whereby a credit guarantee fund under each State Financial Corporation should be created for guaranteeing the obligations of small-scale units to financing institutions;

(b) Creation of a credit insurance system whereby a credit insurance fund mainly contributed by the Central Government should be established in the Reserve Bank of India. Under this scheme, the sole insurer of the credit insurance scheme would be the credit guarantee fund and the scheme would become applicable only when the credit guarantee fund, after re-paying the money on behalf of the borrower, cannot collect it from him;

(c) Establishment of a State co-operative bank or apex co-operative bank in each State for providing finance to small-scale industrial co-operatives;

(d) Routing of Government loans through State Financial Corporations; and

(e) Utilization of the branch offices of the State Bank of India as agencies of the State Financial Corporations.

The delegation praised the industrial estates scheme as unique and observed that the estates had an important role to play not only in the promotion of specialized industries but also in the decentralization of industries and encouragement of local ones.

It also recommended the strengthening of the National Small Industries Corporation and suggested the establishment of "State Small Industries Corporations" in each State which would deal with the hire-purchase of indigenous machinery, purchase of stores by State Government departments and running of raw material depots for the benefit of small-scale units, simplification and liberalization of the hire-purchase procedure and increase in the number of items now purchased by some departments of the Government exclusively from small-scale units and their extension to departments like the Railways, Defence and Printing.

E. Steel Supplies During Third And Fourth Plans—NCAER Report: The National Council of Applied Economic Research, which conducted a study of the steel demand in the country on behalf of the Council of Scientific and Industrial Research, in its report published on February 3, said that at no time during the Third Five-Year Plan period would there be a likelihood of an excess of supply of steel over the requirements in the country.

The main object of the Study was to estimate the total demand for steel by the end of the Second, Third and Fourth Plan periods. An Expert Committee, consisting of Dr. P. S. Lokanathan (chairman) and representatives of the Ministries of Steel, Commerce and Industry and the main steel producers was set up by the Government of India to assist the Council in undertaking the Study.

The Council estimated the requirements of finished steel in the country at the end of the Second, Third and Fourth Plan periods at 3.6, 7.2 and 12.9 million tons respectively.

[That is about 4.8, 9.6 and 17.1 million tons of ingots respectively].

Although the Second Plan target of finished steel was 4.6 million tons, it said, the actual production by the end of the period, after taking into account the observed lag in the scheduled programme of the primary producers, might come up to about 2.6 million tons only.

Thus, the indigenous supply of steel as a whole, was likely to fall short of the requirements in 1960-61 by about one million tons. This gap would have to be met mainly by imports. The shortage would generally be more in respect of sheets, bars and rods, tin plates, wire and wire products and tool and alloy steel.

The production of finished steel at the existing plants might come up to the full capacity —4.6 million tons—within the first or second year of the Third Plan period. But, the requirements of steel by that time would go up to about five million tons. The gap would have to be filled by the expansion of the existing units or installation of new ones.

It felt that by the time the extensions were completed or the proposed fourth steel plant was installed and finished steel was made available to consumers by the end of the Third Plan, the requirements would have again gone up to 7.2 million tons. Thus, at no time during the Third Plan period was there likely to be an excess of supply over the requirements of steel.

It assumed that the capacity of finished steel production would go up by the end of the Fourth Plan period to 12.8 million tons by a further expansion of existing plants in the public and private sectors.

If this programme of expansion was completed by the end of the Fourth Plan period, there was likely to be a balance between supply and demand. But, judging from the experience of the Second Plan, it was perhaps more realistic to assume that at no time during the Third and Fourth Plan periods was there a likelihood of a deficiency in the demand for steel by various sectors in the country.

After analysing the various categories of steel that would be required by different industries and sectors, it said that bars and rods were the most important ones.

In drawing up the expansion programme of the existing plants or for establishing new units, it advised the Government to devote more attention to the development of greater capacities for sheets, plates, skelp, special steel and bars and rods.

[Prev. ref. 2466:INI:F, 2519:INI:B]

F. Kerala Police Re-organization Committee's Report: The Police Re-organization Committee, appointed by the former communist Government of Kerala, submitted its report to the State Government in Trivandrum on January 30.

In it, the Committee declared that "it is not possible completely to eschew the use of fire-arms (by police) in dispersing mobs in cases where other forms of force have proved ineffective."

The Committee suggested that fire-arms should not be used for dispersing an unlawful assembly unless its action caused serious damage to public or private property or the crowd was armed with deadly weapons and there was clear and imminent danger of those weapons being used.

The use of fire-arms, in its view, could not also be avoided if there were two contending groups who adopted such an aggressive attitude to each other that a riot was inevitable if they were not immediately dispersed.

At the same time, it recommended that the police detailed for duties in connexion with the prevention of public disorder should be armed only with .410 bore muskets as these were less deadly than .303 rifles.

Where the use of fire-arms resulted in loss of life, it recommended that a judicial inquiry, if possible by a High Court judge, should be instituted.

On the control of large assemblies by police, it expressed the view that greater use should be made of mounted police. In its view, it was not necessary to make special provision for the banning of the carrying of sticks or other weapons in processions as the existing provisions in law were adequate to enable preventive action to be taken where feelings ran high and clashes were likely to occur.

Picketing by lying down should be handled firmly by arrests and removal. Kid-glove handling of such situations was looked upon as weakness and induced repetition of violations of law.

It was not in favour of the use of coloured water or water under pressure for dispersal of unlawful assemblies. But, the use of tear-gas was a well-known and effective method of mob dispersal.

It would be possible to disperse most unlawful assemblies by a cane-charge if tear-gas was not effective. The *lathi* was a powerful weapon and should be resorted to only if a cane-charge proved ineffective and the use of greater force was indicated.

The Committee was constituted on January 1, 1959, with Mr. N. C. Chatterjee, a senior advocate of the Supreme Court and Vice-President of the Supreme Court Bar Association, as Chairman, Mr. S. Mohan Kumaramangalam, an advocate of the Supreme Court, Mr. S. Guruswamy, President of the All-India Railwaymen's Federation, and Mr. P. N. Krishna Pillai, a former Labour Commissioner of Kerala, as members, and Mr. M. Krishna Menon, Inspector-General of Police, Kerala, as member-Secretary.

The Committee had been asked, among other things, to report as to whether the use of fire-arms by the police should be totally excluded and, if not, the circumstances under which it should be allowed.

[Prev. ref. 2468:INI:N]

G. Bharatiya Jan Sangh Session: Presiding over the eighth annual session of the Bharatiya Jan Sangh

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

in Nagpur on January 23, Mr. Pitamber Das called for a "firm honourable and realistic China policy" and asked the Government to serve an "ultimatum" on China to quit Indian territory.

He said that the Government had "completely failed" to discharge its responsibilities in regard to Chinese aggression. The nation's self-interest and honour demanded an early and effective action to free the Indian soil of Chinese occupation. If the Chinese failed to quit Indian territory within a fixed time "all necessary steps should be taken to eject them from the occupied areas."

He emphasized the need for a rapid improvement and intensification of border arrangements in respect of defence, transport and communications.

Urging the Prime Minister, Mr. Nehru, to issue an appeal to the nation over "this crucial issue", he said: "Let the Prime Minister give the call and I am sure the nation will respond to a man. There must be no more vacillating talk, and a plan for action must be got ready."

He, however, approved Mr. Nehru's non-alignment policy which, in the context of the present international situation, was best suited to India's interests. The need to make India powerful and mighty could not be over-emphasized because the policy of non-alignment lent urgency and force to this need.

He blamed the Congress Government for creating "the Muslim communalism" and keeping it alive.

The Congress, he pointed out, was still following in the footsteps of its predecessors by adhering to the policy of "divide and rule." He alleged that the organization was utilizing Indian Muslims as "pawns in its game of political chess."

The session unanimously passed a resolution on international affairs approving the Government's non-alignment policy.

The resolution, however, emphasized that India should keep out of all "quarrels" which had no direct bearing on her wide national interests.

It also unanimously passed a resolution on the economic situation, which criticised State trading in food grains and the creation of "unnatural food zones."

New Working Committee:

On February 8, Mr. Pitamber Das announced the new Working Committee of Jan Sangh.

The former President, Mr. D. P. Ghosh and Mr. U. L. Patil MP would be Vice-Presidents and Mr. Deendayal Upadhyaya would be General Secretary.

The three Secretaries were: Mr. Jagannath Rao Joshi, Mr. A. B. Vajpayee MP and Mr. Sunder Singh Bhandari. Mr. Keshab Chandra would be Treasurer.

Mr. Balraj Madhok and Mr. Nana Deshmukh were named Secretaries of the North and East zones respectively. Mr. J. P. Mathur would be Office Secretary.

The members of the Working Committee were: Mr. Prem Nath Dogra, Acharya Ram Dev, Mr. Krishan Lal, Mr. Yagya Dutt Sharma, Mr. Guru Datta Vaidya, Dr. Mahavir, Mr. Rajkumar, Mr. Thakur Prasad, Mr. Haripad Bharati, Mr. A. Rama Rao, Mr. M. A. Venkata Rao, Mr. V. Rajagopalacharya, Mr. N. Narain Menon, Mr. Bachraj Vyas, Mr. U. M. Trivedi, Mr. G. K. Kapur, Mr. H. P. Dandya and Mr. Bhairon Singh Shokhowat.

H. **Seamless Tube Plant Opened:** The Central Finance Minister, Mr. Morarji Desai opened the seamless tube plant, the first of its kind, in the country built at a cost of Rs. 3 crores, in Jamshedpur on January 19.

The plant represents the third and the final phase of the Rs. 8-crore tube project, jointly undertaken by British and Indian interests—Stewart and Lloyds Limited and Tata Steel.

With the addition of the seamless plant, the tube works at Jamshedpur have now a capacity of 140,000 tons of steel tubes per year.

(*The Statesman*, Calcutta)

I. **New AIR Transmitter:** A new 100 kw medium-wave transmitter was put into commission near New Delhi on January 31. It would operate on 370.4 metres or 810 kcs.

The transmitter replaced the existing 10 kw medium-wave transmitter and would carry the programmes previously broadcast on channel "A" of the Delhi Station of AIR.

The rural programmes, being broadcast on the existing 10 kw medium-wave transmitter, would continue to be broadcast as at present on 338.6 metres but would gradually be shifted to the new transmitter.

An interesting feature of the new transmitter is the automatic robot monitor which will give an alarm when the performance quality of the equipment falls below a predetermined standard. It is housed in a commodious building near Sangli village.

(*The Times of India*, New Delhi)

[Prev. ref. 3121:INI:F]

J. **Nawab Of Bhopal Dead:** The Nawab of Bhopal died in Bhopal on February 4. He was 65.

The Nawab had been ailing for a week after he had a "moderately severe" attack of coronary thrombosis. Later, he had a congestion of the lungs.

He was buried the same evening.

The Nawab came to rule over the most important of the Muslim principalities of India next to Hyderabad on the retirement of his mother, Sultana Jehan Begum. The youngest of three sons, he graduated from the Mohammedan Anglo-Oriental College (now Muslim University), Aligarh. He took active interest in public life of pre-independent India. Between 1916 and 1922 he was Chief Secretary of Jehan Begum's Government and, for the next four years, served as Member for Law, Justice and Finance.

In 1931-32 and again from 1944 to 1947, he was Chancellor of the Chamber of Indian Princes. He was a prominent figure in Princes' politics before Independence and was among those most insistent on all questions of paramountcy remaining with the Crown.

During World War II, he became an Honorary Vice-Marshal of the Royal Air Force. After Independence, he led more or less a retired life but continued to take an active interest in sports and games. Polo interested him most and he was the founder and organizer of cycle polo in India. He had a vast game reserve in his private *jagir*.

(*The Hindustan Times*, New Delhi)

INDONESIA

A. **Foreign Aid Prospects:** Speaking to a housewives' delegation in Djakarta on January 30, President Sukarno announced that USA, the Soviet Union and China were all ready to give credits to Indonesia.

He was quoted as saying: "Last night (January 29), the First Minister (Dr. Djuanda) told me that USA was ready to extend an additional $50 million credit to Indonesia. Were it not for our increasing solvency, do you think USA would be ready to extend additional credits to us?"

He went on to say that when he visited Moscow and Peking, President Voroshilov and Mr. Mao Tse-tung both told him: "Just say how much credit Indonesia needs. We'll supply it."

The delegation had gone to him to complain about rising prices.

Living costs have been rocketing in Indonesia in the past six weeks, with a rush on luxury goods, foreign money and a general decline in the value of the rupiah.

The Government's answer had been an announcement that price controls would be imposed, and a strong warning to hoarding shop-keepers and other "economic offenders given."

Dr. Sukarno ordered all housewives to report instances of traders hoarding, or raising prices, and he told the delegation that Indonesia was actually becoming more solvent.

(*The Statesman*, Calcutta)

[Prev. ref. 2789:IND:A and C]

B. **Purchase Of Yugoslav Ships:** It was reported in Djakarta on January 22 that Indonesia had entered into a contract with Yugoslavia for the purchase of ten ships.

According to the reports, Yugoslavia would supply the ships in three years.

Indonesian payment would be made in instalments over a period of eight years.

(*The Straits Times*, Singapore)

[Prev. ref. 2702:IND:D]

JAPAN

A. **New Party Inaugurated:** The new Party formed by dissident Socialists (see page 2974) was formally inaugurated in Tokyo on January 24. Known as Minshu Shakai-to (Democratic Party), it would have 53 members in Parliament.

The dissidents, led by Mr. Suehio Nishio (68), an advocate of parliamentary socialism, left the Leftist-dominated Japanese Socialist Party in October, 1959. They charged that the Party had repeatedly strayed away from democratic procedure by resorting to violence in the streets and in Parliament and by boycotting Parliament debates.

Violence and boycotting of Parliament reached a feverish pitch during debates on revision of the Japan-US Mutual Security Pact which was signed on January 19 by the Prime Minister, Mr. Nobusuke Kishi, in Washington. It now awaits Parliament's ratification.

The emergence of the new Party marked the end of the two-party system in Japan. The system had lasted four years and three months after the old "Rightists and Leftists" had merged into the Japanese Socialist Party late in 1955 and major conservative groups formed the Liberal-Democratic Party.

The subsequent split reduced the strength of the Socialist Party to less than one-third needed to block constitutional amendments. The Leftist Socialists now have 128 in the Lower House of 467 seats and 68 in the Upper House of 250 seats.

B. **Lead In Ship-building:** *Lloyd's Register* in London showed on January 30 that Japan had retained the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

lead she had in world ship-building since 1956 by launching 1,715,000 gross tons of shipping in 1959.

Britain re-gained second place with 1,365,000 gross tons, replacing West Germany with 1,202,000 gross tons.

At the end of 1959, Britain had more vessels under construction—276 ships totalling 2,032,600 tons—than any other nation.

Japan had 1,207,050 tons under construction at the same time and West Germany 915,649 tons.

The total tonnage under construction in the world for export was 3,643,802 tons, of which 23.7 per cent was being built in Japan, 20.3 per cent in West Germany, 13.7 per cent in Sweden, 7.1 per cent in Britain and 6.5 per cent in the Netherlands.

Japan had 863,380 tons under construction for export, West Germany 740,533 tons and Sweden 499,500 tons.

[Prev. ref. 2576:JAP:A]

NEPAL

A. **Chinese Troop Concentration On Border Alleged:** Mr. Shrishedra Sharma, General Secretary of the Nepali Congress, told newsmen in Khatmandu on January 2, 1960 that the Nepali Congress had warned the Government to be careful of communist intentions.

He added: "Suppression of Tibet by the Chinese is no less deprecable than the suppression of Hungary. China is a country which does not believe in democracy. The huge concentration of Chinese troops close to Nepal's border is not unintentional, China is out to impose her will on others. Nepal must be careful of Chinese intentions.

"It is a communist strategy to organize a 'fifth column' in a country which the communists plan to attack. It is quite possible that Tibetan refugees, now entering Nepal, have many Chinese intelligent agents."

He alleged that Dr. K. I. Singh, a former Premier, was now an "exposed communist."

The Home Minister, Mr. S. P. Upadhyaya, was asked if the Government was informed about the presence of Chinese troops along the border, and he replied: "A large number of Chinese troops are reported to be on the other side of the border in Tibet."

He added: "We believe that China will respect our territorial sovereignty and will not enter Nepal. Nepal has some old border disputes with China to discuss which a Minister recently visited Peking and asked the Chinese Government to define the border scientifically."

He admitted that there was some progress in the negotiations for a solution of the border dispute with China.

PAKISTAN

A. **Khan Of Mamdot Served Notice Under Elective Bodies Disqualification Order:** The West Pakistan EBDO Tribunal served its first notice on Khan Iftikhar Hussain Khan of Mamdot, a former Revenue Minister of West Pakistan, on January 24.

The notice, containing 12 charges of maladministration and showing favour for political considerations, called upon the Khan of Mamdot to appear before the Tribunal on February 16 and to explain why he should not be held guilty of the charges and disqualified from public life.

The Tribunal also gave an option to the Khan of Mamdot to voluntarily retire from political life till December 31, 1966. If he decided on voluntary retirement, the decision should be communicated to the Tribunal within seven days from January 24.

The Khan of Mamdot had been accused of granting land and *taccavi* loans and staying of recovery of land revenue from members of the defunct Provincial Assembly belonging to the former Republican Party.

The notice further informed the Khan of Mamdot that the Enquiry Committee had more material against him which was being investigated.

Later, the Khan of Mamdot informed the Tribunal of his decision to retire from public life up to 1966.

B. **Opium-Smoking Banned In West Pakistan:** The manufacture, possession or smoking of opium has been prohibited in West Pakistan through an Ordinance promulgated by the West Pakistan Government on January 20.

The Ordinance applied to the whole of West Pakistan except the Federal Capital and the Special Areas.

The Ordinance also prohibited the possession of any implement or apparatus used or capable of being used exclusively for the manufacture of opium or any pipe or utensil for smoking opium.

The penalty for contravention of the Ordinance would be simple or rigorous imprisonment up to two years or fine up to Rs. 2,500 or both.

(*Dawn*, Karachi)

PHILIPPINES

A. **State Of The Nation Message:** In his State of the Nation message to Congress on its opening session on January 26, President Carlos P. Garcia called for the enactment of measures to strengthen the Administration's "Filipino First" policy.

He described this policy as "a national effort to obtain for Filipinos a major and dominant participation in their own national economy."

He said, however, that the Philippines would continue to welcome foreign capital "willing to collaborate with us in the exploitation of our vast natural resources preferably on a joint venture basis."

He announced a programme to develop new foreign markets for Filipino products.

To bring about a diversified market, he said, he had directed the resumption and conclusion of Trade Agreements with West Germany, Japan and other countries. Philippines was also exploring the possibilities of expanding trade with Australia, Israel, New Zealand, Pakistan, South Korea, Spain, Formosa and South Viet-Nam.

He added: "We should explore the possibility of price adjustments on our products to make them more competitive with similar products of other countries."

Regarding the country's economic situation, he added, stabilizing economic measures taken last year (1959) had prevented forced devaluation. It was not necessary at present to increase taxes despite the mounting budgetary problem facing the country.

On foreign relations, he said, the Philippines was pursuing a policy of closer ties with members of the "free world" and particularly with her Asian neighbours.

To this end, he had visited South Viet-Nam in 1959 and would pay a similar visit to Malaya this year (1960).

Among the achievements of his administration in the past year, he cited bigger surpluses of rice and corn and a favourable trade balance for the first time in post-war years.

He recommended: (1) the take-over of Government corporations by private enterprise where feasible; (2) amendment of the Japanese reparations law to prohibit private businessmen from negotiating directly with Japanese suppliers and thus preventing overpricing of goods, and (3) the creation of a "graft busting commission" with full power to investigate and prosecute all cases of graft and corruption in Government offices.

[Prev. ref. 2527:PHI:A]

B. **Scholarships Offer:** Speaking at the closing session of a Regional Conference of National Commissions of UNESCO in Manila on January 23, the Chairman of the Philippines National Science Development Board, Dr. Paulino Garcia, offered scholarship grants to Asians for nuclear research at the Philippines Atom Centre scheduled for completion next year (1961).

He said that the offer was in keeping with UNESCO's principle of scientific co-operation.

The terms of the scholarships that would be available under the Philippine offer were not immediately known.

(*The Manila Times*)

SINGAPORE

A. **Directive To Police Not To Interfere In Labour Disputes:** The Minister for Home Affairs, Mr. Ong Pan Boon, announced in Singapore on January 15 that the police had been instructed not to interfere in labour disputes without the presence of an official from the Labour Department.

In a statement, he said: "Some unscrupulous employers are trying to get the police involved in disputes with a view to creating ill-will between the workers and police."

He cited a recent case in which an employer had invited a Union official for discussion at his office and then "surreptitiously rang up the police" alleging intimidation by the Union official.

The police, he added, still had the authority to take "precautionary measures" if there was a threat of physical violence. "The Government is prepared to deal sternly with employers who, through malice and mischief, seek to turn the workers against the police."

(*The Straits Times*, Singapore)

THAILAND

A. **ECAFE Discussion On Inland Transport:** The ECAFE Working Party on Co-ordination of Transport met in Bangkok from November 26

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

to December 2, 1959. It included representatives of 15 member-countries.

Its final report recommended that all forms of inland transport in Asia —roads, railways, canal, river or inland shipping—should be brought, wherever possible, under the control of a single independent national authority established by statute.

It stated that the existing transport shortages in Asia were likely to be seriously aggravated by demands of economic development. In these conditions, it was necessary to evolve a "comprehensive and effective" policy of co-ordinated development of transport in the ECAFE, where, it said, there was generally a shortage of transport and, at the same time, there was a demand for a rapid expansion to meet the requirements of economic development. The problem was not so much to co-ordinate the existing facilities but rather to promote co-ordinated investment and development.

Therefore, the Working Party expressed the view that co-ordination could be more effective if it was carried out where possible through a single regulatory authority. This authority should be given power to authorize the expansion, curtailment or abandonment of services.

It should also be required to regulate all forms of transport to preserve healthy competition. Forms of transport other than railways should, where necessary, be encouraged to organize themselves in larger units.

It suggested that countries with federal Governments should provide for transport co-ordination at both national and state levels.

B. **Printed Matter From Cambodia Banned:** The *Bangkok World* reported on January 21 that the Government had banned the import of all printed matter from Cambodia because of what was described as "continued Press attacks on Thailand."

The newspaper said that the Deputy Director-General of the Police Department, Lieut.-General Prasert Ruchirawong, had issued the ban to police units on January 17.

A month earlier, the Government had banned the import of the Cambodian Government-subsidized newspaper *Le Nationaliste* which the Cambodians contended had been merely replying to Thai charges.

(*The Nation*, Rangoon)

[Prev. ref. 3115:CAM:A]

ASIA OUTSIDE ASIA

A. **IDA Articles Of Agreement:** The Articles of Agreement of the International Development Association (IDA), which would give a wide variety of loans on a wide variety of terms, were issued in Washington on January 20.

Most of the loans would be soft but IDA would not be a soft lender. This distinction was assured as IDA would be administered by the World Bank.

The initial resources proposed for IDA are $1,000 million. This amount is dependent on all the members of the World Bank joining it. As IDA subscription will be roughly proportionate to the subscriptions to the Bank's capital, USA will be the largest shareholder with $320.29 million, while Britain will be the next largest with $131.14 million.

A unique feature of IDA is that member-countries have been divided into two groups for purposes of subscription of funds which will be payable over a five-year period. Countries in both groups will subscribe 10 per cent of their initial subscriptions in gold or freely convertible currencies.

Different provisions are made for the two groups with regard to the remaining 90 per cent of their initial subscriptions. Seventeen industrialized member-countries who fall in the first group will pay their 90 per cent in five equal instalments in gold or freely convertible currencies. The second group comprising 51 less-developed member-countries will pay their 90 per cent in their national currencies which IDA will not be free to convert into other currencies or use to finance exports from the country concerned without its consent.

Thus IDA's capital amounting to $763.07 million will come from the prosperous 17 member-countries, while the balance will come from 51 poor member-countries.

IDA's financing is to take the form of loans. Their form and terms will be such as IDA "may deem appropriate." This gives IDA much flexibility. It can give loans on easy terms of repayment with long maturities or long periods of grace or both. It can give loans wholly or partly repayable in the local currency free of interest or at a low rate of interest.

IDA loans will be for high development priorities whether or not the project is revenue producing or directly productive.

These Articles will remain open for signature by the original members of the Bank until December 31, 1960. The earliest date on which IDA may come into being is September 15, 1960.

A Washington message dated January 31 said that after six months' work, the International Bank for Reconstruction and Development (World Bank) had submitted to its 68 member-countries for ratification the Charter of the new organization for aid to under-developed countries—the International Development Association (IDA).

The IDA Charter was prepared in Washington by the Bank's Executive Directors in accordance with a decision taken in September, 1939 at the annual conference of the World Bank and the International Monetary Fund.

If the Charter is ratified by all the member-countries, IDA will have at its disposal convertible funds totalling $787,000,000 for five years and could lend to under-developed countries an average of 150 to 160 million dollars a year.

Representatives of the under-developed countries in the International Bank have expressed the opinion that IDA funds were relatively small when compared with the enormous capital which exists in the world.

It was stated that India alone was seeking $1,000,000,000 to finance her Third Five-Year Plan.

World Bank circles expressed the hope that the role of IDA would expand.

The Charter provides for a possible revision before the end of the first five-year period.

It provides for the Association coming into existence on September 15, 1960, before the next annual meeting of the World Bank and International Monetary Fund.

However, before the new organization comes into being, the Charter must be ratified by the countries providing 65 per cent of the contribution.

The member-countries have until December, 31, 1960 to ratify the Charter, but a supplementary time-limit to June 30, 1961 has also been provided for.

[Prev. ref. 2967:AOA:A]

B. **ITU Adopts New Radio Rules:** Approval of a new set of international radio regulations to take effect from May 1, 1961 and the adoption of a new Convention for the International Tele-communications Union (ITU), effective from January 1, 1961, marked the end of two conferences held by the Union in Geneva during the last four months of 1959.

Both the new documents, which, in effect, constitute international Treaties, were signed by the representatives of 89 countries.

The radio regulations were adopted by ITU's Administrative Radio Conference, which met under the chairmanship of Mr. Charles J. Acton of Canada.

The Conference overhauled the existing radio frequencies apportioned in 1947 in order to allow for the extraordinary expansion of a number of services. These included new requirements in such fields as radio-astronomy and space communications.

As a result of the work of the Conference, a small panel of specially chosen experts would be set up to investigate ways of reducing congestion in heavily used frequency bands.

ITU's Standing International Radio Consultative Committee would meanwhile continue its research into radio communications with and between artificial satellites and space vehicles. In 1963, a special conference would be held to consider the problem of space communications with an eye to the peaceful uses of outer space.

The new ITU Convention amended the one adopted in Buenos Aires in 1952. It was approved by the Union's Plenipotentiary Conference, its governing legislative body. The Chairman of this Conference was Mr. J.D.H. van der Toorn of the Netherlands.

Among other things, the Plenipotentiary Conference decided that in order to ensure full and equitable representation of all regions, the membership of ITU's executive body—the Administrative Council—should be raised from 18 countries to 25.

The enlarged Council met in Geneva on December 16, 1959 and elected as its Chairman and Vice-Chairman respectively Mr. Libero Oswaldo de Miranda, Director of Brazil's Telegraphic Services, and Mr. Vladimir Senk, Deputy Director of Yugoslavia's Postal, Telegraph and Telephone Services.

[Prev. ref. 2683:AFG:A]

CHINA

A. **Support To Soviet Disarmament Proposals:** Addressing a Conference of the Political Consultative Committee of the Warsaw Treaty member-States in Moscow on February 7, an alternate member of the Politburo of the Central Committee of the Chinese Communist Party, Mr. Kang Sheng, re-iterated Chinese support to the Soviet proposals for disarmament.

He also indicated China's own conditions for renouncing force—that USA must vacate its "occupation of our territory of Taiwan" and leave the Taiwan (Formosa) problem to be settled directly between Peking and the Kuomintang authorities on Taiwan.

[USA too had been insisting on China renouncing force in settling the Taiwan question although neither Washington nor the Kuomintang Government in Taiwan might be willing to abrogate their 1954 Treaty of Mutual Defence which requires the stationing of sizable American forces on Taiwan.]

Mr. Kang Sheng asserted that China's armed forces at present were less than half their original size.

He said: "The Chinese Government and people have always advocated general disarmament and actively supported proposals concerning disarmament of the Soviet Union and other socialist countries.

"...The present Chinese armed forces are less than half their original size. We shall continue to work ceaselessly for general disarmament together with the Soviet Union and other socialist countries.

"We hope that the countries concerned will reach agreement on the question of general disarmament.

"The Chinese Government has never hesitated to carry out all international obligations which it has assumed. But US imperialism, hostile to the Chinese people, has always adopted discriminatory attitudes against our country in international relations. Therefore, the Chinese Government has to declare to the world that any international disarmament agreement and all other international agreements which are arrived at without the formal participation of the Chinese People's Republic and the signature of its delegates cannot of course have any binding force on China."

In a reference to China's relations with USA, he said: "At the Sino-American ambassadorial talks China has been persistently advocating the principle of settling disputes between China and USA by means of peaceful negotiations and not by resorting to force."

[The Sino-US talks which began in Geneva in August, 1955 were resumed in Warsaw in the Autumn of 1958. The American Ambassador to Poland, Mr. Jacob Beam, and the Chinese Envoy, Mr. Wang Ping-nan, held the 95th meeting of the series on January 19, 1960. They were scheduled to meet again on February 23.]

Mr. Kang Sheng's speech was the first positive declaration by a Peking spokesman that China was willing to give up the use of force as a means of solving her dispute over Taiwan.

It also followed the call by the former Chinese Defence Minister, Marshal Peng Teh-huai, to the Nationalists on Taiwan to open direct negotiations with Peking by breaking off ties with USA.

Marshal Peng Teh-huai made this appeal after the massive bombardment of Quemoy late in 1958.

(*The Times of India*, Bombay)

[Prev. ref. 3152:CHI:C]

B. **Withdrawal From International Astronomical Union:** China's Astronomical Society announced on February 6 its withdrawal from the International Astronomical Union in protest against the acceptance of Kuomintang as a member.

The Society told the Chairman of the Union's Executive Committee, Prof. Jan H. Oort, in a letter that it was withdrawing from the Union and all its affiliated commissions, and severing all connexion with them.

Prof. Oort said in Leyden (Holland) that he "deeply regretted" China's withdrawal from the Union.

He contested the Chinese view that the Union, by admitting Kuomintang as a member, had recognized the country either politically or otherwise and said that under the Union's regulations it was "bound to grant membership to any territory or country engaged in independent astronomical activities.

He also regretted the fact that the communists were introducing politics into the astronomical field.

(*New China News Agency*)

INDIA

SUMMARY: President's Address To Parliament; Kerala Elections; P-SP Executive On Sino-Indian Border Issue; Indians Released In Tibet; Central Advisory Board Of Education's Decisions; Rajasthan Cabinet Expansion.

A. **President's Address To Parliament:** Both Houses of Parliament—Lok Sabha (House of the People) and Rajya Sabha (Council of States)—began their Budget session on February 8 with the customary Address by the President of India, Dr. Rajendra Prasad, to a joint session of both Houses.

The Address contained a firm declaration of India's determination to defend her frontiers against Chinese incursions.

At the same time, Dr. Prasad added, the Government would continue to pursue a policy of peaceful approach and "negotiations under appropriate conditions" to settle outstanding disputes.

Describing China's action as "a breach of faith," he re-iterated the Government's policy "not to accept the course, or the result, of unilateral action or decision taken by China."

He hoped that under the weight of adverse world public opinion, China would soon come to an agreement on common frontiers "long established by treaties, custom and usage." Thus alone could friendly relations between the two neighbours become a reality.

Re-iterating India's policy of non-alignment, he welcomed the relaxation in world tensions and praised the efforts of President D. D. Eisenhower and Mr. N. S. Khruschev in this respect.

India's goodwill and moral support, he declared, would be behind the efforts of these two great leaders in their search for disarmament and peace.

He made a pointed reference to the struggle of the Algerian people against colonial rule and other developments in Africa and strongly criticized the continuance of the policy of *apartheid* in South Africa despite its disapproval in the UN General Assembly.

He dealt at length with the approach to and the objectives of the Third Five-Year Plan which was now under preparation and laid great stress on the speedy and planned development of the economy—more so, for the defence of the country in the context of the Sino-Indian border developments.

The objective of the Third Plan, he said, was to seek almost to double the national income, taking 1950-51 as the basic level. Much greater attention would have to be paid to agricultural production, heavy machine-building and to the development of basic resources such as steel, fuel and power in order to achieve the aim of a self-generating economy.

Reviewing the progress made in various fields of development, he emphasized the need to increase exports and reduce dependence on foreign assistance and outlined the steps being taken to increase the cadre of scientific and technical personnel and their proper deployment.

Praising the work of the Atomic Energy Establishment, he announced that preliminary work for the setting up of the first nuclear power station was well in hand. The uranium to be mined in Bihar, he hoped, would supply sufficient raw material to feed this station.

The reference to the food problem and agricultural production was marked by the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

absence of any mention either of State trading in foodgrains or land reforms.

He described the inauguration of "panchayat raj" in Rajasthan and Andhra Pradesh as the first step in the process of devolution of authority to statutory institutions of the people at the basic level. This would enable greater participation of the people in the development of the country's economy.

He also announced that the Government proposed to introduce a Bill soon for the re-organization of Bombay State into two unilingual States.

In a passing reference to the mid-term Elections in Kerala, where a record number of voters had exercised their franchise, he announced that normal constitutional machinery would be restored in the State shortly.

He also announced the Government's proposal to expand the NCC, Territorial Army and Lok Sahayak Sena, which formed the country's second line of defence.

The Address:

The following are excerpts from the Address:

"In the year we leave behind, my Government and our people had been engaged more than ever before in endeavours of nation-building. The needs and achievements in economic and social advance are understood by our people in towns and villages in an increasing measure as basic and vital to the improvement of their conditions and standards of living and as important to their daily lives.

"The incursions into parts of the territory of the Union of India across our traditional and well understood borders by elements of Chinese forces have, however, deeply distressed our people and evoked legitimate and widespread resentment. They impose a greater strain on our resources and our nation-building endeavours. We regret and deplore these developments on our border. They have resulted from the disregard by China of the application of the principles which it had been mutually agreed between us should govern our relations. My Government has taken prompt and calculated measures, both defensive and diplomatic, to meet the threat to our sovereignty.

"My Government particularly deplores the unilateral use of force by our neighbour on our common frontier, where no military units of the Union were functioning. This is a breach of faith; but we may not lose faith in the principles which we regard as basic in the relations between nations.

"You have been kept informed by the release from time to time of the correspondence between my Prime Minister and the Prime Minister of China of the respective positions of our two countries in this matter. My Government has made it clear beyond doubt that it seeks a peaceful approach in the settlement of outstanding matters. It has also stated and re-iterated equally clearly that they will not accept the course or the results of unilateral action or decisions taken by China. My Government, therefore, pursues a policy both of a peaceful approach, by negotiation under appropriate conditions, and of being determined and ready to defend our country.

"This and the weight of world public opinion which is adverse to her action should, we hope, persuade China sooner than later to come to agreements in regard to our common frontiers which for long have been well established by treaties, custom and usage. Thus and thus alone can friendly relations with our great neighbour which my Government and our people desire, become a reality and endure for our common good. The actions taken and the policy pursued by my Government, it may be hoped, will be adequate to convince China of both our policy and our determination.

"I have referred at some length to the situation that has developed on our border and to the consequences and problems thereof. I need hardly say that in doing so I have re-iterated the sentiments of our entire country and our people and their determination to defend our territory. Defence, however, is effective only with national unity and strength. Our economic and industrial advance, the gearing of our production and our plans to great endeavour and larger and speedier results, which will enable the country to make available to herself the means and resources for modern defence and, at the same time, help the nation to become strong and disciplined, can alone render her secure.

Third Five-Year Plan:

"Distressing as these Sino-Indian border developments have been, we may not, and we do not, relax our efforts for the planned development of our economy and our country. In point of fact, because of this situation, my Government is taking steps to speed up further, organize and streamline our economic development.

"The work on the preparation of the frame and the Outline of the Third Five-Year Plan with its longer perspective and higher targets is making good progress. The objective of the Third Five-Year Plan is to seek almost to double the national income, taking 1950-51 as the basic level, and to pay much greater attention to agricultural production and to our food requirements, to heavy machine-building and to the development of basic resources such as steel, fuel and power. Small-scale and rural industries, the speedier and healthy development of our rural economy and the healthy relationship between rural areas and industrial centres are among the main aims of the Plan.

"The Third Five-Year Plan represents a critical period in our national development. It aims at making our economy more self-reliant and capable of increasing and generating resources for its further and larger development. It calls for sustained efforts and endurance from our people. Thus, our Third Plan will keep well in view both its own developmental aspects as well as the requirements and the perspective of the Fourth Plan to follow. While we are grateful for external aid and loans as necessary in the present stage of our development, we should, in our own interests, in consideration of those who have been our good and generous friends and the needs of the under-developed areas of the world, strive to shed our dependence.

"The country's foreign exchange position, while it shows no deterioration, remains more or less unchanged. My Government, therefore, pursues a policy to create a more favourable balance of trade and to earn more foreign exchange by strict control over imports and efforts to increase exports. It will be the endeavour of my Government to conserve our foreign resources and add to the volume of our invisible exports in which there still exists unutilized a vast and increasing field.

Industrial Production:

"Our industrial production shows a pronounced upward trend and, for the first ten months of the year, an increase of over ten points has been recorded, from 138 to 149.3, over last year's figures. This is an all-round increase to which all industries have contributed, but special mention may be made of the rise in the output of metallurgical industries. The three steel plants at Rourkela, Bhilai and Durgapur went into production in 1959. There has been a 50 per cent increase in the production of pig iron and a somewhat lower, though considerable, increase in the output of steel.

"The iron and steel output would help to advance the heavy machine-building projects. My Government has already sanctioned a number of machine-building and other projects for the Third Five-Year Plan. These include the doubling of the Heavy Machinery Project at Ranchi and the steel production at Bhilai, the expansion of the Heavy Electrical Project at Bhopal and a number of new projects for power, fertilizer plants and heavy machine tools.

"The chemical industry has also witnessed appreciable advance. An Intermediate Plant to provide the basic raw materials for the manufacture of dye-stuffs, drugs, explosives and plastics is being established.

"The endeavours of our Railway organization to attain self-sufficiency in regard to essential equipment have enabled it not only to meet all the requirements of steam locomotives, coaches, wagons, signalling and lighting equipment but also to yield a surplus for export.

"Mining activities in the public sector have increased considerably. The Geological Survey of India has been expanded to undertake research and intensive investigation in virgin areas in minerals essential to our expanding economy.

"A Statutory Oil and Natural Gas Commission has been established. The search for and discovery of oil in different parts of the country continues. Sixty oil-wells have been drilled in Nahorkatiya for the production of crude oil required for the two State-owned refineries in Assam and Bihar and the construction of the refinery in Assam is in progress.

"My Government has entered into an Agreement with the Government of the Union of Soviet Socialist Republics for the supply of equipment for the construction of the refinery at Barauni in Bihar.

"My Government is alive to the requirement of scientists, technicians and technologists for our expanding economy. Measures are being taken to step up progressively the output in these cadres and to provide increasingly better career opportunities and a higher status for the old and new entrants. In our developing economy, there are ever-growing opportunities of service in these fields, which are so important to our planned development on modern lines.

"Our Atomic Energy Establishment has recorded commendable progress. Increased production of isotopes, the fabrication of fuel elements, the Uranium Metal Plant at Trombay, the extraction of plutonium from the used fuel elements and the mining of uranium are among the achievements of this organization. The preliminary work for the setting up of the first nuclear power station is well in hand. The uranium which is sought to be mined in Bihar will supply sufficient raw material to feed the first nuclear power station.

"An additional tonnage of 1,00,000 gross was added to the Indian merchant fleet. A National Shipping Board and a statutory non-lapsing Shipping Development Fund have been established. Indian shipping, which suffered many handicaps in the pre-Independence period, will continue to receive all possible assistance in its modernization and development. My Government is fully aware of the place of the merchant navy in our economy, in the conservation and earning of foreign exchange and in its auxiliary and reserve roles in the defence of our long sea coast.

Food Production:

"Advance in the production of food is vital to the sustenance, expansion and strength of our economy. Foodgrains production attained a record level of 73.5 million tons and cash crops also recorded satisfactory yields resulting in the overall increase in the Index of Agricultural Production to 131.0, an increase of 14.3 per cent over the previous record in 1957-58.

"We cannot, however, feel satisfied, much less complacent, about the food production in our country. Each year, we are obliged to import considerable quantities of foodgrains for consumption and for reserve stocks, causing great stress on our slender foreign exchange resources and rendering our economy far from self-reliant. Our production per acre falls short of the yields in many of the countries of Asia, Europe or America. My Government is giving greater attention to the increased production of fertilizers and to the supply of good seeds. It is, however, by better cultivation, avoidance of waste through

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

pests, better animal husbandry, the advance of co-operation in production and in marketing and by the determination of the people to be self-reliant that individual and national prosperity can be achieved.

"Members of Parliament are aware that in the Proclamation issued in relation to the State of Kerala on July 31, 1959, which was approved by resolutions passed by the Lok Sabha and the Rajya Sabha, it was provided that the General Election for constituting a new Legislative Assembly for that State shall be held as soon as possible. The General Election was accordingly held and polling took place in the entire State on February 1, the number of voters exercising their franchise being one of the highest recorded in any election. The Proclamation will be revoked and the normal constitutional machinery restored in the State shortly.

"Parliament decided during its last session to extend the safeguards provided in the Constitution for the reservation of seats for members of the Scheduled Castes and Scheduled Tribes in the Lok Sabha and the State Legislatures by a further period of ten years and the Constitution (Eighth Amendment) Act embodying this decision has received my assent. My Government also proposes to appoint a Commission as required under Article 339 of the Constitution to examine and report on the administration of the Scheduled Areas and the welfare of the Scheduled Tribes in the States.

World Issues:

"My Government notes with gratification the relaxation in world tensions and the prospect of high level meetings of the Heads of Governments for the promotion of world disarmament and peace. The initiative of great statesmen, notably the President of the United States of America and the Chairman of the Council of Ministers of the Soviet Union, deserve the attention and appreciation of our country and people.

"My Government, while welcoming the continuance of the voluntary unilateral suspension of nuclear test explosions and the increasing endeavours of both the United States of America and the Soviet Union to solve this problem, re-iterates its view that the testing of weapons of mass destruction should be abandoned.

"Devoted as my Government and people are to world peace and co-operation, we are determined to adhere to a peaceful approach and the policy of non-alignment, to both of which our country stands fully committed by history and outlook, faith and conduct, and by the overwhelming desire and conviction of our people."

The Address was debated and a Motion of Thanks to the President was adopted by both Houses later.

(*The Statesman* and *The Times of India*, New Delhi)

B. **Kerala Elections:** The General Elections in Kerala State following the President's Proclamation of July 31, 1959 taking over the administration of the State were held on February 1. The counting of votes ended on February 4.

As a result, the Congress-P-SP-Muslim League Alliance won 94 seats and Communists 26.

An Anglo-Indian is to be nominated later.

Altogether, 81,93,127 votes were cast out of 96,01,000 people who were to choose candidates for 126 seats.

More than 46,00,000 votes were cast for the candidates of the Congress-P-SP-League Alliance. The Communists and Independents supported by them received more than 35,50,000 votes.

The following table shows the full results:

Party	Contested	Won	Polled
Cong.	80	63	27,91,294
P-SP	33	20	11,46,029
League	12	11	3,99,925
Com.	102	26	29,75,259
Com. Ind.	23	3	5,74,877
RSP	18	1	1,06,137
KSP	4	Nil	5,938
Lohia Socialist	4	Nil	21,297
Jan Sangh	3	Nil	5,277
Ind.	19	2	77,725

The votes polled by Independents were those polled by 23 candidates, including two nominees of the Karnatak Samiti.

The total votes polled included 89,369 invalid votes.

One unattached Independent also won. He was a 'rebel' Congressman.

The Muslim League showed out best by winning 11 of the 12 seats it contested. Unlike the Congress, neither P-SP nor the Muslim League lost any of the seats held by them in the previous Assembly, to the communists.

Fifty-one candidates lost their deposits, having failed to obtain one-sixth of the valid votes polled for a seat in 113 constituencies.

They included all the 14 candidates of KSP, 14 of the 18 candidates of RSP, three Jan Sangh nominees, three of the four Lohia Socialists and 17 Independents.

None of the candidates of the major parties —Congress, P-SP, Muslim League and Communists—forfeited their deposits this time.

In the 1957 General Elections, Congress had lost deposits in five constituencies, P-SP in 28, Communists in four, RSP in 22 and other parties and Independents in 31.

All the parties put everything they could into the campaign. Mr. Nehru, Mr. Morarji Desai, Mr. S. K. Patil, Mr. Krishna Menon, Mr. N. Sanjiva Reddy and Mr. U. N. Dhebar were among those who visited the State on behalf of the Congress.

The P-SP has had the services of Mr. Asoke Mehta, Acharya J. B. Kripalani and Mr. H. V. Kamath.

The communists were represented by Mr. S. A. Dange, Mr. Bhupesh Gupta, Mr. M. Basavapunniah, Mr. P. C. Joshi, Mr. B. T. Ranadive, Dr. Z. A. Ahmed, Mr. Jyoti Basu, Mr. Bhowani Sen, Prof. Hiren Mukherji and Mrs. Renu Chakravarty.

The Communist Party had 109 candidates and supported 16 Independents, who were really Party candidates, and a Lohia Socialist. In effect, it contested every one of the 126 seats in the new Assembly.

The Congress-P-SP-Muslim League Alliance contested 125 seats in the following party ratio: Congress 80, P-SP 33 and Muslim League 12. It also supported an Independent candidate in one constituency against a communist rival.

In the Elections of 1957, Congress put up 124 candidates, P-SP 62 and Muslim League 18. The results in 1957 were as follows: Communists 65 (including 5 Independents), Congress 43, P-SP 9, Muslim League 8 and one Independent. The communists captured a majority of seats in the districts of Trivandrum, Quilon, Alleppey, Trichur, Palghat and Cannanore. Then, there were only 25 straight contests while there were as many as 73 triangular contests and 28 constituencies with four or more candidates.

This time, the communists did not enjoy quite the same advantage from a fragmentation of the non-communist vote. The total number of candidates dropped from 389 to 312. There were far fewer Independents. There were straight contests for as many as 80 seats, triangular contests for 38 seats and four-cornered contests for only nine.

P-SP Executive Resolution:

The Praja-Socialist Party National Executive which met in New Delhi passed a resolution on February 9 emphasizing the Alliance's duty to give the people of Kerala a stable and progressive Government.

It appointed a five-man committee, headed by Mr. Asoke Mehta and including Mr. Pattom Thanu Pillai, to act as a negotiating agency on the question of Ministry-formation in Kerala. The other three members of this Committee were Mr. N. G. Goray, Mr. Gangasaran Sinha and Dr. K. B. Menon.

The resolution mentioned the rooting out of corruption as one of the tasks of a future Kerala Government.

The following is the text of the resolution:

"The National Executive of the Praja-Socialist Party expresses its deep sense of gratitude to the people of Kerala, who, by voting for the forces of democracy and progress in the recent Elections, have brought their eight months old battle against communist totalitarianism to a successful culmination. The Executive Committee salutes the women of Kerala in particular whose solidarity, courage and enduring efforts have made such a splendid contribution to the cause of democracy.

"The Praja-Socialist Party is conscious of the fact that this victory at the polls has thrown upon the parties of the democratic Alliance the heavy responsibility of ensuring for the people of Kerala a stable and at the same time a progressive Government, a Government under which agriculture will flourish, industrialization would make significant progress, unemployment would be curbed, corruption firmly dealt with and, above all, all the sections of the population, irrespective of their religious labels, would feel assured of equal and fair treatment. This, in our humble opinion, should not prove difficult if the tremendous popular energy and co-operative spirit witnessed during the liberation struggle as well as at the time of the Elections is diverted into constructive channels.

"The Executive of the Praja-Socialist Party makes a solemn pledge to the people of Kerala that it shall be its constant endeavour to make such a Government a reality and to see that never again democracy in that State need fear eclipse at the hands of the forces of totalitarianism and anti-nationalism."

Communist Party's Reactions:

In a "preliminary statement" on the Kerala Elections, the Communist Party's Central Secretariat declared in New Delhi on February 5 that the increased votes the Communist Party had received disproved the basis on which the Communist Ministry in the State was dismissed from office.

Far from losing the supporters who had brought the Party into office in 1957, it said, an actual shift had taken place in the State in its favour, as represented by the 3½ million votes captured by it—an increase of over 120,000 votes compared to the last General Election.

In the opinion of the Central Secretariat, the United Front (Congress-P-SP-Muslim League Alliance) victory "essentially represents a temporary gain for political reaction and communalism." The Communist Party was fighting single-handed the most formidable combination ever faced by any party in the country since or before Independence.

The Party Secretariat was, however, "fully conscious of the serious electoral reverses" it had suffered. Although this represented "a great misfortune and loss for the toiling masses and indeed for democracy itself," the voting figures had shown that the Elections represented "a positive gain" for the "democratic movement" in India.

The Party congratulated the people of the State for participating in a largely peaceful Election "despite all manner of provocation, undue interference and unhealthy influences continuing right up to the time of the poll."

Digitized by Arya Samaj Foundation Chennai and eGangotri

The Executive Committee of the Kerala Council of the Communist Party adopted a resolution in Ernakulam on February 9 admitting that the defeat of the Communist Party in the State Elections was "serious and severe.

The resolution said that despite the good work of the Ministry during its 28-month rule, the Party not only lost against the P-SP-Congress-Muslim League Alliance but also failed to secure even half the number of seats it had in the 1957 Elections. "It is useless trying to ignore the gravity or minimize the seriousness of the defeat."

It added that the Party had failed to guage correctly the influence of the Alliance on the people of the State.

C. **P-SP Executive On Sino-Indian Border Issue:** The National Executive of the Praja-Socialist Party which met in New Delhi passed a resolution on February 10 urging the Government of India to take concrete steps to get the Chinese aggression vacated.

The resolution took special note of the "pressures that are being built up by interested parties" to induce Mr. Nehru to meet Mr. Chou En-lai.

It emphasized that in view of the deliberate Chinese aggression, any talks between the Prime Ministers of India and China could take place only after China vacated the aggression and "restores unreservedly the *status quo*."

It also focussed the attention of the people of India on the 'fifth-column' activities of the Communist Party and suggested that the national parties must immediately take steps to counteract the constant effort of these anti-national forces to undermine the morale and loyalties of the people in the border areas.

The following is the text of the resolution:

"Though there have been no reports of fresh aggression on the part of China on our Himalayan frontiers during the last four months, the National Executive feels that the situation continues to be serious and needs to be watched with utmost diligence.

"The National Executive has taken note of the pressures that are being built up by interested parties to induce the Prime Minister to agree to meet the Prime Minister of China without any conditions on the naive assumption that China had no expansionist motive behind her actions and the series of aggressions she had committed during the last four years were the result of her genuine though mistaken notions as to the extent of her territories. The recent Sino-Burmese settlement is being cited as additional proof of China's *bona fides* in her international dealings.

"The National Executive is of the firm opinion that the Chinese aggression in Ladakh and her claims in N-EFA and other places cannot be considered on par with her disputes with either Burma or Indonesia. It strongly holds that China has committed deliberate aggression and talks can take place between India and China only after China vacates her aggression and restores unreservedly the *status quo ante bellum*.

"It further feels that even if these conditions were fulfilled we must so develop our Himalayan frontiers and regions that they would cease to be a temptation to any Government, whatever its might and design.

"The National Executive also asks the people of India to take serious note of the 'fifth-column' of the Communist International set up in this country, namely, the Communist Party of India and its allies, whose extra-territorial loyalties, tactics and ramifications were clearly revealed during the Sino-Indian crisis. The Praja-Socialist Party and other patriotic organizations must devise immediate steps to counteract the constant efforts made by these anti-national forces to undermine the morale and loyalties of the people in the border region."

New Official Atlas Of Northern Frontier:

The External Affairs Ministry of the Government of India has published a map illustrating the Simla Conference of 1914, which was not only initialled by the British representatives at the Conference but also carried the full signatures of the Chinese and Tibetan officials who participated in it. The map defined the MacMahon Line in detail.

The "Atlas of the Northern Frontier of India"—as the publication is styled—contained a representative collection of 39 maps, showing that the northern frontier as shown on Indian maps is the traditional boundary between the two countries.

Official and unofficial Indian, Chinese, British, French and German maps have shown these boundary alignments for many years.

Another interesting map is the one illustrating routes taken in 1865 by a British official, Mr. Johnson, to survey the Aksaichin area. This is said to be a proof that Aksaichin was part of India and that the customary boundary in this sector was well known.

The Atlas is divided into four sections, namely—general, boundary in the Ladakh section, the border in the Assam section and variations in Chinese maps from 1928 onwards.

The preface to the Atlas said: "It is only during the last 30 years or so that Chinese maps have departed from the traditional boundary and included large areas of Indian territory as part of China. Even the Chinese maps published during this period have not been consistent in this regard. A broad trend in recent Chinese maps has been to push the alignment deeper into Indian territory."

(*The Times of India* and *The Statesman*, New Delhi)

[Prev. ref. 3024:INI:D, 3141:INI:B]

D. **Indians Released In Tibet:** The Deputy Minister of External Affairs, Mrs. Lakshmi N. Menon, said in Lok Sabha (House of the People) on February 9 that the Government had so far been able to secure the release of at least 14 of the 37 Indian citizens and India-protected persons detained by the Chinese in Tibet and that all the 14 had crossed over into India.

India, she added, held that under her Constitution and according to international usage the remaining persons under detention were Indian nationals, but China continued to refuse to accept this view-point. These Indians had been residing in Tibet for a considerable time.

Answering another question relating to Indians in Tibet, Mr. Nehru said that 103 Ladakhi nationals had returned to India from Tibet since January, 1959 and had gone to their homes in Ladakh. The Government had borne the expenses of their journey.

(*The Times of India*, New Delhi)

[Prev. ref. 3032:INI:A]

E. **The Dalai Lama On Chinese Action In Tibet:** Addressing a prayer meeting in Gaya on February 6, the Dalai Lama said that the Chinese people in general should not be held responsible for the recent happenings in Tibet.

It was, he added, "the villainy of a selected few" who were proud of their military strength and who believed that they could conquer the world. "We should not be sorry for their tyranny as pride must have a fall." Good days for Tibet were sure to come, and Tibetans who had sought asylum in India and elsewhere would then return home.

He called upon Tibetans and Ladakhis to remain alert and united and not to be swayed by false propaganda.

(*National Herald*, Lucknow)

[Prev. ref. 3035:INI:C]

F. **Central Advisory Board Of Education—Decisions:** The Central Advisory Board of Education, which concluded its deliberations in New Delhi on February 7, commended the objectives and proposals outlined in the report of the National Service Committee and urged the speedy implementation of the Committee's recommendations.

The Advisory Board also approved the recommendations of the Sri Prakasa Committee on Religious and Moral Instruction.

Endorsing the report of the Committee on Religious and Moral Instruction, the Standing Committee on Basic Education pointed out that the success of the programme would depend very much on evolving a uniform course of study for all the schools in a State and the preparation of carefully written text-books. Since moral instruction would be a regular feature of school activities, it felt that a regular course should be introduced on the subject in teacher-training programmes.

Among the other recommendations of the Board were the establishment of State evaluation units to promote examination reform and the training of more science teachers for providing science teaching in every secondary school in the country.

To bring about examination reform expeditiously, the Board recommended that the Departments of Education in States should take immediate steps to set up evaluation units.

In view of the great advance in science and technology, the Board recommended that steps should be taken by the Central and State Governments to provide facilities for the teaching of general science in every secondary school in the country by the end of the Third Plan.

For meeting the need for an increased number of science teachers the Board recommended both long-term and short-term measures. These measures should include the expansion of training facilities at the university level and provision of short-term refresher courses for science teachers.

It emphasized that in future more and more science colleges should be opened in preference to other types of colleges. More funds should also be made available to the States for this purpose.

National Service Committee's Report:

The National Service Committee appointed by the Central Ministry of Education in August, 1959, with Mr. C. D. Deshmukh as Chairman, in its report published on February 7, recommended that all students passing out of higher secondary schools or pre-university classes should be required to do nine months to one year of compulsory national service.

It said that a year's national service at this stage would greatly fill the gap left by the present secondary education and equip the students better both for life and for the university. "Those entering life would be more mature, more disciplined and better prepared for the responsibilities of their work. Those who go to the university would be

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

more self-reliant, more disciplined and better equipped for benefiting from university education."

The Committee was set up in pursuance of the recommendations of the State Education Ministers' Conference.

The Education Ministers' Conference had considered the draft outline of a scheme for national service prepared by the Union Education Ministry on a suggestion from the Prime Minister. The Committee was appointed to work out details of pilot projects for the purpose.

The Committee's report said that the scheme of national service must be compulsory "if it is to be effective and make a real impact to improve the quality of man-power needed by the country. There can be no objection, in principle or otherwise, to compulsion as it is the right of the State to ask its citizens for a period of service in return for what it does for them."

It expressed itself against allowing exemptions on any ground. Students who were not physically fit for manual work could be asked to do other suitable work. There should be absolutely no opportunity for the rich and influential to manipulate exemptions for their children.

It suggested the appointment of a National Board to plan, implement and evaluate the programme of national service. This should be preceded by careful preparation of a detailed plan of work for youth, for which it would be desirable to set up a representative working group of educationists, administrators, defence experts and other interests.

About the content of the National Service Scheme, it said that while there need be no dead uniformity, the following ingredients should be dovetailed in any overall programme for the Service.

(1) *Military discipline*: The students should lead a disciplined life for nine months to one year comparable to that of the armed forces. No breach of discipline should be tolerated. Adequate sanctions should be provided to defer any breach of discipline.

(2) *Social service and manual labour*: Social service and manual labour should be rendered for at least four hours every day in the areas selected for work under National Service. Manual labour would be an essential part of the work for every student. The labour and social service may take diverse forms, depending upon the locale and the needs of the community. Work should be so organized that the community derived tangible and lasting benefit. This would inspire confidence in youth and also give them a pride of achievement.

(3) *General education*: So as not to lead to a gap in the education of adolescents, the National Service Scheme should also provide for broad general education by laying stress on the improvement of English, learning of Hindi and other regional languages, improvement of general knowledge, acquaintance with India's cultural heritage and programmes of social and economic planning, etc.

The period of National Service should also be fully utilized for the emotional integration of the youth with the country and the ideals it is working for. The Service should provide opportunities for self-expression in cultural activities like music, dance, drama, but care should be taken to ensure that they do not distract from the main purposes of the service. The youth should be enabled to acquire habits of self-study, critical inquiry and love of scholarship and knowledge.

(*The Hindustan Times*, New Delhi)

[Prev. ref. 2467:INI:J]

G. **Jammu & Kashmir Legislature—Sadr-i-Riyasat's Address:** The Budget session of the Jammu and Kashmir State Legislature commenced in Jammu on February 8 with an Address by the Sadr-i-Riyasat, Yuvraj Karan Singh, to a joint session of both Houses in which he described the recent Presidential Order bringing the State's High Court and Election Commission under the jurisdiction of the Supreme Court and the Central Election Commission as the greatest achievement of the decade, being "the last stage of the arduous and difficult journey" of emotional integration of the State with the rest of India.

The Sadr-i-Riyasat added that the process of emotional integration of the State with the rest of India was now complete.

He recalled the condition of the State's subjects who were still groaning under the aggressors' heel in the Pakistan-occupied area and said that the rights over that area could not be surrendered. He demanded vacation of the aggression.

Referring to the Chinese aggression, he said, it had highlighted the old axiom that eternal vigilance was the price of freedom.

He laid great stress on the achievement of double cropping of paddy in certain areas. The scheme would be extended to other areas.

The construction of Doda Kishlwar road was of special significance. The construction of new roads in the State had given a fillip to trade and commerce. Abolition of the permit system for entry into or exit from the State had also helped trade.

As for industrialization, he said that while the emphasis was still on small-scale industries, some large units were also being started. He hoped that the development of mining would strengthen the State's economy.

He concluded: "We must rise to the occasion and meet the challenges facing us bravely. Let us not forget that nations are built only by dint of hard labour and sacrifice."

(*The Statesman*, New Delhi)

[Prev. ref. 2504:INI:H]

H. **Rajasthan Cabinet Expansion:** The Rajasthan Cabinet was expanded on February 10.

The strength of the Cabinet was raised from six—the smallest in the country—to 11 by the appointment of two new Ministers and the upgrading of three Deputy Ministers to Cabinet rank. A new Deputy Minister was also appointed.

Maharaja Harishchandra of Jhalawar, the former ruler of Jhalawar State, and Mr. Ramchandra Chaudhry were appointed Ministers, while Mr. Sampat Ram, Mr. Bheekha Bhai and Mr. Rikhab Chand Dhariwal, who had been Deputy Ministers so far, were made Ministers.

Mr. Barkatullah Khan was appointed new Deputy Minister.

The new Ministers and the Deputy Minister were sworn-in by the Governor, Sardar Gurmukh Nihal Singh, in Jaipur on February 10.

Maharaja Harishchandra was in the Indian Foreign Service from 1949 to 1954. He left it to enter politics and was elected to the State Assembly as a Congress candidate.

Mr. Ramchandra Chaudhry was a Minister in Mr. Mohan Lal Sukhadia's pre-election Cabinet. He was defeated in the last Election and was returned to the State Assembly in a by-election.

The following are the portfolios:

Mr. Mohan Lal Sukhadia, Chief Minister: General Administration, Political, Appointments, Planning and Development, Education and Mines and Mineral-based industries.

Mr. Haribhau Upadhyaya: Finance, Community Development, Village Industries and Panchayats.

Mr. Ram Kishore Vyas: Home, Law Department and Legal Remembrancer's Office, Judicial Department and Transport.

Mr. Damodar Lal Vyas: Revenue, including Jagir Resumption, Devasthan Department, Relief and Rehabilitation and Famine Relief.

Mr. Badri Prasad Gupta: Medical and Public Health, Stationery and Printing Presses, Legislative Assembly and Elections and Labour.

Mr. Nathu Ram Mirdha: Agriculture, Animal Husbandry, Co-operation and Food.

Mr. Sampat Ram: Municipalities and Forests.

Mr. Rikhab Chand Dhariwal: Industries (except Mineral-based industries), Civil Supplies and Social Welfare Department.

Mr. Bheekha Bhai: Irrigation (except Rajasthan Canal and Bhakra) and Ayurved.

Maharaj Harishchandra: Buildings and Roads and Power.

Mr. Ramchandra Singh: Excise and Taxation and Bhakra and Rajasthan Canal Project.

The following three Deputy Ministers would assist the Ministers concerned in the work relating to the departments mentioned against their names:

Mr. Poonam Chand Vishnoi: Education and Finance.

Mrs. Daulat Ram: Agriculture and Irrigation.

Mr. Barkatullah Khan: Planning (Co-ordination), Power, State Enterprises and Technical Education.

(*The Statesman*, New Delhi)

[Prev. ref. 1449:INI:C]

I. **Giani Kartar Singh Re-joins Punjab Cabinet:** Giani Kartar Singh was sworn-in as a Minister in the Punjab Cabinet in Chandigarh on February 10.

The inclusion of Giani Kartar Singh raised the Ministry's strength to nine Ministers and eight Deputy Ministers.

Giani Kartar Singh had resigned from the Cabinet in October, 1959 in order to devote himself exclusively to SGPC elections.

The Chief Minister, Sardar Pratap Singh Kairon, simultaneously announced a minor re-shuffle in the portfolios of Ministers.

Giani Kartar Singh was allocated the portfolios of Revenue, Relief and Rehabilitation which were hitherto held by Mr. Birender Singh, and Mr. Birender Singh was given the portfolio of Irrigation and Power, Transport, Consolidation and Sports.

Sardar P. S. Kairon had hitherto held the Irrigation and Power portfolio taken away from Mr. Gian Singh Rarewala three months earlier following an inquiry into the "tube-well deal."

J. **Swatantra Party Organizing Committee Meeting:** The Central Organizing Committee of the Swatantra Party held a three-day meeting in Bangalore and concluded on February 7 after finalizing the draft constitution and statement of policies of the Party.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The drafts would be placed before the General Council and the National Convention of the Party scheduled to meet at Patna in March, 1960.

Mr. M. R. Masani, General Secretary of the Party, declined to divulge the salient features of either the constitution of the Party or its policies.

He said that the policy statement now drafted was merely an amplification of the 21-point policy adopted earlier by the Preparatory Convention in Bombay in August, 1959.

The draft constitution, he said, was of a flexible nature. Only essential things with regard to the organization had been mentioned.

When asked to state the Party's policy with regard to nationalization, he said that his Party would like nationalization in enterprises like railways and heavy industries where private capital was not forthcoming. The Government could also start new industries, if it was difficult to find private capital for such industries. In other cases, there should not be any nationalization.

Referring to co-operative farming, he said: "We are for genuine co-operative societies in whatever field it may be. The Party opposed only joint co-operative farming and not the genuine service co-operatives. Joint farming is an enemy of co-operation."

A white five-point star on a sky-blue background—nearest to the United Nations flag—he said, would be the design of the Swatantra Party flag. The length and breadth of the flag would be in the proportion of 5 to 3.

When asked about the significance of the design, he said: "No significance. It is merely a Party flag."

(*The Hindu*, Madras)

[Prev. ref. 3087:INI:H]

K. **Exodus Of Rural Population Into Towns:** The Government of India announced on February 7 that it had decided to set up a study team for the purpose of touring some selected Community Development bloc headquarters in order to examine the various facets of the problem of the shift of rural population into urban areas and to formulate a scheme for rural-*cum*-urban projects on an agro-industrial base.

The team would be headed by Mr. B. Mukherjee, Joint Secretary in the Ministry of Community Development and Co-operation.

It would include the following as members: Dr. D. K. Malhotra, member-Secretary, Research Programme Committee, Planning Commission: Mr. M. S. Bhatia, Housing Adviser, Ministry of Works, Housing and Supply; Prof. V. L. D'Souza, Economist, Central Regional and Urban Planning Organization, Ministry of Health; Mr. J. N. Tewari, Joint Director, Programme Evaluation Organization, Planning Commission; and Mr. R. V. Ramiah, Director (Industries Development), Ministry of Commerce and Industry.

The team would examine the trend of growth of population in a few selected C. D. bloc headquarters and the precise nature of the requirements in terms of the objective developments which had taken place and the different ways in which these might be approached. It would further frame a scheme to be taken up in the proposed urban-*cum*-rural units for generating additional employment opportunities on an agro-industrial base.

The Government of India, it was stated, had been gravely concerned for some years over the high rate of exodus of population from villages into towns. It had been estimated, for example, that during the decade ending with the Second Five-Year Plan, urban population in the country would go up by 33 per cent. The Asoke Mehta Foodgrains Inquiry Committee had similarly observed that in recent years, urban population had gone up twice as fast as the total population.

The only way of checking this trend, it was felt, was to provide facilities for industrial development at the bloc level in order to reduce the pull of urban industry on the village people.

Creation of new centres of small-scale industrial production, closely co-ordinated with rural developments, it was said, was fundamental to national development, for in no other way could the present occupational imbalance between agriculture and industry and between village and town be corrected.

(*The Times of India*, New Delhi)

[Prev. ref. 1189:INI:S]

L. **Mr. Satyajit Ray Wins Two Major American Film Awards:** It was announced in New York on February 8 that Mr. Satyajit Ray, the Indian film director, had won two major American film awards.

The awards were the David O'Selznick Golden Laurel Trophy, which goes each year to a non-American film-maker whose work has contributed most to mutual understanding and goodwill among the peoples of the world, and the Golden Laurel Award, presented annually for a non-American film which has done most to achieve the same objective.

Mr. Ray's award-winning film *Aparajito* received wide acclaim from American film critics.

This was the first time that these awards had gone to an Indian director or an Indian picture, and it was the first time in the 10 years of the Golden Laurel Awards that both went to a single person.

Aparajito was selected from more than 300 foreign films exhibited in the United States during 1958 and 1959.

The statement announcing the awards said:

"Mr. Satyajit Ray of India, winner of this year's O'Selznick Golden Laurel Award and the Golden Laurel Trophy, stands as one of the most honoured film-makers in the world. Yet, his first film *Pather Panchali* appeared less than five years ago, in 1955, when it won prizes at Cannes, Edinburgh, San Francisco, Vancouver and Stratford (Ontario, Canada). Before that time, few knew that an Indian film industry ever existed."

INDONESIA

A. **Press Restrictions:** The Government tightened its restrictions on newspapers and news agencies on February 8.

An Information Department regulation said that newspapers and local news agencies would have to fulfill certain conditions before they got permits to buy newsprint.

The first of these was that news organizations must support the political manifesto of President Sukarno—the basic policy of the Government.

Secondly, news organizations must have "corporate body status" and work for "public welfare interests."

Thirdly, books must be kept in an orderly manner because newsprint would be allocated on the basis of circulation.

Fourthly, all financial backing for newspapers and local news agencies must be Indonesian.

The Government already imports all newsprint and news organizations are buying it from the State.

(*The Straits Times*, Singapore)

[Prev. ref. 3124:IND:A]

IRAQ

A. **Morocco King's Visit:** King Mohammed V of Morocco arrived in Baghdad on January 31 from Kuwait on a three-day State visit.

While in Kuwait, he had talks with the ruler of that country on Arab political problems and Kuwait investments in Morocco.

At a luncheon given in honour of the King of Morocco in Baghdad on February 1, the Iraqi Prime Minister, General Abdel Karim Kassem, announced the gift of some Iraqi Air Force jets to the Moroccan Air Force.

He did not, however, specify how many planes were being presented.

The King of Morocco ended his visit to Iraq on February 3 when he and the Prime Minister of Iraq, Gen. Kassem, issued a joint *communique*.

The *communique* said that the two leaders had agreed on the following five points:

(1) To strengthen the Arab League by promoting among the Arab States relations based on brotherly feelings and collaboration;

(2) To implement a policy of social reforms aimed at raising the living standards of the Arab people and the consolidation of their independence on the basis of Islamic and Arab ideals;

(3) To strengthen the Arab League by amending its constitution in such a way as to guarantee complete equality among the member-States and to exclude all interference in each other's internal affairs;

(4) To support all the Arab peoples fighting for national liberation, particularly the people of Algeria, Palestine and Oman; and

(5) To make common cause with all people who struggle for their independence and liberty.

In Beirut:

King Mohammed V arrived in Beirut on February 4 on the last stop of his Middle East tour.

He returned home on February 7.

B. **Prime Minister To Visit India:** The Iraqi Minister of National Guidance, Mr. Feisal el Samer, announced in Baghdad on January 31 that the Prime Minister, General Abdel Karim Kassem, had accepted an invitation from the Indian Prime Minister, Mr. Jawaharlal Nehru, to visit India.

He said that Gen. Kassem would take the first opportunity to go to India, but at the moment he found it difficult to fix a date for the visit owing to pressure of work.

(*Baghdad Radio*)

JAPAN

A. **Mr. A. Fujiyama On Relations With China:** In his first policy speech after the signing of the Japan-US Mutual Security Treaty, the Foreign Minister, Mr. Aiichiro Fujiyama, told the Diet on February 2 that Japan's

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

relations with China had unfortunately not been very satisfactory.

He said that the first of the three main planks in Japan's foreign policy was promotion of peace. Japan earnestly hoped for results from East-West talks and disarmament proposals.

Secondly, Japan hoped to promote a good-neighbour policy and, in particular, as an Asian nation, she would strive to deepen friendly relations with the neighbouring countries. Japan hoped to adjust her relations with Korea.

Concerning China, he said: "We recognize that the Chinese communist *regime* is continuing to make achievements in economic reconstruction and in other fields. We do not deny that in the field of international politics the problem of China is gradually coming to the fore in connexion with disarmament and other problems. On the other hand, certain misgivings exist among various nations with regard to China's intentions."

He said that relations between Japan and China were unfortunately not satisfactory. "I believe that Japan, from its own stand-point, should seek to remove any misunderstanding on the communist Chinese side and to break the existing stalemate. I believe Japan should consider the future of her relations with China from these two approaches. I hope especially that the Chinese communists on their part will make efforts at this time to correctly understand the position of Japan's good-neighbour policy and remove the existing obstacles so as to promote trade and establish relations of neighbourly friendship."

The third point was that Japan should promote economic co-operation with the less developed countries. With the liberalization of trade in Europe, Japan could no longer permit the continuance of her own complex trade and exchange restrictions. Japan intended actively to push forward an economic policy on the lines of liberalization.

B. **Reparations Agreement With Viet-Nam (RVN):** The Lower House of the Diet ratified the Reparations Agreement with the Republic of Viet-Nam on November 27, 1959. It was approved by the Upper House a month later on December 23. (For details of the Agreement see page 2797).

The Viet-Nam war reparations issue drew severe criticism from the Leftist opposition circles and communists who charged that the amount was too high.

The Agreement was signed on May 13, 1959 in Saigon by the Foreign Minister, Mr. Aiichiro Fujiyama and the Viet-Namese Foreign Minister, Mr. Vu Van Mau.

JORDAN

A. **Morocco King's Visit:** At the end of the State visit of King Mohammed V of Morocco to Jordan, he and King Hussein of Jordan issued a joint *communique* on January 30 pledging the support of their two countries to the people of Algeria in their fight for freedom.

They agreed to support the Arab League in evolving a charter which would make the League an active instrument of Arab interests and stand by the rights of Arabs in Palestine and oppose ideologies inconsistent with Arab nationalism and Islamic principles.

The two Kings also agreed to strengthen economic ties between Jordan and Morocco.

(*Amman Radio*)

[Prev. ref. 3132:UAR:C]

B. **Islamic Conference:** Opening an Islamic Conference in the Jordanian sector of Jerusalem on January 25, King Hussein of Jordan appealed to all Muslims for unified action "for the realization of their rights in Palestine and in every Arab country."

He said that a wave of atheism was implanting subversive principles in the Islamic Arab countries. Imported doctrines could not be totally uprooted except by the general co-operation of Muslims based on the principles of the Holy Quran.

The countries which took part in the Conference were Syria, Lebanon, Egypt, Saudi Arabia, Kuwait, Ceylon, Pakistan, India, Tunisia, West Africa, Morocco, Algeria, Indonesia and Libya.

The resolutions passed by the Conference were published in Amman on January 31.

One of the resolutions urged the Arab States to strengthen their economic blockade against Israel and to consider any solution of the Palestinian problem involving recognition of Israel as 'great treason'.

It affirmed the collaboration of the Arab, Islamic, Asian and African countries in supporting the Arab rights in Palestine and all steps in this respect.

It urged all Arab and Islamic States to take steps against communism and subversive doctrines which threatened Islamic principles and traditions and to fight imperialism.

Arab and Islamic States were further urged to assist in the Algerian struggle, to recognize and support the Algerian Provisional Government and to protest against France's military operations in Algeria and her proposed atomic tests in the Sahara.

It also called for economic and political pressure on France until Algeria attained independence.

[Prev. ref. 1865:PAK:C]

LAOS

A. **UN Expert's Report On Economy:** In a special report to the UN Secretary-General, Mr. Dag Hammarskjoeld, his personal representative, Mr. Sakari Tuomioja, has recommended co-ordinated action by UN and its specialized agencies to assist Laos in her economic and social development.

[Mr. Tuomioja, Executive Secretary of United Nations Economic Commission for Europe, was sent by the UN Secretary-General to review the economic situation in Laos and, in particular, the role of economic and technical assistance rendered by UN for extending economic growth and stability. Mr. Tuomioja was in Laos for about a fortnight from November 15, 1959 when he drafted the report.]

Specifically, his report called for the following:

(1) Surveys of natural and human resources and the development of basic information. In this field, mineral prospecting, soil surveys, man-power surveys and the development of statistical services should have high priority.

(2) Agricultural development, particularly with a view to increasing productivity and promoting diversification and marketing.

(3) Basic education and vocational and technical training.

(4) Organization of a comprehensive public health system emphasizing preventive medicine and the qualitative improvement of nutritional levels.

(5) Community development in order to improve the utilization of latent local resources, with particular attention to be paid to ethnic minority groups and the population of mountainous regions.

(6) The setting up of a country-wide system of transport and communications. The work of United Nations and its specialized agencies should be particularly geared to the problems of using the most economical means of developing inland waterways, secondary and feeder roads, the use of cheap transport facilities and other economical methods.

(7) The public administration should be helped by placing trained and experienced administrators at the disposal of Laos to work both at the central and provincial levels and to assist in the training of Laos administrative personnel.

The report said that besides these long-term programmes aimed at general development, a series of short-term projects should be undertaken to obtain quick results and produce a favourable local climate for further development efforts.

It declared that in addition, current requests made by Laos for technical assistance by United Nations and its specialized agencies may be favourably considered. In particular, the implementation of the commitments of the Special Fund under the Mekong Development Scheme may be speeded up.

It recommended the appointment of a senior official to co-ordinate the various development programmes and the activities of United Nations and its specialized agencies in implementing the projects. The personnel recruited to assist the Laotian Administration should, if possible, come from Asian or other under-developed countries.

It added that Laos faced peculiar problems as a small land-locked country which attained independence only five years ago and that there could be little doubt that the 2,000,000 Laotian people would require considerable foreign assistance for many years to come. Laos had set out to build a new State under the most unpropitious conditions and contingencies and was now appealing to United Nations for assistance.

With inadequate human and material resources at its disposal, the Laos administration had been facing the extremely difficult task of integrating a heterogeneous population, setting up a State machinery, organizing the economy and raising the living standards of the people.

Laos had had to rely heavily on foreign aid which, however, had not so far achieved significant results nor strengthened the productive capacity of the country.

What was now needed was to help Laos meet her basic development needs.

Among the basic problems were to raise the level of education and to create new educational systems, develop public health and improve health conditions to develop villages and re-settle nomadic population.

Mr. Salem Alquadi became Education Minister, Mr. Rajab Benatu Minister of Health and Mr. Mohammed Benothman Minister of Economics.

(*The Egyptian Gazette*, Cairo)

MALDIVES

A. **Dispute With Britain Settled:** Representatives of UK and the Maldives said in a joint *communique* in Colombo on February 4 that their Governments had reached agreement on February 1 on all matters in dispute between them.

Under the Agreement, the Government of the Maldives would make to Britain a free gift of the use of Gan Island for 30 years. The future of Gan Island, where the Royal Air Force had a staging base, had been the main issue in the dispute.

Britain in turn agreed to grant to the Maldivian Government the right to conduct its own external relations in the economic and cultural fields.

The following is the text of the joint *communique*:

"Under the terms of an Agreement initialled in Colombo on Monday, February 1, the Maldivian Government is to make a free gift to the United Kingdom Government of the use of Gan Island and other facilities in Addu Atoll for thirty years. This offer by the Maldivian Prime Minister has been most gratefully accepted by the United Kingdom Government.

"Complete agreement has also been reached on all outstanding matters between the two Governments.

"A fresh Agreement has been drawn up re-defining relations between the two Governments and re-affirming the obligations assumed by the United Kingdom Government for the defence of the Maldive Islands. It allows for the conduct by the Maldivian Government of its own external relations in the economic and cultural fields. The Maldivian Government has signified its readiness to receive a United Kingdom Government representative in Male.

"The United Kingdom Government is making available to the Maldivian Government a total sum of £850,000 sterling, of which £1000,000 sterling will be a direct grant to the Maldives Budget and £750,000 spread over a period of years and devoted to specific development projects, e.g., improvement and expansion of the fishing industry, communications, health and education services.

"The Maldivian Government has also welcomed the United Kingdom's offer of its offices in regard to the restoration of the Maldivian Government's authority in Addu Atoll and both the Governments are agreed that this must be a gradual and peaceful process.

"The Minister of State for Commonwealth Relations, Mr. C. J. M. Alport, will visit Male on February 14 at the invitation of the Maldivian Prime Minister, Mr. Ibrahim Nasir, to sign the Agreement. Full details of the Agreement and the various understandings reached will be released then."

Britain and the Maldive Islands signed the Agreement on February 14.

Mr. C. J. M. Alport, British Minister of State for Commonwealth Relations, signed for Britain and the Prime Minister, Mr. Ibrahim Nasir, for the Maldives.

The Maldives are a British protected State.

In Letters exchanged by Mr. C. J. M. Alport with Mr. Ibrahim Nasir on February 14 after they had signed the Treaty, Britain assured the Maldivian Government that she would recognize no Government within the archipelago other than the Government of Male and that she would do all she could to enable the authority to be restored to Male peacefully.

NEPAL

A. **Marshal K. Voroshilov's Visit:** The President of USSR, Marshal Klementi Voroshilov arrived in Khatmandu on February 3 on a two-day visit to Nepal. Thousands of people gathered at the airport to give him a big ovation.

Thirty-one guns boomed as the President's plane landed at the airport. King Mahendra was the first to greet him.

The six-mile route, through which the Soviet President passed, was attractively decorated.

Welcoming Marshal Voroshilov at the airport, King Mahendra said: "Your visit to Nepal has strengthened the bond of friendship between our two countries."

Marshal Voroshilov reciprocated the sentiments of King Mahendra and said that he was deeply touched by the warmth of the welcome accorded to him.

Within half-an-hour of his arrival, Marshal Voroshilov drove to Narayanhitti Royal Palace to call on the King and then stayed on to a quiet lunch with the royal family.

The Prime Minister, Mr. B. P. Koirala, earlier called on the Soviet President at Shital Niwas.

Soviet-Nepal Friendship Association Reception:

Speaking at a reception given in his honour by the Soviet-Nepal Friendship Association in Khatmandu on February 3, Marshal Voroshilov wished Nepal quick success in her development plans and assured her of Soviet Union's help.

He hoped that the contacts between Nepal and Soviet Union would grow in the future and their friendship would be strengthened.

He called upon all peace-loving nations to concert their efforts and bring about a peace front to preserve world peace. The Soviet Union was a very powerful State but it did not boast of its might. Its sole objective was maintenance of peace.

Welcoming Marshal Voroshilov, the General Secretary of the Association thanked the Soviet Government for technical assistance, scholarships, fellowships and other facilities for education and training of Nepalese students and officials in USSR.

February 4 was his 80th birthday.

The first to congratulate him was King Mahendra. He was followed by Mr. B. P. Koirala. The Indian Ambassador, Mr. Hareshwar Dayal, handed a message of felicitations from Dr. Rajendra Prasad to the Soviet Deputy Foreign Minister, Mr. V. V. Kuznetsov.

He began his day quite early but did not attend the luncheon given by Mr. B. P. Koirala after a series of hurried receptions and going round the Valley the whole morning.

On February 4, Marshal Voroshilov and party went sight-seeing. He visited the Buddhist temple in the capital and "got the blessings" of Buddhist priests for a long life.

He walked bare-foot in the temple of Patan where he was greeted by the chief priest who put a vermillion mark on his forehead.

He received flowers, fried rice, coloured powder and other *prasad* almost as a devotee.

He was given a civic reception in the evening at which Mr. B. P. Koirala conveyed to Marshal Voroshilov Nepal's birthday present of a "Himalayan fund of goodwill for the Soviet Union."

Speaking at the reception, Mr. Koirala said that Marshal Voroshilov was the symbol of peace for which the Soviet Union was striving.

He added that Nepal was happy that Marshal Voroshilov was celebrating his birthday in the midst of the peace-loving people of Nepal.

State Banquet:

The same evening (February 4), King Mahendra entertained Marshal Voroshilov at a State banquet at which he expressed appreciation for the "wonderful progress" Russia had made in science which "has proved to be an inspiration to other countries."

He commended the Soviet Union's "efforts for the cause of world peace" and thanked the Soviet Union for the technical and economic assistance Nepal received from her.

He declared that Nepal also loved peace and cherished freedom and independence and had full faith in peaceful co-existence.

Marshal Voroshilov, in his reply, said that the forces of colonialism had raised a barrier between Nepal and the Soviet Union. That barrier was now gone and friendly relations between them were growing since the great changes in Nepal nine years ago.

He added that language, culture and habits in the two countries were different, but there was one thing in common—concern for security and peace.

He referred to Mr. Khruschev's proposals for total universal disarmament and said that Russia was prepared to do it provided others did the same.

Joint Communique:

A joint *communique* issued by King Mahendra and Marshal Voroshilov on February 6 re-iterated the conviction of both countries that the principles of peaceful co-existence when accepted as the basis of relations between nations, would establish and promote world peace.

It added that both sides had expressed their conviction that complete and general disarmament was the only way to "outlaw wars for all time."

King Mahendra and his Government, it declared, considered the recent reduction of the Soviet armed forces as "a great step towards achieving the unique purpose of general and complete disarmament."

It noted the similarity of views between Russia and Nepal on a number of international questions which "promote the co-op-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

eration of both countries in the solution of problems connected with the consolidation of peace and security of nations."

Satisfaction was expressed at the lessening of international tensions, and King Mahendra and the Nepalese Government welcomed the measures taken by the Soviet Government for reducing international tensions, in particular, Mr. Khruschev's visit to USA, which was described as "an important step on the way of eliminating 'the cold war'."

The forthcoming 'summit' conference in May, 1960 was welcomed and both sides expressed the hope that it would establish a firm basis for the settlement of international problems by peaceful negotiations and on terms of "peaceful co-existence."

Satisfaction was also expressed at the start of the implementation of Russia's 30 million roubles economic aid to Nepal. This was considered to be a significant step in establishing better economic relations between the two countries.

Marshal Voroshilov and party left Khatmandu for New Delhi on February 5.

PAKISTAN

SUMMARY: F-M Ayub Khan on Joint Defence With India And Future Constitution; CENTO Highways Working Party Meeting; Trade Agreement With Yugoslavia.

A. **F-M Ayub Khan's Tour Of East Pakistan—Statements On Indo-Pakistan Joint Defence And Future Constitution:** The President, Field-Marshal Mohammed Ayub Khan, who arrived in Dacca on January 21 on a tour of East Pakistan, told newsmen at the airport that Indo-Pakistan joint defence did not come in the way of the policy of non-alignment pursued by India in world affairs.

He said that an agreement for joint defence was possible with goodwill and understanding between India and Pakistan. Mere understanding between India and Pakistan was enough for the purpose of defending the subcontinent by people living in that zone. Pakistan's stand had been that once their outstanding differences were resolved, some sort of an arrangement could be made whereby the people of the two countries could jointly defend the sub-continent. "It need not be a covenanted pact; mere understanding in this respect would do."

He said that if Mr. Nehru was speaking about alignment with communist Russia and America "we do not contend that. We are not their rivals. We are putting forward this view because we live in the same zone as India."

He went on: "The crux of the whole problem is that Indian and Pakistani forces are at the moment facing each other. If differences between them are resolved, these forces will be released for the job of defending their territories."

F-M Ayub Khan returned to the theme of Indo-Pakistan relations when he laid the foundation stone of a new township near Chittagong on January 22.

He said that there was need for India and Pakistan to be friends and added: "We seek friendship with India not out of fear or anything but because the factors of geography and strategy are forcing us to do that. It is in the interests of India to recognize that. India and Pakistan have to live in the same space and it should be on the basis of some sort of decent relationship, and we want India to realize that."

He referred to the question of Indo-Pakistan friendship when an Indian correspondent asked him whether he had meant India or China "as a source of danger to Pakistan" in his address to the Dacca University students.

Replying, F-M Ayub Khan said: "My reference was to any one who is not our friend. It has got to be found out, however, who is our friend and who is not. The wounds of Partition have been healed. They should have been healed long ago. What is the good of recalling the past. Let us forget the past and look to the future. The entire attitude of the Indo-Pakistan sub-continent should be to forgive and forget."

Dacca University Honour:

Dacca University conferred on F-M Ayub Khan the honorary degree of Doctor of Laws at its annual Convocation on January 21.

Speaking at the Convocation, he said, there was need for a searching enquiry into the various aspects of Pakistan's national, social, economic and cultural life. This enquiry must be undertaken before they could plan with any accuracy.

F-M Ayub Khan on Future Constitution:

At a question-answer meeting at Faridpur in East Pakistan on January 25, F-M Ayub Khan said that the moment Parliament assembled under the future Constitution of Pakistan, Martial Law would be lifted. Martial Law could not be lifted now, because such a step would lead to innumerable difficulties and complications.

In reply to a question, he said that when the Constitution had been framed, political parties were bound to be there, but his only prayer was that they would be parties for good and not for evil.

Answering another question, he said that the future Constitution would certainly reflect Islamic principles.

F-M Ayub Khan, who returned to Rawalpindi on January 29, told newsmen that a no-war declaration without real friendship between Pakistan and India would mean nothing.

Friendship, he added, could be brought about only through the solution of the Kashmir issue.

(*Dawn*, Karachi)

[Prev. ref. 2844:PAK:A, 3011:PAK:C, 3107:PAK:A]

B. **Meeting Of CENTO Working Party On Highways:** A meeting of the Central Treaty Organization's (CENTO) Working Party on Highways began in Karachi on January 21 to review the progress in the implementation of road projects approved by CENTO.

A CENTO Secretariat Note on the progress of road projects said:

"(1) *Road between Iran and Pakistan via Chahbehar*: This road will proceed along the coast from Karachi to Chahbehar and thereafter through the interior of Iran. The aerial survey of the 450-mile Pakistan section of the road has already been carried out and actual alignment located. Necessary arrangements are being made for the supply of equipment by the United Kingdom amounting to £150,000 for survey purposes.

"(2) *Road between Pakistan and Iran via Zahidan and Kerman*: The Governments of Iran and Pakistan are considering measures for the improvement, construction and maintenance of the road which will greatly assist in the economic development of the surrounding area. They have placed requests for assistance in the procurement of necessary equipment."

The CENTO Sub-Committee on Communications and Public Works met in Karachi on January 24 to consider the reports of the various Working Parties set up earlier.

Pakistan's Minister for Railways and Communications, Mr. F. M. Khan, told the Sub-Committee: "Without efficient contacts by land, sea and air, it would be difficult for us and our partners to ensure easy and expeditious movement of men and material between the territories of the Pact region and with Europe, and we would hardly be in a position to sustain and maintain the favourable commercial, cultural, political and collective defence arrangements of our countries."

It was disclosed at the meeting of CENTO's Working Party on Telecommunications on January 22 that the construction of the first building in Pakistan for establishing high frequency radio-telephone and radio-telegraph circuit links with London would start soon at Charo, about five miles north of Karachi.

So far as other CENTO capitals were concerned, the installation of high frequency radio-telegraph and radio-telephone circuits had been completed only in Istanbul, while considerable progress had been made in the construction work at Ankara and Tehran.

The United Kingdom Government financed the project in Turkey to the extent of £50,000 and in Iran to the extent of £100,000.

At the meeting of the CENTO Sub-Committee on Communications and Public Works in Karachi on January 27, the United States offered to consider bearing the foreign exchange cost of navigational aids and communications equipment for an air-way connecting the capitals of the three regional members of CENTO.

The United Kingdom offered an additional £250,000 for the installation of further equipment of the high frequency tele-communication net-work which would link London with the CENTO regional capitals.

(*Dawn*, Karachi)

[Prev. ref. 2909:TUR:A, 2967:AOA:B, 3081:PAK:G]

C. **Trade Agreement With Yugoslavia:** On February 4, Pakistan and Yugoslavia initialled the draft of a new Trade Agreement.

The Agreement envisaged the expansion of commercial and economic relations between the two countries.

The new Agreement was more comprehensive in character and scope than the old one. There was a provision for the negotiation of a Payments Agreement as well as for new barter deals.

Yugoslavia's offer for credit facilities to Pakistan as well as her proposal for increased scientific and technical co-operation with Pakistan was also part of the draft Agreement.

The list of goods to be exchanged was enlarged. Under the existing Agreement, the total yearly volume of trade between Pakistan and Yugoslavia came to about $3,000,000 each way. The volume was expected to be increased considerably.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The leader of the Yugoslav delegation, Mr. Milos Lalovic, told newsmen that an Agreement on Technical and Scientific Co-operation between the two countries was likely to be signed along with the Trade Agreement.

Speaking of the Trade Agreement, he explained that it contained clauses bearing on economic co-operation between the two countries under which they could help each other in such things as the setting up of joint enterprises, investment of capital, conducting economic surveys and so forth.

Mr. Milos Lalovic said in Karachi on January 31 that under the new Trade Agreement, a number of products would be exchanged. The previous Agreement was signed in 1954.

He said that during the discussions, the possibility of exchanging technical and scientific knowledge between the two countries was also considered.

A draft on this question was submitted to Pakistani officials by the Yugoslav delegation.

Speaking of technical help to Pakistan, he said that a geological survey of the sites of the Mangla and Turbela dams was being conducted by Yugoslav engineers. The survey of the Mangla Dam site was almost complete while that of the Turbela Dam was nearing completion. Similarly, in Gujranwala, Yugoslav engineers were engaged in designing and constructing a hydel power station.

(*Dawn*, Karachi)

D. **Industrial And Commercial Employment (Standing Orders) Ordinance, 1960:** The Pakistan Government promulgated on February 3 an Ordinance called "The Industrial and *Commercial Employment (Standing Orders) Ordinance, 1960.*"

The aim of the Ordinance was said to be to regulate the service conditions of workers serving in any industrial or commercial establishment employing 50 or more workmen. For the first time, it sought to ensure minimum standards of working conditions for employees in commercial establishments.

A Press Note issued in this connexion said that the Ordinance applied to the whole of Pakistan and would come into force immediately.

It is estimated that the Ordinance would apply to 690 establishments.

(*Dawn*, Karachi)

[Prev. ref. 3012 (corrected):PAK:F]

E. **Dyes And Chemical Factories Inaugurated:** On February 1, F-M Mohammed Ayub Khan opened a Penicillin Factory and the Pakistan Dyes and Chemicals Ltd. at Daud Khel.

Speaking at the ceremony, he outlined Government's industrial policy and said that the chief aim of Pakistan was to achieve economic independence by producing the main necessities of life within the country.

He added: "We have to assure our people through our own resources food, cloth, housing material and other goods essential to the life of the community."

The two factories were sponsored by the Pakistan Industrial Development Corporation.

(*Dawn*, Karachi)

[Prev. ref. 3068:PAK:G]

F. EBDO Notice On Mr. Mumtaz Hasan Qizilbash: The former West Pakistan Minister, Mr. Mumtaz Hasan Qizilbash, was served with a notice on January 25 under the Elective Bodies Disqualification Order. There were six charges against him of using his official position and power, obtaining personal benefits and depriving the Government of assets.

He was asked to appear in person before the Elective Bodies Disqualification Tribunal on February 15 to show cause why he should not be held guilty of the charges.

Mr. Qizilbash was, however, given the option to retire from public life until December 31, 1966. If he decided to exercise the option, he was asked to communicate his decision to the Tribunal within seven days of the receipt of the notice.

In the West Pakistan Cabinet, Mr. Qizilbash had held the portfolios of Food and Industries.

One of the charges against him was that while he was Chief Minister of Khairpur State in 1955, he had abused his official position and obtained for himself, through questionable means, the grant of land measuring 1,000 acres in Khairpur at the nominal cost of one rupee per acre.

(*Dawn*, Karachi)

[Prev. ref. 3161:PAK:A]

G. **Malik Haq Nawaz Tiwana Sentenced:** Malik Haq Nawaz Tiwana, a former Deputy Inspector-General of Police, was sentenced by the Special Military Court in Lahore on February 3 to rigorous imprisonment for five years and a fine of Rs. 25,000, or in default to one year's further hard labour.

He stood trial under Martial Law Regulation No. 30 on two charges of accepting illegal gratification of over Rs. 38,000 during his tenure of office in Karachi.

The Court held him guilty on both the charges.

(*Dawn*, Karachi)

[Prev. ref 2793:PAK:D]

H. **Next Census:** It was officially announced in Rawalpindi on February 5 that the next census in Pakistan would be held in January, 1961.

According to a *Gazette* notification issued by the Interior Ministry, the census would be conducted between January 12 and 31, 1961.

(*Dawn*, Karachi)

SAUDI ARABIA

A. **Morocco King's Visit:** King Mohammed V of Morocco visited Saudi Arabia towards the end of January.

At the end of the visit, on January 27, he and King Saud of Saudi Arabia issued a joint *communique* announcing the conclusion of a Fraternity and Solidarity Convention between their two countries.

The *communique* said that during their talks the two Kings stressed the need to re-inforce common action among the Arabs. In particular, they agreed to go to the aid of the Algerian people in their struggle for freedom and independence, save Arab Palestine in order to permit the inhabitants to live in their own country and free the other Arab territories from foreign domination.

(*The Statesman*, Calcutta)

[Prev. ref. 3132:UAR:C]

UNITED ARAB REPUBLIC

A. **Soviet Aid For Building Second Stage Of Aswan High Dam:** It was officially announced in Cairo on January 29 that the Soviet Union would grant £(E) 100,000,000 in aid for the second stage of the construction of the Aswan High Dam, in addition to the 400,000,000 roubles already given for the first stage.

The UAR Minister of Public Works, Mr. Moussa Arafa, told a news conference in Cairo that the project, which would be executed by Soviet and Arab engineers exclusively, was expected to be completed by the end of 1967, three years earlier than planned, and at a reduced cost of £(E) 337,000,000. The original estimated expenditure was £(E) 367,000,000.

The second credit which Russia offered to UAR would amount to 20 per cent of the total cost of the Aswan High Dam.

(*The Egyptian Gazette*, Cairo, and *The Statesman*, Calcutta)

[Prev. ref. 3131:UAR:A]

VIET-NAM (DR)

A. **New Constitution Adopted:** The National Assembly unanimously adopted on January 13 the new Constitution of the Democratic Republic of Viet-Nam.

The adoption of the Constitution was acclaimed by thousands of people crowding the square in front of the municipal theatre where the Assembly had been in session. The crowds carried large banners saying: "We welcome the new Constitution."

The Constitution, comprising 10 Chapters with 112 Articles, says in its Preamble: "Viet-Nam is a single entity from Lang-son to Ca-mau and our State is a People's Democratic State, based on the alliance between workers and peasants and led by the working class".

It defines the political, economic and social system of the Democratic Republic of Viet-Nam, the relations of equality and mutual assistance among the various nationalities in the country and guarantees the taking of North Viet-Nam toward socialism, the constant improvement of the material and cultural life of the people and the building of a steady and strong North Viet-Nam as a basis for the struggle to re-unify Viet-Nam peacefully.

Speaking on behalf of the Constitution Amendment Committee, the President, Dr. Ho Chi-Minh said that the new Constitution "will encourage our compatriots in the North to strive further in their emulation for socialist construction, and those in the South to struggle still more persistently for democratic freedom, consultations between the two zones and national re-unification."

"Internationally," he said, "our new Constitution will contribute to the further strengthening of the socialist camp headed by the great Soviet Union."

He stressed that the new Constitution was a socialist Constitution.

Pointing to a group of children who came to greet him, he said: "When they grow up, they will have a communist Constitution". His words were acclaimed with prolonged applause.

The Assembly also adopted a resolution entrusting the President of the Republic with the task of promulgating the Constitution.

It also entrusted the Assembly Standing Committee and the Council of Ministers with organizing the General Elections in six months.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Addressing a mass rally in Hanoi on January 15 to explain the new Constitution, the President, Dr. Ho Chi-Minh, said that the Democratic Republic of Viet-Nam had made tremendous achievements that would have far-reaching effects.

He added: "The new Constitution adopted by the National Assembly affirms the glorious achievements made by the North Viet-Namese people in economic, cultural and social fields."

(*Consulate-General of the Democratic Republic of Viet-Nam*, New Delhi)

[Prev. ref. 2879:VND:A]

B. **Report On Tasks Before Government:** At its plenary meeting on December 29, 1959, the National Assembly unanimously acclaimed the work of the Government over the past five years and approved the main tasks laid down for 1960.

These main tasks were:

(1) To consolidate and push ahead the movement for socialist transformation, basically complete the organization of peasants and fisher-folk into semi-socialist co-operatives, and the socialist transformation of private capitalist industry and trade;

(2) To develop the State economic sector and broaden and step up capital construction;

(3) To develop agriculture and industrial production and all other economic and financial activities;

(4) To push ahead cultural and educational activities, strive to train old and new public servants, especially to train technicians and skilled workers, step up scientific and technical work, continue to improve the living conditions of all sections of the people;

(5) To push forward the re-adjustment and strengthening of the State machine, broaden diplomatic activities, strengthen national defence, put the new Constitution into effect and hold General Elections to the new National Assembly; and

(6) To prepare for the First Five-Year Plan which will begin in 1961.

(*Consulate-General of the Democratic Republic of Viet-Nam*, New Delhi)

[Prev. ref. 2565:VND:A]

C. **Script For Minority:** A Latin script for the Tay nationality has been compiled by the Committee for the Study of Script for Minority Nationals in the Viet Bac autonomous region.

The Tay (also called Tho) minority people number about 410,000 living in the northern mountainous regions of Viet-Nam.

Experimental courses taught in the Tay script have proved satisfactory. Text-books are being composed in the new script.

(*Consulate-General of the Democratic Republic of Viet-Nam*, New Delhi)

YEMEN

A. **Oil Concession To American Company:** *The Middle East Economic Digest*, London, reported on January 22 that a newly-formed company, American Overseas Investment Corporation, had been given oil exploration rights in the Yemen.

The concession covers an area of 10,000 square miles on the north-western coastal plain as well as off-shore. Profit-sharing with Yemen would be on a 50-50 basis after commercial production was achieved.

American oil interests thus re-entered Yemen after a long period of difficulties over oil rights. Five years earlier, another American company—the Yemen Development Corporation—incorporated in Delaware, was granted a 30-year concession over 40,000 square miles in another part of the country well into the north-east. This concession was cancelled by the Yemen Government in 1958.

In the previous two years or so, there had been reports of oil finds by Russian and Czech geologists. These geologists were drilling for water in the central part of the coastal plain near Hodeidah. Czech oil experts were then asked to carry out further tests for the Yemen Government, but their findings were not made public.

(*Middle East Economic Digest*, London)

[Prev. ref. 532:YEM:A]

ASIA OUTSIDE ASIA

A. **Security Council Endorses Cameroons' Admission To UN:** The United Nations Security Council unanimously endorsed the new West African State of Cameroons on January 26 for ultimate admission to UN by the UN General Assembly as the 83rd member of the United Nations.

The UN General Assembly will act on the Council's recommendation at its next session which is not due before September, 1960. By then Togoland, Somalia and Cyprus are scheduled to become independent. Nigeria becomes independent on October 1, 1960.

The Security Council session was marked by references to "Africa on the march" and tributes to French leadership of the Cameroons for advancing it from a Trust Territory to nationhood. Togoland and Somalia are also Trust territories, while Cyprus and Nigeria are British colonies.

(*The Hindu*, Madras)

[Prev. ref. 2424:AOA:H, 3006:AOA:A]

B. **Radio-active 'Fall-out' In Stratosphere—Finding By UN Experts:** The United Nations Scientific Committee on the Effects of Radiation, which ended a two-week private session at UN Headquarters on January 23 expressed the view that the radio-active debris lodged in the stratosphere by nuclear weapon tests would fall to the Earth, if there was no more testing, in three years.

It re-iterated its earlier conclusion that it would be undesirable to have further nuclear tests.

Members of the Committee were from Argentina, Australia, Belgium, Brazil, Britain, Canada, Czechoslovakia, France, India, Japan, Mexico, the Soviet Union, Sweden, the United Arab Republic and the United States.

The Committee, set up by the United Nations General Assembly to assess radiation hazards from all causes, did not discuss French plans to conduct atomic tests in the Sahara or the possibility of testing programmes by other nations.

But it agreed that it could not revise its earlier views about the undesirability of exposing mankind to radiation, though the findings which it published in 1958 had been largely out-dated by subsequent knowledge.

The information presented to the Committee was a determination that radioactive debris in the stratosphere over the earth's northern hemisphere was two or three times greater than that over the southern hemisphere.

Experts from the Food and Agriculture Organization reported on "food chain problems"—radiation transmitted from soil to plants, to animals and to human beings in their diet.

The Committee approved plans for an international meeting of experts to consider questions of genetics and radiation to be held in Geneva from June 27 to July 2, 1960 under the joint sponsorship of the United Nations and the World Health Organization.

A UN official summed up the discussions of the Committee and said that on the basis of the data now available, it appeared that the quantity of radio-active material in the stratosphere was less than was feared, but against this "re-assuring development" it also revealed that the 'fall-out' was much more precipitous than previously thought to be.

He added that it was now possible for weathermen to take an 'inside look' into the quantity of radio-active material in the stratosphere—something which formerly was merely guessed.

C. **Monkey Sent Up In US Rocket To Height Of Seven Miles And Recovered:** A 7½-lb female monkey, named Miss Sam, was successfully recovered by USA from the sea on January 21, still alive, after being fired seven miles into space.

The National Aeronautics and Space Administration (NASA) of the United States which sponsored the test said that the monkey was sent up in "a Little Joe" rocket as a test for putting man into space.

Seven miles above the Atlantic Ocean, the monkey was parachuted into the sea in a small chamber which was part of a capsule weighing one ton. The experiment took place at Wallops Island (Virginia).

A helicopter then recovered the capsule. A full-scale prototype of the capsule would be used in the "Mercury" Astronaut Programme.

The monkey was subjected to an air-load pressure of about 1,000 lbs. per square inch at the moment when the escape rocket was detonated.

This was the first time that a living creature had been subjected to such a pressure, although other monkeys have been sent up higher and on longer journeys.

The escape mechanism was designed to allow a human space traveller to free himself from the booster rocket if something went wrong in the launching.

Shortly after the recovery of the monkey, which was described as "frisky", it was flown to the School of Aviation Medicine at an Air Force base in Texas for tests.

D. **Potential Nuclear Powers—India Included:** The National Planning Association reported in Washington on January 23 that a dozen nations, including India, China, Japan and both East and West Germany, were capable of embarking on nuclear weapons programmes in the near future.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The Association, an American non-profit and non-political organization devoted to planning by Americans in business, labour and the professions, said in its 60-page report: "If France could independently produce an atomic bomb at a time when her military and economic power was being subjected to heavy strain, still more countries might also produce one in the future."

It warned that the point was being approached where it would no longer be possible for the present atomic Powers to control the spread of nuclear weapons.

All told, it named 26 countries—in addition to the present nuclear "club" of the United States, Britain and the Soviet Union—as being potential nuclear Powers.

(*The New York Times*)

[Prev. ref. 3077:INI:E]

E. **Heat Converted Into A.C. Electricity:** It was announced at San Diego (California) on January 12 that some US scientists had succeeded in converting heat directly into alternating current electricity.

It was claimed that the experiment could lead to the use of direct conversion equipment in place of steam boilers, turbines and generators.

Dr. Frederic De Hoffman, President of General Atomic, a Division of the General Dynamics Corporation, said that the experiment had produced enough alternating current to illuminate a series of small light bulbs. Direct current had been obtained from thermo-electric devices before but never appreciable amounts of alternating current.

(*The New York Times*)

F. **New Types Of Rocket Fuel Evolved In Russia:** It was stated by *Tass* from Moscow on January 23 that Soviet chemists had evolved new types of rocket fuel. The successful Pacific rocket test on January 20 was "a major victory" for these chemists.

Academician Semxon Volfkovich told *Tass*: "The fuel and oxydizers proposed by Soviet scientists can apparently be regarded as the best of all propellants mankind now has at its disposal for space flights.

"No man-made body has ever before withstood such enormous friction against the air as the ballistic rocket when falling into the Pacific."

He did not elaborate on the fuel but went on to describe as a "great achievement" the fact that Soviet chemists had obtained "special alloys and other materials which permitted the nose cone to withstand the passage through the dense layers of the atmosphere.

He added that he had had an opportunity to study rocket fuel in the United States and "I must say that much progress in this field has been made there as well."

Prof. Vladimir Dobronravov, a Soviet space rocket scientist, said that after the completion of the Pacific tests "larger sputniks and rockets will be sent up to other planets."

In an interview broadcast by Moscow Radio, he said that heavy Earth satellites would be able to carry instruments such as a space orientation system.

"That sort of satellite," he added "can also carry a small telescope, due to which it will be possible to obtain interesting pictures of the stars not distorted by the Earth's atmosphere.

"Special motors to slow down its speed can be carried by the heavy and guided satellites of the future. It will thereby be able to slow down before entering the dense layer of the atmosphere, and thus will be prevented from burning up."

(*Tass*)

[Prev. ref. 3136:AOA:J]

G. **Soviet Scientists Turn Paraffin Into High-grade Fuel:** It was reported in Moscow on January 23 that Soviet scientists had evolved a method of turning paraffin into high-grade fuel which would cut the cost of producing motor spirit by three or four times.

An experimental plant has been producing the fuel at the Moscow oil refinery for more than three years. It was the first time in the world that motor fuel had been separated from paraffin.

In operation, the plant would process upto 1,500 tons of oil products daily.

(*Tass*)

H. **US Navy Men Go Seven Miles Down In Sea:** Admiral Arleigh Burke, Chief of US Naval Operations, said in Washington on January 23 that a world record dive of over seven miles by two men in the US Navy's Bathyscaphe *Trieste* "may well mark the opening of a new age in the exploration of the depths of the ocean."

The new record of 37,800 feet, which the Bathyscaphe set up to beat its own previous record of 24,000 feet, he added, could well be as important as exploration in space had been in the past.

The 10-ton Bathyscaphe, which looks like a small submarine with a steel observation ball underneath, made the dive on January 23 in Marianas Trench in the Pacific, the deepest hole in the oceans.

Inside it were Prof. Jacques Piccard, son of the Swiss stratosphere and deep-sea explorer, Prof. Auguste Piccard, and Lieut. Don Walsh of the US Navy. The two Piccards built the Bathyscaphe in 1953.

The divers took four hours and 48 minutes to descend, stayed on the bottom about 30 minutes, and took three hours and 17 minutes to return to the surface.

The divers reported that the Marianas Trench was considerably deeper than previously estimated. Until January 23, it was thought to be 35,000 feet deep, on the basis of measurements made by a Russian oceanographic ship in 1957.

The feat has taken man to a depth in the sea greater than the highest mountain, the 29,000-foot Mount Everest.

(*The New York Times*)

[Prev. ref. 3136:AOA:I]

I. **Diamond Deal Between Diamond Corporation Of South Africa And Soviet Union:** The Diamond Corporation of South Africa announced in Johannesburg on January 18 that an Agreement had been signed in London under which it would buy all the diamonds which the Soviet Union wished to market in the Western world.

The diamonds would then be sold through the Central Selling Organization of the De Beers Group of companies.

The City Editor of *The Times*, London, gave the following background on the deal:

"The Agreement must be regarded as a considerable *coup* for the Central Selling Organization, who already handle virtually all diamonds produced by the Western nations. From time to time, it has been suggested that once the Russian diamond production really got under way, the Selling Organization's near monopoly would be broken and competitive marketing would be resumed, possibly with unpleasant results for producers, for prices might then fluctuate violently.

"The whole object of the Central Selling Organization has, of course, been to maintain stable, though not artificially high, prices for the diamond industry, and hitherto their policy has been conspicuously successful. By reaching an agreement with the Russians they have removed a serious potential threat to the industry.

"No precise details of Russian diamond production have been published. However, early in 1956, the Soviet publications reported the discovery of large diamond deposits in Yakutsk, north-east Siberia, which it was claimed might equal, or exceed, the South African deposits. The stones were said to be of gem and industrial quality. Last June (1959), *Tass* announced that the first diamond extracting plant in the western Yakutsk diamond fields had already given thousands of carats of diamonds and that a second plant would be commissioned in August (1959).

"Last month (December, 1959), the same agency reported that Soviet diamond production was to be increased 16-fold by 1965 compared with 1958, largely to meet domestic requirements. And three weeks later Soviet geologists discovered a new rich deposit of diamonds in the northern Urals which 'would increase the diamond output of the Urals at least ten-fold.'

"The Agreement now reached between the Russians and De Beers Group seems to suggest that if and when Soviet production is sufficient to meet domestic needs and leaves a surplus for export, the Russians have no intention to flood the diamond market, regardless of consequences. In an extreme case, these consequences could have had far wider repercussions than just on diamond producers and traders."

ASIAN RECORDER

February 27—March 4, 1960

Regd. No. D-727
Vol. VI No. 9

AFGHANISTAN

A. **Trade Protocol With Czechoslovakia:** Afghanistan and Czechoslovakia signed a Trade Protocol in Prague on February 9.

It provided for a five per cent increase over the volume of trade in 1959.

Under the Protocol, Czechoslovakia would import, among other goods, cotton, wool and oil-seeds, and would export engineering equipment, installations for whole industrial plants and consumer goods.

(*The Hindustan Times*, New Delhi)

BURMA

A. **Trade Ban On Japanese Goods Lifted:** The Government lifted the ban on trading in Japanese goods on February 10.

[The ban was imposed in December, 1959 in retaliation against Japan's refusal to purchase Burmese rice. The lifting of the ban followed the Japanese Government's decision on February 2 to import 45,000 tons of Burmese rice during the current rice year (November, 1959 to October, 1960). For further details see page 3128.]

The decision to lift the ban was conveyed to the Japanese Foreign Minister, Mr. Aiichiro Fujiyama, in Tokyo on February 9 by the Burmese Ambassador to Japan, U Thein Shein.

Tokyo reports said that at that meeting the two countries had agreed to exchange Missions to study ways and means of developing trade and of correcting the existing trade imbalance.

(*The Nation*, Rangoon)

[Prev. ref. 3128:JAP:D]

CHINA

A. **Relations With Soviet Union:** Chinese and Soviet leaders exchanged messages on February 13 stressing the "fraternal and unbreakable" friendship of the two countries.

The messages marked the tenth anniversary of the Sino-Soviet Treaty of Friendship and Co-operation.

A joint message was sent to the Soviet President, Marshal Klementi Voroshilov, and the Premier, Mr. Nikita Khruschev, by the top four Chinese leaders, Mr. Mao Tse-tung, Mr. Liu Shao-chi, Marshal Chu Teh and Mr. Chou En-lai.

The message spoke of the contributions made by China and the Soviet Union in the past ten years for world peace and "against the imperialist policy of aggression and war" and said that Mr. Khruschev's visit to the United States, the Soviet disarmament proposals and the unilateral Soviet reduction of armed forces "have dealt heavy blows to the intrigues of the imperialist bellicose groups." Whether international tensions would be relaxed in the future and international issues would be solved "obviously depends on whether or not the Western bloc headed by the United States really has a sincere desire for peace."

The message sent by Mr. Khruschev and Marshal Voroshilov to the Chinese leaders referred to the "fraternal and unbreakable" friendship of the Soviet and Chinese people and said that the two peoples "are making great contributions to victory in the peaceful economic competitions between socialism and capitalism."

It added: "Simultaneous with their persistent efforts to carry out the Leninist principle of peaceful co-existence among the countries of differing social systems and their struggle for relaxation of international tensions, the socialist countries consistently advance the development of friendship and co-operation among the peoples of all countries and devote their efforts to world peace and security."

It described Soviet-Chinese friendship as "a new type of relationship built on the basis of complete equality of mutual assistance and Leninist principle of proletarian internationalism."

Meanwhile, the Chinese Foreign Minister, Marshal Chen Yi, declared at a banquet held the same day (February 13) in Peking that it was "futile and wishful thinking for the world to look for cracks between China and the Soviet Union in an attempt to split this great alliance."

(*Hsinhua News* and *The Hindu*, Madras)

[Prev. ref. 2938:CHI:A]

B. **People's Courts Grant Pardons:** In the Provinces, Municipalities and Autonomous Regions, the People's Courts have granted pardons to "counter-revolutionary and common criminals" who had given proof of atoning for their crimes and turning over a new leaf in pursuance of the September 17, 1959 order of the Chairman of the People's Republic.

The first group of criminals pardoned and released totalled 12,082. Of this number, more than 2,000 were "counter-revolutionaries" and more than 9,000 "common criminals."

A thorough investigation was carried out before the pardons were granted. A certificate was issued to each of the criminals at meetings where the announcement was made. Upon their release suitable jobs were found for them.

(*Peking Review*)

[Prev. ref. 2926:CHI:B]

C. **Co-operation Among Communist Nations:** *Peking Review*, in its issue dated December 15, 1959, cited some developments toward greater co-operation among the communist countries for their economic progress.

It said that members of the Joint Nuclear Research Institute in Dubna (near Moscow) —the Soviet Union, China and all the other socialist countries—had recently signed a Protocol for co-operation on a still larger scale in the peaceful uses of atomic energy.

From now on, the Dubna Institute would, at their request, arrange for consultations on research programmes of the member-States in the peaceful uses of atomic energy. It would also arrange conferences, whenever necessary, to exchange experience and organize exchanges of specialists among the member-countries. The number of scientists and engineers from the member-countries working at the Institute would be doubled in 1960.

A conference on railway construction was recently held in Peking. Delegations from Bulgaria, China, Czechoslovakia, the German Democratic Republic, Hungary, North Korea, Poland, Soviet Union and the Democratic Republic of Viet-Nam took part in it. They discussed technical problems relating to the development of jointless rails, reinforced concrete sleepers, mechanization of road maintenance and the ventilation and waterproofing of tunnels. They exchanged experience in these fields and signed certain Protocols.

During the conference, the delegations from the fraternal countries visited the Paoki-Chengtu Railway and toured some cities.

The Fishery Research Commission for the Western Pacific completed a session in Hanoi. Members of the Commission — North Korea, Mongolia, Soviet Union, Viet-Nam (DR) and China—presented many reports on the latest results of fishery research in their countries.

(*Peking Review*)

[Prev. ref. 2971:CHI:C]

INDIA

SUMMARY: Mr. N. S. Khruschev's Visit; Railway Budget.

A. **Mr. N. S. Khruschev's Visit:** The Soviet Premier, Mr. N. S. Khruschev, was given a warm welcome on his arrival in New Delhi on February 11 on a five-day visit to India, his second in four years.

Thousands cheered as Mr. Khruschev, accompanied by the President, Dr. Rajendra Prasad, and Mr. Nehru, drove in State through 13 miles of gaily-decorated streets from Palam airport to Rashtrapati Bhavan.

Addressing a large gathering at Palam airport, Mr. Khruschev expressed great satisfaction that the Soviet Union and India were not merely neighbours but "good neighbours and great friends."

He referred to Marshal Voroshilov's visit a few days earlier (page 3154) and his own earlier visit in 1955 (page 522) and hoped that Indian statesmen would pay return visits to the Soviet Union, since personal contacts between leaders had become an effective means "of invigorating the international atmosphere and promoting mutual understanding between States."

He also stressed the importance of Indo-Soviet co-operation in securing a durable world peace and looked forward to expanding co-operation between the two countries in the economic, scientific and cultural fields.

Earlier, Dr. Rajendra Prasad, in his welcome speech, acclaimed the Soviet Union's role in working for peace and recalled the common approach to world problems shared by that country and India.

Address To Members Of Parliament:

The same evening (February 11), in his address to Members of Parliament, Mr. Khruschev pleaded for an

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

end to the 'cold war' and challenged the Western Powers to follow the example of USSR in reducing their armed forces, thereby facilitating general and complete disarmament.

Disclosing that the Soviet Union's armed forces had been unilaterally reduced to 2,423,000, which was less than the figure suggested by the Western Powers as the first step in their disarmament proposals, he declared that the Soviet Union once again said to the West: 'Let us reach agreement on disarmament, let us do our best to prevent war, let us compete in the reduction of armed forces and armaments and in the liquidation of the means of warfare.'

He denounced the efforts of "influential forces" in "some States" which, he said, were still active in their efforts to see the 'cold war' and the armaments race continue and called upon all peace-loving States to overcome these forces.

He also pledged the Soviet Union's "selfless and full support" to all countries in their struggle for freedom and independence and against economic backwardness.

He began by declaring that within the four years that had elapsed since his last visit, the forces struggling for peace and peaceful co-existence had grown immeasurably. *Panch Shila* had emerged into history which was in no small way due to the efforts of "peace-loving India."

Referring to the developments in Asia, Africa and South America, he said that the Soviet people rejoiced in the prospects in the independent development of Asian States, in the successes achieved by African States in their struggle against colonialism and by the Latin American States, such as Cuba, in their struggle against foreign domination.

Pledging his country's "selfless and full support" to these States, he called upon the Western countries, "which had prospered by plundering colonial peoples," to return at least a part of the wealth looted by them to these peoples.

He drew a sharp contrast between these Western countries and the Soviet Union which, he said, had created wealth by the strenuous labour of its own peoples.

In the Soviet Union, he said, there existed the highest manifestation of individual freedom, which was the liberation of man from exploitation by those who possessed the means of production such as mills, banks, factories and lands. Russia had also secured for man the right to work and had liberated him from the threat of unemployment and poverty.

He defended the one-party system in Russia and said that this was due to the monolithic society of workers which had been built up there. Multiple parties existed, he said, only in a bourgeois society consisting of various classes in conflict with each other.

In the many references to Indo-Soviet friendship interspersed in his speech, he laid emphasis on their common struggle of the two countries for peace. "May the friendship between our two countries be as strong as the metal produced at Bhilai, symbol of Indo-Soviet co-operation."

State Banquet:

The President, Dr. Rajendra Prasad, entertained Mr. Khruschev at a State banquet the same night (February 11) at which Mr. Khruschev gave an assurance that the Soviet Union would do her "utmost to assist India to promote still further her industry and her economy."

He expressed his appreciation of the role of India in the struggle for peace and said that "on the question of the struggle for peace, the positions of both India and the Soviet Union coincide."

Speaking on the occasion, Dr. Rajendra Prasad said that the conquest of distance and the availability of better and quicker means of communications, leading to contacts among the peoples of various nations, "must be followed by greater understanding and tolerance among nations so that all differences and disputes among them can be settled through negotiation and any resort to force is outlawed."

He felicitated Mr. Khruschev for his efforts which have so "greatly contributed to the relaxation of world tensions and which have led in no inconsiderable measure to the holding of high-level meetings of the heads of Governments for the promotion of world disarmament and peace."

He added: "We have said it earlier and I would like to re-iterate it tonight that the people of our country appreciate your initiative in this direction. We welcome these trends and the direct contacts between the leaders of the Great Powers and wish success to their efforts which, we feel assured, are inspired by the sincere desire to halt the armaments race and strengthen the forces of world peace."

The following is the text of Mr. Khruschev's speech:

"We (Russia) highly appreciate the fact that India espouses friendship and peace between all nations, irrespective of their political systems.

"We are deeply appreciative of the relations being established between our country and India, between our States, our Governments and our people. On all international questions in the United Nations, for instance on questions concerning the strengthening of peace and friendship, we do not differ, and this we appreciate highly. Knowing and feeling the policies that are pursued by your Government, which is headed by the esteemed Prime Minister Nehru, I trust that the friendship and co-operation between our countries will continue in the future. The relations that we have established between our countries are good relations based on co-operation and mutual assistance.

"We actually won by our efforts successes in industrialization. Our people suffered tremendous hardships to create a powerful industry. But the peoples of the Soviet Union consciously agreed to these hardships for they understood that it was only if an industry was created in their country — first and foremost heavy industry and better means of production—that the Soviet Union could survive and develop and achieve the goals that had been set by the Revolution.

"We, therefore, specially hold dear and we so easily understand the aspirations of India, the desire of India, to establish her own industry. We sympathize with these desires, and indeed we ourselves are imbued with the desire to build our industry. It is only on the basis of this desire that we have achieved such tremendous results. Therefore, we willingly share our experience in this field as well as our material gains with you. It is a source of gratification that we are able to render this useful aid in order to help India develop her industry. It is also particularly gratifying to hear how warmly and how highly you appreciate this aid.

"The Soviet Union understands and sympathizes with this noble desire of India to create and develop her own industry, her culture and her economy. We understand this and will do our utmost to assist India to promote still further her industry and her economy.

"I also highly appreciate the kind words addressed to the Soviet Union in regard to the struggle of our country for peace. We would truly spare no efforts in the struggle to ensure a stable peace. But peace cannot come simply by appeals and urges. What is needed is the fight for peace, and that we are doing. I am looking ahead with confidence for the situation that has taken shape in the correlation of forces in the world today if you look at it from the point of view of the existence of two blocs. The situation in this correlation of forces is such that it can only be a mad man who would start a war to solve arguments, for war in modern conditions would mean a disaster for both sides. The question can of course arise that this disaster would be different. For one side it would be greater and for the other side perhaps lesser. One side would lose more and the other side would lose less. But we must not approach such matters from a commercial stand-point as to who stands to lose more or less.

"What is most important to remember is that a modern war would mean terrible hardships, terrible destruction, for the entire world. We are doing all in our power to avert and prevent such a catastrophe. We are doing all in our power to achieve complete disarmament and to release huge material wealth which could be channelled for raising the well-being of all peoples.

"We in the Soviet Union highly appreciate the role that India is playing in the struggle for peace, the role that the Indian Government and particularly the head of the Indian Government, the esteemed Mr. Nehru, is playing. On the question of the struggle for peace, the positions of both India and the Soviet Union coincide. This fact certainly serves to strengthen the friendly relations and mutual co-operation between our two countries."

Civic Reception:

On February 12, Mr. Khruschev was given a civic reception by the citizens of Delhi. Replying to the address of welcome, Mr. Khruschev spoke of the armed might of Russia and satirically of the advocates of 'cold' and 'hot' wars. Of them he declared, amidst cheers: "They go on dragging the donkey of the 'cold war' up to the roof of their house, without thinking that it can break it and cause damage to the owners of the house themselves."

He said: "The Soviet Union is at present the strongest military Power. But we do not want to take advantage of this superiority. We are prepared at any moment to destroy all our armaments if the Western Powers do the same.

"The sinister clouds of the 'cold war' and international tensions have begun to disperse little by little. The first dents have appeared in these clouds and sun's rays of peace are forcing their way through them. Now the idea of peaceful co-existence is gaining ground even among the advocates of the 'cold war'. They have come to understand that if a war were unleashed by them, its instigators and inspirers would be the first to perish in its flames."

Mr. Nehru, who spoke later at the civic reception, assured Russia of India's unstinted support in her pursuit of peace and total disarmament. On behalf of the people of India, he welcomed Mr. Khruschev as the great leader of "a great country and a great neighbour."

Mr. Khruschev began his speech by saying that even the "freezing cold" of the Russian Winter "could not cool the warmth of the hearty greetings which the Muscovites asked me to convey to you."

Speaking of the growing friendship between India and USSR, he said that "we wish that war is eliminated forever from the life of human society".

He detailed at length the efforts of the Soviet Union for the promotion of lasting peace in the world and criticised the supporters of NATO, S-EATO and CENTO.

Russia, he said, sought total disarmament not because she was militarily weak. "Far from that. We submitted our proposal when the Soviet Union achieved outstanding successes in the development of nuclear and rocket weapons. Science should be used to benefit humanity."

He said: "According to all rules of competition we have made our challenge known

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

to USA. We have told them: 'Let us compete in the development of peaceful economy and not in the production of armaments. The peoples of our countries and the peoples of the entire world will benefit from that."

Of the "capitalist steed" which USA was riding, he said: "As the saying goes 'there is a horse but it is worn out and it is limping in both legs'. In the last six years Russia had increased her *per capita* industrial output by 71 per cent whereas USA had hardly registered any increase. Such are the facts and there is no getting away from them."

The Soviet people would, within the next few years, surpass USA to become the first country in the world in *per capita* production. This would give them the highest living standards in the world and also the shortest working day. In 1960 itself, they would be completing the introduction of a six and seven-hour working day. Gradually it would be reduced to a five and six-hour working day.

He concluded his speech with these words: "Long live peace throughout the world! Long live inviolable friendship between the peoples of the Soviet Union and India! Long live the industrious people of India! Jai Hind! Hindi-Russi Bhai-Bhai!"

Replica Of Soviet Pennant Planted On Moon Presented To Mr. Nehru:

Also, at the civic reception on February 12, Mr. Khruschev presented to Mr. Nehru a replica of the pennant planted on the Moon by *Lunik II*.

In doing so, Mr. Khruschev said: "This is a symbol of human and scientific progress, and this shows how much labour and science can achieve in the 20th century."

He added: "When I was in USA, I was asked whether the flight of the Soviet rocket rocket to the Moon meant that we were making claims to the Moon. I replied then that we regard our achievement as a victory of mankind as a whole.

"Let this pennant serve as one more token of good friendship between our two great nations."

Mr. Nehru said of the pennant replica: "This is the symbol of a new and growing world, of a new history."

Visit To Suratgarh:

On February 13, Mr. Khruschev and his party went to Suratgarh in Rajasthan where the Soviet Government had helped to set up a large mechanized farm.

Mr. Khruschev planted the first sapling of a red *malta* orange to inaugurate a 2,000-acre fruit farm about to be developed there.

On February 13, Rani Padmavati Devi of Khairagarh, Health Minister of Madhya Pradesh, presented a six-month-old tiger cub to Mr. Khruschev in New Delhi.

Presenting the cub, she told Mr. Khruschev that the cub had been given the name "Diamond" as it was captured in Panna district, which is known for its diamonds.

Mr. Khruschev was also presented with a pair of hand-made shoes.

Departure From New Delhi:

On February 14, Mr. Khruschev left New Delhi for Bhilai.

Before emplaning for Bhilai, he expressed 'great satisfaction' over his talks with Mr. Nehru.

He, however, declined to be drawn into a discussion of the border dispute between India and China. In answer to a question by newsmen on the subject, he said: "You read as well as write newspapers. If you do that, you must have read the statement we have made explaining our position about the regrettable differences between two friends."

Asked if, in the light of what had happened since the Soviet statement was made, he had anything to add, he replied: "I believe that the best position which a country that stands for the maintenance of peace and strengthening of friendship can take is the one we have taken."

He disclosed that he had invited both Dr. Rajendra Prasad and Mr. Nehru to visit the Soviet Union. But, judging from his remarks, it seemed that Dr. Prasad's visit to USSR would precede that of Mr. Nehru.

Later, as he was about to get into the plane, he told Dr. S. Radhakrishnan: "You have not been to Moscow for several years. We would love to have you there."

In Bhilai:

Mr. Khruschev arrived in Bhilai on February 14 and visited the Bhilai Steel Plant, which was being built with Soviet aid, where he was given a big welcome.

At a children's rally in which both Soviet and Indian children took part, Mr. Khruschev gave the impressions of his visit to the blast furnace and several other units of the project.

He said that Bhilai was an excellent plant. "Your elders are working not only for the steel plant but also for the friendship between Russia and India."

His advice to the children was: "Study hard, do not worry about marks in examinations. What is needed is how much you have learnt to take India ahead."

With a smile he thanked the organizers for the joint function which, he said, had impressed him very much.

Speaking at a banquet given in his honour at Bhilai the same night (February 14), Mr. Khruschev criticised the Western countries' attitude towards backward countries and remarked: "Ours is a disinterested aid. We help you to progress and to put your resources to better use. Westerners aid you because we aid you. If we give you one rouble they will give you two."

The underlying principle behind Soviet aid to India, he said, was that it wanted the people of backward countries to develop economically and that such a thing was incredible in the capitalist countries.

According to him, Mr. Nehru was following a correct policy of industrialization. So far as he could gather from newspapers, not everyone in India understood the policy Mr. Nehru was pursuing.

Address To Bhilai Workers:

Addressing the Indian and Russian workers of the steel plant on February 15, Mr. Khruschev promised continuing Soviet aid for India's economic development.

He referred to the decision to expand production at Bhilai to 2,500,000 tons in the Third Five-Year Plan and said: "Perhaps, the appetite for steel will increase further, and it will be considered advisable to expand the steel production in the plant further."

He mentioned China once in his speech when he said that the most modern machinery was given to that country by Russia—including the automobile plant and the lathes plant.

He expressed the view that India should steadfastly pursue the policy of industrialization laid down by Mr. Nehru.

He quickly added that this should not be interpreted to mean that he was interfering in the internal affairs of India; his was a friendly advice.

In Calcutta:

Mr. Khruschev arrived in Calcutta on the evening of February 15.

Within 10 minutes of his arrival, he left for Raj Bhavan in an open tourer. All along the eight-mile route to Raj Bhavan, thousands of people, who had waited for hours, cheered and at places waved flags as he passed.

Bengal Governor's Banquet:

The same evening (February 15), the Governor of West Bengal, Miss Padmaja Naidu, entertained Mr. Khruschev at a banquet.

Speaking at the banquet, Mr. Khruschev said that the Soviet Union wanted to see India economically strong so that she could raise the living standards of the people and satisfy their cultural and spiritual aspirations.

In spite of the political, social and economic differences between India and Russia, he said, basically they followed the same policy towards peace. "Irrespective of the differences between us, we assist and co-operate with Indians, and I am sure Indians also have the same feelings towards us."

He did not favour the idea of pooling the resources of all nations to assist underdeveloped countries. Often such a proposal was made by the Great Powers. "We respond. We not only favour such aid but we render that aid also. But we do not understand this talk of a common pool."

Aid could only be effective if it helped to develop the economy of a country. It was different from doles. "This position we adhere to and will continue to do so." Sometimes, the aid distributed through UN could be likened to a drop of medicine prescribed by a doctor which did not have much effect on the patient.

It had also been Russia's privilege to help construct Egypt's High Aswan Dam, which he described as "the dream of the Arabs." "If certain States attacked Egypt for achieving her independence and having nationalized the Suez Canal, we supported that country and took upon ourselves to assist her technically and materially so that the dream of the Arabs could be materialized. I can assure you, the Dam will be built".

If the proposal for disarmament and destruction of weapons was accepted, he added, it would release vast resources and "we will render greater aid to India and other underdeveloped countries."

Departure:

Mr. Khruschev left Calcutta for Rangoon on February 16. Talking to newsmen at the airport, he said that he was optimistic about the outcome of Mr. Nehru's recent letter to the Chinese Prime Minister, Mr. Chou En-lai, inviting him to New Delhi for talks on the India-China border issue.

He added: "The time is not far off when India and China will do away with their differences and restore good relations."

He reacted promptly when a news correspondent asked him: "Are you optimistic about Mr. Nehru's invitation to Mr. Chou En-lai?" He replied: "Yes."

He said that he was "more than satisfied" with his Indian tour.

Since his last visit four years ago, he added, India had become richer. Many plants and factories had been built. "Our relations with India have been strengthened and our friendship has become deeper. The voice of India for the defence of world peace is

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

heard more clearly in the world today. We trust that in future our relations will continue to be still stronger".

He particularly referred to the noble part played by Mr. Nehru in the defence of peace.

Farewell Message To Dr. R. Prasad:

Mr. Khruschev sent the following message to Dr. Rajendra Prasad on his departure:

"Our plane has just crossed the frontier of your hospitable Republic. May I thank you cordially for the extremely warm welcome extended to me and express gratification at our friendly talks which will undoubtedly contribute to the further development of Soviet-Indian relations and to the consolidation of world peace. I sincerely wish you and the friendly Republic of India success and prosperity".

Joint Communique:

A five-page joint *communique* issued by Mr. Nehru and Mr. Khruschev in New Delhi on February 16 contained mutual appreciation by India and the Soviet Union of each other's policies and a re-affirmation of the firm friendliness between the two countries.

The following is the text of the joint *communique*:

"At the invitation of the Government of India, Mr. N. S. Khruschev, Chairman of the Council of Ministers of USSR, paid a visit to India from February 11 to 16, 1960. He was accompanied by Mr. A. A. Gromyko, Foreign Minister, Mr. N. A. Mikhailov, Minister of Culture, Mr. G. A. Zhukov, Chairman of the Committee for Cultural Relations, Mr. S. A. Skachkov, Chairman of the Committee for External Economic Relations, Mr. T. U. Uljabayev, Deputy of the Supreme Soviet of USSR, Mrs. T. A. Tairova, Foreign Minister of the Azerbaijan Soviet Socialist Republic, Mr. A. M Markov, Member of the Board of the Ministry of Public Health of USSR, and Mr. I. A. Benediktov, Ambassador of USSR in India.

"In Delhi and in the other places which he visited, Mr. Khruschev was accorded by the public a warm and friendly reception, which was impressive for the degree of popular enthusiasm which it displayed. These manifestations of goodwill were alike a tribute to a world statesman who has laboured devotedly in the cause of peace and an expression of the happy relations that exist between India and the Soviet Union and the peoples of the two countries.

"During his stay in Delhi, Mr. Khruschev addressed members of the Indian Parliament, visited the World Agriculture Fair, attended a civic reception held in his honour by the city of Delhi, and fulfilled other public engagements. He later visited Suratgarh and Bhilai, both symbols of Indo-Soviet co-operation, one in the agricultural and the other in the industrial field. The success of these two enterprises has been a source of gratification to both countries, and augurs well for the future of economic co-operation between the two countries. His visits to these two centres gave Mr. Khruschev a vivid impression both of the magnitude of the task upon which India is engaged and of the pace at which she is moving forward to the attainment of the immediate objectives of her developmental plans.

"Mr. Khruschev met and conferred with the President, the Vice-President, the Prime Minister and other members of the Government of India. His talks with the Prime Minister, held in a friendly and cordial atmosphere, covered a wide range of subjects in the international sphere as well as specific matters of mutual concern to the two countries.

"The two Prime Ministers noted with much satisfaction the recent favourable trends in world affairs leading to a marked lessening of international tensions. This improvement is due in no small measure to the personal initiative and co-ordinated effort of the leaders of the Great Powers, notably Mr. Khruschev, Chairman of the Council of Ministers of USSR, and Mr. Eisenhower, President of USA. The direct contacts which have been established between them and are being developed through inter-change of visits have been a valuable factor in promoting international understanding, and have facilitated the welcome agreement to hold a meeting, at the highest level, of the leaders of USSR, USA, UK and France in May, 1960. The hopes of all men of peace are centred on this and similar meetings, and it is the ardent wish of all men that the efforts of the leaders of the Great Powers will meet with a full measure of success. For her part, India gladly pledges her goodwill and moral support for these continuing and sustained efforts towards peace.

"The Prime Minister of India repeated his appreciation of Mr. Khruschev's proposals for total disarmament. In Indian eyes they were, in essence, a call for the application of the principle of non-violence to the solution of international problems. The interest which these proposals roused in all countries, and particularly in UN, was a reflection not merely of man's moral sense but his acute awareness of, the dangers of a nuclear war. The two Prime Ministers re-affirmed their stand regarding the prohibition of thermo-nuclear weapons and other means of mass destruction. They also expressed the hope that the first step, namely, the cessation of nuclear tests, would be taken by the Great Powers in the spirit and on the lines of the resolution which it was India's privilege to introduce at the last session of the UN General Assembly. Not only nuclear weapons but conventional armament too are a heavy drain on human progress. The latest reduction in the armed forces of the Soviet Union, following similar reductions in the recent past, was recognized by India as a notable contribution towards the fulfilment of the age-old dream of turning swords into ploughshares.

"In his talk with the Prime Minister, Mr. Jawaharlal Nehru, and other Indian statesmen, Mr. N. S. Khruschev, Chairman of USSR Council of Ministers, expressed his high appreciation of India's policy of non-alignment and non-participation in military alliances. He stressed the fact that this policy was greatly respected in the Soviet Union. The Soviet Government was convinced that by pursuing this policy India and her Prime Minister personally were making a substantial contribution to the maintenance and consolidation of world peace. Mr. Khruschev wished the Government and the people of India success in pursuing this policy and emphasized the fact that joint efforts by the Soviet Union and India in defence of peace would continue to be an important factor contributing to the lessening of international tensions and the development of international co-operation.

"As between India and the Soviet Union, at no time have their mutual relations rested on a firmer basis of friendship and understanding than now. Their common allegiance to the principles of peaceful co-existence and their common determination to assist toward the establishment of lasting peace have brought them closer together and have progressively enlarged the area of beneficent co-operation between them in UN and elsewhere. The two countries share the conviction that the remarkable advance now being made in science and technology, in which the Soviet Union has taken a leading part, would little serve the cause of humanity unless the world is rid of the haunting spectre of war and foundations are laid for an enduring peace. Disarmament, amity between nations, the rapid development of those regions of the world which have long endured poverty and neglect—these alone are the true deterrents to war. The Prime Ministers expressed their faith that to the creation of these conditions, upon which depended to so great an extent the prospects of the peaceful progress of mankind, it would be the endeavour of both their countries to make their fullest contribution.

"The Prime Ministers were glad to observe that the relations between the two countries were no less close in the economic and cultural spheres. Economic and technical collaboration between India and the Soviet Union embraces a wide variety of projects: the Bhilai steel plant, which has gone into production and whose original capacity is now being more than doubled; the machine building plant at Ranchi, the power plant at Neyveli; the Korba coal project; the two-million ton refinery at Barauni; oil exploration and others. To the credits already granted, the Soviet Union has recently added a new one of a 1,500 million roubles. An Agreement was signed during Mr. Khruschev's stay in Delhi as to the utilization of this credit for major projects to be included in the Third Plan. So was also, for the first time, a cultural, scientific and technological Agreement between the two countries.

"Mr. Khruschev was last in India in December, 1955. Since then much has happened affecting the Indian as well as the world scene. His present visit has afforded Mr. Khruschev an opportunity of seeing for himself, or obtaining first-hand information on the results of the efforts which India is making, in all spheres of developmental activity, to improve the lot of the Indian people and ensure for them a higher and ever-increasing standard of living. The visit has also given the two Prime Ministers the opportunity, to which they have long looked forward, of renewing their friendship and for personal discussions on the many matters that claim their common interest. The meeting between the Heads of Governments of India and USSR and the talks they have had, more particularly those on a personal level, have been profitable to them both; and to the new chapter in Indo-Soviet relations which opened with the visit of the Prime Minister of India to the Soviet Union in June, 1955 has been added a significant page, recording a notable step forward in the consolidation of the cordial and friendly relations between the two countries."

(*The Statesman*, New Delhi and Calcutta, and *The Hindustan Times*, New Delhi)

[Prev. ref. 522:INI:A, 3154:INI:A]

B. **Railway Budget:** Presenting the Railway Budget for 1960-61 to the Lok Sabha (House of the People) on February 17, the Railway Minister, Mr. Jagjivan Ram, said that the revenue surplus for the coming year, after meeting the large commitments arising from the Pay Commission's recommendations etc. would be about Rs. 4.5 crores on the basis of existing fares and freights.

For the current year, he said, the revised estimate of surplus had been placed at Rs. 14.75 crores, as against the Budget figure of Rs. 21.19 crores. A provision of about Rs. 20 crores had been made in the Budget year for the implementation of the Central Pay Commission's recommendations, from July 1, 1959 to March 31, 1961.

He added: "The Railways' increasing commitments make it imperative that suitable adjustments be made in freight rates."

He announced that with effect from April 1, 1960 a supplementary charge of five naye paise per rupee would be levied on the freight of goods and coal traffic, excluding export ores, military, postal and the Railways' own traffic. The anticipated yield would be about Rs. 14 crores per year.

He recalled that an increase of only 4 per cent had been made in the freight rates from October 1, 1958 as against an overall increase of about 13 per cent recommended by the Railway Freight Structure Enquiry Committee.

He placed the Budget estimate of passenger earnings for 1960-61 at Rs. 125.50 crores, a small increase of Rs. 1.42 crores over the current year's revised estimate. The estimate of goods earnings was placed at Rs. 291 crores on the existing freight rates, Rs.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

27 crores over the revised estimate for the current year. Gross traffic receipts for 1960-61 were placed at Rs. 450.50 crores on the existing fares and freights, and at Rs. 464.50 crores with the proposed adjustments in the freight rates.

The Budget estimate of ordinary working expenses was placed at Rs. 326.90 crores, an increase of Rs. 34.98 crores over the revised estimate for the current year. This increase included a sum of Rs. 20.12 crores for the implementation of the Central Pay Commission's recommendations from July 1, 1959 to March 31, 1961 and Rs. 1 crore for the initial effect of assumption of liability as "carriers" by the Railways, as recommended by the Railway Freight Structure Enquiry Committee.

The following is the Budget at a glance:

(In crores of rupees)

	Actuals 1958-59	Revised Estimate 1959-60	Budget Estimate 1960-61
Gross Traffic Receipts	390.21	422.03	464.50
Ordinary Working Expenses	276.33	291.92	326.90*
Net Miscellaneous Expenditure	9.45	15.78	16.82
Appropriation to Depreciation Reserve Fund	45.00	45.00	45.00
Payments to Worked Lines	0.11	0.07	0.08
Total	330.89	352.77	388.80
Net Railway Revenues	59.32	69.26	75.70
Dividend to General Revenues	50.39	54.51	57.27
Net Surplus	8.93	14.75	18.43

* Including about Rs. 20 crores on account of the effect of Pay Commission's recommendations from July 1, 1959 to March 31, 1961.

Financial Results For 1958-59:

He said that the gross traffic receipts during 1958-59 came to Rs. 390.21 crores, which fell short of the revised estimate by Rs. 4.17 crores.

The drop was mainly under goods traffic and to a minor extent under other coaching earnings. Economic factors principally, and road competition partially, were the contributory factors.

The net surplus was about Rs. 8.93 crores, as against the revised estimate of Rs. 13 crores, the short-fall of Rs. 4.07 crores practically corresponding to the drop in earnings. The entire surplus was credited to the Development Fund as in the preceding year.

Second Plan Progress:

He disclosed that during the first four years of the Second Five-Year Plan up to March, 1960, the Railways would have spent about Rs. 872 crores out of the total allotment of Rs. 1121.50 crores. "We hope to cover the balance by the end of the Second Plan period."

Reviewing the achievement of physical targets during the first four years of the Second Plan, he said that the doubling of nearly 700 miles would have been completed and about 600 miles of new lines opened with similar additional mileages in various stages of execution. In the planning of execution of these works, the priorities given to the requirements of the steel plants had conformed to their varying needs. A number of new lines in the steel and coal belts had been completed in time to feed the raw products into steel plants.

Final location surveys for nearly 900 miles were in progress as a preliminary to construction.

Progress Of Electrification:

The electrification of the Durgapur-Gaya, Asansol-Sini-Tatanagar-Rourkela sections and the Rajkharswan-Dongoaposi section on the Eastern and South-Eastern Railways was expected to be completed during the Second Plan period.

Contracts for the supply and erection of overhead equipment for the Gaya-Moghalsarai and Khargpur-Tatanagar sections were likely to be placed soon. Civil engineering works were in progress on Sealdah-Ranaghat and Dum Dum-Bongaon sections. On the Igatpuri-Bhusawal section also, the civil engineering survey was proceeding. On the Madras-Tambaram-Villupuram section, 80 per cent of the civil engineering works were complete, and technical details were being worked out to undertake electrification.

Traffic Prospects:

During the third year of the Second Plan, he said, there was some set-back in the economic development of the country. Subsequent trends, however, indicated a revival of vigour in the national economy. "The current and the future outlook seems much brighter."

He referred in this connexion to the progressive development of steel production, the opening of the Rajendra Pul near Mokameh and the setting up of two new refineries at Gauhati and Barauni and said: "Having regard to these prospects, it is anticipated that the Railways may be called upon to carry 17 million tons of additional traffic in the ensuing year, thus concluding the Plan by the achievement of the target of 162 million tons."

The increase in passenger traffic at the end of the first three years of the Second Plan was nearly 12 per cent. During the current year, the increase might be higher than the average for the three earlier years. "It seems evident that the anticipated increase of 15 per cent by the end of the Plan will be exceeded."

A saving of about Rs. 90 crores in foreign exchange in the Railways' Second Plan allocation was expected.

Third Plan:

Developments in the Third Five-Year Plan of the Railways, he went on, hinged upon the transport needs which would emerge out of the agricultural and industrial growth. Until a complete picture of these developments had been finalized, the Railways' Plan would remain undefined. The matter was at present under the consideration of the Planning Commission.

He said: "We are aiming at a rapid advance with a view to the development of a self-generating economy and in this endeavour the heavy industries will have a prominent share. There is, therefore, little doubt that the dominant role of rail transport in this expanding economy will continue. The Railways will not shrink from added responsibilities or greater burdens."

Revised Estimates For 1959-60:

Dealing with the current year's revised estimates, he said that passenger traffic which showed signs of revival towards the end of 1959 had maintained this trend.

The revised estimate of passenger earnings was now placed at Rs. 124.08 crores, an increase of 5.78 crores on the Budget figure. An increase of Rs. 1.20 crores was anticipated under other coaching earnings and about Rs. 1.60 crores under 'Sundries', partly accountable to an increased turn-over in departmental catering.

Goods earnings had been assessed at Rs. 264 crores, registering a short-fall of Rs. 8.58 crores against the Budget amount of Rs. 272.58 crores. In view, however, of the anticipated increase under passenger, other coaching and sundries, it was not proposed to alter the over-all Budget figure of Rs. 422.03 crores for gross traffic receipts.

The ordinary working expenses for the current year were estimated in the net to exceed the Budget figure of Rs. 283.71 crores by about Rs. 8.21 crores. The bulk of this increase amounting to about Rs. 6 crores was due to unavoidable or unforeseen items of expenditure, such as expenditure on repairs to track, bridges and other assets damaged by abnormal floods at a number of places, increase in the price of coal and in the excise duty on coal and fuel, increase in the price of other supplies, increased consumption of coal due to supplies of greater proportion of inferior quality etc. As a result of continued strict control over expenditure, increases had been limited largely to unavoidable items.

The contribution to the Depreciation Reserve Fund had been maintained at Rs. 45 crores. The surplus was now expected to be Rs. 14.75 crores. This would be credited to the Development Fund.

The revised estimate of expenditure on works, machinery and rolling stock during the current year had now been placed at Rs. 196.10 crores, which was a reduction of about Rs. 39.08 crores from the Budget grant. The short-fall was mainly under rolling stock and electrification. Difficulties in the availability of matching steel had led to a drop in wagon manufacture, while some delay in the delivery of electric locomotives and in the procurement of overhead equipment was responsible for the short-fall of expenditure under electrification. It was expected to overtake these short-falls in the Budget year.

It was anticipated that the balances at the end of 1960-61 in the Depreciation Reserve Fund and the Revenue Reserve Fund together would be about Rs. 71 crores. The Depreciation Reserve Fund opened at the beginning of the Second Plan with a balance of Rs. 98 crores, but with the extensive rehabilitation programme under way there had been substantial inroads into the Fund which was likely to close with a balance of about Rs. 18 crores.

The Revenue Reserve Fund remained undisturbed and the balances would stand at about Rs. 53 crores.

The temporary loan of Rs. 10.88 crores from General Revenues for the Development Fund, asked for in the 1959-60 Budget, would not be sufficient now because of the lower surplus anticipated in the revised estimate of the current year. Consequently, the loan would have to be stepped up to Rs. 14.85 crores. In the ensuing year, a loan would again be necessary, but of a smaller amount.

The period covered by the 1954 Convention would expire on March 31, 1961 and a request would be made to the House for the setting up of the next Convention Committee to review the working of the present Convention and submit recommendations in advance of the next quinquennial period (1961 to 1966).

Pay Commission's Recommendations:

The cost of the implementation of the Pay Commission's recommendations, he said, worked out approximately to Rs. 13 crores per annum. A total provision of about Rs. 20 crores had been made in the 1960-61 Budget to cover payments due both in respect of the Budget year as well as in respect of the current financial year from July 1, 1959.

Special machinery had been set up to do the work in connexion with the implementation of Government's decisions as expeditiously as possible. Nevertheless, it would not be feasible to complete the work and to make payments in the current year. These would

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

be made in the next year, including also the amounts due in respect of the current year.

Budget Estimates For 1960-61:

Dealing with the Budget estimates for 1960-61, he said that the upward trend in passenger traffic during the current year might taper off and the Budget estimate of passenger earnings for 1960-61 had been placed at Rs. 125.50 crores, providing a small increase of Rs. 1.42 crores over the current year's revised estimate.

The estimate of other coaching earnings had been placed at Rs. 25 crores, or practically at the same level as during the current year. The estimate of goods earnings provided an increase of Rs. 27 crores and had been placed at Rs. 291 crores at the existing freight rates on the basis of anticipation of about 17 million tons of additional goods traffic. Sundry earnings were estimated at Rs. 10 crores, at the same level as the revised estimate.

After allowing for a small variation in traffic suspense, the gross traffic receipts for 1960-61 were estimated at Rs. 450.50 crores on the existing fares and freights. The Budget estimate of ordinary working expenses for 1960-61 had been placed at Rs. 326.90 crores, providing an increase of Rs. 34.98 crores over the revised estimate of Rs. 291.92 crores for the current year. This increase included a sum of Rs. 20.12 crores for the implementation of the recommendations of the Pay Commission in respect of the period from July 1, 1959 to March 31, 1961. One crore of rupees was provided to cover the initial effect of the proposed assumption of carrier liability by the Railways in the course of 1960-61. The balance of the increase of Rs. 13.86 crores had to be viewed in relation to the anticipated additional traffic receipts of Rs. 28.47 crores. There would be an increase in expenditure necessitated by the requirements of additional traffic as well as by other factors.

The provision for Open Line Works chargeable to Revenue in 1960-61 had been placed at Rs. 14 crores. With further outlay on capital works, an increase of about Rs. 2.75 crores was anticipated in the dividend payable to General Revenues.

Allowing for minor variations, the likely revenue surplus for the Budget year for credit to the Development Fund after meeting the large commitments arising from the Pay Commission's recommendations etc., would work out to the very small figure of about Rs. 4.5 crores only.

The examination of the Railway Freight Structure Enquiry Committee's recommendations relating to the responsibility of the Railways as carriers had been completed, and taking into consideration also the long-standing demand of the trading public in this matter, it was proposed to implement the recommendation and to bring up the necessary legislation for this purpose at an early date.

Freight Rates:

He said: "These increasing commitments, make it imperative that suitable adjustments must be made in freight rates."

While making a statement in connexion with the implementation of the Railway Freight Structure Enquiry Committee's recommendations, he said, he had explained that instead of an overall increase of about 13 per cent recommended by the Committee, only an increase of 4 per cent was being made to minimize the incidence on the general price structure. "In the present circumstances, as explained, I propose, with effect from April 1, 1960, to levy a supplementary charge of 5 nP per rupee on the freight of goods and coal traffic, excluding export ores, military, postal and Railways' own traffic."

The incidence of this increase on an average would be less than 5 nP per maund, or about one-eighth of a naya Paisa per seer. The anticipated yield would be about Rs. 14 crores a year. "I have deliberately kept the proposed increase as low as possible."

The Budget estimate for works, machinery and rolling stock had been placed at Rs. 222.81 crores, of which rolling stock accounted for Rs. 79.06 crores, plant and machinery Rs. 4.64 crores, construction of new lines and restoration of dismantled lines Rs. 55.86 crores, track renewals Rs. 27.20 crores, other open line works, etc., Rs. 54.30 crores and investment in road services Rs. 1.75 crores.

The provision for railway users had been kept at about Rs. 2.20 crores while that for staff amenities and staff quarters at about Rs. 9 crores.

Economy In Fuel Consumption:

All except four of the 41 recommendations made by the Expert Committee on Coal Consumption on Railways made in August, 1958 had been accepted and a majority of those requiring action by the Railways had been implemented.

An Inspection Organization was being set up under Railway control to ensure that coal loaded by collieries conformed to the specified grades. The procurement of coal would be done under contracts executed by the suppliers with the Railways, so that the Railways themselves might deal with the collieries which did not give satisfaction, instead of leaving this to the Coal Controller. It was imperative that coal washeries should be set up as early as possible so that a consistent quality of coal supplied to the Railways might be ensured.

External Assistance:

Dealing with external assistance, he disclosed that negotiations in respect of a further loan of $30 million from the US Development Loan Fund had been practically finalized.

The loan of $85 million from the World Bank received in September, 1958 had been fully utilized. In July, 1959, a further loan of $50 million was negotiated with the World Bank.

Self-Sufficiency:

He added that self-sufficiency had been the key-note of the policy pursued by the Railways. A steel foundry of 7,000 tons capacity was being set up at the Chittaranjan Locomotive Works with a provision for expansion to 10,000 tons.

The Chittaranjan Locomotive Works were expected to turn out 173 locomotives during the current year and 168 in the following year. Telco was likely to deliver 100 locomotives in the current year and the same number in the following year. The Arbitrator who was appointed to determine the prices payable to Telco for locomotives to be supplied from April 1, 1958 to March 31, 1960 had awarded a price of Rs. 3,80,917 per locomotive against the price of Rs. 3,92,861 claimed by Telco and Rs. 3,74,994 offered by the Railway Board.

Dealing with self-sufficiency in steam locomotives, he said: "A stage has been reached when we can enter the export market. The standard of manufacture is high and our costs are competitive. Similarly, in respect of wagons and coaches, we are self-sufficient, and here again we can build for export."

Analysis of purchases made by the railways during 1958-59 showed that, excluding raw materials and basic steel, imports accounted for only 10 per cent of the total purchases. Railway administrations had been instructed to purchase a limited number of specified items exclusively from small-scale industries and they had been authorized to give a price preference up to a maximum of 15 per cent to those recognized by the National Small Industries Corporation.

A Productivity Cell had been set up in the Railway Board's office to improve productivity in Railway workshops by the introduction of incentive bonus on the Chittaranjan pattern. This step had been taken in consultation with Labour Federations, and their full support had been assured in this endeavour.

The Railways had gone over to the decimal coinage system in the case of passenger fares with effect from September 15, 1957, and in the case of freight with effect from October 1, 1958. A beginning would be made with the metric system of weights and measures by the commercial departments of the railways adopting this system with effect from April 1, 1960.

Over-crowding had been appreciably checked. During 1958-59, 170 new trains were introduced and the run of 85 trains was extended. During the current year, up to December 1, 1959, 178 new trains had been introduced and the run of 118 trains was extended.

With regard to the provision of sleeping accommodation for Third Class passengers travelling over 500 miles without any additional charge, he said: "The long-term objective is to provide at least one such coach on each long-distance train". The construction of 200 more broad gauge sleeper coaches and an equal number of metre gauge coaches of the new design had been ordered for this purpose.

Accidents On Railways:

He said that it was gratifying that there had been no major accident during the current year.

A comprehensive review of accidents on Indian railways, which had been prepared, showed that, in the light of the increasing volume and tempo of traffic, the position was satisfactory; but there was no complacency, and sustained attention was being given to tackle the problem as well as the problem of effective liaison with State Governments in the matter of security of railway travel.

An Officer on Special Duty who had been appointed to study and report on the question of participation of workers in management had submitted his report and the proposals were under scrutiny.

New Lines Proposed:

It was stated that 18 new railway projects, each costing more than Rs. 20,00,000, would be taken up during 1960-61.

A sum of Rs. 12.21 crores is provided in the Railway Budget during 1960-61 for these projects. A separate provision of Rs. 79.14 crores has been made for 194 projects, each costing over Rs. 20,00,000, which are already in progress.

The 18 new projects are located in the Central, Western, Eastern, South-Eastern, Northern, North-Eastern and Southern Railways.

Five among them are expected to cost between Rs. 2.1 crores and Rs. 3.8 crores each. The second phase of the doubling of lines between Kanpur and Allahabad and between Moradabad and Saharanpur on the Northern Railway will cost Rs. 6.65 crores.

On the Vijayawada division of the Southern Railway, provision for a separate broad-gauge line between Guntur and Tadepalle, a chord line from Vejendla to Tsunduru and a by-pass line from the Guntur-Tadepalle line to the Guntur-Tenali line has been made at a cost of Rs. 2.10 crores.

Provision has also been made, at a cost of Rs. 3.73 crores, for the doubling of the Jalarpet-Erode section and re-alignment of track for increasing the line capacity on the Southern Railway.

Another large work is the partial doubling of the Drug-Nagpur section on the South-Eastern Railway, at a cost of Rs. 3.8 crores.

Among the other new projects are the doubling of the Bhopal-Habibganj line on the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Central Railway: provision of modern route relay inter-locking system of signalling at the Howrah terminal yard and the Sealdah yard, re-modelling of the yards at Sealdah and Ondal and the construction of a new locomotive shed at Ranaghat—all on the Eastern Railway; doubling of the Barauni-Katihar line on the North-Eastern Railway from Katihar West to Karhagola Road.

Annual Report For 1958-59:

The Railway Ministry's annual report for 1958-59 issued on February 15 said that the Indian Railways carried 136 million tons of goods in 1958-59 as compared to 134 million tons in the previous year, marking an increase of 1.8 per cent.

The number of originating passengers rose from 1,430 million in 1957-58 to 1,441 million during the following year, an increase of 0.74 per cent.

These increases in traffic occurred despite heavy rains, breaches, dislocation of train services and certain other operating handicaps and adverse economic factors. There was also a slight drop in the operating efficiency indices, mainly because the anticipated volume of traffic, for which assets had been built up, did not materialize on account of economic factors.

Out of the total goods traffic of 136 million tons lifted during the year under report, the Railways accounted for 135 million tons. Similarly, the Railways carried 1,422 million passengers as against the total figure of 1,441 million.

During 1958-59, ton miles (reflecting both the tonnage lifted and the distances over which it was lifted) increased to 46,752 from the previous year's figure of 45,644.

Although there was an increase in the number of passengers, the passenger mileage decreased slightly from 43,329 million to 42,501 million. The decrease in passenger mileage under Third Class was due to the fact that the average distance travelled by each passenger came down from 29.6 miles in 1957-58 to 28.7 miles in the following year. The overall distance travelled per passenger also dropped from an average of 30.3 miles to 29.5 miles.

Gross traffic receipts of Government Railways during the year amounted to Rs. 390.21 crores, made up of Rs. 116.74 crores under passenger traffic and Rs. 240.82 crores under goods traffic, the balance of Rs. 32.65 crores being contributed by parcels, luggage and other miscellaneous sources of revenue.

Passenger earnings registered a drop of about Rs. 2.36 crores. Goods earnings recorded an increase of Rs. 11.14 crores, but the increase was not to the extent anticipated in the Budget.

The ordinary working expenses, including suspense from the year, amounted to Rs. 276.33 crores as against Rs. 264.18 crores in 1957-58, or an increase of Rs. 12.15 crores. The contribution to the Depreciation Reserve Fund was Rs. 45.87 crores.

The operating ratio was 82.72 per cent as against 81.21 per cent during the preceding year.

After meeting all the charges, including Rs. 45 crores as appropriation to the Depreciation Reserve Fund, the net revenue for the year was Rs. 59.32 crores, out of which Rs. 50.39 crores was paid to the General Revenues as dividend under the revised Convention of 1954.

The net results of working showed a surplus of Rs. 8.93 crores against Rs. 13.38 crores in 1957-58.

The punctuality of all trains showed a slight improvement on both gauges, but the percentage of mail and important through trains not losing time dropped from 70.81 in 1957-58 to 69.60 in 1958-59 on the broad gauge.

During 1958-59, the third year of the Second Five-Year Plan, Rs. 245.17 crores was spent, making a total of Rs. 675.59 crores during the first three years. The progress of implementation of Plan works was satisfactory. Increased operational efficiency, rehabilitation of depleted assets and the modernization programme received sustained attention.

The year witnessed further progress in regard to self-sufficiency in rolling stock.

The Chittaranjan Locomotive Works produced 164 WG locomotives and also the first WT locomotive during 1958-59, while the Tata Locomotive and Engineering Company Ltd. turned out 103 metre gauge locomotives as against 85 during the preceding year.

Second shift work was initiated at the Integral Coach Factory with the object of stepping up the out-turn from 350 shells to 650 shells per annum. Steps were taken to sponsor indigenous manufacture of diesel locomotives in collaboration with foreign firms in the private sector and electric locomotives in the public sector.

During 1958-59, 1,740 coaches were placed on line, and of these 1,645 were indigenously produced; 16,701 wagons were placed on line, and of these 12,963 were of indigenous manufacture.

New lines aggregating 191 miles, including 17 miles on the Dehri-Rohtas Light Railway, were opened to traffic. Electrification of the Howrah-Burdwan main line section and the Sheoraphuli-Tarakeshwar branch was practically completed, and the progress of work on other sections was satisfactory.

A total of 1,264 miles of rails and 1,261 miles of sleepers were renewed on the broad and metre gauges, making a total of 3,080 and 3,705 miles respectively since the commencement of the Second Plan period.

The total investment on all Railways, including lines under construction on March 31, 1959, amounted to Rs. 16,21.20 crores, of which Rs. 16,14.89 crores represented the investment on Government Railways from different sources, namely, capital (loan account) Rs. 13,56.59 crores, Depreciation Reserve Fund Rs. 73.17 crores, Development Fund Rs. 1,21.97 crores and Railway revenues Rs. 63.16 crores.

The balance of Rs. 6.31 crores, representing the investment on non-Government railways, was the capital raised by companies and district boards.

The total route mileage of all railways in India at the end of the year was 35,081, of which 34,636 miles were for Government Railways.

Total purchases by the Railways during 1958-59 touched a new level of Rs. 254 crores, registering an increase of Rs. 32 crores, or 14.5 per cent over the figure of Rs. 222 crores during 1957-58.

Indigenous materials accounted for Rs. 167.93 crores. Stores worth Rs. 43.92 crores were imported direct, while Rs. 42.23 crores worth of foreign stores were purchased through agents in India.

THAILAND

A. **ECAFE Committee On Trade:** The third session of the Committee on Trade of the United Nations Economic Commission for Asia and the Far East (ECAFE) met in Bangkok from January 13 to 25.

Its agenda included trade and trade policies of the region, shipping and ocean freight rates and developments relating to the European regional economic Agreements.

It noted general improvement in trading conditions, especially in export earnings after the recession of 1957-58. In spite of the continuing balance of payments difficulties, several countries had taken measures to liberalize their imports and to simplify the exchange control procedures, although in some cases it had been necessary to restrict the import of non-essential items in order to conserve foreign exchange for goods needed for economic development.

The problem of fluctuating primary commodity prices aroused general concern as did that of market disturbances caused by the release of agricultural surpluses. Governments were also urged to take full advantage of the growing tourist trade opportunities as a means of increasing their foreign exchange earnings.

The Committee considered that trade in minerals and mineral products was of considerable importance to the economic development of the countries of the region and suggested that the ECAFE Secretariat continue its work in this field.

It expressed the hope that industrial countries could help the less-developed nations of the region to expand their faciilties for research and processing of minerals.

A provisional agenda was approved for the forthcoming meeting of the Working Party in Customs Administration in September, 1960, and it was suggested that an additional item be included dealing with the exchange of staff of customs administrations between the countries of the region.

A proposal to organize a photographic exhibition on ingenious modes of smuggling was also welcomed.

The member-countries reported that they had found it necessary to resort to State trading for essential social, economic and fiscal reasons, to secure better prices and additional markets, to regulate the prices of essential goods, to ensure equitable distribution of food imports and to facilitate trade with the centrally planned economies.

Questions of economic policy raised by State trading were discussed and the Secretariat was asked to continue studies undertaken in this field including the review of the organizational structure of the State trading agencies and to gather information on countries outside the region with experience of State trading.

Noting the advantages as well as the drawbacks of long-term trade arrangements, the Committee felt that no hard and fast rules could be applied. The whole question had to be examined on a practical basis from the view-point of mutual advantage to the trading parties and taking into account the effects on all concerned.

Shipping And Freight Rates:

Under the heading "shipping and ocean freight rates," the Committee discussed measures taken by the Governments of the region to establish a consultative machinery with shipping lines and the results achieved thereby.

It was felt that the exchange of experience at the meeting had been useful and the Committee recalled some of its earlier recommendations *viz.* creation of exporters' organizations (with Governments' assistance) to negotiate freight rates, improvement of port facilities, greater use of tramp steamers and increase of national mercantile marines.

The Secretariat was requested to keep the subject under continuous review in view of its importance to the trade of the region.

European Trade Agreements:

Several countries re-iterated their concern over various aspects of the European Economic Community while expressing the hope that the members of the European Common Market would so regulate their policies that international trade could be promoted.

In spite of the disappointment felt by several Governments with the results achieved from consultations with the European Economic Community under GATT auspices, the Committee expressed the hope that in further consultations under GATT, the European Economic Community would adopt a positive approach to ensure that the interests of third countries were not injured.

It was also hoped that the Community would take action to reduce or eliminate ex-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

cessive internal duties and fiscal charges which hampered some of the exports of the ECAFE region to the Common Market.

The formation of the European Free Trade Association comprising the "Outer Seven" was noted as another important development. It was hoped that the policies of the European Free Trade Association would be liberal and progressive and not exclusive or preferential and would help to expand international trade including that of the ECAFE region.

Commercial Arbitration:

The statements made by several members on commercial arbitration stressed the promotion of international trade.

The Committee endorsed the ECAFE Executive Secretary's request to those Governments which had not yet designated an expert on arbitration to do so soon in order to facilitate the Secretariat's study.

A suggestion had also been made and noted that the Secretariat should attempt to draw up a set of regulations for use in international contracts.

The possibility of convening a Working Party of Experts on Commercial Arbitration might be considered at the next session.

Finally, the Committee considered a report on the Trade Promotion Centre in Japan and expressed the view that the experience acquired would be useful in organizing the next Centre in India in 1961.

Trading Policies Of Various Countries:

The following are extracts from the official report on the trading policies of the Asian countries circulated among the members of the Committee:

"Although most countries in the ECAFE region continued to encounter balance of payments difficulties during the period under review (1959), there was a general tendency toward liberalization of their import policies.

"Following the establishment of non-resident convertibility by 14 Western European countries at the end of 1958, many sterling area countries in the region took steps to reduce or remove discrimination against dollar imports. While efforts were being made to relax and simplify import control procedures in several countries, some of them raised their import tariffs and internal fiscal charges in order to restrict imports of non-essential goods and to protect local industries.

"Continuous attempts were made in most countries to simplify their export procedures and export drives were intensified. For some countries, such measures led to the revision of exchange systems and monetary reforms.

"*British Borneo*: Import duties on a wide range of the luxury and non-essential goods were introduced in Sarawak's Budget for 1958. The Sarawak Government also revised, early in 1958, the sliding scales of the rubber export duty. Non-significant changes in the trade policy of Brunei and North Borneo were reported.

"*Burma*: Strict import control imposed by the Government in the 1957-58 fiscal year were increasingly relaxed and imports were further liberalized in the middle of 1959 when rice shipments began to move faster after a somewhat slow start at the beginning of the year. With a view to improving the export quality of rice and to regain pre-War markets, the rice export policy of the State Agricultural Marketing Board (SAMB) was revised in the early part of 1959. The SAMB, formerly centralizing the task of selling rice to foreign Governments and traders, appointed local and foreign private firms as SAMB's selling agents, who received as commission a certain percentage on the basis of sales they arranged successfully.

"*Ceylon*: The liberal import control system was continued and steps toward further liberalization were introduced. Action was taken in November, 1958 to abolish the only remaining restrictions on four items of dollar origin.

"In early 1959, registered Ceylonese traders were informed that the importation of goods originating from Albania, Bulgaria, Formosa (Taiwan), Hungary, Rumania and Spain, which formerly could only be made on individual import licences at the discretion of the authorities to registered Ceylonese traders, could now be made on their general imports licences, which imposed no quantitative restrictions. There was no significant change in export policy during the period under review. In July, 1958, the Government, with a view to promoting exports reduced the export duty on rubber by legislation, aiming at strengthening the competitive position of Ceylonese tea and developing the tea industry or providing subsidies and financing the replanting scheme passed in 1958.

"*Formosa*: The Foreign Exchange system in Formosa (Taiwan) underwent a series of important changes during the period under review. Trade controls were relaxed since the first quarter of 1958 by increasing import quotas and eliminating some 201 items from the lists of imports and export control.

"*Federation of Malaya*: Up to the end of 1958, import restrictions applied mostly to dollar imports which required licences and were granted only for essential goods. As from January 1, 1959, restrictions on the import of 23 items from the dollar area were removed. Discrimination against dollar imports was completely removed on August 1, 1959. Anti-dumping legislation was enacted in 1959 to enable the Government, if necessary, to protect local industries from dumping.

"*Hong Kong*: On December 1958, an Agreement was reached between Hong Kong textile interests and the United Kingdom Cotton Board to limit exports to the United Kingdom of Hong Kong manufactured cotton goods for a period of three years beginning February, 1959.

"*India*: Strict import control was maintained in 1958. Imports of more than 100 consumer goods were completely banned, while quotas were set for imports of raw materials, spare-parts for approved industries, and other industrial and essential consumer goods. Unless there was participation of foreign capital, imports of capital goods were not permitted within a relatively short period of time. Import controls from October, 1958 to March, 1959 were relaxed for the benefit of industrial consumers. Discrimination against dollar imports was also reduced through such action as increases in the promotion of 'soft' import licences that could be used for imports from the dollar area. The import policy for the remainder of 1959 remained essentially the same, and efforts to promote exports and food production were further intensified. In September, 1959, an Agreement with the British Cotton Board was reached to the effect that the self-imposed quota of Indian textile exports to the United Kingdom was set at a ceiling of 175 million square yards annually for the period of three years beginning January 1, 1960.

"*Indonesia*: The import and export trade of Indonesia was conducted under the export certificate system, which was adopted in 1957 and remained in force until August, 1959. On August 24, 1959, the Government undertook a monetary reform by devaluing 500 and 1,000 rupiah notes to one-tenth of their face value, freezing 90 per cent of all bank accounts in excess of Rp. 25,000 each and replacing the export certificate system by an export-import levy system. The official rate of exchange was devalued from Rp. 11.40 to a more realistic rate of Rp. 45 to one US dollar. Indonesia exercises no discrimination between dollar and non-dollar sources in her import policy.

"*Japan*: Following the improvement in foreign exchange revenue and the decline in imports in the early part of 1958, the Government of Japan decided to ease imports gradually in the middle of 1958 by lowering the rates of advance deposit and adding over 20 items to the list of imports under the automatic approval system. Important steps were taken by the Government in 1959 towards free currency convertibility, by eliminating distinctions between dollar imports and other goods under the automatic approval system. The Government continued to take active steps to promote the export trade. The export target for 1959 was set at a level of about 17 per cent above that of the previous year.

"*Republic of Korea*: In 1958 and 1959, the Government continued its policies of price and currency stabilization. There was some relaxation in import control in 1958.

"*Pakistan*: No significant change took place in the import and export policies of Pakistan during 1958. On January 15, 1959, the export bonus scheme was introduced to replace the previous system of quota entitlement for industries. In February 1959, import duties on several classes of luxury goods were raised. On June 30, import tariffs were again revised, duties on mostly non-essential goods and goods that could be produced domestically were raised and reductions made on import duties on goods for industrial consumers, transport equipment and spices. It was announced on September 30, 1959 that a voluntary quota for the export of Pakistan's textiles to the United Kingdom had been set at 38,000,000 square yards annually for the three-year period beginning January 1, 1960.

"*Philippines*: In 1958, the Government adopted an austerity policy by intensifying import restrictions and introducing a series of drastic measures with a view to improving the balance of trade. The foreign exchange control is used to restrict imports. The Government continued its strict import policy in 1959. In February, 1959, the Central Bank, in an attempt to curb inflationary pressure, raised the reserve requirements on demand deposits and the discount rate. In July, 1959, an exchange tax of 25 per cent was imposed on certain imports.

"*Singapore*: In concert with the Government of the Federation of Malaya, the import of groups of commodities from dollar sources was liberalized as from January 1, 1959. The plan for industrializing Singapore as a means to effect the rapidly growing population has led the Government to adopt a policy of 'selective protection.' Taxes have been imposed on a few imported goods.

"*Thailand*: The import policy of Thailand tended to be more restrictive during the period under review. The purpose of the import control was mainly to protect local industries. Import duties on a wide range of food and non-essential products were raised in April, 1958. On June 5, 1959, a 10 per cent increase was applied to the existing rates of the entire import tariffs, except for gold metal where the 25 per cent import duty was abolished but the import of gold has been suspended ever since. A ban on imports from Chinese mainland was announced on January 17, 1959. Exports, on the other hand, were liberalized. The Government also decontrolled 15 export commodities on September 4, and only major foreign exchange earners such as rubber and rice required export licences. The Foreign Exchange Control Administration of Thailand maintained a liberal policy with regard to import and export transactions."

(*UN Information Centre*, New Delhi and *The Nation*, Rangoon)

[Prev. ref. 2652:AOA:A]

B. **UNESCO Discussion On Information Media In South-East Asia:** Representatives of 22 UNESCO countries, mostly of South and East Asia met in Bangkok from January 17 to 29 to discuss information problems of the area. Thirty-four experts and observers from ten international organizations also attended the meeting which adopted several suggestions for the development of information media in South-East Asia.

The concensus among the participants was that the development of information media was particularly opportune at a time when the countries of the region were engaged in a "determined effort to raise their economic, educational and social standards."

According to an official report, "it was clear to the meeting that a programme was urgently needed to develop Press, radio, films and television and to improve the quality of all media, particularly by training journalists and technicians. This presented an enormous task in an area so vast and diverse, having such a multitude of languages and encompassing countries in different stages of social

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

and economic development with varying systems of disseminating information."

The report noted that the meeting had afforded a unique opportunity to the participants for a full exchange of views of common information problems.

It noted that financial assistance for information projects in the region would come through normal procedures from the UN Technical Assistance Programme at the request of the Governments or by means of loans or bilateral aid.

As regards newspapers and periodicals, it suggested a collection of data on the status of Asian newspapers, stimulation of small newspapers, particularly in rural areas, creation of low-cost summarized news services and promotion of seminars, fellowships and facilities for importing newsprint. On a long-term basis, it was proposed that Press and graphic arts institutes be established under UNESCO auspices for the development of newspapers in the region.

Regarding news agencies and tele-communications, it noted that the problems were inter-related. It urged the establishment of national news agencies with UNESCO convening a meeting of directors of existing national news agencies. It also called for summary news services, expansion of radio news, promotion of news exchanging agreements, pooling of correspondents, exchange of photo-services and investigation into high cable rates.

On the question of radio, films and television, it asked UNESCO to conduct an expert survey on radio needs of the countries of the region, urged the Governments to promote radio listening schemes like the farm forums programme in India and welcomed the dissemination of an international code of ethics for information personnel drafted by the United Nations. It also urged UNESCO and the International Tele-communication Union (ITU) to pursue the study of standard low cost receivers, requested the UN Economic Commission for Asia and the Far East to study the feasibility of manufacturing radio sets in the region and suggested the expansion of the existing training facilities.

It called for a co-operative Regional Film Clearing House, UNESCO to ensure the exchange of film and television material and the establishment of national and regional training centres for film production. It noted the importance of television and asked UNESCO to carry out a detailed survey of television needs and problems in the region.

Finally, regarding training it called for the establishment of national schools of journalism plus seminars and fellowships.

(*UN Information Centre*, New Delhi)

[Prev. ref. 3138:AOA:J]

ASIA OUTSIDE ASIA

SUMMARY: Mr. H. Macmillan's Address To South African Parliament; All-African People's Conference; East-West Unofficial Disarmament Conference; No Decision Yet On US Aid To Indus Canal Waters Project; Meeting Of UN Sub-Commission On Protection Of Minorities; Soviet Missile Tests In The Pacific.

A. Mr. H. Macmillan's Address To South African Parliament: At the conclusion of his African tour, the British Prime Minister, Mr. Harold Macmillan, addressed a joint session of both Houses of the South African Parliament in Capetown on February 3 and declared that the British people rejected the idea of any inherent superiority of one race over another.

Mr. Macmillan cited the speech made by the British Foreign Secretary, Mr. Selwyn Lloyd, in the UN General Assembly in September, 1959 which contained the following statement of British foreign policy: "In those territories where different races or tribes live side by side, the task is to ensure that all people may enjoy security and freedom and the chance to contribute as individuals to the progress and well-being of these countries."

Mr. Macmillan said: "Our policy is therefore, non-racial—it offers a future in which Africans, Europeans, Asians, people of the Pacific and others with whom we are concerned will all play a full part as citizens in the countries where they live and in which the feelings of race will be submerged in loyalty to the new nations.

"We—that is the British—reject the idea of any inherent superiority of one race over another.

"As a fellow-member of the Commonwealth it is our earnest desire to give South Africa our support and encouragement, but I hope you will not mind my saying frankly that there are some aspects of your policies which make it impossible for us to do this without being false to our own deep convictions about the political destinies of free men, to which in our own territories we are trying to give effect.

"I think we ought, as friends, to face together—without seeking to apportion credit or blame—the fact that in the world of today this difference of outlook lies between us.

"I should have been less than honest if by remaining silent on these points I had seemed to imply that they did not exist."

Earlier in his speech, he said that national policies must take account of the "wind of change" blowing through Africa—a reference to the growing strength of African nationalism.

But he deprecated attempts being made in Britain to organize a boycott of South African goods.

Commenting on what he called the 'strength of African national consciousness,' he said: "In different places, it may take different forms, but it is happening everywhere.

"The wind of change is blowing throughout the continent. Whether we like it or not, this birth of national consciousness is a political fact. We must all accept it as a fact. Our national policies must take account of it."

Referring to Britain's policy of non-racialism in territories for which the British Government was responsible, he said it might well be that "we shall sometimes make difficulties for you. If this proves to be so, we shall regret it. But I know that even so you would not ask us to flinch from doing our duty. You, too, will do your duty as you see it."

He said that in another 50 years they would look back on these differences as matters of historical interest. "For as time passes and one generation yields to another, human problems change and fade."

Proposing a vote of thanks to Mr. Macmillan, the South African Prime Minister, Dr. Hendrik Verwoerd, said that he and his Government believed that the policies they were following were right.

He added: "Our ways may be different, but let us try to understand one another."

The Special Correspondent of *The Times*, London, sent his paper from Capetown the following dispatch on February 4 summing up local repercussions to Mr. Macmillan's speech in the South African Parliament:

"After 24 hours of thought and discussion, a fairly clear picture is emerging in South Africa of the exact effect for the Union of Mr. Macmillan's statement to the Houses of Parliament. The immediate reaction from most politicians and supporters of the Nationalist Party (the Government Party) was one of uncertainty. The speech was, one prominent Afrikaner Editor in Capetown said, rather too subtle for the Afrikaner—who is accustomed to blunt speaking—fully to understand its implications.

"It is generally recognized that what the British Prime Minister meant was that if South Africa continued to pursue her present racial policies she would forfeit all hope of support in the Western world and in United Nations. They (South Africans) can no longer doubt what the British Government's policy in Africa really is."

(*The Times*, London and *The Statesman*, Calcutta)

[Prev. ref. 3043:AOA:H]

B. All-African Peoples' Conference: The All-African Peoples' Conference ended its week-long session in Tunis on January 31. It was attended by delegations from over 30 African countries and observers from several others, including the United States, the Soviet Union and India.

The Conference adopted a number of resolutions, one of which called for the independence of African colonies and the creation of a Corps of African Volunteers to fight for the independence of Algeria.

It asked all independent African States to facilitate the formation of the Volunteer Corps. It also urged United Nations to take steps to bring about peace in Algeria.

It sent a message to President Eisenhower and the United States Congress asking them to stop financial, economic and military aid to France.

In another resolution, the Conference called for the immediate independence of Kenya and demanded the release of Mr. Jomo Kenyatta, the famous Kiyuku leader of Kenya, and the Nationalist leaders of Nyasaland.

It also called upon the independent African States to do away with the presence of foreign troops on their territories and to free themselves from economic dependence on colonial Powers.

Another resolution said that the situation in South Africa was worsening and called for the boycott of South African goods.

[Prev. ref. 2546:UAR:B]

C. East-West Unofficial Disarmament Conference: Addressing the first session of the East-West unofficial Disarmament Conference in London on February 2, Mr. Philip Noel-Baker, Nobel Peace Prize winner in 1959, proposed that the major Powers should cut their armed forces by 60 per cent as a first step towards total disarmament.

He said that Britain's military research and development expenditure grew from £5,000,000 in 1938 to £210,000,000 in 1959, while the US expenditure rose from $25,000,000 in 1940 to $8,400,000,000 in 1959. The Soviet Union too must be spending a huge amount.

He said that the arms race was getting no less rapid, dangerous or expensive. On the contrary, more money than ever was being spent on making more destructive weapons.

Lord Dalton (formerly Mr. Hugh Dalton, Chancellor of the Exchequer in a former Labour Cabinet) presided over the day's session and the speakers included US Congressman, Mr. Charles O. Porter, the Russian writer, Mr. Alexander Korneichuk, the French Senator, M Leo Hamon, and delegates from Sweden, Greece, Yugoslavia and Italy.

Another British Nobel Peace Prize winner (1949), Lord Boyd-Orr, told the second session of the Conference on February 3 that he felt there was a psychological unwillingness in some Western countries to go all out for East-West trade.

He said that any new development in East-West trade could play a key role in softening the inevitable economic consequences of full-scale disarmament. Economic consequences should not stand in the way of the political necessity for disarmament.

Dr. M. Rubinstein (Soviet economist) said: "There are still some people in the West who are rubbing in the economic difficulties of disarmament. But if the will is there, the same methods can well be used in their countries."

Participants at the Conference differed on the degree of difficulties which would be encountered, but there was agreement that the difficulties were manageable and must be met.

The Conference ended on February 4.

It urged the 10-nation Disarmament Committee, due to begin its work in Geneva in March, to continue until its work was finished.

It also urged that the Committee's minutes should be published regularly and without delay.

The Conference unanimously supported a proposal from the Soviet delegate, Dr. M. Rubinstein, for India's representation in the future meetings of the Conference.

The meeting recommended to the Preparatory Committee for the Fourth Conference to explore the possibilities of inviting parliamentarians and other prominent personalities from India and other Asian and African countries.

Dr. M. Rubinstein told correspondents later that he had visited India and was very anxious that Indian public men should be associated with this "unofficial but highly responsible work for disarmament."

It was stated in London on February 6 that the recommendations of the third non-official East-West Disarmament Conference would be forwarded to the Government of India as well as to the members of the Indian Parliament and the Indian National Congress Party.

Delegates both from the West and East said that India was frequently referred to throughout the Conference.

D. **US Aid For Indus Canal Waters Project—No Decision Yet On "Buy American" Policy:** The American State Department issued a statement on January 26 to the effect that the United States had not yet decided whether to forgo its "buy American" policy for its planned contribution to the development of the Indus waters basin for the benefit of both Pakistan and India.

The State Department statement said that the other countries contributing to the $1,000,000,000 Indus basin scheme—Britain, Australia, New Zealand, Canada and West Germany—had agreed to supply their part of the aid in the form of grants.

The State Department's spokesman, Mr. Lincoln White, told newsmen in Washington that the World Bank had asked the United States to "untie" its aid to the Indus project.

[Under a recently-announced policy decision, loans for economic development made by the US Government's Development Loan Fund must normally be spent on purchases of US goods and services.]

Mr. White said that the US Government was actively considering both questions—whether the US aid should be in the form of grant or whether any Development Loan Fund loan should be "untied" to the purchase of American goods.

He added: "With respect to these matters, a final decision has not yet been reached.

"In general, however, the United States Government considers that the successful settlement of the Indus basin problem is of great importance both to the political stability and economic development of South Asia."

(*The Hindustan Times*, New Delhi)

[Prev. ref. 3018:AOA:D, 3107:PAK:B]

E. **Meeting Of UN Sub-Commission On Prevention Of Discrimination And Protection Of Minorities:** A study of discrimination in religious rights and practices was the main subject of the agenda of the UN Sub-Commission on Prevention of Discrimination and Protection of Minorities which began at UN Headquarters in New York on January 11.

The study on religious discrimination had been prepared by Dr. A. Krishnaswami (India) who was appointed Special *Rapporteur* on the subject in 1956.

The Sub-Commission also considered preliminary reports on discrimination in political rights and on discrimination in "the right of every one to leave any country, including his own, and to return to his country."

The preliminary report on political discrimination was submitted by Mr. Hernan Santa Cruz (Chile), Special *Rapporteur* on the matter.

Mr. Santa Cruz recalled that the decision to undertake the study was first made in 1954, when it was expected that it could be completed within three years. Declaring, however, that it had now become obvious that for budgetary and organizational reasons the task could not be finished until January, 1962 at the earliest, Mr. Santa Cruz asked the Sub-Commission to relieve him of his task and to appoint another *Rapporteur*.

As requested by the Sub-Commission in 1959, Mr. Jose D. Ingles (Philippines) continued his preparatory work on a study of the right of every one to leave any country.

He submitted a brief memorandum including, as requested, an "outline" of points which might serve as a guide for the collection of information for the study.

In response to appeals by the Israeli delegation, the World Jewish Congress and the International League for the Rights of Man, the Sub-Commission threw open its agenda to a wide-ranging debate on the wave of Swastika daubing and anti-Semitism in Europe and in several places outside Europe.

Religious Discrimination And Protection Of Minorities:

The main item on the agenda of the session was a report prepared by Dr. A. Krishnaswami (India) on prevention of religious discrimination and protection of minorities.

Presenting his report, Dr. Krishnaswami said: "It is the duty of United Nations to see to it that not only all types of discrimination, whether they are remnants of the past or something new, are extirpated but also that in future no one should be subject to any Government likely to impair freedom of thought, conscience and religion. In short, our duty is to ensure that the trend towards equality becomes both universal and permanent."

Despite the recent anti-Semitic incidents throughout the world, Dr. Krishnaswami stood by the statement in his report that on the whole the world trend was towards less discrimination towards religious minorities.

Addressing a news conference on January 12, Dr. Krishnaswami said that the significance of the recent anti-Semitic incidents should not be overemphasized.

He condemned any resurgence of the Nazi creed which had brought so much suffering to mankind. He noted that the Swastika was an Indian symbol and the Nazis had reversed it making it in the view of Indian mystics a sign of darkness instead of light.

On January 28, the Sub-Commission condemned outbreaks of religious and racial prejudice as a threat to the rights of freedoms of all peoples.

It unanimously adopted a resolution which urged the member-States to take all appropriate action to prevent and punish such acts, including the adoption of additional laws, if necessary, and the vigorous enforcement of existing laws.

The Sub-Commission would report to the Commission of Human Rights which is due to meet in Geneva in February, 1960.

The Sub-Commission's resolution would come up before the Commission for endorsement.

The previous day (January 27), the Sub-Commission adopted basic rules for prevention of discrimination in religious rights.

The general effect of the rules, which broadly followed the pattern laid down by the Special *Rapporteur*, Dr. A. Krishnaswami, was to strengthen the historic trend towards separation of the Church and the State.

Efforts by certain religious organizations to have the Sub-Commission distinguish between faiths mystical and divine in origin and mere beliefs did not bear fruit.

The trend towards secularization was so strong in some respects that the Sub-Commission even went beyond what Dr. Krishnaswami had originally proposed. To cite an instance, on divorce, Dr. Krishnaswami had urged "the right to seek and obtain divorce should not be denied to any one whose convictions admit divorce solely on the ground that he professes a particular religion or belief."

The text as approved by the Sub-Commission read: "The right to seek and obtain dissolution of marriage shall be determined solely in accordance with the provisions of law applicable to it without any adverse distinction being based upon the religion or belief of the parties."

(*UN Information Centre* and *The Hindustan Times*, New Delhi)

[Prev. ref. 2513:AOA:D]

F. **Soviet Missile Tests In The Pacific:** It was announced in Moscow on January 21 that Russia had opened her Pacific missile tests with a ballistic multi-stage rocket which hit the sea within one and a quarter miles of the target point. The rocket was launched on January 20.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

All stages of the rocket, it was stated, behaved according to plan. This was the first in the series of planned launchings under the programme of producing a more powerful ballistic multi-stage rocket for orbiting heavy Earth satellites and for space flights towards the planets of the Solar system.

The statement went on: "On January 20, 1960, at 2005 Moscow Time, the penultimate stage of this rocket, together with the dummy of the last stage, following strictly the calculated trajectory and having developed a speed of over 26,000 kilometres (about 16,000 miles) reached the area planned in the Pacific Ocean about 12,500 kilometres (7,800 miles) from its take-off point.

"At a height of 80-90 kilometres (50-56 miles), on entering the dense strata of the atmosphere, the penultimate stage of the rocket, having fulfilled its mission, disintegrated and partly burnt out.

"The nose cone of the last stage of the rocket, adapted to traverse dense layers of the atmosphere, hit the ocean near the calculated point of its fall.

"Special vessels of the Soviet Navy situated in the area of the expected fall of the rocket have made valuable telemetric measurements at the lower extremity of the trajectory of the flight.

"The dummy of the last stage of the rocket was observed in flight in the atmosphere and its entry into the water was recorded by radar, optical and acoustic stations.

"Measurements carried out have established that the deviation of the point of fall of the rocket from that calculated amounted to less than two kilometres. This confirmed the high exactitude of the system of rocket control.

"The launching of the rocket was effected at a strictly planned time. The flight of the rocket as a whole and the performance of all its stages took place in accordance with the planned programme.

"The measuring equipment and apparatus on board the rocket transmitted the necessary data to ground and floating stations throughout the rocket's flight. During the flight, the working efficiency of certain scientific instruments was checked and essential measurements were made.

"Tests of powerful ballistic multi-stage rockets will be continued in order to obtain further experimental data. The rockets will fall within the limits of the zone announced in the *Tass* report of January 8.

"The successful launching of a powerful Soviet multi-stage ballistic rocket ensures the further advance of Soviet science along the path of mastering cosmic space and studying the planets of the Solar system."

The United States Defence Department issued on January 21 a one-sentence statement on the Soviet Pacific rocket test.

It said: "From information at hand, the Russian rocket apparently did fall within the impact area."

Second Super-Rocket:

On February 1, the Soviet Union announced the successful firing of its second Super-Rocket in the Pacific the previous day (January 31).

Russia also announced that the target area was again free for navigation. The one-month period set by the Russians for a series of tests was to have ended originally on February 15. The area from which shipping and aircraft were asked to stay away was between Hawaii and Fiji.

A *Tass* announcement said that the latest test was carried out under the plan of perfecting a more powerful multi-stage ballistic rocket for the launching of heavy Earth satellites and for carrying out cosmic flights towards planets in the solar system.

It added that the last stage of the rocket fired on January 31 was observed during the flight and was tracked at its fall into the water by radio location and optical and acoustic stations set up on ships. According to the data of the measurements, the high degree control over the flight of the rocket had again been confirmed.

A leading Soviet scientist said that the rocket experiments in the Pacific had been so successful that no further tests were needed.

He said that the rockets landed in the Pacific with extraordinary accuracy, showing that mankind was nearing a real solution to the problem of re-entry from outer space.

Comments:

The launching of the rocket evoked comment among Soviet specialists on future possibilities.

For instance, a leading Russian space scientist, Prof. Vladimir Dobronravov, said in an interview on January 27 that the next stage in space exploration would be the launching of heavy Sputniks equipped with brakes to stop them from disintegrating when re-entering the Earth's atmosphere.

The further next stage would be to equip the Sputniks so that they could land on Earth.

He said that the stage would then come when man would be sent up in a rocket first round the Earth and then into space.

He added: "It seems to me that in the near future it will become quite feasible to reach Mars, for instance, with the aid of a multi-stage rocket slightly more powerful than the one launched on January 20 into a pre-selected area of the Pacific.

"It will be possible to install a space orientation system for controlling the heavy Earth satellite. A heavy Earth satellite can be even fitted with a telescope which will photograph the starry sky and we shall see what it is like without the Earth's atmosphere in the way. A heavy oriented Earth satellite can be provided with retro-rockets. They will slow down the Sputnik when it enters the denser atmosphere. And finally, a heavy Sputnik can carry a device permitting its safe conduct through all the atmospheres to the point of landing.

"Although the rocket fired on January 20 is larger than the earlier Soviet space rockets, its last but one booster and the final stage developed a speed of more than 26,000 kilometres an hour, that is, almost the first astronautical speed (29,000 kilometres per hour). This shows that the final stage of the future larger space rocket will be able to develop not only the first astronautical speed of 11.2 kilometres per second but even a greater speed, sufficient for flights not only to the Moon but also to the planets of the Solar system too. This speed will be made possible by the engines installed in the new space vehicle."

The noted Soviet mathematician, Academician Sergei Sobolov, said on January 22 that the successful testing of the powerful multi-stage ballistic missile had brought scientists nearer to their cherished goal of obtaining full information about the Moon, Mars and Venus.

He said that the prime task before space explorers would be that of setting up powerful astronomic space exploration observatories on heavenly bodies. He thought that he would see this development in his lifetime.

(*Tass*)

[Prev. ref. 2798:AOA:A, 3040:AOA:A]

G. **Photographs Of Moon Taken By Lunik III—More Details:** Prof. Alla Masevich, Professor of Astro-Physics at Moscow University and Vice-President of the Astronomical Council of the Soviet Union's Academy of Sciences, told a London audience on February 6 that the photographs of the far side of the Moon published by Soviet scientists were partly composite. "They were the three best photos of the many taken and details were added to them by means of composition."

She said that the Russian rockets recently fired in the Pacific were designed to carry far bigger satellites than the Sputniks and Luniks to other planets.

But, she added, there would be no question of sending a man in a Moon rocket "unless he not only had a ticket to the Moon but also a back ticket."

She said that both Sputnik III launched in May, 1958 and Lunik III launched in October, 1959 were due to re-enter the Earth's atmosphere early in March, 1960.

(*Tass*)

[Prev. ref. 3040:AOA:A]

H. **US "Discoverer IX" Earth Satellite Fails To Go Into Orbit:** The United States failed to put its *Discoverer IX* Earth satellite into orbit on February 4.

The attempt was made from the Vandenberg Air Force Base in California.

Radio contact with the satellite failed first. The US Air Force announced two hours after the launching that the satellite failed to gain enough speed to attain its planned orbit round the Poles.

The satellite carried a 300-lb capsule designed to be recovered from space within about 30 hours.

(*The New York Times*)

[Prev. ref. 3045:AOA:R]

I. **Radar Contact With Sun—US Success;** The February issue of the US magazine *Science* disclosed on February 4 that scientists at Stanford University (California—USA) had made a break-through in establishing radar contact with the Sun by bouncing a series of powerful short-wave pulses off it.

As a result, it said, scientists were in a better position to learn how the Sun affected radio communications, Earth, its weather and its living things.

The contact was made in April, 1959 by Prof. von R. Eshleman, Dr. P. B. Gallagher, and Lieut.-Colonel R. C. Barthle of the US Army. The delay in the publication of the feat was due to the scientists' exhaustive calculations to prove that they actually achieved what they claimed.

Prof. Eshleman said that the radar signals, which took 17 minutes to return to Earth, did not reach the actual surface of the Sun but were turned back by the hot gas of the Sun's were about 500,000 miles from its real surface.

(*The Times*, London)

J. **Russian Turbo-prop Airliner Establishes Speed Record:** The Soviet News Agency *Tass* announced on February 2 that a Soviet IL-18 turbo-prop airliner had established a new world record by flying about 3,100 miles at an average speed of about 430 miles per hour, carrying a 10-ton load.

It said that the plane broke United States records for flights by aircraft of a similar category carrying one, two, five and 10 tons.

(*Tass*)

K. **Soviet Census:** It was announced in Moscow on February 3 that the Soviet Union had a population of 208,826,650 on January 15, 1959. There were 94,050,303 men and 114,776,347 women.

Quoting the figures on the national census taken in January, 1959, issued by the Central Statistical Board of the Soviet Council of Ministers, *Tass* said that between 1939 and 1959, the population increased by 9.5 per cent. The death rate was 7.2 for every 1,000 people, the lowest in the world. About 1.5 per cent of the population between the ages of nine and 49 was illiterate. The great part of the country's population, nearly three quarters of the total, consisted of people born after the October Revolution of 1917.

(*Tass*)

L. **First Year of IMCO Operation:** A United Nations release in New Delhi on January 15 reviewed the first year's operation of the Inter-Governmental Maritime Consultative Organization.

[The year 1959 was the first of actual operations for the Inter-Governmental Maritime Consultative Organization which is the newest of the specialized Agencies of United Nations. IMCO came into being during 1958 when the requirements of its Convention, drawn up in 1948, were fulfilled.]

The year 1959 opened with IMCO's first Assembly which met at Church House in London from January 6 to 19. A Preparatory Commission, which was responsible for creating the agency, was disbanded.

After the first Assembly, the Secretariat was established in London and Mr. Ove Nielsen (Denmark), who was elected by the Assembly as Secretary-General, took up his new post.

During the Assembly's two weeks of discussions, the practical foundations for the new agency were created with an initial work programme, completion of the membership of IMCO's Council, election of a Maritime Safety Committee and the establishment of a budget of $726,000 for 1959-61. Steps were taken to bring IMCO formally into the United Nations' family by the approval of an agreement on this subject.

IMCO Council:

The 16-member Council held its first session in London after its membership had been completed by the Assembly. [The Council acts as the agency's governing body between sessions of the Assembly which are held every two years.]

A second session of IMCO's Council was held in London during July, 1959. It dealt with the work programme, administrative arrangements and relationship of the organization with other UN specialized agencies.

Among the new proposals made to the Council was one that IMCO should consider the problem of simplifying the voluminous documentation required by international shipping when entering or leaving port.

Another aspect of the Council's second session was the debate on technical co-operation with under-developed countries. In 1959, technical assistance on maritime matters was provided directly by United Nations through the Expanded Programme of Technical Assistance.

During the year, IMCO established close liaison with United Nations on technical assistance and a full report would be considered by the next Council session, scheduled for March, 1960.

Maritime Safety Committee:

The Maritime Safety Committee, responsible for any matters placed before it concerning aids to navigation, construction and equipment of vessels, rules for prevention of collisions, regulations on manning from a safety aspect, marine casualty investigation, handling of dangerous cargoes, salvage and rescue operations, hydro-graphic information and any other technical matters connected with safety of life at sea, held its first working session from November 23 to 25, 1959.

[The Committee is responsible *inter alia* for the International Convention on the Prevention of Pollution of the Sea by Oil, signed in 1954, and it said that additional member-States might ratify this Convention in the near future.]

When established earlier in the year, it was faced with numerous technical problems and much of its session was taken up with deciding how to deal with this volume of work.

The Committee also considered what should be done to bring the International Code of Signals up-to-date.

The most urgent matter discussed by the Committee at its November, 1959 meeting related to the International Conference on the Safety of Life at Sea which is due to take place in London during May, 1960.

The Committee approved the organizational arrangements for the Conference, the main task of which would be to revise the International Convention on the Safety of Life at Sea, 1948 and the current regulations for preventing collisions at sea.

Membership:

Another technical problem before IMCO in 1959 was that of unifying the various systems for the tonnage measurement of ships aimed at evolving a standard system which would be universally accepted.

A Sub-Committee on Tonnage Measurement was set up which held its first meeting in June, 1959.

[The Sub-Committee is a technical body composed of experts, and although there is no fixed membership, 17 countries participated in the discussions at the first session.]

Since the first Assembly, IMCO's membership has risen from 31 to 34. At the close of the year, the membership was as follows: Argentina, Australia, Belgium, Burma, Canada, China, Denmark, Dominican Republic, Ecuador, Finland, France, Federal Republic of Germany, Ghana, Greece, Haiti, Honduras, Iran, Ireland, Israel, Italy, Japan, Liberia, Mexico, Netherlands, Norway, Pakistan, Panama, Sweden, Switzerland, Turkey, USSR, United Arab Republic, United Kingdom and United States.

(*UN Information Centre*, New Delhi)

[Prev. ref. 3017:AOA:C]

M. **International Air Traffic Sets Record In 1959:** The traffic carried by the scheduled airlines of the 74 member-nations of the International Civil Aviation Organization (ICAO) increased again to record heights in 1959.

Although the rate of the annual increase in air traffic has been smaller during the past five years than in the preceding 10 years, air traffic as a whole has increased each year since 1945.

According to details released by the International Civil Aviation Organization (ICAO) early in January, 1960, the total number of passengers carried in 1959 was 96,000,000 as compared to 87,000,000 in 1958. In 1949, the corresponding figure was 27,000,000.

Passenger-miles increased by 12 per cent over 1958, cargo ton-miles by 14 per cent and mail ton-miles by 11 per cent.

The total number of hours flown, however, decreased by one per cent. This was the result of the high speeds of the new jet transports which were used commercially in important numbers for the first time during 1959.

The average number of passengers per plane was 31 in 1959 as compared to 13 in 1945. Each passenger was carried an average distance of 615 miles as compared to 561 miles in 1945.

Miles flown per hour rose from 149 in 1945 to 217 in 1959.

(*UN Information Centre*, New Delhi)

[Prev. ref. 1340:AOA:K]

N. **UK Bank Rate Raised:** The Bank of England announced on January 21 that, with the approval of the Chancellor of the Exchequer, the rate of discount of banks had been raised from 4 per cent to 5 per cent.

The rise in the bank rate (which is the key to the general level of interest rates in the United Kingdom) was seen in official quarters in London as being directed mainly at domestic conditions.

(*UK High Commission*, New Delhi)

[Prev. ref. 2384:AOA:H]

SPORT

A. **Durand Cup Won By Mohun Bagan:** Mohun Bagan Club of Calcutta won the Durand Football Cup in Delhi on January 11 beating Mohammedan Sporting by three goals to one in the re-played final.

The teams were:

Mohun Bagan: C. R. Das; A. Ghosh and S. Guha; Kemplah, Jarnail Singh, and Banerjee; Dipu Das, N. Sarkar, K. Pal, C. Goswami and Varahlu.

Mohammedan Sporting: Nabi; Mushtaq and A. Hussain; Rafaat, Moin and Mohd Ali; Yamani, Rahamatullah, Oomer, Salahuddin and Moosa.

(*The Statesman*, New Delhi)

[Prev. ref. 3030:SPO:A]

B. **Rovers Cup Won By Mohammedan Sporting:** Mohammedan Sporting won the Rovers Football Cup by beating East Bengal by three goals to none in the replayed final in Bombay on January 25.

Outside-left Moosa scored all the three goals, one in the first half and the other two after the interval.

Mohammedan Sporting last won the Cup in 1957.

The teams were:

Mohammedan Sporting: Nabi; Mushtaq and Rafaat; Ibrahim, Ahmad Hussain and Moin; Syed Ahmed, Yamani, Oomer, Salahuddin and Moosa.

East Bengal: R. Guha; Ram Bahadur and C. Chanda; N. Sanyal, Bir Bahadur and T. Chowdhry; D. Das, Baloo, Kannan, Balaram and Kittoo.

ADEN

A. First Anniversary Of Aden Federation—Three More States Join: Addressing the Federal Legislative Council on February 11—on the first anniversary of the Aden Federation—the Chairman of the Council for the month of February, Sultan Fadhil Bin Ali of Lahej, announced that three more States of the Western Aden Protectorate had joined the Aden Federation.

The three new States were the Sultanate of Lower Aulaqi, the Dathina Confederation and the Sheikhdom of Aqrabi.

Sultan Fadhil expressed satisfaction at the improved relations with the Yemen.

The Aden Federation was established with its capital at Bir Ahmed, capital of the Sheikhdom of Aqrabi, with British support, and with the ultimate aim of independence by the Sultanates of Audhalc, Fadhli and Lower Yafa, the Amirates of Beihan and Dhala and the Sheikhdom of Upper Aulaqi.

These States had been the scene of several border skirmishes between the Protectorates' forces and intruders from the Yemen, which claims sovereignty over the Western Aden Protectorate.

(*The Egyptian Gazette*, Cairo)

[Prev. ref. 2959:ADN:A]

B. New Sultan Of Lower Yufa'i: It was announced in Aden on February 10 that the British Government had recognized Amir Mahmud Bin Aidarus Alafifi as the new Sultan of Lower Yufa'i.

This is one of the seven States of the Federation of Arab Amirates of the South created in 1959.

Amir Mahmud Bin Aidarus Alafifi succeeds his father, Sultan Aidarus Bin Mushin Alafifi, who died on January 28 at the age of 74 after ruling Lower Yufa'i for 36 years.

The new Sultan is the younger brother of the Heir-Apparent, Amir Muhammad Bin Aidarus Alafifi, who had gone into hiding as a rebel in the fortress of Qara, the Sultanate's ancient capital.

Political circles in Aden expected some opposition from the supporters of the Heir-Apparent to his younger brother's accession.

(*The Egyptian Gazette*, Cairo)

INDIA

SUMMARY: Mr. Nehru Invites Mr. Chou En-lai To India To Discuss Border Issue; Agreement On Soviet Credit Utilization; Polish Aid For Third Plan; Import And Export Advisory Councils' Meetings; Indian Shipping Figures; Commonwealth Broadcasting Conference.

A. Sino-Indian Border Issue Correspondence—Mr. Nehru Invites Mr. Chou En-lai To New Delhi For Talks: Replying to Mr. Chou En-lai's letter of December 26, 1959 Mr. Nehru sent him a letter on February 5 inviting him to visit New Delhi as "an honoured guest" in the second half of March for talks on the Sino-Indian border question.

The letter and a further Indian Note of February 12 on the border question were placed on the table of both Houses of Parliament by Mr. Nehru on February 15.

Both the letter and the Note made repeated references to the importance of restoring Sino-Indian friendship in the interests of the two countries and of world peace. New Delhi was suggested as a venue for talks owing to Mr. Nehru's preoccupations with Parliament which required his presence in the country.

The letter and the Note were carried to Peking by the Indian Ambassador in Peking, Mr. G. Parthasarathy, who left New Delhi on February 9. He reached Peking on February 11 and on the following day, delivered them to the Chinese Foreign Office.

As Mr. Nehru's letter indicated that the Government of India's reply had been finalized before Mr. Nehru signed the letter on February 5.

The Chinese Government had suggested in its Note of December 26, 1959 that the Prime Ministers of India and China should meet to lay down principles for the negotiation of a settlement on the basis of India recognizing that the entire 2,200-mile boundary with the Tibet Region of China had not been delimited.

Mr. Nehru pointed out in his letter that on this basis "there can be no negotiations" and added that the respective view-points of the two Governments "were so wide and opposed to each other that there was little ground left for useful talks."

He recalled that he had, in his letter of November 16, suggested certain preliminary steps to ease the situation and facilitate talks, namely, the withdrawal of China from Ladakh to the boundary shown in Indian maps and of India to the boundary shown in Chinese maps, the vacation of Longju in the North-Eastern Frontier Agency by the Chinese and both sides agreeing not to send out patrols from their frontier posts.

Mr. Nehru regretted that Mr. Chou En-lai had not accepted these proposals and hoped that he would re-consider the matter.

Mr. Nehru pointed out that the deterioration of relations between the two countries, which had pained him deeply, "is a tragedy for both countries as well as for the larger issues in the world" and that, for his part, he would continue to endeavour to find a way to a peaceful settlement.

Although there could be no negotiations on the basis suggested by Mr. Chou En-lai, he said that it would "still be helpful for us to meet."

He, therefore, invited Mr. Chou En-lai to New Delhi in these words: "I am afraid it is not possible for me to leave India during the next four months. The Budget session of our Parliament is beginning on February 8 and this will require my presence here. I would, however, be glad if you could take the trouble to come to Delhi for this purpose at a time convenient to you and us. You will be our honoured guest when you come here. I would suggest that some date in the second half of March might be fixed for this meeting, if it is convenient to you."

The Indian Note, published with the letter, rejected in the firmest language used so far by the Government of India in their correspondence with China the Chinese contentions and claims on the border.

The letter stated that there could be no negotiations on the premise that India's northern border was entirely undelimited and added that the view-points of the two Governments were "so wide apart and opposed to each other" that there was "little ground left for useful talks."

Nonetheless, Mr. Nehru suggested that a meeting between him and Mr. Chou En-lai "might be helpful" as every effort should be made to explore avenues which might lead to a peaceful settlement.

The Indian Note of February 12 contained an elaborate refutation of the historical data quoted by the Chinese in support of their border claims.

The 7,000-word Note was the firmest rebuttal and the most categorical rejection so far of China's contentions and claims about the Sino-Indian boundary.

Quoting extensively from "the facts of history, geography, custom, tradition and international agreements," it refuted the Chinese contention that the entire Sino-Indian boundary had never been delimited and showed that the Chinese claim to 51,000 square miles of Indian territory was false and without any basis.

It added: "The present controversy regarding the boundary and the tension on the border have arisen because the Chinese Government laid claims to extensive areas of Indian territory for the first time on September 8, 1959 and intruded into Indian territory both before and afterwards in furtherance of their claims.

"The Government of India is particularly shocked and surprised by this attitude and action of a neighbour whose friendship it has always cherished. Despite these unwelcome developments, the Government and people have shown the utmost restraint."

It declared that negotiations on the basis suggested by the Chinese Government were impossible but that India was prepared to discuss specific disputes in regard to the location of particular places on the boundary and to make minor rectifications by agreement where they are considered necessary.

It concluded: "Apart from the boundary question, it is important in the interests of both China and India and of world peace in general that the two Governments should leave nothing undone, which could remove misunderstanding and restore the traditional friendship and cordiality between the two countries on a firm basis."

The salient points in the Note were:

Sikkim and Bhutan: The Government of India welcomed the fact that the Chinese had accepted the boundary with Sikkim and had not repeated their map claims to any part of northern Bhutan. "In view of the responsibility of the Government of India for the defence and the maintenance of the integrity of Bhutan and Sikkim, the Government of India welcomes the assurance of the Chinese Government that they will not en-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

croach upon the territory of Sikkim and Bhutan."

Ladakh: The 1842 Treaty between Kashmir, Tibet and China did not define but merely confirmed the long fixed and well-recognised Ladakh-Tibet border.

The Chinese argument that the 1842 Treaty did not cover Aksaichin because this region formed part of Sinkiang was untenable. Even Chinese maps of the 18th and 19th centuries showed clearly that Sinkiang never extended south of the Kuen Lun mountains. Throughout the 20th century Kashmiri and Indian officials, traders, hunters and geological survey parties freely moved about this area (Aksaichin).

Punjab-Himachal-UP Border: The Government of India rejected the Chinese claims to Spiti, Shipki Pass, Nilong-Jadhang, Bara Hoti, Sangchamalla and Lapthal. The fact that some of the inhabitants of these areas were of Tibetan origin did not prove that they belonged to China. Both India and China were multi-racial societies. China did not raise the frontier question during the 1954 Sino-Indian Treaty negotiations on Tibet. The six border passes mentioned in the Treaty gave further definition to the frontier in this sector. "The Chinese Government have changed their position since 1954."

N-EFA Border: The entire tribal area south of the traditional watershed boundary (the MacMahon Line) had always been part of India. The Ahom rulers held sway over this area for six centuries until displaced by the British. The Chinese had only sought to adduce evidence of Tibetan jurisdiction over the small Tawang and Walong tracts. But, even this evidence was defective. The Tibetan Lamas might have exercised some ecclesiastical authority over Tawang, but this did not ever imply recognition of Tibetan sovereignty.

The MacMahon Line: The Simla Convention merely confirmed the traditional and administrative boundary. Tibet was a fully equal partner with China and India at the Conference and the credentials of the Tibetan delegate to this effect were known to and never questioned by the Chinese representative. The MacMahon Line was formally and openly delineated on a map which was initialled by the Chinese delegate. A copy of the Simla Treaty and the map was also given to the Russian Government which raised no objection to the negotiations or the subsequent Agreement. In view of the Government of India's responsibility for the defence and integrity of these territories the Chinese assurance that they would not encroach on these areas was welcomed.

Maps: The postal map of China (1917) showed the Ladakh and N-EFA boundaries in consonance with the Indian alignment. Indian survey maps until 1950-52 showed these borders as undefined only in the sense that they had not been formally demarcated on the ground. As, however, the traditional boundary lay along a major watershed it was subsequently decided that no such demarcation was necessary. According to international usage and practice a customary boundary which followed well-known and unchanging natural features like main watersheds stands defined and does not require further or formal definition.

Tibet's Status:

The Note said that Tibet had asserted its sovereign status to carry on negotiations and conclude treaties with other States without any protest from China on several occasions in the past 100 years.

This was the first occasion that the question of Tibet's historical independent status had ever been referred to by the Government of India in its correspondence with China.

So far, India had not qualified her acceptance of Chinese suzerainty over Tibet by any mention of the fact that Tibet had for many years been recognized for all practical purposes as an independent State by China and other States which signed treaties with it.

The Government of India seemed to have been provoked to refer to this fact by China questioning the validity of the 1914 Agreement signed between India and Tibet which confirmed the traditional boundary east of Bhutan, thereafter, known as the MacMahon Line.

CPI Welcomes Invitation To Mr. Chou En-Lai:

The Secretariat of the National Council of the Communist Party of India issued a statement on February 16 welcoming the extension of an invitation to Mr. Chou En-lai to visit India.

The statement said: "In his latest letter to Premier Chou En-lai dated February 5, Prime Minister Nehru has not only re-iterated his sentiments for a peaceful settlement of the Sino-Indian border dispute and for the restoration of the friendly relations between the two countries but has also expressed in favour of an early meeting of the two Prime Ministers. All peace-loving humanity will deeply appreciate these sentiments and heartily welcome this decision for direct talks between the two leaders. Indeed, it is only through such an approach that a way out of the present tragic turn in India-China relations can be found.

"The opponents of India's policy of peace and non-alignment who have never lost an opportunity to denounce and undermine this policy and discredit Prime Minister Nehru are naturally upset by the prospect of the two Premiers' meeting. But we are confident that our people inspired by ideals of peace and friendship among nations, will know how to defeat their efforts and create the proper atmosphere for talks between Prime Minister Nehru and Premier Chou En-lai. In their endeavour for a peaceful settlement of the India-China problem, the two leaders have the most fervent good wishes of all right-thinking men throughout the world".

Sir Olaf Caroe On MacMahon Line:

Sir Olaf Caroe, who was Foreign Secretary to the Government of India from 1939 to 1945, wrote an article in *The Guardian* (UK) on February 13 refuting the arguments put forward by Mr. Chou En-lai in the Chinese Note of December 26, 1959.

He wrote: "The Himalayas are India's natural and inviolate frontiers, and China has absolutely no political, historical or ethnic grounds to claim the territory between the main mountain axis and the plains on the Indian side."

Sir Olaf, who spent nearly 30 years in the old Foreign and Political Department of the Government of India and made a special study of India's northern frontiers, dealt with only the north-east frontier (in this article) for the sake of conciseness and left out the Ladakh part of the current Sino-Indian dispute.

He said that the Chinese claim in the north-east is based on four main assertions: (a) that this frontier had never been delimited, China having declined to ratify the Simla Convention of 1914: (b) that, until 1938 at any rate, the frontier of India was shown even in British maps as claimed by China, namely, along the line of the foothills in the Assam plain; (c) that, until recently, the area down to the plains was under Chinese jurisdiction; and (d) that the Chinese case was supported by British officials like Col. F. M. Bailey and Sir Henry Twynam.

Sir Olaf pointed out that the Chinese, in their Notes to India, drew no distinction between delimitation (or delineation) in a map of description and demarcation on the ground. He conceded that it was true that the MacMahon Line was never demarcated by pillars, the reason being that for the most of its length it traverses the main Himalayan axis and includes peaks 20,000 feet in height. For similar reasons, large sections of the Durand Line on the North-West Frontier had never been demarcated. But the MacMahon Line was clearly delimited in Article 9 of the Simla Convention of 1914, with a large-scale map attached thereto showing it as a red line. The same Article 9 stipulated that "for the purpose of the present Convention the borders of Tibet shall be shown in red on the map attached hereto." This red line ringed Tibet round, showing not only its frontier with India but also that with China.

He said that the Chinese were basing their denial of the MacMahon Line's validity on two points: (1) that the then Republican Government of China declined to ratify the Convention; and (2) that this part of the red line was never explained to them at the Simla Convention and it was secretly agreed to between Britain and Tibet without Chinese knowledge.

Sir Olaf conceded that China did not ratify the Simla Convention. But he pointed out that in giving grounds for the repudiation of its plenipotentiary's initialling of the Agreements, the then Chinese Government made no reference whatever to any exception being taken to the proposed India-Tibet frontier. It based its objections only on the proposed frontier of Tibet towards China.

He stressed that it was "to explain away this damaging fact that Peking was now putting forward the wild accusation that the MacMahon Line was secretly agreed to between the British and the Tibetans without Chinese knowledge. In fact, the MacMahon Line was shown on the map initialled by the Chinese representative in Simla in June, 1914, which clearly indicated that the then Chinese Government was fully aware of it. It was thus quite inconceivable that the Chinese negotiator or his Government could really have remained in ignorance of this part of the red line, as Peking now pretended."

Sir Olaf also maintained that Britain and Tibet were fully competent at that time to enter into a formal Agreement on the India-Tibet frontier, and the Chinese refusal to ratify it was quite immaterial to the validity of the Agreement.

"This apart, the Chinese case completely overlooked the vital point that the then Government of China had agreed to the attendance of Tibet as a fully empowered third party to the Simla Conference. The Foreign Minister of China wrote to the British representative on August 7, 1913 that the Chinese plenipotentiary would proceed to India to open negotiations for a Treaty jointly with the Tibetan and British representatives. Tibet was thus recognized by China at the time as an entity empowered to take part in international negotiations. At no stage did the Chinese Government take objection to the India-Tibet frontier, or to its fixing. The real position at the time was that China was not in factual control of Tibet and was not interested in the frontier towards India."

Sir Olaf then explained the cartographical position and said that in the early days of British rule the external frontiers of India were conceived as lying at the limits of the territory where British writ ran. But, on the north-east and north-west frontiers, there lay beyond the limits of administered territory an agglomeration of tribes owning no master. In such cases, it became the practice of early British administrators to exercise in the region beyond the administered border what was known as "loose" political control. "Trans-border" agencies were set up, but it was not until later that the need was felt to show these tribes so politically controlled as excluded from the neighbouring States and included in India.

Thus, there was a time-lag in amending the old imperial maps. On the north-west frontier, they were amended after the Durand Line was delineated in 1893, but on the north-east frontier, the MacMahon Line having been accepted by Tibet—without a Chinese demur—there was a greater time-lag in amending the maps, mainly because World War I supervened and Sir Henry MacMahon himself was sent to Egypt in 1914. But, the new position would be found clearly set out in Volume XIV of Aitchison's Treaties, 1929 edition. The maps were amended thereafter.

Sir Olaf emphasized that in dealing with these matters in those days, China was not in the picture, having no authority in Lhasa from the time of the fall of the Manchu dynasty in 1911 to that of the communist conquest in 1950.

Referring to Mr. Chou En-lai's claim in his last Note to Mr. Nehru that "until recently

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the area between the MacMahon Line and the foothills boundary was still under Chinese rule," he pointed out that the Chinese Premier was trying to establish this point by reverting to the time of the fifth and sixth Dalai Lamas in the 17th century, who exercised jurisdiction over the Tawang area and some other places to the south of the Himalayan axis. This was before the Chinese conquered Tibet itself. "Thus, in the wider conspectus of history, the idea of Chinese rule south of the Himalayas does not bear scrutiny. It is true that over many periods neither the Dalai Lama nor the Chinese Government had exercised some sort of authority in certain small regions south of where the MacMahon Line now runs. But Tibetan rule had never been extended to the Forobo tribes inhabiting the area between the Himalayan apex and the so-called foothills line and there has never been any Chinese jurisdiction of any sort in this region. There is thus no Treaty or authority of any kind for the territory now claimed by China to the south of the MacMahon Line."

And finally, he repudiated the arguments put forward by Col. F.M. Bailey and Sir Henry Twynam which Mr. Chou En-lai had quoted in his Note of December 26, 1959 to the effect that the north-east frontier should conform to the ethnic divisions of the border area.

It is hardly surprising, he added, that Col. Bailey should say that there was no MacMahon Line when he was in the area in 1913, since it was negotiated and delineated only in the following year (1914). But he himself had affirmed, in his letter to *The Times* on September 7, 1959 that even in those days the crest of the Himalayas was the obvious and accepted frontier between India and Tibet. And Sir Olaf could not see how this helps China. Sir Henry Twynam spent only a few months as acting Governor of Assam and did not know the area well. A more authoritative view would be that of Sir Robert Reid, for whom Sir Henry was acting.

Sir Henry, in his letters to *The Times* on September 2 and 10, 1959, argued that the MacMahon Line did not exist and never had existed, and that the frontiers should follow ethnic divisions. Sir Olaf rejected this plea on the ground that the hackneyed argument that international frontiers should follow ethnic lines could never be applied to the Himalayan region where the population in many sectors was of mixed Indian and Mongolian stock, inextricably tangled.

Frontier Areas Special Officer Appointed:

It was announced in New Delhi on February 17 that the post of Special Officer for Frontier Areas had been transferred from the Ministry of External Affairs to the Home Ministry.

Mr. Shanker Prasad, Special Secretary for Kashmir Affairs in the Home Ministry, it was added, had been given the additional assignment as Secretary for Frontier Areas.

The External Affairs Ministry would, however, continue to exercise jurisdiction over N-EFA and the Naga Hills-Tuensang Area.

B. Soviet Credit Utilization—Agreement Signed: An Agreement was signed in New Delhi on February 12 specifying the projects to be financed with the Soviet rouble credit of Rs. 180 crores offered for India's Third Five-Year Plan.

It was also assumed that at a later stage, an offer of further assistance might be forthcoming from Russia.

This latest Agreement which, apart from listing the approved projects, also laid down details of technical assistance, was signed by Mr. S. S. Khera, Secretary in the Ministry of Steel, Mines and Fuel and Chairman of the Negotiating Committee set up to deal with the credit, and Mr. S. A. Skachkov, Chairman of the State Committee of Foreign Economic Relations of the USSR Council of Ministers.

Mr. Nehru and Mr. Khruschev were present at the signing ceremony.

According to it, a Soviet team would come to India in a few months' time to finalize some of the projects, particularly in the case of the expansion of the heavy machinery plant at Ranchi and the proposed mining machinery plant at Durgapur.

Although the projects had been chosen to approximate Rs. 180 crores in respect of the foreign exchange expenditure—the total outlay is expected to be of the order of Rs. 400 crores—the present cost estimates were often purely notional for the simple reason that neither Indians nor the Russians know what the ultimate scope and pattern of production would be. For example, roughly Rs. 20 crores each had been earmarked for the mining machinery and the heavy electricals plant, but ultimately it may be expedient to step up the latter to Rs. 25 crores. In that event, either the mining machinery project might be scaled down, or the Russians might decide to extend a supplementary line of credit.

The allocation for oil exploration and development was similarly an arbitrary figure, subject to adjustment in the light of future prospects and needs.

The Bhilai expansion was expected to cost roughly Rs. 42 crores in terms of foreign exchange.

This lack of precision partly followed the comparatively short notice at which the original list of projects for this assistance had to be pruned.

Among the projects dropped from the earlier list were some power plants.

The new loan carried standard Soviet terms. It is repayable, in goods, over 12 years after the last shipment; the interest rate is 2½ per cent.

The following were the projects approved for being financed with the loan:

(1) Expansion of the Bhilai steel works and its ancillary facilities so as to increase its capacity to 2.5 million tons of steel per year;

(2) Expansion of the heavy machinery plant at Ranchi from 45,000 tons to its design capacity of 80,000 tons per year;

(3) Mining machinery plant—expansion and diversification.

(4) Completion of the oil refinery at Barauni;

(5) Manufacture of heavy electrical equipment;

(6) Manufacture of precision instruments (industrial control equipment);

(7) Exploration, development and production of oil and gas by the Oil and Natural Gas Commission in Cambay and in other areas;

(8) Expansion of the capacity of the Neiveli power plant (Madras) from 250,000 kilowatts to 400,000 kilowatts;

(9) Expansion of the Korba thermal power station (Madhya Pradesh) by the addition of 200,000 kilowatts installed capacity; and

(10) A new thermal power station at Singrauli (Uttar Pradesh) with a capacity of 250,000 kilowatts.

(*The Times of India*, New Delhi)

[Prev. ref. 2901:INI:A]

C. Cultural Agreement With USSR: An Indo-Soviet Cultural Agreement, the tenth of such bilateral arrangements entered into by India since 1951, was signed in New Delhi on February 12.

The object of the Agreement is to strengthen the ties of friendship and understanding between the two countries by promoting cooperation and exchange in the field of education, technology, science, research, sports, arts, books, broadcasting and cinema.

The mutual exchange of tourists, teachers, and students on scholarships was especially envisaged.

A joint Indo-Soviet Committee would be set up to co-ordinate and implement the Agreement. It would meet alternately in New Delhi and Moscow.

The Agreement consists of eight Articles and was signed by Mr. E. A. Zhukov, Soviet Minister for Foreign Cultural Relations, and Mr. Humayun Kabir, Minister for Scientific Research and Cultural Affairs.

It would come into effect following the exchange of Instruments of Ratification in Moscow in the near future.

(*The Times of India*, New Delhi)

[Prev. ref. 558:INI:A]

D. US Export-Import Bank Loans: The US Export-Import Bank announced in Washington on February 14 that it was making three loans in Indian rupees to industrial firms in India totalling Rs. 4,26,00,000.

All the three companies were joint ventures involving US and Indian private concerns. The largest loan of Rs. 2,71,00,000 would go to India Synthetics, formed recently by the Firestone Tyre and Rubber Company of Akron, Ohio, and Messrs. Kilachand, Devichand and Company Ltd. of Bombay. The loan would be used to assist in the financing of a synthetic rubber manufacturing facility near Bareilly in UP. It was repayable over a nine-year period.

The second loan went to the Hindustan Aluminium Corporation Ltd. for Rs. 1 crore and was in addition to a previous dollar loan amounting to $13,600,000 (nearly Rs. 7.8 crores), as announced on January 27, 1960. The proceeds of the additional rupee credit would be used towards the building of an aluminium reduction plant near the Rihand Dam in UP.

The third credit amounting to Rs. 55,00,000 was made to Mysore Cements Ltd., of Mysore. The loan would be used to help finance the construction of a cement plant in Mysore State.

(*The Statesman*, Calcutta)

[Prev. ref. 2098:INI:A]

E. Manhandling of US National In Bombay—Chinese National Expelled: The Deputy Minister for External Affairs, Mrs. Lakshmi N. Menon, disclosed in the Lok Sabha (House of the People) on February 17 that the Chinese official who was involved in the forcible detention of an American, Mr. Robert Armstrong, in Bombay in June, 1959 had been sent out of India at the instance of the Government of India.

She said that the Bombay police, who had gone into the matter had found on the basis of evidence recorded by them that there was a *prima facie* case of assault on, and forcible detention of, an employee of the US Consulate-General. Little evidence was, however, forthcoming. The earlier course of events and the circumstances in which the two employees of the US and Chinese Consulates-General appeared in a taxi at the place where the assault took place, had not been sufficiently explained. The Government, therefore, felt that no useful purpose would be served by instituting formal proceedings in court. Instead, it would be sufficient if the Chinese official concerned went out of India. The Chinese Embassy was advised accordingly. The official had since left India, and no further action was, therefore, proposed.

F. Polish Aid For Third Plan: The Polish Ambassador in New Delhi, Dr.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Julius Katz-Suchy, announced in the capital on February 17 that Poland had offered India a long-term credit of about Rs. 15 crores for her Third Five-Year Plan.

The credit would be incorporated in a special Agreement on economic co-operation between the two countries which would be negotiated.

Certain other exploratory talks were in progress which might further substantially enlarge the quantum of Polish assistance. This would presumably be covered in supplementary agreements relating to specific projects.

The credit would be utilized for the purchase of Polish plant and equipment for the production of aluminium, machine-tool plants, processing of zinc ore, coal washeries and ammonia compressor plants.

The Polish deliveries would include plants, technical 'know-how' and technical and scientific assistance.

The new three-year Indo-Polish Trade Agreement, which came into force on January 1, 1960 provided for a substantial increase of trade between the two countries.

Under the terms of the new Agreement payments between Poland and India would be in non-convertible rupees and trade would be on a balanced basis. The rupees earned by Poland through exports to India would be utilized for importing Indian goods of equal value.

(*The Times of India*, New Delhi)

[Prev. ref. 1949:INI:B]

G. **Supply Of Metal Rolling Mill By Poland:** The Polish News Agency *PAP* reported on February 8 that Poland would deliver to India a metal rolling mill, which would be built in Agra.

The production capacity of the mill would amount to over 30,000 tons of rolled goods a year.

Delivery of the machinery and installations would begin in the second quarter of 1960. The assembling of the plant would be carried out under the supervision of Polish engineers.

(*The Hindu*, Madras)

[Prev. ref. 1949:INI:B]

H. **Foreign Controlled Companies In 1958:** According to a Study on "External Transactions of Foreign Controlled Companies in India, 1958," published in the Reserve Bank of India Bulletin, the foreign controlled companies accounted for 31 per cent of India's total import-export trade on private account in 1958 as compared with about 28 per cent in 1956 and 1957.

It said: "The increase in 1958 in the proportion of trade handled by these companies, however, does not by itself suggest any diversion of trade from the Indian sector."

During 1958, it said, private imports showed a sharp reduction as a result of severe import controls. The items which showed the largest decline were machinery and metals, in which the foreign controlled companies had a relatively small interest and were, therefore, comparatively unaffected by the import cuts.

The total trade of foreign controlled companies during 1958 amounted to Rs. 353 crores, of which primary goods (food and raw materials) amounted to Rs. 213 crores or 60 per cent. "The high percentage of primary goods in the trade handled by these companies is mainly due to the fact that two of the major primary commodities in our foreign trade, *viz.*, tea on the export side and mineral oils on the import side, are to a large extent in their hands."

In the case of Indian companies, the opposite was true. Primary goods accounted for 38 per cent of their total trade and manufactured goods 62 per cent. A major share of the country's exports of cotton textiles and jute goods and imports of machinery and metals was handled by the Indian sector.

Exports of foreign controlled companies (at Rs. 170 crores) represented about 30 per cent of the total exports during 1958. This proportion was more or less the same as in the previous two years.

Private imports declined substantially during 1958. In consonance with the overall trend, imports of the foreign controlled companies declined by 4 per cent as compared to 1957. Imports of the Indian sector, however, showed a much larger decline of 31 per cent.

The operation of import control in 1958 was such as to bring about a severe cut in the imports of machinery and metals in which the Indian sector had a large share, imports of these two items showed a decline of Rs. 27 crores, of which Rs. 16 crores were accounted for by the Indian sector. The effect was thus to increase the share of foreign-controlled companies in private imports from 28 per cent in 1957 to nearly 33 per cent in 1958.

The invisible account of the foreign controlled companies conformed to the usual pattern, there being a net out-go of Rs. 13.8 crores in 1958, compared with Rs. 12.3 crores in 1957 and Rs. 7.2 crores in 1956. "The outgo was mainly due to transfers abroad of income of their investments in India."

(*The Hindustan Times*, New Delhi)

[Prev. ref. 2788:INI:K]

I. **Import Advisory Council Meeting:** Addressing a meeting of the Import Advisory Council in New Delhi on February 13, the Central Minister for Commerce and Industry, Mr. Lal Bahadur Shastri, forecast an increase in the country's imports in the years ahead on account of economic growth and said that the challenge of increased imports in the future would call for greater endeavour to find the necessary foreign exchange through exports.

The import requirements of industrial development, he said, were growing both in terms of capital goods and raw materials. There was need for a careful balance between helping the growth and development of indigenous industries through the elimination or reduction of imports on the one hand and ensuring the supply of raw materials on the other.

Industrial production in 1959 had shown an increase of 6.4 per cent. This could be attributed in part to the more liberal licensing of raw material imports such as chemicals, transport equipment, raw rubber and non-ferrous metals.

There were a few items which continued to be in short supply. These included steel (although the position was likely to improve as the new steel plants went into production), aluminium, copper, sulphur, art silk yarn, wool-tops and paper.

He referred to the fact that several items imported from abroad had been selling at a very high margin of profit. Prices of certain raw materials and even of manufactured goods had been artificially stepped up and cloth prices had increased. On account of the activities of hoarders and speculators, prices were ruling high in respect of mercury and many other chemicals, non-ferrous metals and motor vehicle parts. If the importers were unable to limit their profits to a reasonable figure, the Government would be compelled to canalize the import of some items through the State Trading Corporation or some other agencies.

He also recounted the various measures being taken to simplify the import control procedure and disclosed that a proposal for extending the scope of annual licensing to cover the import of a large part of the requirements of industry and some individual commodities was under consideration. In the meantime, licences on a "repeat basis" would be issued for many more items.

It was also proposed to set up a Vigilance Organization in the export-import control administration so that speedy action could be taken to prevent abuses.

In the discussion that followed, most speakers urged the need to liberalize imports in different sectors, specially with regard to raw materials.

Mr. Bharat Ram, speaking on behalf of the Federation of Indian Chambers of Commerce and Industry, and Dr. P. S. Lokanathan, Director of the National Council for Applied Economic Research, urged a larger quota for steel imports during the current year on account of the lag in domestic production and the rise in demand.

Mr. J. D. K. Brown, Chairman of the Associated Chambers of Commerce, said that if the country was to achieve a higher coal production, it would be necessary to permit a substantial increase in mining equipment and machinery.

He also advocated a more liberal import of raw jute if the Indian mills were to operate at more competitive price levels in the face of growing competition from Pakistan.

Replying to the discussion at the end of the day, Mr. K. B. Lall, Director-General of Foreign Trade, said that it had been possible last year to import more and increase industrial production while narrowing the trade gap at the same time. Such shortages as existed had been spread over the whole economy.

The upswing in industrial production, however, spelt difficulties during the current year. The demand (for raw materials) from industry was growing so rapidly that the basic problem was to increase the country's (foreign exchange) resources and evolve a more effective distributive organization that would minimize unavoidable shortages.

He felt that the range of actual users and established importers was too wide and suggested that a body like the Federation might consider this matter industry-wise so that the import structure might be re-organized on a more efficient basis.

Mr. Lall called on importers and exporters not to function in water-tight compartments but to combine both functions. In this context, he commended the initiative of the art silk industry to earn its own foreign exchange.

[Prev. ref. 2904:INI:L]

J. **Export Advisory Council Meeting:** Addressing a meeting of the Export Advisory Council in New Delhi on February 14, the Central Minister of Commerce and Industry, Mr. Lal Bahadur Shastri, said that with the improvement in international trade it was likely that Indian exports would exceed the target figure of Rs. 3,000 crores by the end of the Second Plan period.

He said that India's exports in 1959 totalled Rs. 626 crores, the highest ever, barring the exceptional year of the Korean war boom. This performance was more creditable despite the decline of Rs. 10 crores in tea export earnings.

He revealed that some "business contacts of considerable potential value" were in the process of finalization in which the State Trading Corporation might have to play an important role.

In order to plan the export programme on a better basis, he said, he had asked his Ministry to draw up an overall export plan

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

commodity-wise and country-wise for the next five to six years in consultation with other Ministries and the Planning Commission. He hoped it would be possible to prepare such a plan as it would enable the Government and the industries to analyse matters regarding production, price, transport, credit facilities and other problems connected with the achievement of targets.

Emphasizing the need to export more in order to pay for the increased imports which might touch even Rs. 1,000 crores per annum in the years to come, he said that during the current year the country should earn from exports Rs. 50 crores more than last year. If the same rate of progress was maintained India might earn Rs. 700 crores from exports in 1961.

The adverse balance of trade in 1959 had been reduced to Rs. 243 crores as compared to Rs. 296 crores the previous year (1958) despite the higher imports of the order of Rs. 669 crores. A large part of this deficit had been covered by financial assistance from friendly countries. The payments position, with West European countries, however, remained in serious deficit.

About the European Free Trade Association taking shape among UK, Denmark, Sweden, Switzerland, Portugal, Austria and Norway, he said that India had not yet been able to comprehend the effect of the Association on her exports to these countries.

He regretted that India had not been very successful in increasing her exports to countries in Asia and Africa.

Analysing the exports of last year commodity-wise, he said that the most striking improvement had been in oil-cakes. Exports of tanned leather and major traditional items like cotton and jute manufactures had also shown improvement. A comparatively new item of export was cement which brought nearly Rs. 1 crore. There were possibilities of exporting potatoes provided requisite surpluses were available.

In the discussion that followed, the representatives of the Federation of Indian Chambers of Commerce and Industry and the Associated Chambers of Commerce, Calcutta, stressed the need for keeping down the costs in export industries.

Mr. Madanmohan R. Ruia, President of FICCI, in an obvious reference to the recommendations of the Textile Wage Board, said: "There are proposals which, if accepted, will increase costs in an important export industry like textiles. We must fully guard ourselves against any rise in industrial costs."

He wanted India to import goods only from countries which bought Indian goods.

He felt that India should concentrate on selling her goods more to developed countries than to under-developed countries in Asia and Africa.

He particularly mentioned the vast American market which, he said, must be developed sedulously.

He wanted the price of steel to be reduced further for export industries.

Mr. J. D. K. Brown, President of the Associated Chambers of Commerce, said that the costs of tea and jute goods, which were vital for earning foreign exchange, were already high and should not be subjected to a further increase by artificial factors.

He hoped that while considering any wage increase the Wage Board proposed to be set up for the jute industry would keep the export markets in mind.

The industry, he added, would not grudge any increase in wages provided there was a corresponding rise in productivity.

He called for further reliefs to the tea industry which, he said, was now bearing a crushing burden of taxation. There was also need for the intensification of tea propaganda both in the home market and abroad. Ceylon had already made deep inroads into the British market which was India's principal consumer, with the result that Indian tea had dropped to 50 per cent from 75 per cent of the total imports into UK.

(*The Statesman*, New Delhi)

[Prev. ref. 2904:INI:H]

K. **Indian Shipping:** During 1959, it was stated in New Delhi, Indian shipping companies acquired 24 ships totalling 112,000 gross tons and 156,000 dead-weight tons, bringing the strength of the Indian merchant fleet to 159 vessels aggregating 744,000 gross tons at the close of 1959.

The dead-weight tonnage of the entire Indian merchant fleet was now over 1,000,000.

Seven vessels totalling 15,000 tons were disposed of due to overage etc., and one small ship of 567 tons was lost at sea. The net addition to the Indian merchant fleet during the year was thus 16 vessels and 96,000 gross tons.

Of the 159 Indian ships, 64 totalling 437,000 tons were operating in the overseas trade of the country. Of these, 27 vessels of 210,000 tons were in the India-UK-Continent trade, six of 37,000 tons in the India-Black Sea ports trade, six of 30,000 tons in the India-West Africa-Mediterranean trade, four of 29,000 tons in the India-USA trade, two of 19,000 tons in the India-South America trade, four of 26,000 tons in the India-Far East trade and three of 17,000 tons in the India-Australia trade.

One passenger-*cum*-cargo vessel operated between India and East Africa and another between India and Malaya. Three ships were licensed to ply in the India-Persian Gulf trade, while one small vessel, fully refrigerated, would shortly enter this trade as banana-carrier.

In addition, there were four vessels which were operating on a tramp basis.

The overseas fleet consisted of a large number of new and near-new vessels, some of which have a high speed of 19 knots.

India's coastal fleet consisted of 95 vessels totalling 307,000 gross tons. Of these, 66 totalling 252,000 tons were cargo vessels, three totalling 24,000 tons were tankers which have been chartered to the oil refineries for carrying refined oil along the coast, seven of 19,000 tons cargo-*cum*-passenger vessels, eight of 7,000 tons small vessels engaged in short coastal range operations.

Over 50 per cent of Indian tonnage was "young", that is, under 10 years of age and about 15 per cent "middle aged", that is, between 10 and 14 years of age.

At the end of 1959, Indian shipping companies had 11 vessels totalling some 85,000 gross tons under construction or on order in Indian and foreign yards, for delivery before March, 1961.

[Prev. ref. 2649:INI:D]

L. **Co-operative Farming—Working Group's Report:** The Working Group on Co-operative Farming, headed by Mr. S. Nijalingappa, which was set up by the Government of India in June, 1959, to recommend measures for promoting a programme of joint co-operative farming has submitted its report. It is the first volume of the report, having 147 pages.

In it, the Group said that it was convinced that "joint co-operative farming is an effective method and agency for improving the economic and social conditions, particularly of small and medium cultivators" and maintained that co-operative farming in India could be a success.

The Group went round eight States, studied the working of a number of co-operative farming societies and elicited opinions of various officials and non-officials.

It defined a co-operative farming society as "a voluntary association of cultivators for better utilization of resources, including manpower and lands pooled and in which the majority of members participate in farming operations with a view to increasing agricultural production, employment and income".

The Group was against any form of compulsion. In its opinion, existing legislation in some States under which a minority of cultivators could be forced to join a co-operative farming society was contrary to the basic principles of voluntariness and undesirable on practical grounds.

It suggested that 320 pilot projects, at the rate of one in every district, should be carried out during the next four years in selected NES (CD) Blocs where co-operation had made good progress. To start with, 40 such projects may be set up during the current year. Ten co-operative farming societies should be organized in each project.

By the end of 1963-64, as a result of the success achieved in these 3,200 societies, another 20,000 societies, it was expected, would come into being in other areas.

Pooling of land, according to it, should ordinarily be for a period of five years. Ownership rights of the members contributing land should not only be respected but also duly rewarded. A retiring member, who had pooled his land, should get land of equal productivity in return and not necessarily the same piece.

In respect of mechanization, it drew a distinction between machinery which caused displacement of labour and which increased efficiency and employment. The use of the latter, such as pumps and engines for lifting water, was not ruled out.

It recommended that the Government should provide long and medium-term loans not exceeding Rs. 4,000 to each society on the basis of production programmes. Short-term credit should be made available from Central Co-operative Banks without demanding a Government guarantee.

The Government's participation in the share capital not exceeding Rs. 2,000 per society was also suggested as a method of increasing the societies' borrowing capacity.

The total outlay of the programme would be about Rs. 35.26 crores comprising Rs. 28.65 crores for assistance to the societies; Rs. 4.24 crores for training and education and Rs. 2.37 crores for technical staff.

(*The Statesman*, New Delhi)

[Prev. ref. 2639:INI:I]

M. **Central Government Employees And Permanency:** The Deputy Finance Minister of the Government of India, Mr. B. R. Bhagat, said in the Lok Sabha (House of the People) on February 11 that the Government of India had decided that in all permanent departments other than those in workshops and industrial units, temporary posts in all grades and classes which have been in existence for not less than three years as on March 1, 1959 should be converted into permanent posts up to a limit of 80 per cent if the Ministries concerned were satisfied that such posts were required permanently.

In its report, the Pay Commission had suggested that the permanent requirements of all categories of staff should be speedily deter-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

mined and, thereafter, the margin of temporary posts should be the same for all classes.

In a statement laid on the table of the House, Mr. Bhagat said that Government had also accepted the Commission's recommendation that highly qualified scientists and technologists who were recruited at the age of 35 and above might be given the option to join the contributory provident fund scheme in preference to the pension scheme.

(*The Hindusthan Standard*, New Delhi)

[Prev. ref. 2490:INI:Q]

N. **Commonwealth Broadcasting Conference:** The Commonwealth Broadcasting Conference began in New Delhi on January 22. About 27 delegates from 10 countries attended.

Opening the Conference, the Indian Minister for Information and Broadcasting, Dr. B. V. Keskar, called for greater co-ordination in the field of tele-communications and made a strong plea for evolving common patterns among Commonwealth countries.

About All-India Radio, he said that it was now broadcasting in more than 15 languages and the total broadcasting hours were about 109,227 a year—an increase of five times over the figure in 1947. AIR was also developing its TV section and efforts were being made to manufacture equipment for India's network within the country.

The Director-General of AIR, Mr. J. C. Mathur, said that Ghana and Malaya were joining the Conference for the first time and their presence highlighted the problems of broadcasting to rural communities in large numbers. Television was appearing on the horizon of Afro-Asian countries and "is at once an attraction and distraction."

Sir J. Beresford Clark (BBC) said: "The aim at truth is perhaps one of the greatest purposes which we could share in a Commonwealth environment. During the two world wars, the broadcasting medium suffered from the evils of untruthful propaganda with its mischievous frills of lies, distortions and suppressions. No one can say that these are non-existent today. By pooling their ideas and experience at the Conference the delegates will see the target more clearly and help towards the elimination of restrictions, great and small, which can deflect our individual or collective aims."

Mr. Charles Jennings (Canadian Broadcasting Corporation) said that the Commonwealth was the most efficient and positive organization in the world which could help ensure world peace. In Canada, he said, all TV stations gave programmes from noon till midnight and in radio the service was for over 16 hours every day.

Mr. D. M. Colombage (Radio Ceylon) said that their problem now, after augmenting their programmes, was one of finding more artistes. Another problem was the processing of Sinhalese records and they would welcome any scheme for processing records at a cheap rate.

Mr. Charles Moses (Australian Broadcasting Corporation) said that in the past seven years ABC had trained 34 broadcasters from other Commonwealth countries under the Colombo Plan. The Corporation expected to train another six this year.

Mr. A. T. Reid (Radio Malaya) said that problems associated with broadcasting to a multi-racial community as existed in Malaya were legion. They were faced with seven languages and dialects. These problems were not likely to be solved in a decade.

He said he had no doubt that English would be featured in programmes indefinitely. They were now starting on a five-year development plan to provide three simultaneous transmissions on nation-wide net-works. This would permit of full services in the four major languages. But as the use of Malay increased and Chinese and Tamil diminished the need for such diversity would disappear.

Decisions:

The Conference ended on February 11 after reaching several decisions affecting the development of broadcasting in the Commonwealth and exchanging information on professional subjects.

A special Sub-committee was set up to discuss the provision of programmes for rural communities.

It was also agreed to add to normal broadcast activities the compilation, editing and broadcasting of folk songs and other forms of folk culture.

The Conference stressed the need for close collaboration between broadcasting and educational authorities in order to achieve a fuller utilization of school broadcasts at the listening end.

It re-affirmed the right of television news organizations and agencies to obtain and present film coverage of sporting and other public events in television news bulletins without payment to promoters. A code of practice of freedom of access for news, laying down reasonable limits and safeguards for promoters and holders of exclusive rights was adopted in principle.

It agreed that direct broadcasting of parliamentary proceedings (a long standing practice in Australia and New Zealand) by organizations which had only a single programme channel was impracticable and that even where two channels were available, there were serious problems in providing an adequate service to listeners.

The impact of commercial broadcasting was considered in detail with particular reference to the duty of national broadcasting organizations to provide information, education and entertainment.

The Engineering Committee was concerned with the study of the existing techniques and of new developments in broadcasting. It discussed the freer inter-change of information of engineering problems and on improved operation and maintenance procedures in sound and television.

A Sub-committee studied problems of copyright affecting broadcasting and the plans for new legislation in various countries.

The Conference agreed on ways and means of implementing the various decisions taken and on strengthening the links between member organizations.

The next Conference would be held in Canada in May-June 1963.

[Prev. ref. 2296:AOA:B]

O. **Punjab Legislature—Governor's Address:** Addressing the Punjab Legislature in Chandigarh on February 15, the State Governor, Mr. N. V. Gadgil, said that the State Government was fully alive to its responsibility towards Lahaul and Spiti valley—the far-flung area of Kangra district bordering on China—and its strategic importance.

As for the Indo-Pakistan border, he pointed out the recent successful negotiations between the two countries on the outstanding disputes and said: "With the mutual goodwill generated as a result of these negotiations there will now be a border of peace, goodwill and constructive co-operation."

He made a special mention of the people's singleness of purpose to forge ahead and said: "This faith and effort has enabled my Government to make significant advances."

He spoke proudly of the increase in farm production even beyond the Second Plan target and praised the Food Department for overcoming the "extreme difficulties" experienced last year, the police for ensuring a peaceful atmosphere during the Gurdwara elections and for controlling the anti-betterment levy agitation with tact and firmness and the Bhakra administration for repairing the damage in the hoist chamber.

Notable among the plans he announced for 1960-61 were a 'firm fight' against water-logging and the establishment of three polytechnics, one each at Sirsa, Batala and Jhajjar.

He described the present power shortage in the State as "only a temporary phase" and said that some restrictions on supply became inevitable because of the gap between demand and generating capacity affected by low water supply in the rivers. He held the promise of an easy situation when the left power house at Bhakra went into action later this year.

Besides the installation of additional units at Ganguwal and Kotla, each of 29,000 kw, the Government had taken up with the Planning Commission the question of constructing four generating units of 1,20,000 kw each on the right bank power house at Bhakra.

The programme of agrarian reforms, he added, was being pushed through with speed. The assessment of surplus area under the Punjab Security of Land Tenures Act and the PEPSU Tenancy and Agricultural Lands Act was in progress. Nearly 4,50,000 acres of the land would be available for the resettlement of ejected tenants and landless workers.

About agriculture, he said that vigorous efforts were being made for a rapid increase in production. The State had already crossed the Second Plan target of foodgrains, last year's production figure being 60,80,000 tons. An area of 2,60,000 acres was expected to be reclaimed during the Plan period.

As a result of the State trading scheme and anti-smuggling measures, there had been no shortage of food anywhere in the State. A wheat reserve of 20,00,000 tons was built up successfully without upsetting market prices. The State supplied over 8,000 tons of wheat seed to Bombay and West Bengal, while another 1,00,000 tons of wheat moved out of the Punjab within the food zone through normal trade channels. Punjab continued to retain the enviable position of being not only self-sufficient in food but also catering for the needs of other States.

(*The Hindustan Times*, New Delhi)

[Prev. ref. 2504:INI:F]

P. **Orissa Legislature—Governor's Address:** Addressing the Orissa Legislature in Bhuvaneswar on February 17, the Governor, Mr. Y. N. Sukthankar, complimented the leaders of the Congress and the Ganatantra Parishad for showing the "necessary statesmanship and foresight in order to make a stable Government possible in the State."

He referred to the formation of the Orissa-West Bengal food zone and said that consumers were satisfied with these arrangements but producers were unhappy as the rates compared unfavourably with returns accruing in the neighbouring States. Varying conditions outside Orissa resulted in a large disparity in prices of paddy and rice in the Orissa market and those in the neighbouring States and the producer in Orissa suffered badly. "My Government is fully aware of the apprehension entertained by a section of the public about these arrangements causing a shortage of foodgrains for internal consumption. The position is being very carefully watched and timely action will be taken whenever necessary".

Targets of agricultural production during 1959-60 had already been achieved and pro

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

duction of foodgrains stood at 30,92,000 tons. The target for the coming year had been fixed at 32,86,000 tons.

All possible assistance was being given to the Dandakaranya Development Authority. The State Government would hand over 149,000 acres of land to the Authority. Out of these, 9,000 acres at Omerkote had been handed over already.

Referring to the Hirakud Dam Project being taken over by the State from April 1, 1960, he said that the total expenditure by the State on the Project up to the end of March, 1960 would be Rs. 65 crores. This was exclusive of interest charges on the capital which would come to Rs. 16.23 crores by the end of 1959-60.

Irrigation facilities had been provided from the Hirakud canal system to 335,760 acres up to the end of December, 1959. By the end of March, 1960, the construction of field channels would be completed when the entire area of 380,000 acres would have the benefits of irrigation before the next *kharif* crop.

(*The Statesman*, Calcutta)

[Prev. ref. 2540:INI:N]

Q. **Bihar Legislature—Governor's Address:** Addressing the joint session of the Bihar Legislature in Patna on February 3, the Governor of the State, Dr. Zakir Hussain, said that the total production of foodgrains in Bihar during the year 1958-59 touched a new peak of 66,86,000 tons.

Discussing the measures taken by the State for flood control, he said that up to 1959 a total length of 800 miles of flood protection embankments had been completed and the Government proposed to spend Rs. 1.33 crores during the current financial year on flood control.

In the field of industries, he said, the Central Government had finally decided to locate an oil refinery at Barauni. A major step towards the proposal for the location of the fourth steel plant had been the shifting of the headquarters of the Hindustan Steel Limited from Delhi to Ranchi. The sites for the heavy machinery and foundry forge plants were also getting ready.

On education, he said, a decision had been taken by both Patna and Bihar universities to introduce the three-year degree course from July, 1960. A proposal to set up a new teaching-cum-affiliating university at Ranchi was under consideration.

(*The Hindustan Times*, New Delhi)

[Prev. ref. 2505:INI:I]

R. **Bihar Budget:** The Chief Minister of Bihar, Dr. Sri Krishna Sinha (who also holds the Finance portfolio), presented the Bihar Government's Budget for 1960-61 to the State Assembly in Patna on February 9.

It showed a deficit of Rs. 36,00,000, and Dr. Sinha told the House that "this small deficit is for the present being left uncovered."

The following were the Budget figures:

Revenue receipts	Rs. 79.35 crores
Revenue expenditure	Rs. 70.70 crores
Surplus on revenue account	Rs. 8.65 crores
Capital receipts	Rs. 50.23 crores
Capital expenditure	Rs. 59.24 crores
Deficit on capital account	Rs. 9.01 crores
Net deficit in the Consolidated Fund	Rs. 36,00,000.

Dr. Sinha said that the State Government had decided that in certain sectors the emoluments must be somewhat augmented. Prices had risen in recent years and the cost of living index had gone up. It was, therefore, decided to give a flat increase of Rs. 10 in the cost of living allowance of all Government employees whose basic pay did not exceed Rs. 250. Marginal adjustments would be made in the case of persons whose pay just exceeded Rs. 250; in such cases, the flat increase would be reduced by the amount by which the basic pay exceeded Rs. 250.

The Government, he added, were also considering the question whether the cost of living allowance should be wholly or partly merged with the pay. For the present, the benefits of the cost of living allowance would be allowed for the purpose of calculating leave, salary, gratuities and pension.

The Government had also decided to allow a flat increase of Rs. 5 in the cost of living allowance of employees of local bodies and of Rs. 2 in the case of chowkidars. Gram Sewaks employed in the Panchayats should also get a fixed living allowance of Rs. 12.

(*The Statesman*, Calcutta)

[Prev. ref. 2505:INI:J]

S. **Uttar Pradesh Budget:** The UP Finance Minister, Syed Ali Zaheer, presented the State Budget for 1960-61 to the Legislative Assembly in Lucknow on February 13 showing a revenue deficit of Rs. 2.33 crores. Revenue was estimated at Rs. 130.90 crores and expenditure at Rs. 133.23 crores.

There were no tax proposals. Relief from sales-tax granted to certain cottage industries products would be discontinued and the long-standing demand of Class IV employees for better travelling allowance was conceded.

The development of the State's northern border areas adjoining Tibet, the introduction of NCC Rifles Scheme and the strengthening of the Pradesh Education Corps were among the new plans presented to the House.

A sum of Rs. 61,64,000 was allocated for the development of communications in the border areas in addition to Rs. 28,36,000 to be spent on the general development of the areas.

A sum of Rs. 6,49,000 was earmarked for the NCC Rifles Scheme sponsored by the Central Government. The National Cadet Corps would be expanded and 4,000 cadets during the current financial year and 16,000 during the next year would be given military training under the Scheme.

A separate military school was being started to prepare candidates from UP for admission to the commissioned ranks of the Armed Forces.

The net capital expenditure during 1960-61 was put at Rs. 26.91 crores against the original estimate of Rs. 32.14 crores for 1959-60.

The capital expenditure under the revised estimate for the current year was enhanced to Rs. 32.42 crores.

As the Budget would cover the last year of the Second Five-Year Plan, Mr. Ali Zaheer gave an assessment of the Plan's progress made so far.

Against Rs. 253 crores allotted to UP for the Second Plan, he said, he expected to utilize Rs. 221.97 crores assuming that the entire Budget allocations made for the current and next financial years would be spent.

A number of notable schemes were included in the Budget.

The number of Community Development blocks would be raised to 497 to cover 52.9 per cent of the rural population. Ten thousand service co-operatives, set up between August and December, 1959, would be linked with 148 marketing societies.

The target for irrigation, during the *rabi* season, was fixed at 46,95,000 acres of land. One thousand and twenty tube-wells, out of a target of 1,500, would be completed during the next financial year. Work on the remaining channels of the Jirgo Dam, the Upper Khajuri project, the Balmiki Sarovar and on the Nanak Sagar was expected to be completed during the next financial year.

Facilities would be provided for irrigation of 1,20,00,000 acres of land. A diesel power station would be set up in western UP to meet power shortage in areas served by the Ganga and Sharda grids. Two turbines of 30,000 kw each would be established at the Harduaganj power house. The firm capacity of the Matatila power house would be increased to 20,000 kw. Work on the revised Yamuna Hydel Scheme would be taken up during the year.

Class IV employees would be entitled to travelling allowance for members of their families. They would also be entitled to take their personal effects on being transferred. Their halting charge would be raised from eight annas to one rupee per day.

He announced that the State Government's Heavy Industries Plan Committee had proposed an investment of Rs. 34.42 crores and Rs. 11.68 crores in industries projected under the Third Plan in the public and co-operative sectors respectively.

Among the large-scale industries which had gone into production were the soda ash-*cum*-ammonium chloride factory and a rayon filament yarn factory, both of which had been given Government loans.

(*National Herald*, Lucknow)

[Prev. ref. 2522:INI:P]

T. **Sahitya Akademi Awards:** Writers in seven languages were awarded the Sahitya Akademi prizes of Rs. 5,000 each. The awards were given away by Mr. Nehru in New Delhi on February 13.

No book in other Indian languages was considered fit for the awards.

The writers were: Ramdhari Singh Dinkar (Hindi), Gajendra Kumar Mitra (Bengali), K. S. Karanth (Kannada), Ganesh Trimbak Deshpande (Marathi), Mohan Singh (Punjabi), Tirth Basant (Sindhi) and Masud Hasan Rizvi (Urdu).

Work Of Sahitya Akademi:

The Akademi is one of the three established by the Government of India. The other two are the Sangeet Natak Akademi and Lalit Kala Akademi.

In the six years of its existence, the Sahitya Akademi has published several standard, low-priced books in each of India's 14 languages, and in English and Sindhi.

The first volume of the National Bibliography of Indian Literature (20th Century), one of the most important publications of the Akademi, will be released later this year. It will contain a complete record of all publications of this century in Assamese, Bengali, English, Gujerati, Hindi, Kannada, Kashmiri, Malayalam, Marathi, Oriya, Punjabi, Sanskrit, Sindhi, Tamil, Telugu and Urdu.

An important series of the Akademi's publications is the Anthology of Current Indian Poetry in which the volumes on Punjabi and Assamese poetry have been published. The Akademi has also published the first volume of the annual Bhartiya Kavita.

Another important series is the Critical Edition of Kalidasa's Works under which it is proposed to publish six volumes. *Meghaduta* has already come out and *Vikromorvasiya* and *Kumarasambhava* are expected to be published soon. Work is progressing on *Shakuntala*, *Malavikagnimitra*, *Raghuvamsa* and *Ritusamhara*.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The Akademi is also working on yet another series—Anthology of Sanskrit Literature—under which seven volumes are to be published dealing with the Epics and Puranas, Buddhist texts, Vedas, Brahamanas and Sutras; classical literature, Jain texts, Inscriptions and Subhashitas. The first volume has come out and the second is in print.

In the series, Histories of Literature, the histories of Bengali and Malayalam literatures have already been published.

The Akademi is also publishing anthologies of folk songs and short stories. In addition, it has published a large number of books on many subjects in almost all Indian languages.

The first authoritative Who's Who of Indian Writers—with 6,000 entries—is expected to be published by April, 1960. It is in English.

On the occasion of the birth centenary of Tagore in 1961, the Akademi proposes to publish Tagore Bibliography in two volumes.

Another important publication on the Tagore Centenary will be the release in all languages of eight volumes of Tagore's selected writings—poems, songs, short stories, short novels, dramas, serious prose and other essays.

All Tagore publications will be out before May, 1961.

(*The Hindustan Times*, New Delhi)

INDONESIA

A. **Defence Services Promotions:** At a special ceremony held in Djakarta on February 8, President Sukarno conferred new ranks on the Army and Air Force Chiefs.

The Army Chief of Staff and Defence Minister, Lieut.-Gen. A. H. Nasution, was promoted to the rank of full General.

The Air Force Chief of Staff, Air Vice-Marshal S. Suryadarma, was promoted to the rank of full Air Marshal.

(*The Nation*, Rangoon)

[Prev. ref. 2820:IND:A]

B. **Relations With Singapore:** The First Minister and Foreign Minister, Dr. Djuanda, and the Prime Minister of Singapore, Mr. Lee Kuan Yew, issued in Djakarta on January 26 (at the conclusion of Mr. Lee's week-long goodwill visit) a Joint Statement expressing their desire to further strengthen the friendly relations between the two countries.

According to the Statement, Mr. Lee Kuan Yew supported the Indonesian struggle for the return of West Irian to Indonesia.

The two leaders agreed that a close watch should be kept on all activities detrimental to their territorial interests and security.

Dr. Djuanda accepted an invitation to visit Singapore.

The Goodwill Mission from Singapore presented to Djakarta officials a trade liberalization plan proposing to allow Indonesia 60 per cent of the foreign exchange she needed for the purchase of goods provided Indonesia bought certain goods through Singapore. A Singapore Trade Mission would be established in Djakarta. Indonesia would send officials to Singapore to discuss an increase of bilateral trade.

(*The Times*, London)

C. **US Loan For Fertilizer Plant:** The Construction Minister, Mr. Chaerul Saleh, announced in Djakarta on February 2 that Indonesia planned to put up a fertilizer plant in North Sumatra out of a loan of $46.3 million received from the US Export-Import Bank.

The plant, he said, would cost $32 million. The remaining $14.3 million would be utilized for establishing an electric supply project in East Java. Both the schemes would be completed at the beginning of 1963.

According to Mr. Saleh, the fertilizer plant would enable Indonesia to cut foreign exchange spending for fertilizer imports to the extent of $10,000,000. The fertilizer plant would also help Indonesia achieve self-sufficiency in food production and Indonesia might be able to stop rice imports by the end of 1962.

The electricity project would supply an additional 50,000 kw that would benefit Indonesia's industrialization plans.

(*Information Service Indonesia*)

[Prev. ref. 2789:IND:C]

D. **Cotton Agreement With UK:** Representatives of Indonesia and the United Kingdom signed in Djakarta on February 2 an Agreement to the effect that Hong Kong would receive cotton from USA and process it into yarn which would be shipped to Indonesia.

A Foreign Ministry spokesman explained that the Agreement was within the framework of the Surplus Agricultural Commodity Agreements between Indonesia and USA.

Under the Agreement, Hong Kong would receive American cotton worth nearly $2.75 million and would ship to Indonesia the processed yarn.

(*Information Service Indonesia*)

E. **Dutch Assets To Be Sold To Indonesians:** It was officially announced in Djakarta on February 16 that the Government would bring under its control all Dutch property not already nationalized and then sell it to Indonesians.

A new regulation issued in this connexion required all Dutch immovable interests in Indonesia to be placed under Government control in two months and then sold to Indonesians.

[Already, most of the Dutch-owned enterprises have been nationalized. The new law chiefly affects real estate and other property.]

(*The Hindustan Times*, New Delhi)

[Prev. ref. 2821:IND:B]

IRAQ

A. **Soviet Experts To Build Dams And Reservoirs:** The Soviet News Agency *Tass* reported on February 10 that Russian specialists had completed their main geological prospecting near the Tigris and Euphrates rivers and were designing several large engineering installations on these two rivers.

The head of the Soviet Institute for the Design of Hydro-Engineering Development, Mr. Mikhail Ananyev, said that Russia would help in the construction of a power station and the Fatha Dam, about 330 feet high, on the Tigris. The Dam would be backed by a reservoir holding more than 33,000,000,000 cubic yards of water. Two more reservoirs which would be formed after the completion of two 130 feet high dams would regulate a large part of the Euphrates.

Soviet scientists were also exploring the possibility of forming a man-made sea of 71,000,000,000 cubic yards in a natural depression for further regulation of the waters of the two rivers.

Mr. Ananyev said that the Institute was also designing a canal 310 miles long between the Tigris and the Euphrates, which, by removing salinated water to the Persian Gulf, would enable more than 7,400,000,000 acres of land to be drained off.

The work was being carried out under the Soviet-Iraqi Agreement on Economic and Technical Co-operation signed in March, 1959.

(*The Times*, London)

[Prev. ref. 2524:IRQ:B, 2608:IRQ:C, 3125:IRQ:B]

B. **Three Political Parties Become Legal:** Three political parties came into being in Iraq on February 9 after a lapse of six years. [All political parties had been abolished in 1954 by General Nuri-es-Said, the then Prime Minister, who was killed in the Revolution in 1958.]

The Parties to re-appear are the National Democratic Party headed by Mr. Mohammed Hadib, Finance Minister; the Democratic Party of Khurdistan under the Khurdish leader, Mullah Mustafa Barzani; and the Iraq Communist Party led by Mr. Daud al Sayegh.

These Parties applied for licences on January 9 and no objections having been raised by the Minister of the Interior, they were considered legally licensed under the new Associations Law promulgated on January 1, 1960.

This was the first time that a Khurdish party had been licensed in Iraq or anywhere in West Asia (where Khurds live).

Mr. Al Sayegh's newspaper *Al Mabda* issued a special edition on February 9 announcing the revival of the Communist Party and published a list of the Party's 11 founding members.

In a front page appeal, *Al Mabda* called on Iraqi communists to support the Iraq Republic under General Abdul Karim Kassem and to seek the formation of a United Front of all national parties under his Revolutionary leadership.

(*The Times*, London)

[Prev. ref. 3125:IRQ:A]

ISRAEL

A. **Another "Dead Sea" Scroll Found:** It was stated in Jerusalem (Israel) on February 7 that two fragments of a scroll on parchment, obviously parts of a phylactery, inscribed with the first 16 verses of Chapter 13 of the Book of Exodus had been found in a cave between Massada and Ein Geddi.

They were written by an expert in a style similar to that of the famous Dead Sea scrolls of Qumram.

With them were found sections of papyrus covered with square Hebrew letters of the same period, but less beautifully written. These have still to be deciphered but are believed to belong to the Bar Cochba period and to be part of a letter.

News of this discovery was given on February 7 by Dr. Yochanon Aharoni, who led a party of archaeologists and 30 volunteers who carried out the search from January 24 to February 2.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

March 5—11, 1960

The finds are considered of significance, because they include the first scrolls on the Israel side of the Dead Sea and, therefore, give promise of more of the same kind in the area.

This was the fourth expedition to the area, but the first to yield such important results. The other expeditions were organized in 1953, 1954 and 1955.

Nahal Tseelim, where these caves are situated, is one of the big canyons north of Massada. Two Roman fortresses were found, guarding the western side of Nahal Tseelim. Three miles away were a group of caves which showed traces of having been dug up by Bedouins who had crossed from Jordan.

But, two untouched caves were reached in a secluded and almost inaccessible spot. In them were found remnants of linen and leather, wooden and clay implements, and eleven arrow heads and many arrow shafts. The latter, the first to be found in Israel, were of wood and cane, painted red and black.

Two coins of Trajan who died in 117 AD and others of the 3rd century testified to the length of time during which these caves were in use.

The similarity between these finds and those about six or seven miles to the north at Murabbaat in Jordan is taken as evidence that this whole area was a refuge for parties of Jewish rebels led by Bar Cochba who, in the second century AD, so harassed Emperor Hadrian that he was compelled to bring his greatest general, Julius Severus, from Britain to quell them.

In one of the caves, remnants of implements were found dating to the Chalcolithic period from the fourth millennium BC and these are being studied. Unidentified skeletons found are also under examination.

(*The Times*, London)

[Prev. ref. 79:ISR:B, 1467:ISR:A]

JAPAN

A. **South Korean Occupation of Takeshima Island:** At a meeting of the Diet's Standing Budget Committee in Tokyo on February 8, a Socialist member, Mr. Setsu Yukomichi, asked: "May we regard the South Korean occupation of Takeshima island as an armed aggression even after the revised Japan-US Treaty becomes effective?"

The Prime Minister, Mr. Nobusuke Kishi, replied: "I think it should be interpreted as such."

He said that Japan intended to solve the issue by peaceful negotiations such as diplomatic talks with South Korea and an appeal to the competent international machinery.

Japan had so far urged the South Korean Government to return the disputed island lying half-way between the two countries, but of no avail.

(*The New York Times*)

[Prev. ref. 3127:JAP:A]

B. **New Socialist Party's Programme:** The programme adopted by the new party of Socialist dissidents (see page 3160) in Tokyo on January 24 laid down democratic socialism as its goal.

It claimed to be a people's party instead of a class organization seeking support far wider than from organized labour alone. It demanded nationalization to the extent required to conduct a planned economy while respecting private enterprise and rejecting nationalization for its own sake.

It recognized the need for self-defence and collective security arrangements, accepting the Japan-US Mutual Security Agreement on condition of its gradual abolition as the ultimate aim.

It called for a 'two-China policy' and for the admission of the Peking *regime* to UN membership and for a Peace Treaty with Russia for the return of the Southern Kuriles to Japan.

Japan, it declared, should not intervene in East-West disputes and should follow neither USA nor the communist Powers blindly.

(*The Times*, London)

[Prev. ref. 2974:JAP:A]

JORDAN

A. **King Hussein's Visit To Saudi Arabia:** King Hussein arrived in Riyadh, capital of Saudi Arabia, on February 8 for talks with King Saud on topics of common interest, including the possibility of an all-Arab 'summit' meeting.

He was accompanied by his Prime Minister, Mr. Hazta Majali, and the Chief of the Royal Cabinet, Mr. Bahjat Talhouni.

At the end of the discussions between the two Kings, a joint *communique* was issued.

In it, they agreed to support the Arab League Charter and evolve it in such a way that it becomes an active instrument for uniting the Arabs.

They also agreed to support the Algerian struggle, to support Arab rights in Palestine and to continue with plans to repair the Hejaz Railway, idle since it was destroyed by Lawrence of Arabia.

(*The Egyptian Gazette*, Cairo)

[Prev. ref. 1479:JOR:A]

B. **Plot To Overthrow Government—Sentences On Accused:** The State Security Court, sitting in Amman on February 15, sentenced Col. Mahmud Russa, a former Jordanian Minister in Washington, and Col. Salameh Ateeq to 10 years' detention on charges of plotting to overthrow the Government during 1957-58.

Two other officers were given five years' imprisonment each. Another officer and four civilians who escaped were sentenced in their absence to 15 years' imprisonment.

The officers, who were tried *in camera* at their own request, pleaded guilty.

They were accused of plotting to take power by force with the aid of a foreign Power.

(*The Statesman*, Calcutta)

[Prev. ref. 2975:JOR:A]

NEPAL

A. **Hatauda Rope-way Foundation Laid:** The Prime Minister, Mr. B. P. Koirala, laid the foundation of the world's second longest Ropeway at Hatauda in the foothills of Nepal, 30 miles south of Khatmandu, on February 16.

The 28-mile-long Ashial Ropeway Project, undertaken by the American Riblet Tramway Company would be completed by October, 1961.

The Ropeway will have the capacity to carry a road load of 25 tons hourly and could be run by the hydro-electric power generated at the plant at Trisuli on the border, being constructed with Indian aid. It will have 280 towers, the highest being at a 7,600-ft.-high mountain top.

(*The Hindustan Times*, New Delhi)

PAKISTAN

SUMMARY: Dr. V. J. Sukselainen's Visit; S-EATO Seminar On Communist Subversion; Agriculture Credit Conference; Writers' Guild Meeting.

A. **Dr. V. J. Sukselainen's Visit:** The Finnish Prime Minister, Dr. V. J. Sukselainen, arrived in Karachi on February 9 on a four-day official visit to Pakistan. He was welcomed at the airport by the Foreign Minister, Mr. Manzoor Qadir.

On February 10, Dr. Sukselainen had a meeting with the Pakistan President, Field-Marshal Mohammed Ayub Khan.

The talks between them were said to have been of a general nature.

The following day, Dr. Sukselainen continued his talks with Pakistan Central Ministers.

The Foreign Minister, Mr. Manzoor Qadir, gave a dinner in honour of Mr. V. J. Sukselainen in Karachi on February 10.

In a formal speech on the occasion, Mr. Qadir paid a tribute to the people of Finland for their great love for freedom and expressed gratitude for the offer of technical assistance made by Dr. Sukselainen.

Immediately after his arrival in Lahore from Karachi on February 12, Dr. Sukselainen said that his country would give technical assistance in the construction of the Indus Basin replacement works in West Pakistan. He, however, emphasized that the assistance would be limited to the technical sphere only.

Finland would also study the possibilities of giving aid to Pakistan in the implementation of her Second Five-Year Plan.

After spending a day in Lahore, Dr. Sukselainen left for New Delhi on February 13.

(*Dawn*, Karachi)

B. **S-EATO Seminar (Second) On Communist Subversion:** The South-East Asia Treaty Organization's Second Seminar on countering communist subversion was inaugurated in Lahore on February 9 by the Interior Minister of Pakistan, Lt.-General K. M. Shaikh.

In his speech, Lt-Gen. Shaikh said: "The presence here of experts from the member-countries of S-EATO and of distinguished observers from CENTO (Central Treaty Organization)—Iran and Turkey—testifies to the significance and importance which these countries attach to the to the danger of subversion.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

"It is a happy augury for the future independence of these countries that there should be serious realization of a danger against which they have shown characteristic indifference and unreadiness to understand and look the problem in the face.

"The time has now come when we must see, analyse and interpret communist activities and attitudes against the stark and terrifying background of its true nature and history.

"We should never lose sight of the philosophy which gave birth to it, the composite of dialectic materialism and economic determinism of history.

"The technique of the gun and the dagger has been replaced by the Trojan Horse but, in effect, the threat remains as dangerous, abhorrent and potentially violent as ever before.

"While it is for each of our countries to work out her own ideology, you (here) can help to establish through facts and known history the impossibility of fulfilment of the promises of communism."

The Seminar was attended by delegates from the Treaty countries—United States, United Kingdom, Thailand, Philippines, Australia, New Zealand and Pakistan. There were Observers from the Central Treaty Organization—Iran and Turkey.

Mr. Pote Sarasin, Secretary-General of S-EATO, told the Seminar that the public as well as security agencies must be alerted to the "ceaseless efforts of the enemy within to infiltrate, organize and influence legitimate bodies."

Outlining the technique of communist subversion, he said that since 1954, communist action in both open and secret phases had become mostly non-violent and peaceful in some way. That, according to him, was even more dangerous than armed revolt, since it was more subtle and more difficult to detect.

He added: "One of the greatest assets of the communist Powers is the blind support they command from communist parties in countries they seek to subvert. These parties are composed of people who purport to be loyal citizens, but whose hearts are on the other side. It will be foolhardy to think of these parties as being like the other political parties, that they confine themselves to orthodox political efforts to gain power by the ballot box."

Mr. K. Prammoj (Thailand) said that vigilance should not be slackened even in Thailand, where communism was ill-organized.

He said that since Thailand had never experienced foreign domination, there was no emotional opposition to Western countries and the communists found themselves aliens in their own country.

Mr. Douglas Hyde (Britain) said that communists all over the world believed that the most profitable time to build up their parties was when there was an easing of tensions. "Now they seem to have come to the conclusion to proceed slowly and patiently towards their ultimate goal of capturing power."

Mr. Hyde (who renounced communism after subscribing to that ideology for two decades) said that the world was witnessing a great battle between communism and the 'free world' for the minds, hearts and souls of the people.

He thought that the communists had dropped violent methods because they involved total gain or total loss. If violent methods succeeded, the country was theirs; but if they failed, they had to go under for a considerable period.

The leader of the American delegation, Mr. Richard S. Bissell, said that Russian leadership had made no pretence that communists had given up plans for world domination despite the relaxation of tensions.

He said that now was the time to guard against communist subversion, which was likely to assume increased importance.

He said that the 'cold war' had all along been unpopular everywhere in the world, and with the proposed 'summit' conference in sight, there was a disposition to believe that an era of peace was in the offing. The communists had already started cashing in on the hopes of humanity's urge for peace and they were repeating "the lie that the Governments trying to defend against subversion are trying to perpetuate the 'cold war'."

He said that he and his countrymen firmly believed that the understanding between the East and the West could not mean an end or even diminution of the rivalry between the two systems. He was of the view that it only represented a great change in dimensions which might mean a slowing down of the arms race, although it was too early to say even that. Conclusions that the economic and ideological rivalry had diminished were wild.

The Philippines delegate, Mr. F. Cabahug, said that S-EATO was designed to ensure peace in South-East Asia. The architects of S-EATO had always recognized the serious threat posed by International Communism to peace.

He expressed the view that the position demanded more vigilance, as the communists continued to flourish and disrupt the peace of freedom-loving people through all the known methods of International Communism.

The S-EATO Secretary-General, Mr. Pote Sarasin, said in Karachi on February 10 that the recommendations of the Seminar would be forwarded to the member-countries for implementation in accordance with their requirements.

In reply to a question, he said that the Seminar was not the result of any specific threat or danger in any part of the S-EATO region.

Regarding the military potential of S-EATO, he said that it was not possible to have a standing army of S-EATO because of the vastness of the area covered by the Treaty, but member-States remained in a state of preparedness to meet all threats.

On the question of co-ordination of S-EATO, CENTO and NATO, he said that the three Organizations had already established contacts and were exchanging information of use to each other.

Communique:

The Seminar ended on February 12.

It issued a *communique* urging greater vigilance and further action by the member-States to meet intensified communist activities.

It said: "Of special pertinence to the Treaty area is the Seminar's interpretation of the communist economic offensive in newly-independent and|or under-developed nations.

"The communist aim is to use trade and economic aid as a subtle weapon to change the balance of power in favour of the communist world. It is necessary to expose these practices."

The *Communique* went on to say that as counter-measures the Seminar recommended more positive programmes to correct conditions that permit communist infiltration or make communist propaganda effective, specially in industrial centres and villages of the Treaty area.

Mass uplift programmes in the Philippines and Thailand were cited as good examples.

It added: "Individual communists must be identified in villages and cities when they operate. Communist policies and objectives must also be exposed. Contradictions and inconsistencies must be highlighted."

All the deliberations of the Seminar except the inaugural session were held *in camera*.

(*Dawn*, Karachi)

[Prev. ref. 3068:PAK:B]

C. **Conference On Agricultural Credit:** A high-level Conference on Agricultural Credit held in Karachi on February 8 under the chairmanship of the Minister for Food and Agriculture, Lt.-General Azam Khan, took a series of decisions to extend and simplify credit facilities to agriculturists and to cover the whole country with a net-work of co-operative societies.

Registrars of co-operative societies in both Wings would be advanced a sum of Rs. 10,000,000 each as part of the credit extension drive. Loans to be given by the State Bank of Pakistan would be increased if the amounts to be given now were fully absorbed.

The Conference accepted in principle a proposal for amalgamating the Agricultural Development Finance Corporation and the Agricultural Bank.

After discussing the various aspects of the problem, the following decisions were taken:

(1) Credit must be provided to farmers and fishermen quickly and at the appropriate time to have an impact on production.

(2) Short-term and medium types of credit should be provided by co-operative societies. The Registrar of Co-operative Societies should re-organize the co-operatives and extend them to cover the whole of the countryside. Until this was done, the Agricultural Development Finance Corporation and the Agricultural Bank should continue to provide such credit so that there was no break.

(3) The co-operatives must ensure that they provide rural credit for agricultural production and not middlemen.

(*Dawn*, Karachi)

[Prev. ref. 2527:PAK:D]

D. **Writers' Guild Meeting:** The first anniversary of the Pakistan Writers' Guild was celebrated in Dacca on January 31 at a meeting of writers from the two Wings of the country. Syed Waqar Azim, an eminent Urdu writer, presided.

In a message to the meeting, F-M. Mohammed Ayub Khan exhorted the writers to "feel free in your mind, act freely in your expression and react freely to the environment around you".

He added: "Let not the edge of your sensibility be blunted by any sense of fear or expediency."

The Secretary-General of the Pakistan Writers' Guild, Mr. Qudratullah Shahab, told the meeting that the members of the Guild should always remember that the Guild was a trade union and not an ideological body.

The only ideology of the Guild, if any, he said, was the intellectual honesty, courage and freedom to express ideas. Beyond that, every body was free. He warned those sections of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the bureaucracy who were bent on suspecting that the Guild might become a weapon of 'Leftism' or 'Rightism' in the political sense of the terms and said that the Guild was not a political organization.

THAILAND

A. Rice Exports Affected By US Sale: The Prime Minister, Field-Marshal Sarit Thanarat, said in Bangkok on February 4 that the US sale of surplus rice in Asia had affected Thailand's rice exports.

He said that Thailand had lost a 40,000 tons rice contract with Ceylon since the news of the sale of US rice was disclosed.

He added that in any case "any new-comer on the Asian rice market was bound to affect adversely the economy of Thailand."

He said that despite the Government's appeal to merchants for co-operation by decreasing the imports of luxury goods, over $1,000,000 worth of luxury items had been imported.

He warned that severe measures, including a total ban, would be imposed on luxury goods if his warning proved ineffective.

TURKEY

A. Failure Of Further Talks On Cyprus — Independence Postponed: There were talks in Nicosia early in February, 1960 between Archbishop Makarios and Dr. Fadhil Kutchuk, President and Vice-President-elect of the new Cyprus Republic on the one hand, and the British Parliamentary Under-Secretary for Colonies, Mr. Julian Amery, on the other, on the question of British sovereign bases on the Island.

The two Cypriot leaders handed to Mr. Amery their reply to the final British proposals on February 9.

At the end of their last meeting, a statement was issued on February 8 saying that as no agreement had been reached, it would be impossible for the United Kingdom Government to pass the necessary legislation in time to proclaim the Cyprus Republic on March 19.

The statement said: "Since the negotiations in London were reported in the Foreign Secretary's statement to the House of Commons on February 1, further proposals have been made from the Cypriot side with regard to the extent and administration of the sovereign base areas, training needs of the British forces and British financial assistance to Cyprus.

"These matters were discussed in detail with the leaders of the Greek and Turkish Cypriot communities over the past few days.

"Yesterday (February 7), Mr. Amery explained to Archbishop Makarios and Dr. Kutchuk Her Majesty's Government's final proposals.

"A further meeting today (February 8) showed that it was not possible to reach agreement.

"In these circumstances, the necessary legislation cannot be passed through the British Parliament in time for the proclamation of Independence on March 19."

Both the Cypriot leaders disapproved of the postponement of Independence.

Archbishop Makarios said that the postponement was inconsistent with the agreements reached in London and in Zurich. He also accused Britain of claiming areas for sovereign bases beyond those envisaged in the London Declaration.

Dr. Kutchuk said that Britain had acted too hastily in announcing the postponement of Independence. He said he had made certain favourable proposals to both sides which had the support of Archbishop Makarios and could have been the subject of further discussions. But, three hours later, Britain issued an official statement announcing postponement of Independence.

Statement In House Of Commons:

Reviewing the talks on Cyprus, the British Foreign Secretary, Mr. Selwyn Lloyd, said in the House of Commons on February 1 that the basis of the London Agreement of 1959 was that the United Kingdom should hand over to the new Republic sovereignty over Cyprus except for two areas to be retained under full British sovereignty.

It was also agreed, he said, that the Republic should assure to Britain rights and facilities on its territory necessary to enable the two areas to be used effectively as military bases.

Mr. Lloyd said that originally British needs were assessed at some 150 to 170 square miles, which would include a Cypriot population of some 16,000. Later, Britain had tried to restrict these areas and the number of Cypriots living there and, at the London talks, had finally put forward a figure of about 120 square miles with under 1,000 resident Cypriots.

He went on: "The fear was expressed that the Island of Cyprus would not continue to be a single economic and administrative unit. We have tried to meet that point. We have undertaken not to set up a colonial type of administration in the two areas and not to use the areas in any way as a means of competing with the Republic or disrupting the economic unity of the Island.

"We have no wish to use the sovereign base area for other than purely military purposes and certainly not to deprive the Republic of any economic advantage.

"Archbishop Makarios has accepted the concept of sovereign bases area but has maintained that they should be restricted to 36 square miles—an area of six miles by six miles—on the argument that we should be restricted to the existing military establishments with some elbow room and communication territory. What, however, has also to be taken into account is that one of our purposes has been to get as many as possible of the installations which would otherwise be scattered throughout the rest of the Island into these two sovereign base areas."

Speaking of financial assistance to Cyprus, he said: "Subject to the clearing up of certain financial points, we have offered a grant of £7,520,000 to be spread over five years, together with £500,000 to meet certain Turkish-Cypriot requests which both communities have endorsed. We have offered a loan of up to £2,000,000 for financing the extension of the electricity service in the Island. If Cyprus remains in the Commonwealth, she would be eligible for Commonwealth assistance loans.

"With regard to the Commonwealth, we have agreed to draft the Cyprus Bill in such a way as to keep the position open until after Independence so that Cyprus can then decide whether or not to seek membership of the Commonwealth. That means that so far as the United Kingdom is concerned Cyprus will have the advantages of Commonwealth membership during this *interim* period pending a decision."

The House of Commons had an emergency debate on February 9 on the break-down of the negotiations with Cypriot leaders. The debate was forced by the Labour Opposition.

The Labour leader, Mr. Hugh Gaitskell, said that the attitude of the Foreign Secretary, Mr. Selwyn Lloyd, was intransigent and would do no good to the prospects of resuming negotiations on Cyprus.

He added: "None of us wants a return to the conflict, hatred and bitterness that once existed in Cyprus."

The chief Labour spokesman, Mr. Denis Healey, in the absence of Mr. A. Bevan (owing to illness), said that the Opposition was doubtful about Government's intentions on Cyprus.

He said there was now a desperate need for new initiative to resolve the deadlock over Cyprus. He called on the Government to show more flexibility over the question of sovereign bases. It would be impossible to operate such bases without the full consent of the Cypriots. If their co-operation could not be secured without conceding British sovereignty, this concession would have to be faced.

Mr. Selwyn Lloyd said that 120 square miles of sovereign base area was the absolute minimum and no further reduction could be made in the demand.

Also, he said, it would be better to reach agreement on this before setting a new date for the Independence of Cyprus.

He denied that there was any break-down in the overall negotiations or that Britain's attitude was rigid or intransigent. The Government still wanted a settlement founded on the London and Zurich Agreements which provided for sovereign military bases in Cyprus. These bases were required to enable Britain to discharge her international responsibilities.

He said that he was very conscious of the dangers of failure to reach agreement on Britain's future military bases in Cyprus.

The Opposition did not press the issue for a vote.

Archbishop Makarios' Comment:

Archbishop Makarios, who returned to Nicosia on January 30, said in a statement that there had been differences between Britain and Cyprus on Independence for Cyprus and added: "We do not see why we should deviate from our original position on the area of the British sovereign area. We showed goodwill and we hope the other side does the same."

He said in London before leaving for home that although the talks on Cyprus had ended without agreement, they had been profitable. During the discussions, he said, he had tried to understand British requirements of defence compatible with the creation of an independent and sovereign Republic of Cyprus.

He complained that there was no corresponding understanding of the difficult problems concerning the Republic by the British Government. If the existing differences over the extent of the British bases in Cyprus were to be settled, there must be some better understanding of the Cypriot view-point on the part of the British Government.

UNITED ARAB REPUBLIC

A. Nationalization Of National Bank Of Egypt And Misr Bank: The nationalization of Egypt's two great banks—the National Bank of Egypt and the Misr Bank—was announced in Cairo on February 11.

The Cairo correspondent of *The Times*, London, in a despatch to his paper, said that the nationalization of these two banks appeared to mark a further step in the execution of the Government policy for controlling the country's principal economic resources.

He added that the nationalization of the National Bank did not come as a surprise.

The Misr Bank, founded in 1920, is the head organization of a group of 22 companies, including Misr Airlines and textile concerns. Since 1958, with the Union of Egypt and Syria, the Misr Bank had extended its activity into the Syrian Region.

The National Bank was banker to Government.

In an explanatory statement, the Minister for Economy, Dr. Abdul Moneim el Kaissouny, said that it was "unacceptable" to leave the National Bank in the form of a joint stock company, owned by individuals. In its capacity as the Central Bank, it issued currencies, kept State funds and exercised control over commercial banks.

He added that the Misr Bank owned shares in joint stock companies in excess of the limit specified in the Bank and Credit Law, and the financial market was pervaded by the fear that the Misr Bank might be compelled to unload its securities.

In addition, the Government had saved the Misr Bank from collapse in 1941 and was owed large amounts by the Bank. It "would have faced a very difficult situation and its shareholders would have suffered great losses had the Government requested it to re-pay the debts."

The shares of both the banks would be converted into bonds with 5 per cent interest, redeemable over 12 years. The price would be fixed on the closing stock exchange quotation on February 11, namely £ (E) 29.8 for National Bank shares £ (E) 22.7 for the Misr Bank shares.

(*The Times*, London)

[Prev. ref. 2476:UAR:A]

B. "Inge Toft" Released—Ship Unloads Cargo At Port Said: It was officially stated in Cairo on February 5 that the Danish ship *Inge Toft* had been released by the UAR authorities after having been detained at Port Said for more than eight months. The owners had ordered the Captain of the ship to unload its cargo at Port Said.

The UAR authorities had detained the ship in May, 1959 in accordance with their policy not to allow any Israeli ship or any ship carrying cargo for Israel till the entire Palestine question had been solved.

An official statement issued in Cairo on the release of the *Inge Toft* said:

"This brings to an end the artificial crisis Israel had tried to create. The *Inge Toft* had entered the Suez Canal early in 1959 with a cargo meant for Israel. Israel wanted to make the ship a test case to assert her 'right' of passage through the Suez Canal.

"The state of war between Israel and Arab countries still continues, and under the 1888 Constantinople Convention UAR has every authority to take any measure she may consider suitable to protect the Canal in a state of war.

"When Israel raised the *Inge Toft* affair at the last session of the UN General Assembly, the UAR Foreign Minister, Dr. Mahmoud Fawzi, declared that the UAR Government could not consider Israel's claim to use the Suez Canal independently of the Palestine question. It was bound up with UN resolutions regarding Palestine which UAR was prepared to accept as a whole but which Israel had consistently violated, particularly the UN resolutions asking Israel to vacate the Arab territory she has occupied by force and to rehabilitate the 1,000,000 Palestine refugees.

"According to international law, the state of war which exists between UAR and Israel gives the former full rights as to the prevention of Israeli ships or ships hired by Israel from passing through the Canal. No attempts or devices that Israel may resort to, such as hiding behind the standards of other nations, can possibly change this fact.

"The belief of some States that the Truce Agreement terminated the state of war between UAR and Israel is entirely without foundation. It is also belied by actual events; for the Truce Agreement only stopped the fighting but it did not terminate the state of war. This war was in defence of the Palestine people and their rights against the Israeli aggression. This aggression still holds since Israel still usurps the rights of the people of Palestine and still challenges the numerous decisions reached by UN in favour of these people.

"Besides, Israel's attitude with regard to the Armistice Agreement and the decisions of United Nations has destroyed the allegation that the state of war is ended since Israel has confirmed the continuation of this state of war by her aggressive moves against the people of Palestine and the neighbouring countries in the tripartite aggression against Egypt in 1956.

"The statement issued by UAR in March, 1957 concerning navigation in the Suez Canal clearly points to UAR's obligation to protect the Canal and ensure freedom of navigation in it. Owing to the existing state of war between UAR and Israel, UAR cannot allow Israeli shipping free passage as this would expose this vital waterway to sabotage and delay as a result of any sudden action Israel might undertake to take revenge on UAR or to injure it.

"The people of UAR cannot disregard the simplest rights of self-defence and stand by, accepting the passage of enemy shipping through the Canal.

"The Government of the United Arab Republic, which holds itself responsible, together with the rest of the Arab nation, for the protection of the people of Palestine and the safeguarding of their rights, cannot accept the passage of goods coming out of the Arab territory which was usurped by the Israelis from its rightful owners, through its territory without endeavouring to restore to the legal owners their rights. Consequently, the Prize Court has decided to confiscate all Israeli cargoes for the benefit of the people of Palestine."

The release of the 4,000-ton *Inge Toft* was jeopardized on February 6 when the Customs authorities at Port Said refused to pay the cost of unloading the cargo.

The ship's agents, Lambert Brothers, said on February 4 that they had received orders to unload the ship on condition that Egypt paid for the unloading.

The Customs Administration in Alexandria then said that they had advised the Port Said harbour authorities to retain the cost from the proceeds of the sale of the cargo.

A spokesman for the ship's agents said on February 6 that the owners were interested simply in the release of the vessel after unloading but were not prepared to pay the unloading expenses of a cargo which did not belong to them.

The cost of unloading was estimated to be about £ (E) 1,000.

The Director of Customs at Port Said told newsmen that Egypt had refused to pay for the cost of unloading in case Israel then claimed that the vessel had been unloaded by force.

It was stated at Port Said that the *Inge Toft* left for the Mediterranean on February 15 after unloading her cargo.

C. Drug Plants With Soviet Aid: It was stated in Moscow on February 8 that the Soviet Union would render technical assistance to the United Arab Republic in building an antibiotics factory and a plant for producing chemical-pharmaceutical preparations. Technical designs for them were being prepared in Moscow.

Under the contract concluded between UAR and the Soviet Techno-Export Foreign Trade Agency, the Soviet Union would provide equipment and materials for both plants and technical supervision of the construction work. Deliveries of the equipment would begin in the second half of 1960.

These plants, to be built in the Abu Zabal district, 40 kilometres north-east of Cairo, would be the "firstlings" of the medical industry of the United Arab Republic.

SPORT

A. India-Australia Cricket Tests: An Australian cricket team arrived in India in the second week of December, 1959 under the captaincy of Ritchie Benaud and played five Test matches. Australia won two matches, India won one and two were drawn.

The first Test was played in Delhi from December 12 to 17, 1959. Australia won by an innings and 27 runs. Scores: India 135 (Davidson 3 for 30, Benaud 3 for 0) and 206 (Roy 99); Australia 468 (Harvey 114, Umrigar 4 for 49).

The second Test was played in Kanpur from December 19 to 24, 1959. India won by 119 runs. Scores: India 152 (Davidson 5 for 31) and 291; Australia 219 (Patel 9 for 69) and 105.

The third Test was played in Bombay from January 1 to 6, 1960. It ended in a draw. Scores: India 289 (Contractor 108, Davidson 4 for 62) and 226 for 5 declared; Australia 387 for 8 declared (O'Neill 163, Harvey 102, Nadkarni 6 for 105) and 34 for 1.

The fourth Test was played in Madras from January 13 to 18. Australia won by an innings and 55 runs. Scores: India 149 (Benaud 5 for 43) and 138; Australia 342 (Favell 101, Desai 4 for 93).

The fifth and final Test was played in Calcutta from January 23 to 28. It ended in a draw. Scores: India 194 (Davidson 3 for 37) and 339; Australia 331 (O'Neill 113, Borde 3 for 23 and 121 for 2.

Thus, Australia won the Rubber.

Vol. VI. No. 11

BURMA

A. **Mr. N. S. Khruschev's Visit:** The Soviet Prime Minister, Mr. Nikita S. Khruschev, paid a visit to Rangoon from February 16 to 18 at the invitation of the Burmese Government.

During the visit, he went through a packed programme of discussions with Government leaders and State receptions.

A joint *communique*, issued simultaneously in Rangoon and Moscow on February 18, said that the Prime Minister, Gen. Ne Win, and Mr. Khruschev had agreed to conclude between the two countries a Cultural Agreement as soon as possible and to draw up a mutually acceptable cultural and scientific exchange programme.

The communique said: "The Chairman of the Council of Ministers of USSR, N. S. Khruschev and the Prime Minister of the Union of Burma, General Ne Win, took the opportunity afforded by the visit to have a free and frank exchange of views on matters of common interest and concern to the two countries as well as on certain pressing international issues. The exchange of views took place in an atmosphere of utmost cordiality.

"The two statesmen are happy to note that the relations between the Soviet Union and the Union of Burma have continued to develop on the basis of the principles of peaceful co-existence and friendly co-operation. They believe that this will not only promote further expansion in co-operation between their two countries on the basis of equality, mutual respect for each other's independence and mutual non-interference in each other's internal affairs but also serve the cause of world peace and international co-operation.

"In this context, views were exchanged on the further strengthening and developing of cultural and scientific exchanges between the two countries and, to this end, agreement was reached on the desirability of concluding a Cultural Agreement as soon as possible. It was also agreed to draw up a mutually acceptable cultural and scientific exchange programme for the year 1960.

"The Prime Minister of Burma re-iterated his country's adherence to the policy of neutrality and non-alignment. The Chairman of the Council of Ministers of the Soviet Union respects this policy of the Union of Burma which constitutes a positive contribution to the cause of upholding universal peace.

"The Heads of the Governments of both countries consider universal disarmament to be the most important issue that confronts the world today, since its attainment will not only remove the threat of global war which is fraught with severe consequences for mankind but will also make available the valuable resources now being spent on armaments for the essential task of raising the living standards of the peoples of the world particularly the peoples of economically underdeveloped countries.

"They note that the Chairman of the Council of Ministers of USSR, N. S. Khruschev's recent proposal for general and complete disarmament has evoked world-wide interest and are agreed that it merits the most earnest consideration in the forthcoming disarmament negotiations. The Union of Burma welcomes the Soviet Union's recent reduction of her armed forces, which is an important step in the right direction.

"Both statesmen also expressed the hope that all the Great Powers in possession of nuclear weapons would come to an early agreement for the complete cessation of nuclear weapons tests under effective international supervision and control. Pending such agreement, they call on all these and other Powers voluntarily to abstain from carrying out such tests.

"The two statesmen hope that the spirit of negotiation and understanding will pervade the forthcoming 'summit' meetings and that the talks will yield positive results. They also hope that the present atmosphere of *detente* prevailing over the international scene will continue and eventually bring about a just and durable peace throughout the world.

"The Chairman of the Council of Ministers of USSR, N. S. Khruschev, also took the opportunity to visit the Arzanee mausoleum and laid a wreath in homage to the fallen leaders of Burma. The Head of the Soviet Government and persons accompanying him also took the opportunity to see the progress of the construction projects which are being built with the help of the Soviet Union—the Technological Institute and Hotel in Rangoon.

"The present visit of the Chairman of the Council of Ministers of USSR, N. S. Khruschev, has greatly contributed towards the strengthening of friendship and understanding between the two countries and thereby towards the strengthening of international co-operation and understanding. The Heads of the Governments of both countries re-affirmed their determination to consolidate and further strengthen the existing friendship and co-operation between the countries."

Mr. Khruschev received a number of gifts for himself and his daughters and grand-daughters from President Win Maung and Madame Win Maung as well as General Ne Win and his wife.

President Win Maung presented Mr. Khruschev with a silver gong mounted on an ivory tusk and some Burmese oil paintings. The gifts from General Ne Win and his wife included necklaces for Mr. Khruschev's daughters and grand-daughters.

CAMBODIA

A. **Plot To Kill Prince Norodom Sihanouk Alleged:** In an article published in the Pnom Penh newspaper *Nationaliste* on February 14, the Prime Minister, Prince Norodom Sihanouk, alleged that Cambodian and Viet-Namese communists had planned to assassinate him and then blame the Americans.

He said that on February 10 two American officials gave the police a letter which a young Cambodian had handed in at the American Embassy.

The letter proposed an alliance with the Americans to kill Prince Norodom on the pretext that the country needed a change of policy.

It said that the proposed killing would be easy when Prince Norodom attended a youth rally at Svayrieng, about 68 miles from Pnom Penh.

The young Cambodian, who was arrested at the Embassy while awaiting a reply to the letter, said that five months previously a Secret Committee called the "Cambodian Freedom-lovers" had been formed at Svayrieng for subversive activities.

This Committee, according to Prince Norodom, was led by certain members of the editorial staff of the newspaper *Pracherchon*—the Cambodian Communist Party newspaper—and two Viet-Namese proprietors of a restaurant in Svayrieng. They were armed with a pistol and a grenade.

He said: "This plan for my assassination was prepared by a communist group led by Cambodians and Viet-Namese who wished to blame the Americans for my murder. The *Pracherchon* group hoped to advance communism and speed up a take-over of power."

Speaking at a function in Pnom Penh on February 21, Prince Norodom said that the Cambodian communist movement had apparently held a secret Congress about three months back and captured documents showed that they had planned "to take advantage of any disorder which might arise in Cambodia."

He said: "You should know that my days are numbered. After reflection it seems certain that the abandonment of neutrality for an alliance with the free world...would make the country run the most serious risks... The insecurity of some of our neighbours is becoming more and more serious and the fire can spread and consume our house in the near future.

"The aggressive desire of foreigners towards our country is becoming more and more threatening.

"The only way to defend our independence and safeguard the nation's life is that of neutrality and nationalism, which will allow us to live in honour and liberty."

(*The Nation*, Rangoon and *The Statesman*, Calcutta)

CHINA

A. **Peaceful Re-unification Of Korea Urged:** The National Committee of the Chinese People's Political Consultative Conference meeting in Peking on December 22, 1959 adopted a resolution expressing full support for the proposal of the Supreme People's Assembly of North Korea for the peaceful re-unification of the two halves (North and South) of that country.

The Committee said: "The proposal raised by the Korean Supreme People's Assembly that troops of the United States and all other foreign countries withdraw from South Korea and that the Korean people be allowed to hold free General Elections in both North and South Korea without any outside interference and in accordance with their own will, to realize the peaceful re-unification of Korea, fully reflects the strong national aspirations of the 30,000,000 Korean people and, at the same time, conforms to the universal demand of the peoples of the world for a relaxation of international tensions.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

"The National Committee of the Chinese People's Political Consultative Conference expresses full agreement and warm support for this proposal. We believe that the Korean people's struggle for the peaceful re-unification of the Fatherland will win final victory."

The Committee conveyed its decisions in a formal letter to the Central Committee of the United Democratic Fatherland Front of the Korean Democratic Republic (North Korea).

The Committee's letter itself was in response to an appeal addressed by the North Korean Supreme People's Assembly to the parliaments of various countries on October 26, 1959 calling for the withdrawal of US and all other foreign troops from South Korea and the realization of Korea's peaceful re-unification without foreign interference.

(*Peking Review*)

[Prev. ref. 3007:KRN:A]

FORMOSA

A. **Mr. Ngo Dinh Diem's Visit:** The President of the Republic of Viet-Nam, Mr. Ngo Dinh Diem, paid an official visit to Formosa from January 15 to 19 at the invitation of President Chiang Kai-shek of the Kuomintang Administration.

Mr. Ngo Dinh Diem was accorded warm receptions wherever he went in the Island. Besides holding talks with Government leaders, Mr. Diem and his party visited military, industrial and agricultural centres.

In a joint *communique* issued on January 19, Mr. Diem and Gen. Chiang Kai-shek noted the identity of their views and decided to take necessary steps for further strengthening co-operation between the two countries in various fields.

The *communique* said in part: "The two Chiefs of States have stressed that international communism is the very source of menace of aggression to the Far East, South Asia and South-East Asia, the impact of which also endangers the other parts of the world. Using the Chinese mainland as its base, international communism stretches its tentacles of various forms of subversive aggression such as infiltration, agitation and open use of naked force. At present, the international communists are also employing tactics alternating between peace offensives and *coups de force* directed against the zones of least resistance. The communist disarmament propaganda is nothing but a deceptive device which has already been unmasked by their ICBM tests in the Central Pacific.

"In view of the foregoing, it is the earnest hope of the two Chiefs of State that the temporary lull now obtained in the European scene will not lure the 'free world' to be off its guard, particularly in the Far East and South-East Asia, where the threat of aggression persists as long as the Chinese mainland remains under the yoke of international communism. The aid received by the 'free' Asian countries on the periphery of or in the path of aggression of the communist bloc, therefore, should not be reduced but should be further strengthened so as to enable them to effectively meet both the overt and covert communist action.

"The two Chiefs of States have paid equal attention to an examination of other problems concerning mutual interests.

"They have expressed complete identity of views on the policies of their respective Governments, which aim at safeguarding national unity and preserving the common cultural inheritance shared by the two countries such as respect for human dignity and the upholding of ethical standards.

"They have re-affirmed their decision to co-operate with all other countries, in particular with the Asian nations animated by similar ideals. This decision has been made with a view to establishing peace with freedom and justice as well as to promoting economic prosperity and social progress, without which there can be no genuine and lasting peace.

"The two Chiefs of States also maintain their common stand that they are opposed to any discussion of problems concerning 'free' Asian nations in any international conference or under any circumstance without their assent."

INDIA

SUMMARY: New Kerala Ministry; Salt Mines In Chanthan Area In Chinese Hands; Mr. Nehru On Mangla Dam; State Budgets; UGC Report For 1958-59.

A. **New Kerala Ministry:** An 11-member Congress - Praja - Socialist coalition Ministry, headed by Mr. Pattom Thanu Pillai, was sworn-in at 11 a.m. in Trivandrum on February 22. It ended 205 days of President's rule in Kerala.

A *Gazette* notification ending President's rule was also published on February 22.

The Kerala Government also formally announced the constitution of the new Legislative Assembly.

Mr. Pattom Thanu Pillai announced after he and his colleagues had assumed charge that he had formed a "Co-operative Government" which would try to give succour to "hungry mouths and unemployed hands in Kerala."

The Ministry, with eight Congressmen and three Praja-Socialists, comprised:

Mr. Pattom Thanu Pillai (P-SP)—Chief Minister, Planning, General Administration and Local Self-Government;

Mr. R. Shankar (Congress)—Finance, Co-operation and Social Welfare;

Mr. P. T. Chacko (Congress)—Home, Police, Anti-corruption and Elections;

Mr. K. A. Damodara Menon (Congress)—Industries and Commerce, Handloom, Information and Publicity;

Mr. P. P. Ummer Koya (Congress)—Education and Sport;

Mr. K. T. Achuthan (Congress)—Transport and Labour;

Mr. E. P. Poulose (Congress)—Food and Agriculture and Civil Supplies;

Mr. V. K. Velappan (Congress)—Public Health and Electricity;

Mr. K. Kunhambu (Congress)—Harijan Uplift and Registration;

Mr. K. Chandrasekharan (P-SP)—Law and Revenue; and

Mr. Damodaran Potti (P-SP)—Public Works and Tourism.

Mr. Pattom Thanu Pillai had previously headed a Congress and a Praja-Socialist Ministry for less than a year.

The Congress-P-SP coalition came into office, ending three weeks of Ministry-making talks which, at one time, appeared to be deadlocked.

The new Cabinet contained no former Minister except Mr. Pillai. It did not have a woman. The average age of the Cabinet was about 50.

Like the Communist Ministry which it has replaced, the coalition Cabinet gave representation to the various communities in the State. There were four Nairs, two Christians, two Ezhavas, one Muslim, one Brahmin and one Harijan in the Ministry. Region-wise, five were from Travancore, four from Malabar and two from Cochin area.

The Kerala Congress Legislature Party had unanimously elected Mr. R. Sankar as its leader in Trivandrum on February 14.

Mr. T. O. Bava, who had arraigned the Communist Ministry for its Andhra rice deal before an official inquiry commission, tried to contest the election but after some talks he was persuaded to second Mr. Sankar's nomination.

Mr. Sankar's name was formally proposed by Mr. P. T. Chacko and seconded by Mr. K. A. Damodara Menon as well.

The proposer and the seconders were at one time or other considered likely candidates for the leadership of the Party.

Mr. R. Sankar, leader of the Congress Legislature Party, met the Governor on the night of February 21 and conveyed to him his Party's decision to share ministerial responsibility with P-SP and requested him to invite Mr. Pattom Thanu Pillai to form the Ministry.

Muslim League Withdraws Claim To Cabinet Seat:

The State Muslim League withdrew its claim for representation in the Ministry on February 21.

Mr. K. M. Seethi Sahib, leader of the Legislature Muslim League Party, announced in Trivandrum that the League had agreed to the Congress and P-SP forming a coalition Government in the State.

He told newsmen: "It is an unconditional offer of support to a Congress-P-SP Government."

He added that the League had communicated its decision to Mr. Pattom Thanu Pillai.

The Congress had refused to join in a Cabinet which consisted of Muslim League members, but P-SP had wanted a Muslim League member in the Cabinet.

Communist Leader Elected:

In Ernakulam, on February 17, Mr. E. M. S. Namboodiripad, the former communist Chief Minister of the State, was elected leader of the 29-member Kerala Legislature Communist Party.

Mr. C. Achutha Menon was elected as Deputy Leader.

Anglo-Indian Nominated To Assembly:

On February 19, the Governor nominated Mr. C. F. Periera to be a member of the Kerala Legislative Assembly to represent the Anglo-Indian community.

The nomination, made under Article 333 of the Constitution, was announced in a notification published in a *Gazette* Extraordinary.

B. **Dr. Heinrich von Brentano's Visit:** The Foreign Minister of the Federal Republic of Germany (West Germany), Dr. Heinrich von Bren-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

tano, arrived in New Delhi on February 19 on a five-day 'unofficial' visit to India.

A two-day conference of heads of West German Missions in South Asia beginning in New Delhi on February 21, over which Dr. Brentano presided, and a 90-minute talk with Mr. Nehru on February 20 were his principal engagements during his stay.

In a statement to newsmen, Dr. Brentano said that the West German Government would do all that lay in its power to contribute to the success of the 'summit' meeting beginning on May 16, 1960. "The pending international negotiations (summit meeting) will undoubtedly be most significant."

On the question of German re-unification, he said: "The people of Germany and the Federal Government are prepared and resolved to make their contribution for the preservation of peace and the safeguarding of freedom. We have at the same time every reason to believe that the inalienable right of self-determination of the entire German people is recognized by India in the same manner as by other friendly nations with whom we have particularly close relations."

News Conference:

Addressing a news conference on February 23, Dr. Heinrich von Brentano condemned the Chinese violations of the Indian border.

He declared: "Any attempt to change a valid border by force was a check on world peace and was regrettable."

Replying to questions at his 60-minute news conference, he said that the Government and the people of the Federal Republic of Germany fully understood and sympathized with the reaction of the Indian people to the Sino-Indian border dispute.

Underlining the desire of his Government to co-operate in the implementation of India's Third Five-Year Plan "on the basis of genuine partnership," he expressed the hope that the Finance Minister, Mr. Morarji Desai, and the Minister for Steel, Sardar Swaran Singh, would shortly visit Bonn in response to invitations personally extended by him.

The visit of the two Ministers and their discussions with the Government in Bonn would no doubt be fruitful. West Germany considered the problem of economic assistance to India as a task of "first priority."

He expressed satisfaction with the progress made at the Rourkela Steel Plant which was as modern as any plant in Germany. His country was interested in the further expansion of the project.

Mr. F. H. Ulrich's Views On West German Loan:

Mr. F. H. Ulrich, General Manager of *Deutsche Bank*, who was visiting India, said in Bombay on February 23 that the prospects of India raising a development loan in West Germany were not bright.

Giving his impressions after a four-week study tour of India, he said that the rate of interest in the West German market was as high as 8 per cent for normal credit. The lowest rate, according to him, was 7 per cent for special cases. "If you are to raise a loan in the West German market you will have to pay a very high rate of interest in the context of ruling high interest rates there."

He added that private commercial banks financing Indo-German trade could provide only short-term finance. If a proper guarantee was forthcoming from the West German Government, then private commercial banks could think in terms of providing medium and long-term credit facilities.

As for giving credit facilities to Indian importers through Indian commercial banks, he said, the main problem facing West German banks was to get the necessary cover for the risk involved in transferring funds outside Germany. It was for the German Government or credit insurance companies to cover this risk.

(*The Statesman* and *The Times of India*, New Delhi)

[Prev. ref. 2443:INI:C, 2816:INI:A]

C. **Salt Mines In Chanthan Area In Chinese Hands:** The Prime Minister, Mr. Nehru, said in the Lok Sabha (House of the People) on February 25 that the salt mines in the Chanthan area and the salt lakes in the north-east corner of Ladakh were in illegal occupation by Chinese forces.

[His reply to an adjournment motion on the same subject on February 21 had left Members confused about the exact location of these salt mines and the salt lakes referred to in reports from Jammu. The confusion had arisen because of reports that Indians attempting to go to some of these salt mines and lakes had been refused access by foreign nationals.]

Mr. Nehru's reply on February 25 made it clear that there was confusion about the names of various salt mines in the area.

He added that there had been no reports of Indians having attempted to go to these particular salt mines and lakes to collect salt.

As regards the intrusion of Chinese in the guise of Buddhist monks in the Paddar and Zanskar areas of Jammu, he said, the Kashmir Government had already contradicted these reports. It was most unlikely that any Chinese could have come to these places after negotiating one or two snow-bound high ranges and traversing some 100 miles of Indian territory.

Asked what steps were being taken to check Chinese spies from coming into Ladakh in the guise of Buddhist monks, he said that a spy was an individual who came under false pretences. Despite all efforts to check such individuals, some of them might slip in. He could not guarantee that entry of all such spies could be prevented.

Mr. Nehru's Clarification:

Mr. Nehru told Mr. Jugal Kishore in the Rajya Sabha (Council of States) on March 8 that the Chanthan salt mines in Ladakh were under the illegal occupation of the Chinese in the sense that they had certain check-posts in the area covering these mines.

He added: "It is 'covered' in the military sense that they can guard it and prevent access to it if they want to."

Bakshi Ghulam Mohammed's Statement:

The Premier of Jammu and Kashmir, Bakshi Ghulam Mohammad, told the State Assembly on January 27 that no other salt lake except the Amtogar, in Chanthan, north-east of Ladakh was in illegal occupation of the Chinese.

He denied that there was any discrepancy in the statement made by him on February 23 and Mr. Nehru's statement in Parliament on February 25.

He had said on February 23 that the Amtogar salt lake in Aksaichin area was in the illegal occupation of the Chinese and there had been no fresh encroachment.

He added that the Rapshu salt lake, near Demibok, and some other lakes in that part of Ladakh were in Indian possession.

(*The Statesman*, New Delhi)

[Prev. ref. 3166:INI:C]

D. **New Envoy To Thailand:** The Indian Ministry of External Affairs announced on February 22 that Mr. Niranjan Singh Gill, until recently Ambassador of India to Ethiopia, had been appointed as Ambassador of India to Thailand.

He would assume charge of his assignment in March, 1960.

(*The Statesman*, Calcutta)

[Prev. ref. 2859:INI:G]

E. **Film Manufacturing Plant—Pact With French Firm:** An Agreement between the Government of India and Messrs. Bauchet of Paris for the establishment of a project for the manufacture of cinema films, photographic films and various types of photographic papers was finalized in New Delhi on February 20.

The raw films project would be located at Ootacamund.

The project, which is expected to begin production by the middle of 1962, will meet a good part of the country's requirements for the various types of films and photographic material.

The estimated cost of the project will be about Rs. 5 crores. Its foreign exchange needs would be about Rs. 3 crores which will be met by French export credit.

(*The Statesman*, New Delhi)

[Prev. ref. 1660:INI:G]

F. **Mr. Nehru On Mangla Dam:** During question-hour in the Lok Sabha (House of the People) on February 17, the Prime Minister, Mr. Nehru, said that the construction of the Mangla Dam in Pakistan-occupied Kashmir would not adversely affect India under any settlement that might be reached on the Canal Waters dispute.

He said that there were two aspects of the Dam: one was that it formed part of the larger issue of Kashmir; and the other related to the sharing of the water resources of the project for the benefit of the people of the sides. The quantity of water India would get under any possible settlement would not be reduced by the construction of the reservoir.

When asked whether the question would be taken up independently, he said, it might be dealt with without prejudice to India's claim of sovereignty over Pakistan-occupied territory of Jammu and Kashmir.

(*The Hindustan Times*, New Delhi)

[Prev. ref. 3107:PAK:B]

G. **Rajasthan Legislature—Governor's Address:** Inaugurating the Budget session of the Rajasthan Legislative Assembly in Jaipur on February 24, the State Governor, Sardar Gurmukh Nihal Singh, said that the Panchayat Samitis would be vested with powers for collecting land revenue.

He also disclosed that each Panchayat Samiti would have land to run a model farm. The Government would help the Samiti to acquire land wherever necessary.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

He announced that it had been decided to constitute separate judicial panchayats. A Bill for this purpose would be introduced in the House during the current session.

The urban Community Development programme would be undertaken at the beginning of the Third Five-Year Plan period. A working group had been set up to prepare a scheme. This would necessitate giving more powers to the municipalities. It was also proposed to make civic chiefs members of Zila Parishads to ensure integrated development.

He was glad that the Bhakra power was now being utilized in Rajasthan. Pilani had been receiving it since May, 1959 and Ganganagar since January, 1960.

The Rajgarh sub-station would receive Bhakra power from the middle of March, 1960. Ratangarh and other places, at present fed by the Bikaner thermal station, would also receive electricity from Rajgarh, thus releasing more power for Bikaner city.

He informed the House that the Rana Pratapsagar Project, part of the Chambal Hydel Project, which was estimated to cost Rs. 17 crores, had been approved by the Planning Commission and work on it had started.

The police had done good work in dealing with the dacoit menace. Of the nine gangs operating in Rajasthan at the beginning of 1959, six had been liquidated.

[Prev. ref. 2522:INI:O]

H. **Andhra Pradesh Budget:** The Andhra Pradesh Budget for 1960-61, presented to the State Assembly in Hyderabad on February 20 by the Finance Minister, Mr. K. Brahmananda Reddy, showed a surplus of Rs. 20,01,000. The revenue was placed at Rs. 82.18 crores and expenditure at Rs. 81.98 crores.

There were no new taxation proposals. The capital outlay in the expenditure would be Rs. 32.44 crores.

The Budget estimates included a provision of Rs. 44.04 crores for the Second Five-Year Plan schemes.

Mr. K. Brahmananda Reddy announced certain concessions to agriculture and industry, suspension of special assessment on groundnuts and cotton for the next three years, exemption of tax on sales of cotton yarn consumed by the handloom industry, exemption from tax on purchase of oil-seeds by ghani owners and tax reduction on sales of oil-cake from three per cent to two per cent.

The annual loss of revenue on account of these concessions would be Rs. 45,00,000. Thus, the revenue surplus would be converted to a deficit of Rs. 26,00,000.

No fresh measures of taxation were proposed in the current session for meeting this deficit.

The new Andhra Pradesh formed in 1956, he said, had started with an opening balance of Rs. 1.59 crores with prospects of revenue receipts and revenue expenditure of the order of Rs. 47.25 crores and Rs. 51.94 crores for the year 1956-57. The position now had improved and the revised Budget estimated for this year (1959-60) revealed a revenue of Rs. 78.08 crores and an expenditure of Rs. 76.13 crores.

The Budget for next year was expected to close with a deficit of Rs. 8.62 crores which could have been avoided by pruning the expenditure programme.

He also disclosed that the State Government had decided to set up an Industrial Development Corporation with an initial capital of Rs. 1 crore, which would later be increased to Rs. 3 crores if necessary, in order to give a fillip to industrial development in the State. This Corporation would be registered under the Indian Companies Act and would plan, promote and set up industries either by itself or in association with private enterprise.

(*The Hindu*, Madras)

[Prev. ref. 2540:INI:K]

I. **Madhya Pradesh Budget:** The Madhya Pradesh Finance Minister, Mr. Mishrilal Gangwal, presented the State Budget for 1960-61 to the State Assembly on February 24 showing a revenue deficit of Rs. 62,95,000 with receipts and expenditure at Rs. 64.67 crores and Rs. 65.30 crores respectively.

The Budget, which contained no fresh taxation proposals, revealed a further deficit of Rs. 1.12 crores in the capital account with receipts at Rs. 59.26 crores and expenditure at Rs. 60.38 crores.

Transactions on public account, however, were expected to result in a net income of Rs. 2.03 crores. The net result, it was estimated, would, therefore, be an overall surplus of Rs. 33,00,000.

The expenditure budgeted for was of the order of Rs. 5.78 crores, of which Rs. 4.21 crores was under the Second Five-Year Plan.

Central assistance for Plan schemes would be of the order of Rs. 24 crores and resources to be tapped by the State Government were assumed to yield Rs. 12.11 crores, including Rs. 5 crores from a market loan and Rs. 2.5 crores as the State's share of small savings collection.

It also revealed that the Central Government would make good the State's loss of its share of income-tax in the two remaining years of the period covered by the award of the last Finance Commission.

(*The Statesman*, New Delhi)

[Prev. ref. 2553:INI:N]

J. **West Bengal Budget:** The West Bengal Budget for 1960-61, presented to the State Legislative Assembly by the Chief Minister, Dr. B. C. Roy (who also holds the Finance portfolio), in Calcutta on February 25 showed an overall deficit of Rs. 2.65 crores. But, as it was expected to open with a balance of Rs. 8.01 crores, the year's closing balance would be Rs. 5.36 crores. No fresh taxation proposals were made.

The deficit of Rs. 2.65 crores comprised Rs. 1.06 crores in revenue account and Rs. 1.59 crores outside revenue account. Revenue receipts were estimated at Rs. 88.17 crores against the current year's revised figure of Rs. 91.50 crores. Capital expenditure was estimated at Rs. 33.96 crores as compared with this year's (1959-60) revised estimate of Rs. 26.07 crores.

There was a rise of over Rs. 12 crores in revenue receipts during the current year. Against the Budget estimate of Rs. 79.04 crores, the collections were now estimated at Rs. 91.50 crores. This resulted in the estimated deficit of Rs. 3.63 crores for 1959-60 turning into a surplus of Rs. 4.95 crores. An improvement in the sales-tax collection alone accounted for an increase of Rs. 3.13 crores.

The capital expenditure estimated included Rs. 1.70 crores for payment of compensation to former zamindars, Rs. 3.35 crores for Kangsabati and Mayurakshi projects, Rs. 3 crores for State roads, Rs. 34,00,000 for the salt lake reclamation scheme, Rs. 1.14 crores for the Greater Calcutta Milk Supply Scheme, Rs. 75,00,000 for a fertilizer plant, Rs. 4.72 crores for the Durgapur coke oven, gas grid and power plant projects and Rs. 5.76 crores for DVC.

The Government, he said, proposed to float a loan of Rs. 7 crores in 1960-61 to finance the Second Plan schemes. During the current year (1959-60), a loan floated by the Government was over-subscribed, only Rs. 7.70 crores of a total subscription of Rs. 9.16 crores being allowed to be retained according to the loan notification terms.

(*The Statesman*, Calcutta)

[Prev. ref. 2505:INI:K]

K. **Jammu & Kashmir Budget:** The 1960-61 Budget estimates for Jammu and Kashmir, presented to the State Legislative Assembly in Jammu by the Premier, Bakshi Ghulam Mohammed (who also holds the Finance portfolio) on February 20 showed a surplus of Rs. 2.86 crores.

He proposed sales-tax at five per cent on photographic material, radios, watches, arms, electrical goods, foreign liquors, sewing machines, scents, crockery, iron and steel safes, perambulators, sanitary fittings, smoking pipes and articles made of foreign electroplated nickel.

The sales-tax on automobiles was sought to be raised from three to five per cent and that on diesel oil from 25 nP to 30 nP a gallon.

He said that the estimated income of Rs. 15.69 crores was higher than that of the current year by Rs. 2.86 crores. Expenditure charged to revenue was placed at Rs. 12.83 crores.

The Plan expenditure for next year (1960-61) was placed at Rs. 9.56 crores of which Rs. 7.06 crores would be in the form of Central assistance.

He said: "The economy is bearing an impress of the successful implementation of the schemes. Employment opportunities on a scale without precedent have been created. Real income per head of population has increased."

He added that a new power project at Chennani in Jammu province for the generation of 6,000 kw of electricity would be taken in hand. By it, 24 villages would be electrified.

(*The Hindustan Times*, New Delhi)

[Prev. ref. 2553:INI:O]

L. **Three New Districts Created In UP:** The Uttar Pradesh Chief Minister, Dr. Sampurnanand, announced in the State Legislative Assembly in Lucknow on February 24 a new administrative set-up for territories in the State adjoining Tibet.

The new set-up would resemble that of N-EFA. But, the Chief Minister (instead of the Governor as in N-EFA) would be the head of the administration.

Unlike in Assam, where the Governor was answerable to the President, the Chief Minister would be responsible to the UP Legislature for measures adopted in the border region.

A Commissioner's Division of Uttarakhand had been created. It would compromise three new districts formed out of Pithoragarh and Chamoli tehsils and Uttarkashi sub-division.

The creation of these districts raises the number of revenue districts in the State to 54.

Uttarakhand would have no Commissioner for the time being. The district collectors would enjoy wide powers.

He said that the new administrative measures had been enforced to meet the special conditions created by China's action in Tibet and hoped that the region would benefit from the acceleration of development activity. New administrative methods had been designed to expedite development by cutting out several administrative checks.

The area covered by the three districts would be as follows:

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Pithoragarh: Dharchula, Munsiyari, Pithoragarh and Didihat.

Chamoli: Chamoli, Joshimath and Karan Prayag.

Uttarkashi: Dunda, Rajgarhi, Purole and Bhatwari.

The security of UP's border region was under the Pradesh Armed Constabulary in close collaboration with the Armed Forces. The authorities were fully satisfied with the arrangements. This might be the reason why the Armed Forces had not directly assumed responsibility for border patrol in the areas.

(*The Times of India*, New Delhi)

M. **Bank Employees' DA Formula Modification:** It was stated in New Delhi on February 21 that the Government of India had modified the formula recommended by the Bank Award Commission for the adjustment of dearness allowance (DA) for bank employees.

Under the revised formula, dearness allowance would be raised or lowered quarterly for each variation of five points in the all-India cost-of-living index as compared with the index level of 144 (1944:100).

The formula of the Commission provided for half-yearly adjustment of DA for each variation of ten points.

The decision was notified in a *Gazette of India* Extraordinary.

The notification said: "If the average all-India cost-of-living index for any quarter after March 31, 1959 should rise or fall by more than five points as compared to 144 (1944: 100), the DA payable for the succeeding quarter shall be raised or lowered, in the case of clerical staff by one-fourteenth, and in the case of subordinate staff by one-twentieth, of the DA admissible at the index level of 144 for each variation of five points."

The formula, suggested by the Commission, was modified in December, 1957 by an agreement between the State Bank of India and its employees to provide for adjustments in DA if the average all-India cost of living index rose or fell by five points during any quarter as against ten during a half-year period under the formula.

It was represented by the employees of other banks that the interval of half-a-year was too long a period and that considerable hardships were caused to the employees when the average cost-of-living index rose considerably but did not actually reach ten points.

The Industrial Disputes (Banking Companies) Decision Act, 1955, by which the Commission's recommendations were implemented, was, therefore, amended in 1958, empowering the Government to make the necessary adjustments in the DA formula for any period subsequent to December 31, 1957 within the ratio laid down in the formula.

[Prev. ref. 2507:INI:R]

N. **Compounded Excise Levy For Khandsari Sugar:** The Government of India announced on February 20 a scheme of compounded excise levy for khandsari sugar as a measure of assistance to the industry.

The scheme would come into operation from March 1.

A Press Note issued by the Central Finance Ministry said: "Representations were being received from the khandsari industry that the normal central excise procedure for the control of and realization of duty from small-scale producers of khandsari sugar was causing a good deal of inconvenience to the trade.

"In order to help the manufacturers of khandsari sugar working without the aid of sulphitation plants, the Government of India has introduced a compounded levy scheme by virtue of which manufacturers will be required to pay a composition fee on the rated capacity of the equipment employed and would thereafter be absolved from the day-to-day checking or verification of the production by the Central excise staff."

[Prev. ref. 1839:INI:F, 2134:INI:K]

O. **UGC Report For 1958-59:** Three important recommendations and an appeal were made by the University Grants Commission in its report for 1958-59 presented to the Lok Sabha (House of the People) on February 23.

They were the restriction of university education to those who had the necessary aptitude, establishment of affiliating and teaching type of universities instead of the unitary residential types and further improvement of the pay scales of university teachers.

The Commission appealed to political parties and politicians to assist in the maintenance of discipline in the universities and not to interfere in their affairs.

It complained that it had been faced with "technical and legalistic hindrances" in the performance of its duty and there was "uncertainty about the areas and extent of jurisdiction" between it and the Central Ministries and suggested an amendment of the University Grants Commission Act and the establishment of a Convention that matters relating to universities and university education would be referred to it for advice.

It proposed the appointment of a working group to study the problem of change-over of the medium of instruction from English to Indian languages. The issue should be treated as an academic and not a political question.

It estimated that the university population in India in 1959-60 was 900,000. It had been increasing at the rate of 50,000 a year and would soon reach the million mark.

P. **Mr. M. P. Petrenko Killed:** Mr. M. P. Petrenko (56), a Soviet Deputy Chief Engineer at the Bhilai Steel Plant, was killed instantaneously when a heavy steel door fell on him in Bhilai on February 22.

He was supervising work in the rail and structural section of the rolling mills when the accident occurred.

Mr. Petrenko, seeing the massive steel door hurtling towards him, tried to run for safety but was knocked down.

The General Manager of the Steel Plant, Mr. N. C. Srivastava, and the Indian Chief Engineer, Mr. P. P. Dani, visited the place of accident and ordered an inquiry. The body of Mr. Petrenko was flown to Moscow.

Mr. Petrenko came to India as a Deputy Chief Engineer of the Steel Plant in May, 1958.

(*The Times of India*, Bombay)

INDONESIA

A. **Expulsion Of Foreign Offenders:** The Attorney-General's Office in Djakarta announced on February 19 that all foreign nationals who had been convicted by an Indonesian court irrespective of the nature of their offence would be expelled from the country.

Steps would be taken to ensure that such persons did not obtain permits for re-entry.

The announcement said that the orders were issued following indications that foreign nationals had been attempting to undermine the country's internal economy by profiteering and speculation.

(*The Hindustan Times*, New Delhi)

[Prev. ref. 3099:IND:A]

B. **Trade Pact With USSR:** It was announced in Djakarta on February 19 that the 1956 Trade Agreement between the Soviet Union and Indonesia had been extended for a year.

The Agreement was signed in August, 1956 on a year-to-year basis.

The commodities exported to Russia under the Agreement included rubber, copra, coffee and tea. The main imports from Russia were machinery, chemical products and technical equipment.

IRAQ

A. **Soviet Help In Building Baghdad-Basra Railway Line:** A ceremony was held at Dora near Baghdad on February 14 to mark the beginning of the construction work on the Baghdad-Basra railway line.

[This 570-kilometre-long line will be the principal railway of the Iraqi Republic. It will run parallel to the present narrow gauge line built during World War I by the British authorities for strategic purposes.]

The construction of the new line was necessitated by the economic development of the country. The old line has been unable to handle the growing flow of freight coming from the port of Basra to the central regions of the Republic.

Soviet specialists engaged in designing and surveying are aiding in the building of the line.

The first stone in the construction of the line was laid by the Prime Minister, General Abdel Karim Kassem.

Speaking on the occasion, Gen. Kassem underlined the great importance of the line for the economic development of Iraq and for strengthening her independent policy and praised the Soviet specialists who took part in the preparation and implementation of the project.

Referring to Iraqi-Soviet relations, he said that friendship with the Soviet Union was based on the principles of mutual and equitable co-operation.

(*Tass*)

[Prev. ref. 2524:IRQ:B, 2608:IRQ:C]

B. **Sayed Ibrahim Kubbah Relieved Of Posts:** A special decree issued in Baghdad on February 16 announced that the Minister of Agrarian Reform and Petroleum Affairs, Sayed Ibrahim Kubbah, had been relieved of his posts. No reason was given for this action.

In his place, the Interior Minister, Brigadier Ahmed Mohammed Yahia, was appointed in an acting capacity.

Dr. Talaat Sheibani, Minister of Development, was appointed acting Minister for Petroleum Affairs.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Sayed Ibrahim Kubbah, regarded as one of the leading 'left-wingers' in the Iraqi Government, was appointed Minister of Economy in July, 1958 after the *coup d'etat* which overthrew the Monarchy.

Mr. Kubbah went to Moscow in 1959 and signed an Agreement on Economic and Technical Co-operation with Russia.

He was appointed to his latest posts in July, 1959, when the Economy Ministry was abolished.

ISRAEL

SUMMARY: Israeli Forces Attack Village In Demilitarized Zone—Mr. David Ben-Gurion's Statement—UAR Complaint To Security Council—Mixed Armistice Commission Findings.

A. **Israeli Forces Attack Tawafik:** Under cover of darkness, in the pattern which had become familiar before the Sinai campaign, Israeli armed units, just after midnight on January 31, attacked in force Syrians in the demilitarized zone south-east of the Sea of Galilee and drove them from the area, demolishing 50 buildings in the village of Tawafik. Israeli casualties in this operation were given as three killed and seven wounded.

The battle lasted until 4 a.m. on February 1 when UN Observers arranged a cease-fire, but only six hours later the Syrians were reported to have penetrated the area again and to have returned to the ruins of the village.

On February 1, the Israeli Foreign Ministry addressed a complaint to the Syrian-Israel Mixed Armistice Commission.

An Israeli Foreign Ministry spokesman told the correspondent of *The Times*, London: "Under no circumstances do we concede to the Syrians any rights whatsoever in the demilitarized zone."

This attitude, the correspondent said, was the reason which had led to the present crisis and was the crux of the conflict between the Israeli Government and the United Nations Truce Supervision Organization.

The Israelis charged the Syrians with two offences in this area: (1) with having fortified themselves within the village of Tawafik and used it as a base for aggressive actions; and (2) with having in the few previous days "used the pretext of wanting to cultivate land in the area to extend their illegal hold in the demilitarized zone."

First reports from other sources regarding the clash said that Israeli guns had blasted positions in the abandoned Syrian village of Tawafik, east of the Israeli village of Beit Katzir.

A UN spokesman said in Jerusalem that the artillery duel died down at about 4-15 a.m. on February 1 following a cease-fire negotiated by Major-General Carl von Horn, Chief UN Truce Observer.

As the shells exploded, Israel announced that her forces had acted "to wipe out Syrian military positions established inside the southern demilitarized zone from which Syrian troops had fired on Israeli troops in the area."

Israeli army sources said that Israeli forces had withdrawn from the village after the demolition operations.

Mr. David Ben-Gurion's Statement:

Also on February 1, the Israeli Prime Minister, Mr. David Ben-Gurion, told the Knesset (Parliament) in Jerusalem that Israel would, under no circumstances, concede to Syria any rights in the demilitarized zone.

He uttered the warning that Israel would resort to force if there was no other way of safeguarding her people in the area.

It was reported on February 2 that the Second Army of the United Arab Republic, massed along the Sinai desert, had dug itself in amidst mounting tension created by the destruction of the Syrian village.

The UAR First Army in Syria also made a similar move.

Troops were seen moving out of Cairo on February 2 for undisclosed destinations.

Syrian Version:

In Damascus, a Syrian Army spokesman said on February 1 that the Israelis had suffered heavy casualties.

He added that two Syrians were killed and four wounded and that the Syrians had retaken the village of Tawafik on February 1 after it had been occupied by Israelis.

A Syrian spokesman reported a fresh outbreak of violence on February 3 between Syrian and Israeli troops in the border region.

A UAR First Army spokesman said that out-posts of UAR fired on an Israeli patrol of five men moving towards the UAR out-post of Hawi and that the Israeli patrol "fell down".

The same day (February 3) in Jerusalem, Israeli Foreign Ministry sources said that Israel was ready to take part in direct talks with Syria to discuss ways of reducing tension along the Syrian-Israeli border.

There were a number of border clashes in the succeeding days but none as serious as the one at the beginning of the trouble.

On February 12, one Israeli was killed and two wounded in renewed clashes. One of the wounded men died later.

This clash occurred in the Huleh Valley, north of the Sea of Galilee.

UAR Complaint To Security Council:

Both UAR and Israel sent Notes to the UN Security Council accusing each other of aggression.

In a letter delivered to the President of the Security Council on February 3, the UAR Government accused Israel of a renewed act of aggression in the Syrian Region on the night of January 31.

It said that Israeli forces opened fire on a group of Arab farmers in the southern sector of the demilitarized zone north of Lake Tiberias and said that the farmers were accompanied by a UN Observer.

A few minutes later, an Israeli armoured vehicle moved up to give support to the Israeli forces, who started firing. UAR forces returned the fire.

It went on to say that UAR had agreed to a request by the UN Chief of Staff, Major-General Carl von Horn, to an emergency meeting of the Syria-Israel Mixed Armistice Commission, but the Israeli response was not known.

At midnight on January 31-February 1, the Israelis shelled some UAR positions in the southern sector, attempting to occupy the village of Tawafik. At 3-30 a.m., the Israelis resumed firing on UAR positions and UAR artillery returned the fire. The Israelis then occupied the village which was re-occupied by UAR forces at 5-30 a.m. on the same day. Three hours later, the Israelis re-engaged the UAR forces using all kinds of weapons.

The letter added that at 11 a.m. on January 31, Israeli planes violated the Syrian Region air-space and were engaged by aircraft of UAR. At 8-30 p.m., another engagement took place between Arab and Israeli patrols, and the Israelis opened fire with 120 mm mortars.

On February 20, UAR again informed the UN Security Council that grave consequences might follow if the situation in the demilitarized zone between Israel and the Syrian Region went unchecked.

In a letter to the Security Council President, the UAR representative at UN, Mr. Rafik Asha, referred to the clashes on the Syrian-Israeli border and said that UAR would not remain passive in the face of Israeli "provocations" and "aggression."

Mixed Armistice Commission Findings:

The Mixed Armistice Commission, in the absence of any Israeli delegate, passed resolutions on February 16 condemning Israel for violations of the Armistice Agreement in respect of a number of incidents in the demilitarized zone, culminating in the attack on the village of Tawafik on February 1.

One resolution said that the UN Military Observer who carried out an investigation found that there was no fortification in Tawafik other than a trench to defend it and a barbed wire entanglement around this trench.

This contradicted the Israeli contention—which the Israeli Foreign Ministry had claimed was endorsed by UN Observers' reports—that Tawafik was not a peaceful village but a fortified station of the Syrian armed forces.

[Prev. ref. 2377:ISR:A, 3038:ISR:B]

B. **US Farm Surplus Agreement:** An Agreement on the sale of US farm surplus to Israel to the value of $30,200,000 was signed in January in Washington.

The following products would be sent to Israel: wheat $11,200,000, foodgrains $9,900,000, cottonseed and/or soya bean oil $4,200,000, cotton $800,000 and tobacco $200,000. Sea transport would cost $3,300,000.

As usual, payment would be in local currency and the proceeds would be used for economic development loans and grants, loans by the Export-Import Bank to private US or Israeli business firms, American expenditure in Israel and various other American purposes.

[Prev. ref. 2641:JAP:A]

KUWAIT

A. **Transfer Of British Jurisdiction Over Foreigners:** The British Foreign Secretary, Mr. Selwyn Lloyd, told the House of Commons on February 15 of the impending transfer of jurisdiction over foreigners in Kuwait from Britain to Kuwait.

Asked what information he could give on this subject, Mr. Lloyd made the following statement:

"In the past, the Government of Kuwait and Her Majesty's Government found it mutually convenient that Her Britannic Majesty's jurisdiction in civil and criminal matters should extend over various classes of foreigners in Kuwait. In 1957, His Highness the Ruler of Kuwait and Her Majesty's Government agreed that the time had come for His Highness to assume full jurisdiction over certain of those classes.

"His Highness the Ruler and Her Majesty's Government have now agreed that the time is coming for Kuwait to assume full jurisdiction over all persons within her territory. An amendment to the Kuwait Order-in-Council has, accordingly, been laid before Parliament, and the change-over will start within a few weeks with the transfer of certain sectors of jurisdiction. Further transfer of jurisdiction will take place progressively thereafter."

(*UK High Commission*, New Delhi)

MALAYA

A. **Loan Agreement With Britain:** Representatives of Malaya and Britain signed in London on February 17 an Agreement giving Malaya a loan of £2,250,000 sterling for the purchase of tele-communication equipment.

The loan will be re-paid by the end of 1969. Interest will be at a rate corresponding to the current rate of British borrowing in addition to a management charge of one per cent.

The British loan will enable the development of Malaya's tele-communications department to be accelerated. This will help meet the increasing demand for communications facilities in the rural as well as urban areas.

(*The Times*, London)

[Prev. ref. 2623:MAL:B]

MALDIVES

A. **Details Of New Agreement With Britain:** Details of the new Agreement between the Maldives and Britain (page 3170) were published in London as a White Paper on February 15.

The Agreement, which pledged Britain to continue with the protective responsibility for the Maldives, which she first assumed more than 70 years ago, was signed in Male, capital of the Maldives, on February 14.

The Agreement is in three sections —the main Agreement of eight Articles and two separate Annexures concerning the status of British forces on the Islands and the facilities they may use.

The Preamble to the Agreement, after recalling the long history of association between Britain and the Maldives, notes that the two countries desire to consolidate the friendship and good relations between them and to place those relations on a foundation of mutual confidence more suited to the needs and common interests of the people of the Maldives and of the United Kingdom.

In the first two Articles, the Agreement provides that British responsibility for the protection of the Islands shall continue unimpaired and that Britain shall refrain from any intervention in Maldivian internal affairs except insofar as may be mutually agreed upon to meet any request of the Maldivian Government for assistance.

The third and fourth Articles concern arrangements under which facilities are made available in the Islands for British forces.

The fifth Article notes that while Britain would conduct Maldivian foreign political affairs, the Maldivian Government will have freedom to conduct relations of an economic, commercial, cultural and educational nature with other countries and international organizations.

The sixth and seventh Articles contain pledges by the Maldivian Government not to undertake any commitments which might affect Britain without prior consultation and agreement and not to receive foreign commercial or cultural representatives without first receiving British representatives, if the British Government so desires.

The eighth Article notes that the new Agreement will supersede the Agreement signed in January, 1953.

In the two Annexures, it is agreed that Britain shall maintain an air-base on Gan Island, which is given by the Maldivian Government as a free gift for 30 years. Rights are also guaranteed for Britain to keep a radio station on nearby Hittadu Atoll and to maintain the necessary technical facilities for both the air-base and the radio station.

British personnel in the Islands will not be subject to local taxes or jurisdiction, and the British Government will be able to import, tax- and duty-free, any materials needed for the up-keep of the air-base and the radio station.

The White Paper also contained the Letters exchanged between Mr. C. J. M. Alport, British Minister of State for Commonwealth Relations, and the Maldivian Prime Minister, Mr. Ibrahim Nasir, concerning the relations between the two Governments and the inhabitants of Addu Atoll, where an uprising against the Male Government occurred recently.

In these Letters, Britain promised to work towards "conditions which will enable the authority of His Highness the Sultan to be restored peacefully on the Atoll."

Finally, a separate letter from Mr. Alport confirmed the British offer of an immediate grant of £100,000 and a further sum of £750,000 to be spread over the next five years or more to be devoted to specific projects of economic aid.

(*UK High Commission*, New Delhi)

[Prev. ref. 3170:MLD:A]

MONGOLIA (Outer)

A. **Report On Economic Progress:** At the fourth session of the Great National Hural (Assembly) in Ulan Bator from December 19 to 21, 1959, the First Vice-Chairman of the Council of Ministers, Dr. Molomjamtsa, gave a report on the economic progress of the country including the draft outline of the Plan for 1960.

He said that 1959, the second year of the Three-Year Plan, saw big successes for the socialist reconstruction programme. The most outstanding, according to him, was the completion of the co-operation of individual *arat* (herdsmen) households into collective production societies.

He said that in 1960, the Plan envisaged the raising of the livestock population up to 24.3 million, that is, to increase it by 391.3 per 1,000.

Arrangements would be made to render increasing material, technical and financial assistance to agricultural co-operatives. The Plan also envisaged the State purchase of animal husbandry products.

He said that in 1960 the sown area would be increased by 54 per cent and would cover more than 600,000 acres.

Further reclamation of virgin land, he said, would still remain one of the most important targets for 1960. About 290,000 acres of virgin soil would come under the plough in 1960. Big steps would be taken to further mechanization and electrification of agricultural operations and the irrigation system would be expanded considerably.

The Plan envisaged a 38.4 per cent increase in industrial production. Special effort would be made to raise the output of coal, electricity, building materials as well as consumer goods.

The capital investment would be 29 per cent over that of 1959.

The Finance Minister, Mr. B. Dugersuren, pointed out that in 1959, the Budget revenue had been over-fulfilled. The outlay for the development of the national economy for 1960 would be 13.7 per cent more than that of 1959, while the expenditure for cultural and social welfare measures would increase by 14.5 per cent.

He said that 80.5 per cent of the Budget outlay for 1959 had been devoted to the need for economic and cultural development and that 89.4 per cent of the revenue had been covered by incomes from the industrial and agricultural as well as commercial enterprises. The tax income from the population was up by only 10.6 per cent and in 1960 this percentage would still go down.

(*Mongolia Today*)

B. **Support To Soviet Proposal For Disarmament:** The Great National Hural (Assembly), during its session from December 19 to 21, 1959, expressed unanimous support to the appeal of the Supreme Soviet of USSR to the Parliaments of all nations on universal and complete disarmament and stated that the Mongolian People's Republic would strive for the peaceful settlement of international disputes, for general and complete disarmament and for the strengthening

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of peace and friendship among nations.

It supported the letter of the Supreme National Assembly of the Korean People's Democratic Republic to the Governments of all nations on the peaceful settlement of the Korean question and declared that all foreign troops should be withdrawn from Korea so that the people might be able to settle the problem themselves in the interest of safeguarding peace in Asia and all over the world.

(*Mongolia Today*)

[Prev. ref. 3007:KRN:A]

C. **Economic Agreement With Soviet Union:** The Prime Minister, Mr. Y. Tsedenbal, and the Soviet First Vice-Premier, Mr. F. R. Kozlov, signed in Moscow on February 11 an Agreement on economic and technical assistance to build industrial and other projects in the Mongolian People's Republic.

At the same time, the Foreign Minister, Mr. Shagdarsuren, and the Vice-Chairman of the Soviet State Committee for External Economic Relations, Mr. Pavel Maletin, signed an Agreement on Russian assistance for building residential quarters in Ulan Bator.

(*The Nation*, Rangoon)

[Prev. ref. 2822:MON:A]

NEPAL

A. **National Day Anniversary:** The anniversary of National Day was celebrated in Khatmandu on February 19.

It was on this day nine years ago that the late King Tribhuvan set up democratic institutions in the kingdom.

King Mahendra watched a colourful combined army and police parade and, as the Supreme Commander, took the salute at a march-past.

The King, in a message to the nation, urged the people to make united efforts to build a new Nepal.

The Government, he said, did not possess a magic wand. The people had greater duties today than ever before.

The Prime Minister, Mr. B. P. Koirala, in his message to the nation, called upon the people to co-operate with the Government in its nation-building activities.

Two foreigners were honoured on the Day with the award of the *Gorkha Dakshina Bahu* ("the right hand of the Gorkhas"). They were: Mr. K. C. Bhatnagar, Adviser with the Indian Aid Mission; and Lieutenant-Colonel H. W. Baldwin, of the Royal Engineers, who was in charge of the construction of a road in south-east Nepal.

(*The Statesman*, Calcutta)

[Prev. ref. 813:NEP:A, 2791:NEP:A]

B. **Japanese Snow-Man Expedition's Failure:** The Japanese "Snow-man" Expedition to the Himalayas returned to Khatmandu on February 20 and reported failure in its attempt to catch or sight the "Yeti" (Snow-man).

The leader of the seven-man team, Mr. Teizo Ogawa, a Tokyo University anatomist, it was stated, had, however, collected some bones and skins found in the area they visited, which he took to Japan for a thorough study.

Mr. Ogawa said that he considered that four of the 10 bone pieces in his bag were "most unusual" and hoped that "they may provide some useful clues to unfolding the Yeti mystery."

The members of the Expedition left for Calcutta on February 23 on their way to Japan.

Earlier in the day (February 23), Mr. Ogawa submitted a report to the Nepal Government on the Expedition's attempts to find the "Snow-man." He hoped to continue the search next year.

He added: "Yeti definitely existed but not in the Everest region of Solokhumbo. It may be found in the Ganesh Himal or Langtang range of the Himalayas.

"A better organized and more scientific long-term party may succeed in discovering this fast vanishing, interesting, snow animal."

Dr. Juro Hayashi, who is President of the Tama Zoo in Japan, said that the Snow-man was definitely a human-like guerrilla and it was quite possible that very few of them now visited the Himalayas. Skins obtained from Tibetans in the forest region belonged to a rare brown bear whose footprints resembled those of men. "The difference between the Snow-man and the brown bear was that while the Snow-man walked straight for several hundred yards like a man, the brown bear walked zig-zag and only for short distances."

PAKISTAN

SUMMARY: F-M Ayub Khan Elected President; ICA Conference; Price Commission Set Up.

A. **F-M Mohammed Ayub Khan Elected First President Under Future Constitution:** The Government of Pakistan, through a Notification in a *Gazette* Extraordinary issued in Rawalpindi on February 15, announced that the elected members of the Local Councils of Basic Democracies had expressed their confidence in the Pakistan President, Field-Marshal Mohammed Ayub Khan, in a secret ballot held by the Election Commission under the Presidential (Election and Constitution) Order.

The Election Commission had earlier announced that 95.6 per cent of the total number of votes cast were in the affirmative, while the percentage of negative votes was 3.6.

Out of a total electorate of 79,850, the votes cast numbered 78,521. There were 603 invalid votes. The number of persons who expressed lack of confidence in F-M Ayub Khan were 2,829.

Under the Presidential (Election and Constitution) Order, expression of confidence in President Ayub Khan by a majority of elected members of Local Councils of Basic Democracies would automatically mean his election as the first President of Pakistan under the future Constitution.

F-M Ayub Khan's Broadcast:

After his election as President, F-M Ayub Khan, in a message broadcast to the nation on February 15, said: "Today, we enter the second phase of the process of national reconstruction liberated by the peaceful revolution of October, 1958. This is a solemn phase and I would like to be quite frank in talking to you about it.

"As matters stand at the moment, it is my obligation to give the country a Constitution in order to be able to withdraw Martial Law. I could have done it on my own, but after careful deliberation, I tried to seek your consent for two important reasons:

"First, this Constitution will be of immediate and direct concern to each one of us, and it is only right that you should have a say in it at every stage.

"Secondly, I am anxious to bring home to my countrymen the value of their basic sovereign right, that is to say, that the highest authority in the country must obtain its sanction from the people.

"The conduct of elections to Basic Democracies and the Presidential ballot are only an indication of my endeavour to give the people a clear and urgent sense of exercising their inherent right of vote in an atmosphere of complete freedom and secrecy. I have done this to firmly implant the essence of democracy in the minds of my countrymen and establish an unquestionable regard for law. Law, like the people, is sovereign and no one must be above it.

"In compliance with your vote of confidence, I very soon propose appointing a Constitution Commission of eminent men in the country to put up their recommendations as soon as feasible after consulting as many people as possible.

"What we really need is a Constitution which is democratic, which is easily understandable and workable, which is not too expensive to run and, above all, a Constitution which enables us to live the life of good Muslims.

"This business of reflecting the spirit of Islam in state-craft is a delicate and difficult ambition, but I propose to attempt it with all the earnestness and intellectual honesty at my disposal. To my mind, the meaning of spiritual faith does not lie in dogma alone, but it also lies in a scientific comprehension of the essence of life, which, unlike the mortality of man, is a continuous process, both in this world and the other. The purpose of religion is to illuminate and enrich the fullness of life as thus comprehended, and the purpose of man is to make himself worthy of it.

"The fact is that some of the reforms and innovations that have been introduced in the country in recent months, or are in the process of being introduced, have already paved the way for the type of Constitution I have described above. However, if the Constitution Commission can come out with better and more workable ideas, I shall have no hesitation in changing my views. What I am after is to bring in a Constitution under which we can remain united and free, advance forward, keep strong and be true to our faith.

"When you apply your minds to constitutional affairs, I beg of you not to be dogmatic and go by what is being done in other countries. Such examples are all right as guides, but their blind imitation in our own environment has proved suicidal in the past and can do so again in the future.

"So, when making your suggestions to the Constitution Commission, please look at the Book of Pakistan and not follow blindly somebody else's text-books. Study the circumstances in our own country and ask yourselves: 'What is it that will really suit us?' It is a correct and honest answer to this question which alone can provide a true solution of our problems. In other words, what is needed is realism and originality of thought."

F-M Ayub Khan Sworn-in:

F-M Mohammed Ayub Khan was sworn-in as Pakistan's first elected President at a ceremony in Rawalpindi on February 17.

The ceremony was attended by members of the Diplomatic Corps, flown to Rawalpindi from Karachi, Chiefs of the three Armed Services, Governors of East and West Pakistan, members of the Cabinet, Judges of the Supreme Court and of High Courts and high civil and military officials.

Earlier in the morning (February 17), members of the Presidential Cabinet handed in their resignations to President Ayub Khan.

After President Ayub Khan was sworn-in, he re-appointed the same 11-man Cabinet.

Constitution Commission Set Up:

After the swearing-in ceremony, President Ayub Khan announced the setting up of an eleven-member Constitution Commission headed by Mr. Justice Mohammed Shahabuddin of Pakistan Supreme Court to frame a new Constitution.

President Ayub Khan said that no deadline for submission of the report by the Commission had been fixed because of the complexity of the task. But no time would be lost unnecessarily by the Commission in completing its work.

The following are the terms of reference of the Commission:

"To examine the progressive failure of Parliamentary Government in Pakistan leading to the abrogation of the Constitution of 1956, and to determine the causes and nature of the failure; to consider how best the said or like causes may be identified and their recurrence prevented,

"And having further taken account of the genius of the people, the general standard of education and of the political judgment in the country, the present state of a sense of nationhood, the prime need for sustained development and the effect of the constitutional and administrative changes brought into being in recent months, to submit constitutional proposals in the form of a report advising how best the following ends may be secured:

"A democracy adaptable to changing circumstances and based on Islamic principles of justice, equality and tolerance, consolidational of national unity and a stable system of government."

Commander-in-Chief's Message:

General Mohammed Musa, Commander-in-Chief of the Pakistan Army, sent a message of congratulation to Field-Marshal Ayub Khan on his election as President.

The message said: "On behalf of all ranks of the Pakistan Army, I have the honour to convey to you our humble and very sincere felicitations on your election as President of Pakistan.

"For us, it is a great day. We are all very proud that our people have chosen, as their trusted leader, the person under whom, as our Commander-in-Chief, we had the honour and privilege to serve.

"We firmly believe that the affairs of the country cannot be in safer hands. In particular, we are very glad that as President, you will be Supreme Commander of the armed forces of the country. The Pakistan Army will be very proud to serve under you."

B. US Economic Assistance—ICA Conference For Co-ordination: A Conference convened by the Director of the United States International Co-operation Administration (ICA), Mr. James S. Killen, met in Karachi on February 10.

It was attended by over 250 ICA experts and technicians to formulate a co-ordinating programme of American economic assistance required for the expeditious implementation of Pakistan's Second Five-Year Plan.

Inaugurating the Conference, the President, F-M Mohammed Ayub Khan, said that he visualized a 25-year period of peace and orderliness necessary for Pakistan to achieve her goal of moral regeneration and material self-sufficiency through adequate foreign aid and her own maximum effort at self-improvement.

At the same time, he cautioned that if sufficient aid from friendly countries was lacking, or if the nation committed her own follies, there would be no alternative except "falling into the vast sea of communism which is a most horrible thought for anyone to contemplate."

He said: "Whether you like it or not, you (Americans) are leaders of the 'free world', and if you do not discharge your duty, then somebody else is bound to take over that duty."

He referred to what he called 'the tremendous crisis of rising expectations' in Pakistan and observed that this psychological hunger of the people had to be satisfied in the foreseeable future.

Whether the United States liked it or not, pressure was being brought to bear upon her both from the communist world of inimical nature, and the under-developed 'free world' which wanted to reach that standard of living which had been attained by the West. "It is essential that this pressure is met by USA. Otherwise, under-developed countries will become a liability to America if they go under and fall a prey to communism."

Normally, it was said to take 60 or 70 years for the economy of an under-developed country to reach a stage where it could generate enough resources to carry on under its own momentum. "We cannot wait that length of time. We reckon in Pakistan that if we get the necessary resources, internal and external, and we have peace for 25 to 30 years, the chances are that we shall then reach a stage when we are able to look after ourselves in every sphere."

If Pakistan survived that period and developed sufficiently, she would have saved herself and made herself immune from communism—that was what was at stake today.

The American Ambassador in Pakistan, Mr. William Rountree, said that the US International Co-operation Administration was important to America, to Pakistan and the entire 'free world' and that American assistance supported the progress, stability and the security of the 'free world.'

He added: "The real progress in economic development represents the effort of the Pakistani people and Government, and American economic assistance supplements this effort, contributing a great deal to the achievement of the goals set by the Pakistan people themselves."

The ICA Director, Mr. James S. Killen, commended F-M Ayub Khan on his address and said: "Your frankness and candour is a measure of the friendship between our two countries. Pakistan can count on the support of the United States to the limit of American capabilities and abilities."

The Pakistan Minister for Rehabilitation, Lt.-Gen. Azam Khan, predicted that Pakistan's Second Five-Year Plan, assisted by the American 'know-how,' would provide Pakistan with full self-sufficiency in food in the shortest possible time.

Tracing American assistance to Pakistan, he said that the policy of the United States was to contribute to the liberty, prosperity and progress which a human being wanted.

He said: "In the history of the world, you cannot find any example of giving assistance with the spirit of sincerity and with the maintenance and safeguarding of individual liberty than that of the United States."

Addressing the Conference on February 11, the Chairman of the Pakistan Planning Commission, Mr. G. Ahmad, said that in 15 years or so, Pakistan might be in a position to evolve a self-generating and self-sustaining economy.

He defined his approach in formulating the Second Five-Year Plan as a "perspective approach" which centred on a computation of the rate of economic growth in the country. The planners had worked out in a broad prespective the long-range development needs of the country, established as precisely as possible the rate of economic growth and then worked out a plan to attain the objective of a self-reliant economy.

He added that Pakistan's Second Five-Year Plan would need foreign assistance and investment to the extent of about Rs. 800 crores. On the existing rate of aid, Pakistan would be getting about Rs. 500 crores during the period of the Plan, not counting the special credits given by the United Kingdom and West Germany. The balance would have to be made up if the Plan was to go through.

In a brief commentary on Mr. Ahmad's speech, the ICA Chief, Mr. Killen, said that he was sure the United States Government would do all to make the Plan a success within the "limits of its capacity."

He pointed out that the United States had to balance up competing claims, but he could say without any hesitation that his Government was wholly sympathetic towards the objectives and aims of the Plan.

The United Kingdom High Commissioner in Pakistan, Sir Alexander Symons, who also addressed the Conference on February 11, said he was most anxious to see a progressive rise in the living standards of the Pakistani people and to secure for them a share in the world's increasing prosperity.

He said that Britain's interest in the future of Pakistan was dictated by their long-standing friendship and Commonwealth ties.

Conference Ends:

The Conference ended on February 16 with the International Co-operation Administration assuring financial and technical assistance to Pakistan's Second Five-Year Plan.

The Director of the ICA Mission in Pakistan, Mr. James S. Killen, said that the Conference had been a fruitful one and would enable American technical experts and advisers to carry out their duties and responsibilities in a way so as to assure the maximum benefit of American economic support to Pakistan's development objectives.

C. **Price Commission Appointed:** The Presidential Cabinet appointed on February 18 a nine-man Price Commission, headed by Mr. I. I. Chundrigar.

The Commission would investigate the rising trend in prices.

The Finance Minister, Mr. M. Shoaib, said that the index of prices was still lower when compared to the pre-Martial Law price structure. However, the prices were showing an upward trend.

The job of the Commission would be to investigate the causes of this upward trend and suggest remedial measures.

(*Dawn*, Karachi)

D. **Mr. S. A. Hasnie Appointed Governor Of State Bank:** It was announced in Karachi on February 22 that Mr. S. A. Hasnie, Principal Secretary in the Ministry of Finance, had been appointed as Governor of the State Bank of Pakistan.

Mr. Abdul Qadir, the present Governor of the State Bank, would take over as the Managing Director of the National Bank of Pakistan on the expiry of his term of office in July, 1960.

(*Dawn*, Karachi)

[Prev. ref. 2916:PAK:C]

E. **Agreement With Dutch Firm For Manufacture Of Sugar Plant Machinery:** The Karachi Shipyard and Engineering Works Ltd., signed an Agreement with a Dutch firm, Stork Werkspoor, on February 19 for the manufacture of a sugar plant and machinery.

The Agreement was initialled by Mr. S. Zaman, a Director of the Pakistan Industrial Corporation, on behalf of the Karachi Shipyard Ltd., and Mr. M. H. Damme, Managing Director of Stork Werkspoor.

Speaking on the occasion, Mr. Zaman said that in the near future, Karachi Shipyard Ltd., might produce agricultural implements as well in collaboration with Stork Werkspoor.

Mr. M. H. Damme said that the Agreement was the first step in the manufacture of capital goods machinery in Pakistan. Manufacture of plant and machinery for several other industries was also likely to be taken up at a later stage. His Company was also prepared to make investments in such enterprises.

[Stork Werkspoor is an 150-year-old firm. It is a leading manufacturer of sugar machinery in the world. The firm also manufactures items like diesel engines, rolling stock, complete fertilizer plants, power stations, installations for chemical and oil industries and so forth.]

(*Dawn*, Karachi)

SUDAN

A. **Economic Agreement With West Germany:** The West German Mission to the United Arab Republic and Sudan signed an Economic Agreement in Khartoum before returning to Bonn on February 6.

The full details of the Agreement were not announced, but some details were given to the Sudanese Press by Dr. H. Reinhardt, Head of the Foreign Trade Division of the West German Ministry of Economy.

He stated that the talks had covered trade exchanges, technical assistance and credits to finance irrigation and agricultural projects. The present volume of trade exchanges would be increased through larger purchases of Sudanese products. In future, Sudan would import consumer goods in addition to the capital goods now supplied by West Germany. A large number of technicians would be sent to Sudan. The existing Agricultural Research Centre at Yambo (Equatoria) would be restaffed and equipped by West Germany. Also, an Institute of Mineral Resources would be established with German help.

As regards finance, the West German Government would give every possible credit guarantee to its industrialists to encourage them to take part in new industrial enterprises and to tender for major developmental schemes. They would be specially encouraged to offer attractive terms for the construction of the Khashm el Girba Dam on the Atbara river.

(*Middle East Economic Digest*, London)

[Prev. ref. 2897:SUD:A]

UNITED ARAB REPUBLIC

A. **Anniversary Of United Arab Republic:** The United Arab Republic celebrated her second anniversary on February 22.

There was a military parade in Damascus which was watched by over 1,000,000 citizens. President Nasser took the salute.

Addressing the vast gathering, President Nasser attacked those whom he termed as "the enemies of the Republic of Egypt and Syria" and said that there was concentration of forces in Israel, which was making a "quest for arms because they imagine that they can attain their aims. But the people of UAR have proclaimed that they will carry on their holy march."

The Egyptian Press quoted President Nasser on February 23 as having said in his speech at Damascus the previous day (February 22) that UAR would use force "to regain our rights in Palestine."

All newspapers splashed President Nasser's speech on their front pages containing this statement and predicted that the "usurped" part of Palestine would be restored within a year.

Earlier, speaking at Homs in the Syrian Region on the occasion of the anniversary, President Nasser said that the Arabs of Egypt and Syria had been able to "confront the Big Powers, banish imperialism and triumph over its agents."

The Union between Egypt and Syria, he said, had been inevitable. The Union had made them a force superior to cannons and atom bombs. "We shall have no rest until we have helped other Arab countries to free themselves from imperialism, to win independence and to achieve the Great Arab Union."

Addressing a rally at Hama Mena, he reiterated the determination of the Arab nations to liberate Palestine and all territories which had been usurped from them.

(*The Egyptian Gazette*, Cairo)

[Prev. ref. 2564:UAR:A]

B. **Resumption Of Diplomatic Relations With Britain:** Following the meeting in London on February 17 between the British Minister of State for Foreign Affairs, Mr. J. Profumo, and Mr. Kamal el Din Khalil, the United Arab Republic's new Charge *d'Affaires* in London, the tricolour flag of UAR was unfurled in Britain for the first time.

Diplomatic relations between London and Cairo were broken off on the occasion of the Suez War in 1956 and, as Egypt and Syria merged in 1957 to form the United Arab Republic, the young Republic's banner was never unfurled officially in Britain before February 17.

One immediate consequence of the resumption of diplomatic relations between Britain and UAR would be the termination of the arrangement whereby the Indian High Commission in London acted on behalf of UAR in respect of consular and other matters.

(*Dawn*, Karachi)

[Prev. ref. 3069:UAR:A]

C. **Russian Industrial Aid For UAR:** The Soviet Union announced on February 19 that it was planning to assist the United Arab Republic in building more than 100 major industrial projects.

According to Moscow Radio, the projects included six steel plants, six engineering works, oil, chemical, textile and food industry establishments, irrigation systems and hydro-engineering installations.

(*The Times*, London)

[Prev. ref. 2916:UAR:A]

VIET-NAM (RVN)

A. **Draft Budget For 1960:** The National Assembly approved on December 29, 1959 the 1960 draft Budget of VN $14,778,000,000 (piasters).

This was VN $447,802,000 less than the 1959 Budget of VN $15,225,802,000.

Presenting the estimates to the Assembly, the Chairman of the Budget and Finance Commission, Mr. Ha Nhu Chi, said that they were now prepared to promote the creation of democratic institutions in rural areas, the establishment of a solid economic structure and development in social and cultural fields. Expenditure on several departments was cut.

The estimated 1960 receipts totalled VN $14,778,000,000 including funds from external aid, representing a decrease of VN$493,000,000 or 3.26 per cent below the 1959 Budget. The decrease was due to the fact that reserve funds would not be used and also that taxes levied on imports were decreasing as part of the Government's plan to make the country self-sufficient.

A decrease of 14,62 per cent was expected in customs duties.

Receipts from land taxes and licences would remain the same, but those levied on incomes would be larger.

[At the official exchange rate, one US dollar is equivalent to 35 piasters.]

(*The Times of Viet-Nam*, Saigon)

[Prev. ref. 2825:RVN:A]

ASIA OUTSIDE ASIA

A. **France Explodes Her First Atomic Bomb In The Sahara:** On February 13, France exploded her first atomic bomb from the top of a

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

steel tower in the heart of the Sahara Desert. Thus, France joined USA, the United Kingdom and the Soviet Union as a member of the "Atomic Club."

Announcing the explosion of the bomb, a *communique* from President Charles de Gaulle's office in Paris said:

"The President of the French Republic and the Community make it known that at 7 a.m. on February 13, taking account of very favourable meteorological conditions, the order was given to explode an atomic device in the Sahara Desert of the Tanezrouft, south-west of Reggan. The explosion took place with the power and safety conditions envisaged.

"The device was placed at the top of a tower. The explosive used was plutonium.

"The safety of the populations of the Sahara and of the neighbouring countries was completely assured.

"General de Gaulle expresses the gratitude of the country towards the artisans of this success—Ministers and scientists, officers and engineers, industrialists and technicians.

"Thus France, thanks to her national effort, can re-inforce her defence potential, that of the Community and that of the West.

"Besides, the French Republic is better able to make its action felt for the conclusion of agreements between the Atomic Powers with a view to achieving nuclear disarmament."

At the same time, President de Gaulle sent the following telegram to M Pierre Guillaumat, Minister-designate for Atomic Affairs, who was present at Reggan (in Western Sahara):

"Hooray for France! Since this morning (February 13), she is stronger and prouder. From the bottom of my heart, my thanks to you and to those who, for France, have carried off this magnificent success."

President de Gaulle's reference to "national effort" in his *communique* was a reminder that France had carried through her research leading up to the successful test without assistance from her Western allies.

France's first atomic bomb was reported to be a bulky 10-ton device, with estimates of its yield ranging from the equivalent of 20,000 to 100,000 tons or more of TNT.

Plutonium is the only fissile material produced in France at present. Uranium-235 will not be produced until after the isotope separation plant is completed at Pierrelatte in south-east France. This is expected to take several years.

The test site stretches for about 250 miles south-west of Reggan in western Sahara. Reggan itself is about 750 miles from Algiers. The locality where the blast was set off is a bleak sandy and stony waste.

Some 600 scientists, soldiers and technicians watched the bomb go off.

M Francis Perrin, the French Atomic Energy High Commissioner, said that the explosion would produce "infinitely small dangers for the world and negligible ones for the African people."

Description:

According to an official commentator in Paris, one minute after the bomb went off, a huge white-capped, mauve-based mushroom cloud rose over the test site.

A censored extract of the military sound track of the test was played to newsmen at the French Defence Ministry in Paris on the afternoon of February 13.

As dawn began to break over the desert, a white rocket rose into the sky, then three orange rockets. Fifty seconds before the blast, there was a last red rocket.

Observers had their backs turned to the test tower, their faces hidden in crossed arms.

A commentator's voice described the mushrooming cloud, but it was not until 90 seconds later that the blast and shock-waves were heard and felt.

The balloon-shaped mushrom soon rose to a height of about two miles, with a snow-white top. Then curls of cloud spread out and a gap formed at its base as it swept towards the rising Sun.

One of those who witnessed the test said at the microphone: "Although I had my face hidden in my arms, I had the impression of a great light cutting through them. Anyone who did not follow orders and tried to watch the blast directly would have been blinded."

M Messner's Statement:

The French Defence Minister, M Messner, told a news conference in Paris on February 14 that although France had taken a crucial step, she had not yet reached her goal.

Work would go on, he said, to give France a striking force equipped with nuclear warheads and the means of delivering them.

This statement was interpreted in Paris to mean that France would concentrate on bombs which could be carried in aircraft before embarking on anything more ambitious.

Asked about the possibility of France developing a hydrogen bomb, he said that this would be considered.

He indicated that there were to be more atomic tests in the Sahara, but he did not indicate when.

Protests:

Many West African nations protested to France against the test. The United Nations General Assembly had called on France in November, 1959 to halt her plans to explode her atomic device in the Sahara.

An international team headed by the well-known British clergyman, Rev. Michael Scott, attempted to enter the Reggan area to stage a peaceful demonstration, but they were not allowed anywhere near it.

Despite an adverse vote in United Nations and a hostile campaign from many nations, particularly in Africa, France had maintained her right to carry out nuclear explosions in the absence of any general agreement.

France's position on disarmament has been that it must be global, covering both conventional and atomic weapons and controlled, and that conventional disarmament must be linked with a ban on nuclear tests and the destruction of existing stocks.

A message from Cairo on February 13 said that a wave of indignation had swept across Africa as the news of the test spread.

African leaders generally described the explosion as "an aggression against the African people." Broadcasts from a number of African capitals characterized the test as "a crime against humanity and defiance of United Nations resolutions."

Mr. E. C. Quaye, Chairman of Ghana's Council for Nuclear Disarmament, described the explosion as "an outrage".

In Cairo, authoritative UAR quarters said: "The French had so far been butchers of the Algerian people, but the explosion of the bomb shows that they have become butchers of the whole of Africa."

President G. A. Nasser of UAR said: "France has exploded an atomic bomb in our beloved Algeria, trying to eliminate it. We condemn atomic experiments being carried out in an Arab nation."

The Government-owned newspaper *Al Gomhouria* of Cairo commented that President Charles de Gaulle, who wanted to be a Napoleon, did not explode a bomb but exploded himself.

Radio Morocco said: "The threat of the explosion of the French atom bomb is a challenge to the very Charter of United Nations, a challenge which puts a strain on the fundamental principles of peace while the nuclear Powers are at present meeting at Geneva to seek agreement on the end of tests.

"Moroccan attitude to the French explosion is determined by two principles. The first, condemning all nuclear tests and, the second, particularly the French explosion on territory which does not belong to France."

Broadcasting from Accra a few hours after the test, the Prime Minister of Ghana. Dr. Kwame Nkrumah, said: "My Government has learned with horror that the Government of France, in total disregard of repeated protests by Ghana and other African States and of the resolution of the General Assembly of United Nations, has defied the conscience of mankind.

"My Government further notes a declaration by the French Prime Minister that this explosion is only the first of a series of similar explosions to be carried out by the Government of France.

"In these circumstances, my Government must take immediate action to safeguard the interests of the people of Ghana.

"Therefore, as a first step, my Government has decided to freeze as from today the assets of all French firms in Ghana until such time as the effects on the population of Ghana of the present atomic explosion and the future experiment referred to by the French Prime Minister become known."

The Moroccan Government decided on February 15 to withdraw its Ambassador in Paris and cancel the diplomatic Agreement between the two countries in protest against the French atomic test.

In Khartoum, the Sudanese Foreign Minister, Mr. A. Kheir, delivered a verbal protest to the French Ambassador on February 15.

He uttered the warning that any further atomic tests by the French would be vigorously resisted.

International Comment:

There was world-wide comment on the test.

The Indian Prime Minister, Mr. Nehru, said: "I inevitably regret any atomic explosion."

He told the Lok Sabha (House of the People) on February 17 that the French atomic test was a matter of deep regret and concern to India.

Replying to the point made in the House on the possible consequences of radio-active clouds passing over India, he said that Dr. H. J. Bhabha (of India's Atomic Energy Commission) had informed him that so far there had been no apparent effect of the atomic explosion.

While monitoring stations were keeping a watch, he disclosed that after the last Russian and American tests, it was found that the rise in the atomic radiation level in the atmosphere was much below danger-point.

In the United States, *The New York Times* said that the news of the explosion was received in Washing-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

ton with a mixture of resignation and regret.

The US State Department comment was that the detonation was not "unexpected".

The US President, Mr. D. D. Eisenhower, said that as far back as 1947 the United States delegate to the United Nations Atomic Energy Commission, Mr. Bernard Baruch, had argued that one of the great risks to be avoided was that of having many nations developing nuclear weapons.

He said it was only natural that first Britain and then France should develop a nuclear device in the circumstances of life existing today.

He hoped the major nations could reach the kind of agreement to make sure that other nations did not want to go to the expense of this kind of an armaments race and would "stop the whole thing in its tracks."

He added that it was not easy because the spirit of nationalism was felt not only by under-developed nations and peoples who wanted to be independent but also by everyone. Matters of pride and national prestige impelled the belief that things should be done at times which would not be necessary.

The official reaction in the Soviet Union came in the form of the following authorized statement issued by *Tass*:

"USSR has repeatedly urged the immediate ending of all nuclear tests. The action of the Government of France in disregarding the views of world public opinion and setting off an atomic bomb on February 13 cannot but be deplored. The Soviet Union believes that every further nuclear explosion, wherever it may take place, cannot but complicate the problem of the solution of total and universal disarmament, the over-riding problem of the day, and plays into the hands of forces which press for the continued nuclear arms race.

"If nuclear explosions should continue, the Soviet Government will naturally not be able to overlook it and fail to draw the proper conclusions for the sake of safeguarding the security of the Soviet Union."

The Soviet Prime Minister, Mr. N. Khruschev, who was then visiting New Delhi, told correspondents on February 14 that while it was regrettable that instead of working towards a cessation of atomic tests, France had exploded an atomic bomb in the Sahara, he thought that this test would not affect the Geneva Conference on nuclear disarmament.

He added: "France and General de Gaulle also want a *detente* and lessening of tensions."

The Afghan Prime Minister, Sardar Mohammad Daud Khan, criticised the French action in exploding the bomb.

He said in an interview in Kabul that it was surprising to see the French Government resorting to such an action at a time when other nuclear Powers had suspended their atomic tests and were discussing at a conference the question of a total ban on atomic explosions.

The Indonesian Government handed a Note to the French Ambassador in Djakarta expressed its deep regret that France should have carried out a nuclear test in the Sahara.

The Note said that the French Government had completely ignored the United Nations appeal to cancel the test and the French action was a challenge to the authority of United Nations.

The Japanese Government told France that her atomic test in Sahara had aroused "the fear that the hopes of mankind to see a complete ban on nuclear tests may be disappointed."

In Italy, 14 radio control stations throughout the country went into action to measure the radio-active 'fall-out' over the next 60 days.

The Italian Defence Ministry said in a statement that Italian experts were convinced that the danger to Italy was so small as to be "not worth taking into account."

Experts in South Africa said that there was little fear of radio-active 'fall-out' from the bomb explosion doing any harm to South Africa.

The West German Chancellor, Dr. Konrad Adenauer, told a gathering of students at Cologne that the French atomic explosion had made clearer than ever the danger that mankind faced unless nuclear weapons were banned.

He added: "I hope, in this connexion, that the banning of nuclear weapons can be made part of an overall control of both conventional and nuclear weapons."

A spokesman for the Canadian Prime Minister, Mr. John Diefenbaker, said in Ottawa that the French atomic test had increased the urgency for reaching an agreement on the cessation of nuclear weapon tests.

The Canadian Government had officially opposed any further atomic tests and supported the 1959 resolution in United Nations condemning the proposed French test.

Cyprus Radio announced on February 14 that the atmosphere over Cyprus had been affected by increased radio-activity following the atomic test.

It said that the normal radio-activity in the Cyprus atmosphere was 16 to 30 units, but on February 14, it rose to 600 units.

A spokesman for the Dutch Foreign Ministry said that the Ministry was awaiting further technical details before determining its attitude.

He added: "But, at this stage, we can say that we admire the technical and scientific ability of the French."

The French Socialist Party commented that the discussions now going on on banning nuclear tests made this an inopportune moment to carry out an experiment "so costly, so dangerous and so useless."

In London, on February 13, about 200 demonstrators carrying placards denouncing nuclear tests paraded outside the French Embassy.

A letter protesting against the explosion was handed to the Embassy by Earl Russell, the well-known British philosopher and President of the Campaign for Nuclear Disarmament.

The letter, addressed to President de Gaulle, said that the risks of nuclear war were enormously increased if more and more nations armed themselves with these suicidal weapons.

Afterwards, the demonstrators marched to No. 10, Downing Street, with a letter addressed to the Prime Minister, Mr. Harold Macmillan.

This letter said that the British Government was to blame for the present situation by a policy which encouraged lesser military Powers to make the bomb for themselves and so increase the chance of genocide.

The French atomic explosion was deeply deplored in United Nations lobbies, although the test hardly came as a surprise.

Even France's friends characterized the explosion as a tribute to General de Gaulle's stubbornness and not to his statesmanship.

Delegates of African and Asian States at United Nations met in New York on February 16 and criticized the French atomic explosion and ordered an enquiry into the possibilities of United Nations' action to prevent further atomic tests by France.

The United Nations Secretary-General, Mr. Dag Hammarskjoeld, told a news conference at UN Headquarters on February 18 that he stood by a previous statement expressing concern at the spread of nuclear military knowledge, but he declined to comment on the French atomic test.

He said: "Generally speaking, I think you do realize there are limits to the kind of comment the Secretary-General can make on current political developments."

He said that public condemnation by him of member-nations would be harmful to United Nations. It was for the Security Council and the UN General Assembly to pass such judgments.

SPORT

A. **National Hockey Championship:** The Services won the Indian National Hockey Championship in Calcutta on February 24 by beating Uttar Pradesh by four goals to nil in a replayed final.

The Services thus won the title for the fourth time.

The teams were:

Services: S. Laxman; Murthy and Shantaram; Deshmukh, Harbux Singh and Bhansode; Dogra, Peter, Haripal, Manuel and Bhola.

Uttar Pradesh: Shyamlal; Jhammamlal and T. Hussian; M. K. S. Dard, Jagjit Singh, and Hari Shankar; Caleb, Dharampal Singh, Karnail Singh, Om Prakash and Syed Ali.

ASIAN RECORDER

March 19—25, 1960

Regd. No: D-727
Vol. VI. No. 12

ADEN

A. **Budget For 1960-61:** The Budget for 1960-61 for the Aden Colony (known in New Delhi on February 19) put the estimates at £3,973,000, an increase of £262,000 on the approved estimates for the current financial year ending March 31, 1960.

A deficit of £71,000 this year would be met by a tax on soft drinks.

A statement on the Budget announced that a Five-Year Plan for 1960-64 would be put before the Legislative Council shortly.

A grant of £1,000,000 from the Colonial Development and Welfare Fund would assist the Plan. But, future developments were dependent on annual allocations from the general revenue.

About £7,200,000 was spent on development work in the Aden Colony during the past five years.

(*Middle East Economic Digest*, London)

AFGHANISTAN

A. **Sardar Mohammad Naim Khan On Differences With Pakistan Over Pakhtoonistan:** In a talk with American, French and Soviet newsmen in Kabul on February 27, the Afghan Foreign Minister, Sardar Mohammed Naim Khan, said that the completely negative attitude of Pakistan's present *regime* had jeopardized relations with his country.

He pleaded for the right of self-determination for the Pushtu-speaking people along Pakistan's north-western frontier.

He disclosed that he had wished to discuss the problem of Pakhtoonistan when he visited Rawalpindi on a Goodwill Mission in January, 1960, but his Mission failed because Pakistan refused to discuss the issue.

He discounted the likelihood of a diplomatic break with Pakistan but said that he was less optimistic about future relations than he was before his goodwill visit to Pakistan.

Sardar Naim Khan said that his visit to Pakistan in January, 1960 had only confirmed what Afghanistan was thinking, namely, that Pakistan's new *regime* did not recognize the existence of the Pakhtoonistan issue in contrast to the desire of the former Pakistan President, General Iskander Mirza, to find some sort of a way out.

Reviewing relations between Afghanistan and Pakistan, he said, the relations had deteriorated steadily since 1947. At that time, a "fake" referendum in the area (in 1947) ignored Pushtu nationalism by offering India and Pakistan as the only options for the Pushtu-speaking people. The subsequent Pakistani regimes jailed Pushtu leaders and tried to obliterate the national character of the Pushtu-speaking people.

Referring to Pakistan's six months' transit blockade of land-locked Afghanistan some years ago, he observed that the trend of relations between the two countries was "not good". What Pakistan had done before, she could do in the future.

INDIA

SUMMARY: Central Budget; Mr. Chou En-lai Accepts Mr. Nehru's Invitation; Mr. N. S. Khruschev Passes Through Calcutta; Textile And Cement Wage Boards' Reports; Punjab Budget.

A. **Central Budget:** Presenting the Government of India's Budget for 1960-61 to the Lok Sabha (House of the People) on February 29, the Finance Minister, Mr. Morarji Desai, proposed additional taxation totalling Rs. 23.53 crores to cover nearly one-fourth of the revenue deficit of Rs. 83.90 crores in 1960-61, which had been occasioned by higher outlays on development in the last year of the Second Five-Year Plan (1960-61) and increased defence expenditure because of the threat to the northern border.

He levied excise duty on eight new items and raised excise rates on five other commodities and the customs duty on alcoholic liquors, but made no proposals in the field of direct taxation.

Tin-plates and sheets, pig-iron and aluminium sheets and circles (with certain exceptions), internal combustion engines used for transport vehicles in industry and for agricultural purposes, cycle free-wheels and rims, electric motors, exposed cinema film and silk fabrics were all proposed to be taxed for the first time.

Apart from the increase in prices because of the duty on internal combustion engines, commercial vehicles and small and medium cars, motor-cycles and scooters were also taxed by extending to them the excise duty which was so far levied on larger passenger cars only.

He also raised the imposts on refined diesel oil and vaporizing oil (to correct the growing imbalance between production and consumption of diesel oil) and on electric fans, bulbs and batteries, levied an excise duty on machine-made soles and heels of materials other than leather or wood and withdrew the duty exemption enjoyed by fabrics produced from staple fibre yarn and cotton cut-pieces.

The changes in excise duties would bring a net revenue of Rs. 21.03 crores. The duty on liquors together with countervailing import duties would bring another Rs. 2.5 crores.

At Rs. 272.26 crores, he said, the defence expenditure in 1960-61 out of revenue account would go up by Rs. 28.56 crores over the revised estimate for the current year and by Rs. 29.58 crores over the original provision for 1959-60.

He explained that the Army (because of its "additional commitments," and expansion of the Territorial Army and NCC) would account for Rs. 26.75 crores and the Navy Rs. 3.46 crores of the increased expenditure. The expenditure on the Air Force would be less by Rs. 2.94 crores, although in 1959-60, the expenditure on the Air Force was expected to go up by Rs. 6 crores over the original provision.

There would be only a slight increase in defence expenditure out of capital account in the coming year—Rs. 37.74 crores compared to Rs. 36.48 crores (revised estimate) in 1959-60.

He also announced the decision to implement in its entirety the scheme of company taxation. The Wealth Tax on companies and tax on excess dividends was being formally abolished from April 1, 1960.

He proposed changes relating to the assessment of dividends paid out of profits taxed in the past and relating to companies holding less than 50 per cent share in the capital of another company. Certain changes in regard to deduction of tax at the source were also proposed.

The period of exemption from income-tax available to new industrial undertakings would be extended by another five years. The exemption limit for donations for charitable purposes would be raised.

Business incomes of co-operative societies other than those connected with agriculture, rural credit and cottage industries would be exempt only up to Rs. 10,000. Minor amendments in the Expenditure Tax Act and Gift Tax Act were also proposed.

The following is the Budget at a glance:

(In crores of rupees)

	Budget (1959-60)	Revised (1959-60)	Budget (1960-61)
Revenue	780.10	838.66	896.45
Tax Proposals			23.53
Expenditure	839.18	854.05	980.35
Deficit	59.08	15.39	60.37

Taxation Proposals:

The following were the taxation (indirect) proposals:

(1) Duty of Rs. 200 per metric ton on tin plates and tin sheets. Yield in full year was estimated at Rs. 2,08,000.

(2) Duty of Rs. 10 per metric ton on pig iron. Yield would be Rs. 60,00,000 a year. Pig iron used in the manufacture of steel would be exempt.

(3) Duty of Rs. 500 per metric ton on aluminium sheets and circles and Rs. 300 per metric ton on aluminium ingots. Estimated yield was Rs. 86,00,000.

(4) Duty of 10 per cent *ad valorem* on all types of internal combustion engines used as prime movers for transport vehicles. A lower rate of five per cent *ad valorem* on stationary types of these engines which are generally used in industry and for agricultural purposes. Revenue was estimated at Rs. 1,07,00,000.

(5) Tax on certain essential cycle parts. Rs. 2 on each free-wheel and Rs. 4 on each rim. Rs. 10 would be realized on each completed cycle without bringing into the excise net small assemblers of cycles and manufacturers of cycle parts. Annual yield was estimated at Rs. 1,00,00,000.

(6) Duty on electric motors and their parts ranging from 5 per cent to 15 per cent *ad valorem*. Estimated revenue was Rs. 46,00,000.

(7) Duty on exposed cinematograph films varying from 10 naye paise per metre to 50 naye paise per metre depending on the type of films. News reels and shorts will have a lower rate. Revenue was estimated at Rs. 75,00,000.

(8) Duty of 30 naye paise per square yard on silk fabrics. Annual yield Rs. 30,00,000. The handloom sector would not be affected.

The following re-adjustments in the existing rates were made:

(1) Levy of a duty ranging up to 15 per cent *ad valorem* on all types of motor vehicles. Revenue was estimated at Rs. 6,25,00,000.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

(2) Basic rate of excise duty on refined diesel oil to be further raised by 25 nP per imperial gallon. Revenue was estimated at Rs. 5,04,00,000.

(3) Excise duty on machine-made soles and heels of foot-wear made of materials other than leather or wood. Rate of duty 15 per cent *ad valorem*. Yield would be Rs. 20,00,000 a year.

(4) In textiles, the existing total exemption on fabrics reduced from staple fibre yarn and cut-pieces of cotton textiles and so-called fents would be removed. The former would now be on par with artificial silk fabrics. In the case of cut-pieces, the present definition was revised. Small specific duties at levels substantially below the fabric rates would be levied. Estimated yield would be Rs. 1,95,00,000. Of this Rs. 65,00,000 would accure to the States.

(5) The existing duties on electric fans, bulbs and batteries would be raised by 50 per cent with a suitable increase in the duty on components. Revenue would be Rs. 90,00,000.

(6) The possibility was being explored of removing hardship to the tea industry because of the levy of a number of taxes at various stages by different agencies. This was being done keeping in mind the financial interest of the concerned State Governments. To enable this to be done, the permissible maximum limit of excise duty was being raised from 19 nP to 30 nP per lb. This did not involve any change in the effective rates of the existing duty.

(7) A few other minor re-adjustments were also being made. These would bring an additional revenue of Rs. 27,00,000 of which Rs. 5,00,000 would accrue to the States.

(8) Customs duty: Following the changes in excise duties, provision was being made, where necessary, for the levy of countervailing import duties so that the indigenous producer was not placed at a disadvantage. The duty on liquors was raised to Rs. 150 per Imperial gallon of the strength of London proof or 120 per cent *ad valorem*, whichever was higher, from Rs. 120 per Imperial gallon of the strength of London proof or 100 per cent *ad valorem*, whichever was higher.

The following re-adjustments in the field of direct taxation were made:

(1) No change was being made in the rates structure of personal income-tax.

(2) The Wealth Tax on companies and the tax relating to excess dividend were abolished from the new financial year.

(3) In connexion with the new system of company taxation, two provisions were made in the Finance Bill, one relating to the assessment of dividends paid out of profits taxed in the past and the other relating to taxes on companies holding less than 50 per cent share in the capital of another company and have them taken into account in the revenue estimates.

(4) It was proposed to apply a uniform rate of 30 per cent for deduction of tax from both individuals and companies. In order that this change may not affect revenue receipts, the Income-tax Act would be amended to enable Government to collect from Indian companies the remaining 15 per cent as advance tax on dividends received by them. It was proposed in the Finance Bill to provide for the deduction at source from the payments to Preference shareholders of companies as in the case of any other dividend leaving the actual amounts of these dividends for the companies themselves to decide.

(5) The period for which exemption was available to new industrial undertakings was extended by a further five years.

(6) The limit up to which donations for charitable purposes qualified for exemption from tax was proposed to be increased from five per cent of total income or Rs. 1,00,000, whichever was less, to 7½ per cent of total income or Rs. 1,50,000 whichever was less.

(7) Amounts paid to scientific research associations and educational institutions to be used for scientific research would be allowed as deduction in computing the business income of the donor even if the scientific research was not related to such business.

(8) In respect of property constructed before April 1, 1950, the full amount of taxes levied by a local authority and borne by the owner would be allowed to be deducted in computing the taxable income from the property.

(9) While the business incomes of co-operative societies connected with agriculture, rural credit and cottage industries would continue to be wholly exempt from tax, business incomes of other societies would be exempt only up to a sum of Rs. 10,000.

(10) The proposed amendments to the Expenditure Tax Act provided for allowance for expenditure incurred on leave travel in India as well as education of children in India. It was also proposed to allow in full the taxes paid by an assessee to a foreign Government instead of only a portion as at present.

(11) The amendment to the Gift Tax Act, proposed, provided that the advance tax payable would be at the same rate as the tax payable on regular assessment. These changes were not expected to have any significant effect on revenue.

Net Effect Of Proposals:

The changes in the excise duties, exclusive of the revenue accruing to the States, were expected to bring an additional revenue of Rs. 21.03 crores. Customs duties were expected to bring Rs. 2.5 crores.

The total additional revenue would be Rs. 23.53 crores. The revenue deficit would thus be reduced to Rs. 60.37 crores and the overall deficit from Rs. 177 crores to Rs. 153 crores. The revenue deficit would be left uncovered and the overall deficit met by the expansion of Treasury Bills.

In framing his taxation proposals, Mr. Desai said that he had in mind something more than the immediate needs of the coming year. The proposals, particularly those widening the base of taxation, had been formulated with the needs of the Third Five-Year Plan in view. While direct taxation would be kept under constant and continuous review so as to make it yield the maximum resources, the bulk of the expansion in taxation would have to come from indirect taxation.

Budget Speech:

Introducing the Budget in the Lok Sabha (House of the People), Mr. Morarji Desai reminded the nation that the next financial year (1960-61) was the last year of the Second Five-Year Plan and care must be taken to see that the economy was in a state of healthy balance when the year ended and the Third Plan commenced.

Reviewing the estimates of the current financial year (1959-60) and outlining the Budget estimates for the coming year (1960-61), he said that the Budget for the current year (1959-60) had estimated revenue at Rs. 780.10 crores and revenue expenditure at Rs. 839.18 crores, leaving a revenue deficit of Rs. 59.08 crores. On the trend of actuals, revenue was now estimated at Rs. 838.66 crores and expenditure at Rs. 854.05 crores, leaving a deficit of only Rs. 15.39 crores.

The improvement of Rs. 58.56 crores in revenue was due mainly to better collections under Customs and Union Excises. The revenue under these two heads was now expected to yield Rs. 510.82 crores, Union Excise alone accounting for Rs. 350.82 crores.

With the progressive increase in production, the revenue had shown an all round improvement. Revenue from Income-tax, including Corporation Tax, was likely to go up by Rs. 5 crores, but the yield from Wealth Tax, Expenditure Tax and Gift Tax taken together would be less by Rs. 1.6 crores. The surcharge on iron and steel which was transferred to the Iron & Steel Equalization Fund was likely to yield Rs. 9 crores more while grants from the US Government under PL 480 would be Rs. 13 crores less.

Civil expenditure in 1959-60 was now estimated at Rs. 610.35 crores as against the original Budget of Rs. 596.50 crores, and defence expenditure at Rs. 243.70 crores against the original estimate of Rs. 242.68 crores. The increase of Rs. 13.85 crores in Civil Expenditure was the net effect of variations over a number of heads, as for example, debt services, transfer to the Steel Equalization Fund, expenditure on displaced persons, increased payment of States' share of Union excise duties and compensation to States for the loss in their share of Income-tax following the changes made in company taxation in the current year.

The revised estimate of the net defence expenditure on revenue account during 1959-60, he said, showed an increase of Rs. 1.6 crores over the Budget. This was due to an increase in the Air Force budget mainly due to liabilities carried over from 1958-59 on stores purchased from abroad and new proposals sanctioned during the year. There had been a reduction in Navy expenditure mainly due to less expenditure on stores.

Financial Year 1960-61:

Mr. Desai said that for 1960-61, on the basis of existing taxation, revenue was estimated at Rs. 896.45 crores and expenditure at Rs. 980.35 crores, leaving a deficit of Rs. 83.90 crores on revenue account.

Revenue from Customs had been put at Rs. 160 crores and Union Excise duties at Rs. 358.91 crores. Income-tax and Corporation Tax were likely to improve by Rs. 10 crores. Revenue from Wealth Tax would decline by Rs. 5 crores due to the merger of the tax on companies in their Income-tax. Interest receipts would go up by Rs. 7.44 crores, mainly due to the anticipated receipts from the two Steel Companies and the Khadi and Village Industries Commission. The share of Income-tax payable to the States in 1960-61 showed a decrease of Rs. 27.26 crores as a result of the merger of Company Income-tax in Corporation Tax. But it was intended to make good the loss by a specific grant till the next Finance Commission made its report.

Expenditure in 1960-61, he said, was estimated at Rs. 980.35 crores. Of this, Rs. 372.55 crores would be on Defence Services and Rs. 708.09 crores under Civil Heads.

Civil Expenditure showed an increase of Rs. 97.74 crores over current revised estimates. Expenditure on Debt Services was likely to be Rs. 9.45 crores more on account of the progressive increase in the Internal and External Debts. Development and Social Services including Community Development were expected to cost Rs. 27 crores more. The two self-balancing items of surcharge on iron and steel and grants under PL 480, for which corresponding credits were assumed in the revenue estimates, accounted for an increase of Rs. 15 crores. *Ad hoc* grants to the States to compensate them for the loss in their share of income-tax would be Rs. 23 crores more. The rest of the increase was spread over a number of heads.

Defence expenditure in 1960-61 was estimated at Rs. 272.26 crores, an increase of Rs. 28.56 crores over the current revised estimates. There was an increase in the estimates for the Army and the Navy while that for the Air Force would be less. The reduction in the Air Force estimates was mainly due to the inclusion in the current year's revised estimates of substantial amounts on account of liabilities carried over from the previous year.

The estimates of the Defence Services had been prepared against the background of the present threat to the Indian borders. It might be that if circumstances necessitated, additional funds would be asked for. He had no doubt that the Government would have the support of all sections of the House in taking all the measures necessary for ensuring the safety of the country.

Certain Special Factors:

In dealing with the estimates for 1960-61, he explained two or three matters which affected the estimates.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The first related to the Posts and Telegraphs Department. The existing arrangements had been reviewed, particularly against the background of the need to encourage the Department to build up adequate reserves against its growing capital investment. It had, therefore, been decided to place the P & T Department, with effect from next year (1960-61), in the same position as the Railways vis-a-vis General Revenues. In future, the P&T Department would pay a dividend to the General Revenues at the rate in force from time to time for the Railways on the mean capital at charge during the year. The balance of the surplus would be retained by the Department for strengthening its reserves, particularly the Renewals Reserve Fund.

The second concerned the Pay Commission. The annual expenditure for Government as a whole on the implementation of the Commission's recommendations including the interim relief already granted was of the order of Rs. 44 crores, which was likely to rise ultimately to about Rs. 55 crores per annum. The recommendations accepted by the Government took effect from July 1, 1959, but no provision was being made in the revised estimates for the current year as all payments would be made in 1960-61. The Budget for the new year (1960-61) included more than a year's provision for this expenditure.

The third special factor was about the growth of Civil Expenditure. The question of avoiding wastage and securing the maximum economy consistent with efficiency continued to receive close attention and various steps had been taken towards this end.

Capital Expenditure:

Mr. Desai said that the revised capital requirements for the current year (1959-60) were now estimated at Rs. 362.85 crores, a decrease of Rs. 57.29 crores.

The savings resulted mainly under two heads. The Railways now expected to spend only Rs. 85.03 crores against the original estimate of Rs. 121.81 crores. The net expenditure on purchase of foodgrains showed a fall of Rs. 21.01 crores due mostly to larger sale proceeds and recoveries.

Provision for next year (1960-61) stood at Rs. 370.84 crores. Outlay on industrial development, mainly on coal and oil development, would cost Rs. 30.56 crores more, Railways Rs. 35.78 crores more and Posts & Telegraphs Rs. 3.60 crores more. Foodgrains transactions would also involve an increase in the net outlay of Rs. 19.41 crores.

Furthermore, the estimates provided for Rs. 283.18 crores this year (1959-60) and Rs. 331.51 crores next year for loans to other parties and Rs. 221.74 crores this year and Rs. 176.74 crores next year for loans to other parties including Port Trusts, Government-owned Corporations and foreign Governments.

Plan Outlay:

Next year's (1960-61) estimate, he said, included a total provision of Rs. 889 crores for implementing the Plan —Rs. 173 crores in the Revenue Budget and Rs. 716 crores in the Capital Budget.

Of this, Rs. 64 crores in the Revenue Budget and Rs. 175 crores in the Capital Budget were for assistance to the States. In addition, the Railways would be spending Rs. 24 crores from their own resources and the States Rs. 251 crores. Thus, the total Plan outlay in the coming year (1960-61) would amount to Rs. 1,174 crores.

Over the five-year period of the Second Plan, the actual outlay in the public sector, after allowing for the usual short-fall in expenditure, would be about Rs. 4,600 crores. Investment in the organized private sector was expected to reach the Plan target. It might even slightly exceed it.

Borrowing Programme:

Mr. Desai spoke of the success of Government's borrowing programme in 1959-60 and said that for the coming year (1960-61) he was taking credit for a market borrowing of Rs. 250 crores.

He announced the Government's decision to issue Prize Bonds which would be placed on sale from April, 1960. The issue would be in the form of bearer bonds in two denominations of Rs. 100 and Rs. 5. The bonds would not carry interest and would be re-paid after five years. The holders, during the period, would participate in quarterly drawals of prizes, which would be free of income-tax.

With regard to Small Savings, he said, there had been a steady improvement in recent years. This year (1959-60), net collections were expected to go up to Rs. 82 crores against the Budget estimate of Rs. 85 crores. In the coming year (1960-61), credit had been taken for Rs. 90 crores.

Foreign assistance next year (1960-61), he said, was expected to amount to Rs. 362 crores, according to the latest information available.

He reviewed the assistance received from foreign countries during 1959-60 and mentioned the World Bank decision to consider the establishment of an International Development Association as an affiliate of the Bank. This body would help promote economic development in less-developed areas by providing additional finance on terms which would bear less heavily on the balance of payments position of the borrowing countries.

Economic Review:

Reviewing the economic situation in the country during the year (1959-60), Mr. Desai said that prospects for agricultural production in the current year (1959-60) were good.

Food production in 1959-60, it was hoped, would be around the same high level as 1958-59, although it was likely that there might be some reduction in the output of raw cotton and jute.

Industrial production had increased by about 7.4 per cent which was a substantial improvement over that of the previous two years. Notable was the increase in the production of iron, steel and aluminium. Increase in industrial production had been on account of fuller utilization of capacity. There had also been expansion in installed capacity in a number of industries. Progress was being made in the production of finished machinery and equipment. Construction of the first phase of the Heavy Electrical Project at Bhopal was nearing completion. The capacity of the Heavy Machinery Project at Ranchi was to be expanded so as to produce 80,000 tons of machinery a year. Indian shipping, which continued to expand, stood at 7,40,000 tons in 1959 and was expected to reach the Plan target of 9,00,000 tons by the end of 1960-61.

The foreign exchange reserves held by the Reserve Bank had maintained a measure of stability during the year. There had been some improvement in export earnings and some reduction in imports, but the major factor in the stability of our foreign exchange position had been the larger availability of external assistance.

The trends in money supply and credit indicated that the expansionary impulse in the economy had been fairly strong.

The stock markets had been buoyant practically throughout the year.

These pointers, taken together, indicated the need in the coming year (1960-61) for active vigilance in regard to domestic price trends and continued austerity imports, backed by accelerated efforts to step up exports.

The investments undertaken in the last few years were beginning to yield results and we should expect substantial increases in output in the coming years.

At the same time, the demands for domestic consumption and investment were increasing while the urgent need to build up exports remained. It was essential in this situation to ensure to the maximum extent possible that aggregate demand did not outstrip the supplies available.

It was vital, he declared, that the pace of development that would be reached at the end of the Second Five-Year Plan was not merely maintained but accelerated. That was the essential task of the Third Five-Year Plan. The first prerequisite for success for this was increased agricultural production. Other sectors of the economy had also to be developed rapidly if the economy was to grow rapidly enough over the next 10 or 15 years. The Third Five-Year Plan had to keep this perspective in view.

He called for restraint on consumption and for a high degree of fiscal and monetary discipline. It was vital that there should be a clear recognition of the urgency of economic development for preserving and strengthening the democratic values which they cherished.

The Economic Survey :

The Economic Survey for 1959-60 presented with the Budget emphasized that inflationary pressure should be firmly held in check in the coming year (1960-61) and the effort to increase production and savings accelerated.

According to it, there was need for a high degree of discipline in fiscal and monetary policies in 1960-61 to avert a further increase in prices in the immediate future and to maintain conditions under which the larger task of mobilizing resources for the Third Plan would be confidently taken in hand.

It pointed out that prices were already high and that demands for both consumption and investment were on the increase. With the scope for additional imports strictly limited because of the low level of reserves, continuance or resurgence of inflationary pressures was a positive hindrance to development.

The continued up-trend in prices and cost of living despite the increased agricultural and industrial production during the last year indicated the insufficiency of domestic resources relatively to the demands both by way of investment and of consumption.

Although food production had risen, it was considerably below the target fixed in the (Second) Plan and the imports of foodgrains had averaged about 3,000,000 tons a year for the last four years.

What was, therefore, needed obviously was both increased production and continuance of policies designed to restrain consumption and enlarge savings. The task of the policy was, therefore, to promote and foster the growth of investment on sound lines without creating in the process large or persistent imbalances in the system.

Referring to the needs of the Third Five-Year Plan, it said that it was essential at the next stage of development to orientate the investment programmes in such a way that the economy was able to increasingly support from its own resources a scale and pattern of investment that ensured more rapid growth in future.

The aggregate fall in the foreign exchange reserves since the beginning of the Second Plan amounted to Rs. 543 crores. This left little scope for any further drawing down. Hence, enlargement of export earnings to the maximum extent possible and continued rigour in import policy would for long have to be the basis of foreign exchange policy.

During the year (1959-60), the all-India cost of living index recorded a rise of about five per cent despite the favourable trends in agricultural and industrial production as compared to the previous two years. Agricultural production had risen from 114.6 to 131.0; industrial production increased at an even faster rate, but the index for 1959 was 117.9 as compared to 111.4 in December, 1958.

The pressure on resources since the beginning of the Second Plan had been aggravated by the sharp fluctuation in agricultural output. Although agricultural production in 1958-59 was the highest so far on record, the rise over 1956-57 was only about six per cent.

National income in real terms declined by 1.5 per cent in 1957-58. It went up by 6.8 per cent in 1958-59.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Taking the three years of the Second Plan, the rise was of the order of only 10.4 per cent. The increase in the total national income since 1950-51 amounted to about 31 per cent and *per capita* income to about 18 per cent. Since, on recent estimates the rate of population growth had of late been higher than assumed, the actual growth of *per capita* income over the period would be somewhat smaller.

FICCI Comment:

In a statement on the Budget issued on March 2, the Executive Committee of the Federation of Indian Chambers of Commerce and Industry agreed with the "basic approach" of the Budget but expressed disappointment over the absence of relief in direct taxation on companies as well as individuals.

It declared: "It must be firmly recognized by the authorities that high rates of taxation are bad for industry and harm the national interest."

It also drew attention to the general trend in foreign countries towards tax reduction which, in its opinion, had stimulated both savings and investment.

Urging a complete re-consideration of company taxation, it suggested that the tax on bonus shares should be abolished or at least reduced. It saw no justification for the continuation of the tax on gifts and expenditure.

In view of the appreciable increase in excise duties, it recommended that the excise administration should be overhauled. Instead of industrial undertakings being "policed" by the excise staff, the system of returns—as in the case of income-tax—should be introduced.

In its view, more excise duties should be merged with sales-tax.

Another point it made was that Mr. Desai had perhaps underestimated the yield from excise duties.

(*The Times of India, The Statesman* and *The Hindustan Times*, New Delhi)

[Prev. ref. 2533:INI:A]

B. **National Income:** According to latest official assessment (published on March 1), the rise in national income by the end of the Second Five-Year Plan period would be nearly 21 per cent as compared to the target of 25 per cent.

A provisional estimate placed national income (at 1948-49 prices) in 1958-59 at Rs. 11,570 crores—an increase of Rs. 740 crores over the figure for the previous year.

The national income was Rs. 8,650 crores in 1948-49, Rs. 9,100 crores in 1951-52, the first year of the First Five-Year Plan, Rs. 11,000 crores in 1956-57, the first year of the Second Plan.

The figure of national income in 1958-59 at current prices was not yet available. In 1957-58, the national income at current prices was Rs. 11,360 crores.

The *per capita* income at 1948-49 prices was estimated at Rs. 290.7 in 1958-59 as compared to Rs. 275.6 in 1957-58, Rs. 283.5 in 1956-57, Rs. 250.1 in 1951-52 and Rs. 246.9 in 1948-49.

The *per capita* income in 1958-59 at current prices was not yet estimated. In 1957-58, it was Rs. 289.1.

C. **Sino-Indian Border Issue—Mr. Chou En-lai Accepts Mr. Nehru's Invitation For Talks In New Delhi:** Replying to Mr. Nehru's letter (of February 5) on February 26, the Chinese Premier, Mr. Chou En-lai, accepted Mr. Nehru's invitation to visit New Delhi in order "to explore avenues which may lead to a peaceful settlement of the boundary issue."

He, however, suggested a meeting in April rather than in the latter half of March on account of pressing State engagements and that the exact date might be decided through diplomatic channels.

Speaking in the Indian Parliament on the subject on February 29, Mr. Nehru said that Mr. Chou En-lai's visit may take place in the last week of April, 1960.

Mr. Chou En-lai's 400-word reply was released by the Chinese Embassy in New Delhi on February 28 after its receipt in the Indian External Affairs Ministry.

The letter was very cordial and conciliatory in tone and expressed confidence that a meeting between the two Prime Ministers would lead to a "friendly and peaceful" settlement of the border question despite "temporary differences of opinion and certain unfortunate and unexpected incidents."

No reference was made to the Indian Note of February 12 setting out additional historical evidence in support of India's stand other than a promise to send a reply after due study.

The letter referred to Mr. Chou En-lai's "deep gratitude" for the "friendly invitation" to visit "the capital of great India" and meet the "great Indian people" who were fighting for world peace.

It concluded with the hope that "the long-standing friendly relations between the two countries" would be "consolidated and developed."

The following is the text of the letter:

"Dear Mr. Prime Minister,

"I thank Your Excellency for your letter of February 5, 1960, which was brought here on February 12 by the Indian Ambassador to China, Mr. G. Parthasarathy. At the same time, the reply to the Note of December 26, 1959 of the Ministry of Foreign Affairs of the People's Republic of China made by the Indian Embassy in China on the instructions of the Indian Government was also delivered by Mr. Parthasarathi to our Ministry of Foreign Affairs. The reply Note of the Indian Embassy will be answered by the Chinese Ministry of Foreign Affairs after studying it.

"You have in your letter agreed to the suggestion of the Chinese Government and myself for the holding of a meeting between the Premiers of China and India in the immediate future so as to explore avenues which may lead to a peaceful settlement of the boundary issue, and invited me to visit Delhi in the latter half of March. I express to you my deep gratitude for your friendly invitation.

"The Chinese Government has consistently held that the friendship between the Chinese and Indian peoples is eternal, that it is necessary and entirely possible to settle the boundary issue between the two countries in a friendly and peaceful manner, and that the two countries must not waver in their common desire for a peaceful settlement of the boundary issue on account of temporary differences of opinion and certain unfortunate and unexpected incidents. The Chinese Government, therefore, takes a positive attitude towards the forthcoming meeting and has confidence in it.

"As to myself, needless to say, I am very glad of the opportunity of once again visiting the capital of great India, meeting the great Indian people fighting for the prosperity, strength and progress of their Motherland and for world peace, and seeing you as well as other friends whose acquaintance I had the honour of making during my last visit. I particularly hope to see the dark clouds hovering between our two countries dispersed through our joint efforts, so that the long-standing friendly relations between the two countries may be consolidated and developed.

"Owing to reasons in connexion with State affairs, I shall come to your country in April. The specific date will be discussed and decided upon through diplomatic channels."

Kashmiri Muslims In Tibet—Chinese Rejection Of Plea:

It was stated in New Delhi on February 27 that the Chinese Government had rejected the Indian plea that Kashmiri Muslims resident in Tibet should be permitted to exercise their right to contact the Indian Consulate in Lhasa and apply for Indian citizenship if they so desired.

The rejection was contained in a Note received in New Delhi about a month before in reply to two exhaustive Indian Notes on the subject dated September 24, 1959 and October 29, 1959.

It was stated that the Chinese had reiterated the position taken by them in their Note of September 11, 1959, in which they had maintained that these people were Tibetan nationals. They, however, agreed to examine individual cases if the Government of India could adduce sufficient evidence to prove their Indian nationality.

According to information available with the Government of India, there were about 129 Kashmiri Muslim families (consisting of about 600 persons) in the Lhasa-Shigatse areas who are "potential citizens of India."

About 120 Ladakhi Lamas have returned to India since the Tibetan uprising. But a considerable number are still studying or undergoing theological training in various Tibetan monasteries.

[Prev. ref. 3166:INI:C]

D. **Calcutta Civic Address To Mr. N. Khruschev:** The Soviet Premier, Mr. N. S. Khruschev, arrived in Calcutta on March 1 on his way back after visiting Burma and Indonesia. Mr. Nehru reached Calcutta from New Delhi earlier to receive him.

In the evening (March 1), Mr. Khruschev was given a civic reception by the Calcutta Corporation.

Speaking at the reception, Mr. Khruschev said that USSR was the most powerful country in the world militarily, but it did not want to use that force of arms either in diplomacy or in politics.

He added: "The Soviet Union was the first to suggest general and complete disarmament."

He referred to his visit to Burma and Indonesia (from which he was returning) and said that he had frank, warm and friendly talks with the leaders of those countries. "Our visit of peace and friendship to India, Burma and Indonesia convincingly showed that the peoples of these countries, like the people of the Soviet Union, sincerely strive for peace and for developing and strengthening friendship and co-operation. Now that friendship between India, Burma, Indonesia and the Soviet Union has become stronger, our economic and cultural co-operation is developing further and deeper and our countries, as it were, are becoming closer to each other."

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The exchange of views he had had with Mr. Nehru and other members of the Government of India left on him very good impressions. "As a result of these meetings and talks, a conviction has grown in me that we have very much in common in the understanding of the basic questions of international politics, and our positions on most important world problems coincide.

"The concern for the preservation of peace is the main thing which agitated the people of the world. We may have different points of view on some questions, but we should treat these differences with understanding, show patience and restraint and realistically take into account the specific interests of every country.

"Why is it that our countries, having different social structures, are developing and strengthening friendly relations? It is because the basis of the foreign policies of the Soviet Union and India is laid on the principle of peaceful co-existence."

Mr. Nehru and Mr. Khruschev had some talks later.

Mr. Khruschev left Calcutta for Kabul on March 2.

E. **Letters Exchanged On Trade With Czechoslovakia:** India and Czechoslovakia exchanged letters in New Delhi on March 2 embodying trade arrangements between them for 1960.

India's trade with Czechoslovakia is governed by the Trade Agreement which was signed in September 1957. This Agreement was extended in May, 1959 and is valid up to the end of 1960.

The volume of trade between the two countries during the first 11 months of 1959 was about Rs. 7.40 crores.

(*The Statesman*, New Delhi)

[Prev. ref. 2589:INI:C, 2708:INI:C]

F. **Trade With Greece—Agreement Extended:** Letters were exchanged in New Delhi on March 2 between Mr. K. R. F. Khilnani, Joint Secretary in the Central Ministry of Commerce and Industry, and Mr. Nicholas Hadji Vassiliou, Greek Ambassador to India, extending the validity of the Trade Agreement between the two countries up to the end of 1960.

The Trade Agreement, which was signed on February 14, 1958, expired on December 31, 1959.

Under the Letters exchanged, sugar was added to the list of Indian commodities available for export to Greece.

(*The Statesman*, New Delhi)

[Prev. ref. 1902:INI:F]

G. **Indian Students In Britain:** According to figures released in New Delhi on February 23, there were, at the beginning of 1960, more full-time students from India than from any other oversea country studying at British universities.

Out of a total of 11,284 students from all overseas countries, 1,476 were from India. The next biggest contingent (938) came from the United States.

Of these 1,476 students—153 of them women—703 were pursuing post-graduate studies, while 713 were under-graduates. Nearly 200 were living in colleges or halls of residence, while the remainder were in lodgings or staying with friends.

The most popular subjects with Indian students in Britain were those grouped under the heading "Technology". Six hundred and fifty-nine of them were studying these subjects. Some 400 were studying arts, including economics, social studies and law; 161 were studying medicine; 205 pure science; 28 agriculture and forestry; 8 dentistry; and 6 veterinary science.

H. **General K. S. Thimayya Visits Pakistan Horse And Cattle Show:** General K. S. Thimayya, Indian Army Chief of Staff, arrived in Lahore on February 25 to witness Pakistan's Horse and Cattle Show.

Soon after his arrival, General Thimayya, accompanied by the Commander-in-Chief of the Pakistan Army, General Mohammed Musa, went to the Fortress Stadium, venue of the Horse Show, in a carriage drawn by four horses and later distributed the prizes.

(*Dawn*, Karachi)

I. **"Floating Fair" Launched:** The Prime Minister, Mr. Nehru, launched by radio-relay from New Delhi on February 27 *S.S. Jyoti*, a "floating fair" cargo of various types of Indian products on a 90-day voyage to various countries in West Asia and Africa.

The ship slid into the sea from the Victoria Dock, Bombay.

It would visit the ports of Karachi, Bahrein, Khorram-Shahr, Aden, Port Sudan, Djibouti and Massawa, Mombasa and Dar-es-Salaam.

The Central Food Minister, Mr. S. K Patil, is the President of the "Floating Fair" Committee.

Its aim is to display Indian products in bulk at various ports.

The Chairman of the "Floating Fair" Committee, Mr. Murarji Valdya, said that promotion of exports would provide the ultimate solution to the problem of shortage of foreign exchange.

In his speech, Mr. Nehru said that in the past India used to export conventional goods such as jute and tea. But, in a changing world, it was not good to depend on them alone. The range and variety of our exports had to increase and include a much larger number of goods.

He stressed the fact that India exported not with any idea of exploiting other countries to her advantage. India's approach was a friendly and co-operative approach, one of mutual advantage. And this was the message that the *S.S. Jyoti* was carrying with her.

[Prev. ref. 3076:INI:D]

J. **Bhakra Generators Declared Fit After Accident:** Expensive equipment at Bhakra, which was feared to have been seriously damaged by the accident in August, 1959, was pronounced to be fit for use on February 27.

The final estimate of the loss due to the accident would, therefore, be substantially below the official estimate of Rs. 1,55,00,000, which in turn was well below the several unofficial estimates that had gained wide currency soon after the accident.

After vigorous testing with imported instruments, it was announced that all the three stators, one rotor and five generators, which had remained submerged for days, would be put into commission "according to schedule". These items together cost Rs. 62,00,000 and the damage to them was initially estimated officially at about Rs. 55,00,000 or a third of the total damage. But, now, it was not expected to exceed "a negligible amount".

The Superintending Engineer in charge of the left bank power house, Mr. Gulab Singh, announced that the 90,000 kw unit No. 1 would now be switched on some time in October or November, 1960 as planned earlier, Unit Nos. 2, 3, 4 and 5 would be commissioned later in that order.

Two stators and one rotor, which were in position at the time of the accident were subjected to "slow baking" by passing a low voltage current through them for several weeks to dry them. They were subjected to shock tests by passing a 34,000-volt current through their coils. The coils of the third stator, which was in the power house but had not been erected at the time, were removed to the workshop and dried and tested separately.

All the five generators—two which had been erected and three of which were still in their cases when the Sutlej waters invaded the power house within an hour of the accident—were completely dismantled, dried and tested at a special workshop erected near the power house and were declared fit for use.

The makers of the generators, a Japanese firm, insisted at one stage that the repair job could only be done in their workshop in Japan, but after testing the repaired instruments, they recorded their approval.

Mr. J. L. Hathi On Damage:

The Central Deputy Minister for Irrigation and Power, Mr. J. L. Hathi, told the Lok Sabha (House of the People) on March 7 that the total loss due to the submergence in water of the equipment of Bhakra power house was estimated at between Rs. 20,00,000 and Rs. 25,00,000.

He added that the parts of the three generators which were submerged had been reconditioned and stator and rotor windings had been subjected to final tests and had been found to be satisfactory. The turbine parts had also been re-conditioned. Final tests on these would be possible only after the turbines are put into commission. A Japanese expert who came specially to examine the turbines was satisfied with the condition and had expressed the view that they would function properly.

(*The Hindustan Times*, New Delhi)

[Prev. ref. 3037:INI:I]

K. **Textile Wage Board's Award Accepted By Central Government:** In a resolution published on March 3, the Central Government announced its acceptance of the unanimous report of the Textile Wage Board and commended its findings to the employers and workers in the industry for voluntary adoption.

Since the Board's recommendations regarding dearness allowance involve detailed work which may give rise to differences of opinion, the Government announced its decision to appoint a National Tribunal to facilitate the expeditious execution of these recommendations.

Should difficulties, doubts or differences of opinion arise over other matters, the resolution said, these should be solved by direct discussion between employers and workers and, if necessary, with the help of the State Governments.

In the event of any serious differences of opinion over the interpretation of the report, however, the Government of India would be willing to set up "suitable machinery" to resolve them.

Placing the Government resolution and a copy of the Wage Board report before Parliament, the same day

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

(March 3), the Central Labour Minister, Mr. G. L. Nanda, expressed satisfaction that a wage award of great importance had been accepted with reasonable speed.

By far the most important recommendation of the Board gives the 800,000 textile workers substantially increased wages. In category I mills, the average increase will be Rs. 8 per month, and in category II mills, Rs. 6 per month. It will, however, be provided that no worker in a category I mill gets an increase less than Rs. 7 per month and in category II less than Rs. 5 per month.

As regards dearness allowance, the Board recommended that it should be paid in all units and that it should vary according to the cost of living index.

Moreover, the Board also provided that three-fourths of the dearness allowance should be merged with the basic pay. The remaining 25 per cent should vary according to the changes in cost of living.

(*The Statesman*, New Delhi)

[Prev. ref. 2818:INI:I]

L. **Cement Wage Board's Recommendations:** It was announced in New Delhi on March 1 that the Central Government had accepted the recommendations of the Central Wage Board for Cement Industry, fixing a minimum wage of Rs. 94 and suggesting the phasing of their implementation in case of large increases as a result of it.

At the same time, however, the Government stated that a study of work-loads in the industry would be desirable and that, while the implementation of the recommendations of the Wage Board as referred to in the report need not be delayed on this account, it felt that such a study should be undertaken as early as possible and the recommendation regarding wage increase in the second phase, wherever applicable, might be implemented after this study was completed.

On the industry's plea that it did not have the capacity to pay the wages recommended on the existing retention prices, the Government proposed "to determine the extent of the increases in the ex-works price payable to the producers consequent on the implementation of the recommendations of the Wage Board and to grant such increases with effect from the date when such recommendations are implemented."

The Government requested the employers, workers and State Governments to take immediate steps to implement the recommendations of the Wage Board in letter as well as in spirit and expressed the hope that "the parties will show a spirit of accommodation in interpreting the recommendations, and difficulties, if any, will be solved by direct discussions between them."

The Wage Board, in its recommendations, said that where the lowest total minimum wage recommended by the Board would result in a very big increase over the present wage, the increased wage should not be given in "one jump" but should be so fixed that the full incidence came into effect one year after the initial increase was given.

The Wage Board for Cement Industry was set up by the Government in April, 1958, with Mr. M. R. Meher as Chairman.

(*The Statesman*, New Delhi)

[Prev. ref. 1977:INI:V]

M. **Bengal Chamber Of Commerce And Industry Annual Meeting:** Addressing the annual meeting of the Bengal Chamber of Commerce and Industry in Calcutta on February 26, the President of the Chamber, Mr. J. D. K. Brown, said that if doctrinnaire conceptions were not permitted to interfere with the economic development of the country's resources, progress during the Third Five-Year Plan period could take them a big step forward to the point of a take-off for a self-sustaining economy.

He said that the rate of increase in industrial production in 1959 was higher than ever achieved. That this was possible despite the difficult foreign exchange situation was a credit to the Indian Government and the monetary authorities. The industry could also claim "some praise" for this as it had managed to adapt itself to local shortages of raw materials from time to time.

Referring to the jute industry, he warned of the stiff competition in recent months from Pakistan and said that it was unfortunate that at such a time the Indian mills should be severely handicapped by a substantial rise in the cost of raw material. The relative absence of foreign inquiry, coupled with Pakistani competition, indicated the need for lower raw jute prices.

He felt that this was a prerequisite to any expansion of production by the unsealing of looms.

Referring to the decision to set up a Wage Board for the jute industry, he said that the Board, if it felt it should recommend an increase in wages, should also appreciate the importance of ensuring a corresponding increase in productivity.

As for the tea industry, he said that it was most unwise to impose a punitive level of taxation at a time when it had to face increasing competition from other countries.

(*The Hindustan Times*, New Delhi)

[Prev. ref. 2157:INI:E]

N. **Assam Legislature—Governor's Address:** Addressing the Assam Legislative Assembly in Shillong on February 26, the Governor, General S. M. Shrinagesh, said that while every effort for the peaceful liberation of Chinese-occupied Longju would continue to be made, "we are determined to resist any further aggression or encroachment into the territory which indubitably belongs to us."

He said that the occupation of Longju was the climax of a series of aggressive movements by the Chinese all along our northern frontier. "We have had the closest cultural and other relations with the Chinese for the past 2,000 years. We have championed the cause of China in UN and other forums. That is why we have been even more shocked by the incursions into our territory."

In a tribute to the armed forces, he said: "As one associated with the military forces throughout my service career, I can say with confidence that the preparedness and morale of our forces are excellent. The people of Assam have reacted to the threat of aggression with calmness, fortitude and determination to meet any eventuality. The strength of the armed forces is derived from the strength and morale of the civilian population and, in this regard, our population in Assam is setting an extremely good example."

He expressed satisfaction at the improvement of the relations with Pakistan and said that many border disputes had already been settled and that, before the rainy season, most of the boundary between Khasi and Jaintia Hills district and Cachar district of Assam and Sylhet district of East Pakistan would be demarcated.

Referring to the situation in the Naga Hills, he regretted that there had been a recrudescence of violent activities and raids and said that the Naga hostiles had intensified their criminal activities in the bordering villages of Sibsagar and United Mikir and North Cachar Hills districts and that they had also committed acts of sabotage on the North-East Frontier Railway.

The Government was sparing no pains to meet the gigantic problem posed by the fact that approximately 160,000 out of a total of 240,000 people were affected by food scarcity. The relief measures being taken were estimated to cost over Rs. 3 crores. Flood control schemes costing Rs. 5.95 crores had been taken up for execution during the Second Plan period.

Work on the oil refinery at Gauhati was gaining in pace and momentum and this would give a fillip to small industries in and around Gauhati. The big pulp mill project at Lamsakhang had been finalized. Small paper mills would grow along with the big project. The Nahorkatiya gas would be used for starting a fertilizer plant at Namrup in the public sector. The Government had also decided to start a jute mill on a co-operative basis with 200 looms and another in the private sector comprising 100 looms. Besides these, a re-rolling mill at Gauhati and a bicycle factory and other industries would be coming up in the next year or two.

O. **Bombay Legislature—Governor's Address:** Addressing a joint session of the Bombay Legislature in Bombay on March 2, the Governor, Mr. Sri Prakasa, expressed confidence that the Bombay Legislature would conduct its deliberations on the Bill for the bifurcation of Bombay State in a spirit of understanding and goodwill.

He said: "I am sure the parting will be as good brothers and that we shall continue to live as good neighbours."

He said that this special session of the Legislature had been called primarily to give legislators an opportunity to offer their views on the proposed Bill for the bifurcation of the State and that it would be a "brief" session.

He outlined the main achievements of the bilingual State during 1959 and said that notwithstanding the highly successful manner in which the affairs of the bilingual Bombay State had been conducted during the past three years, it was now proposed to bifurcate it into two States, namely, Bombay (Maharashtra) and Gujerat.

The achievements outlined included:

Second Five-Year Plan: Serious difficulties of foreign exchange and equipment handicapped the implementation of the Plan in earlier stages. Seventy-three per cent of the total Plan outlay of Rs. 350 crores would have been spent by the end of the current year (1959-60) and the spending of the balance would be "within the realm of possibility" in the final Plan year.

Co-operatives: The State Government had taken a decision in November, 1958 to cover each village with co-operatives. In the past year, the co-operatives had attained a coverage of 85 per cent of the villages and 35 per cent of the rural population. It was hoped that by 1961 it would be possible to achieve a 100 per cent coverage of villages and at least 60 per cent of the population.

State Trading in Foodgrains: The question of State trading in foodgrains was very much linked up with zonal arrangements and, therefore, the question had been kept pending till the Central Government's policy was clearly known. The State Government was not in favour of the zonal restrictions on the movement of foodgrains and the Central Government had been requested to do away with the zonal system or at least enlarge the zones.

Irrigation: As a result of the extensive irrigation programme implemented in the First and Second Plan periods, an additional irrigation potential of 5,00,000 acres had been created till June, 1959.

Industry And Power: The State produced 30 per cent of the total electricity generated in India of which 70 per cent was consumed by industries in the State. A Master Plan

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of industrial development of the State had been prepared after studying the potentialities in different parts of the State.

Industrial Production: Although the general index of industrial production had maintained a steady upward trend since the planning began, there had been some decline in the rate of growth in 1959 mainly because of the restrictions on the import of raw materials. The cotton textile industry, a major industry in the State, was seriously affected and a scheme had been prepared to help that industry.

[Prev. ref. 1914:INI:J]

P. **Mysore Legislature—Governor's Address:** Addressing a joint session of the Mysore Legislature in Bangalore on March 2, the Governor, Mr. Jayachamaraja Wadiyar, said that his Government had been making continuous efforts to improve the pace of progress during the current year as well as next year.

If the amounts provided in the Second Plan for the current and next years were fully utilized, he said, it would mean that the State would have fulfilled a Plan of nearly Rs. 140 crores as against the original target of Rs. 145 crores. "This is a satisfactory achievement by any standards."

He informed the members of the Legislature that "as a result of the very convincing case made out by my Government," the Planning Commission had agreed to an outlay of Rs. 39.63 crores for the State Plan for 1960-61 and that the Central Government had agreed to give assistance to the extent of Rs. 16.5 crores. They had further consented to provide additional assistance of Rs. 1 crore, if the expenditure under 'Irrigation' particularly on Tungabhadra left and right canals and under 'Power' demanded it.

(*The Hindu*, Madras)

[Prev. ref. 2157:INI:E]

Q. **Punjab Budget:** The Punjab Government's Budget estimates for 1960-61 presented to the State Assembly in Chandigarh on February 26 by the Finance Minister, Dr. Gopichand Bhargava, revealed a surplus of Rs. 1.69 crores.

No fresh taxation was proposed.

Revenue receipts and expenditure for the year were estimated at Rs. 59.42 crores and Rs. 57.73 crores respectively.

The Government decided to abolish electricity duty in the case of industrial concerns which had installed their own generators for the production of power for their own use. The loss in revenue on this score was estimated at Rs. 9,00,000. This would reduce the surplus to Rs. 1.60 crores.

The revised estimates for the year 1959-61 disclosed a surplus of Rs. 5.72 crores against the deficit of Rs. 32,00,000, the revenue receipts being Rs. 56.89 crores and revenue expenditure Rs. 51.17 crores.

He announced that a beginning would be made this year with a scheme of crop insurance. At one selected centre in each district, two important crops would be insured against weather failure in an area of 100 villages.

Since premium receipts were expected to be below the indemnity liability in case of total failure of crops "a reserve fund of Rs. 75,00,000 would be created to meet any exigency that may arise". A beginning would be made with a contribution of Rs. 1,00,000 for this fund in 1960-61.

Nearly Rs. 1,85,00,000 would be spent next year on flood control and drainage schemes.

Another Rs. 41,00,000 would be spent on pilot schemes for fighting waterlogging by digging shallow tube-wells and lining water channels in the worst-affected districts. Dr. Bhargava made no reference to the scheme of compulsory service for digging drainage channels.

As a concession to Class IV employees, he announced an increase in their daily allowance from 62 nP to Re 1 while on duty in "ordinary localities", from 75 nP to Rs. 1.25 in Delhi and Madras, and from Re 1 to Rs. 1.62 in Bombay and Calcutta. "These rates will take effect from April 1, 1960 and will bring Class IV employees in the State at par with their counterparts serving with the Government of India".

In a general review of the State's economy, he said that as compared with the start of the Second Plan, foodgrains output had increased by 34 per cent, cotton by 18 per cent, sugarcane by 35 per cent and oilseeds by 50 per cent. "Thus, the Second Plan targets for foodgrains and oilseeds have already been exceeded."

The culturable area under irrigation had doubled since Partition and another 750,000 acres would be brought under irrigation by schemes already under execution.

Major industries had increased their output significantly. For example, cotton yarn output had increased from 11,200,000 lbs in 1958-59 to 11,600,000 lbs in 1959-60, cotton cloth from 57,900,000 yds to 60,800,000 yds; sugar from 77,000 tons to 80,000 tons and hosiery goods from Rs. 3½ crores worth to Rs. 3¾ crores.

There had been a 20 per cent increase in the output of tools and 16 per cent in that of bicycles and bicycle parts.

Work on the construction of an airfield in Spiti would be taken up during 1960-61.

The airfield, which would be located at Pangmo and would cost Rs. 1,84,000, would be complete in the Third Plan period. "Yet on all considerations it has been decided that it is imperative to start work on it much in advance."

Of the total of Rs. 44,00,000 provided in the Budget for Lahaul and Spiti, over Rs. 14,00,000 would be spent on the construction of roads and bridges. The construction of a ropeway over the Rohtang Pass into Lahaul had also been provided for.

For closer administrative supervision of the whole area, a Deputy Commissioner would be posted at Keylong in Lahaul, with an SDO for Lahaul and another for Spiti under him.

About Rs. 6 crores had been provided for further work on the Beas dam and Beas-Sutlej link projects. A sum of Rs. 2,91,00,000 was provided for design work relating to the right bank power house at Bhakra.

About Rs. 41,00,000 had been provided for creating two special divisions in the Irrigation Department to implement measures against waterlogging.

[Prev. ref. 2552:INI:K]

R. **Congress Working Committee On Kerala Election Results:** The new Congress Working Committee, which held its first meeting in New Delhi on February 27 under the presidentship of Mr. N. Sanjiva Reddy, felicitated the people of Kerala on the success of the democratic forces in the mid-term Election in the State.

The Working Committee reviewed the Kerala developments leading to the formation of a Congress-P-SP coalition Government in the State and passed the following resolution: "The Working Committee notes with satisfaction the results of the mid-term elections in Kerala and congratulates the people and the democratic forces on the success they have achieved. The Working Committee sends its good wishes to the people of Kerala."

The Working Committee also discussed at length Congress organizational questions and decided to call a session of the All-India Congress Committee early in June, 1960 at Poona to consider various proposals on the re-organization of the Congress and its work.

The A-ICC would consider in detail the report of the five-man Committee on the subject.

Two More Members Of Working Committee Named:

On February 26, the Congress President, Mr. N. Sanjiva Reddy, announced that he had appointed Hafiz Mohammad Ibrahim and Miss Abha Maiti (from West Bengal) as members of the Congress Working Committee.

Miss Abha Maiti was also appointed as the third A-ICC General Secretary. [Mr. Sadiq Ali and Mr. G. Rajagopalan, members of the Working Committee, were appointed A-ICC General Secretaries immediately after the Bangalore session on January 18, 1960.]

One more seat now remains to be filled on the 21-member Committee.

Congress Parliamentary Board Named:

The Congress Working Committee constituted on February 27 the Central Congress Parliamentary Board.

It consisted of Mr. N. Sanjiva Reddy, Congress President, Mrs. Indira Gandhi, Mr. Jagjivan Ram, Mr. U. N. Dhebar, Hafiz Mohammed Ibrahim and Mr. Kamaraj Nadar.

In the new Parliamentary Board, Mrs. Indira Gandhi replaced Pandit G. B. Pant.

It was learnt that Mr. Nehru, Pandit Pant and Mr. Morarji Desai would generally attend the Parliamentary Board meetings as special invitees.

The Working Committee also announced the composition of the Central Congress Disciplinary Action Committee.

It consisted of Mr. Morarji Desai, Mr. Jagjivan Ram, Mr. Lal Bahadur Shastri, Mr. Balwantray Mehta and Mrs. Sucheta Kripalani.

Next Congress Session In Gujerat:

The Working Committee also announced on February 27 that the next plenary session of the Congress would be held in the new State of Gujerat early in 1961, and the next meeting of the A-ICC at Poona in June, 1960.

The Congress Committees of Orissa and Madhya Pradesh had also requested that the next Congress session be held in their States, but the Working Committee favoured Gujerat.

S. **World Agriculture Fair Ends:** The World Agriculture Fair which opened in New Delhi on December 10, 1959 ended on February 29, 1960. It was open for 81 days.

Presiding over the concluding ceremony, Mr. Nehru said that the Fair had helped clear the minds of the farmers visiting the capital about the need of marching with the times and improving the age-old farming methods.

He said that the 25,000 to 30,000 farmers who came to see him had stated that they

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

were impressed with the Fair and proposed to put into action what they had learnt.

Some of the advanced countries had put up imposing pavilions in the Fair. "But what had impressed me most were the pavilions of the States which showed that much work in agricultural field had been done there and progress had been recorded in many corners of the country. Our aim should be to spread that progress throughout India."

The Central Co-operation Minister, Dr. P. S. Deshmukh, said that nearly 3,200,000 people had visited the Fair and ten Seminars on matters connected with farming had also been organized during the past 11 weeks.

Rajasthan, he said, topped the list of awards in the State sector and was awarded four medals. Madras and Punjab got the first awards for the architecture of their pavilions. The first award for display went to Madhya Pradesh. In the national sector, the Atomic Energy Commission got first prize.

T. Hindu Religious Endowment Commission Set Up: An official Press Note issued on March 1 announced that the Government of India had appointed a five-man Commission, with Dr. C. P. Ramaswami Aiyar as chairman, to "carefully examine" and make recommendations in regard to certain questions connected with Hindu public religious endowments in the country.

The Press Note said:

"For some time past, the Government of India has been giving anxious consideration to the desirability of undertaking Central legislation and other suitable steps for ensuring better administration and proper management of Hindu public religious endowments throughout India. In this connexion, it has been felt that certain questions connected with such endowments should first be carefully examined by a Commission to be appointed for the purpose.

"The Government has, accordingly, decided to appoint a Commission with Dr. C. P. Ramaswami Aiyar as chairman and Mr. Sankar Saran, retired Judge of the Allahabad High Court, Mr. Mahabir Prasad, Advocate-General, Patna, Swami Harinarayananand, General Secretary, Bharat Sadhu Samaj, and Mr. P. Kameswara Rau, retired Commissioner, Hindu Religious Endowments Board, Madras, as members, to conduct an inquiry and make recommendations to the Government in the matter.

"The terms of reference of the Commission are as follows:

"(a) To examine generally the institution of Hindu religious endowments and to recommend the classes of such endowments which should be treated as public religious endowments.

"(b) To inquire into the manner in which Hindu public religious endowments are being managed and the resources thereof are being utilized, and to recommend ways and means for the proper management of such endowments and the proper utilization of their resources.

"(c) In particular, to inquire into the manner in which holders of offices in relation to Hindu public religious endowments are being chosen, whether by way of succession, nomination or otherwise.

"(d) To examine whether the existing arrangements in regard to the manner in which holders of such offices are being chosen are satisfactory and if not, to suggest ways and means for improving the same.

"(e) To inquire into the report on any other matter relevant to any of the matters specified above, which, in the opinion of the Commission, requires to be inquired into."

The Commission is expected to submit its report to the Central Government by September 30, 1960.

Mr. S. P. Sen Varma, officer on special duty in the Legislative Department of the Ministry of Law, will act as Secretary to the Commission.

The Commission will have all the powers of a Commission of inquiry under the Commissions of Inquiry Act, 1952.

IRAQ

A. **One Communist Party Refused Licence:** It was learnt in Baghdad on February 24 that the Interior Ministry had rejected an application by Mr. Zeki Khairi seeking a licence for the Ittihad Shaab (People's Union) Party, which was originally called the Iraq Communist Party.

The Party was re-named after the licensing earlier in February, 1960 of the rival Iraq Communist Party led by Mr. Daud el Sayegh.

The Interior Ministry's letter of rejection said that the law forbade the existence of two political parties with similar objectives and policies.

(*Baghdad Radio*)

[Prev. ref. 3125:IRQ:A]

B. **Trial And Sentence Of Persons Charged With Attempting To Assassinate Gen. A. K. Kassem:** The trial began in Baghdad on December 26, 1959 of 78 persons on the charge of attempting to assassinate the Prime Minister, General Abdel Karim Kassem, on October 7, 1959. Twenty-two of them were tried *in absentia*.

Opening the proceedings, the President of the Court, Colonel Fadehl Abbas Al Mahdawi, reviewed four alleged conspiracies against the Iraqi Republic since the Revolution of July, 1958 and added as the fifth the one relating to recent incidents on the Iraq-Iranian border.

He referred to President G. A. Nasser (of the United Arab Republic) who was alleged to have helped the conspiracy, as a "little Pharaoh" and a "base Hitler", without any religion, nationalism or morals and attacked the Shah of Iran for threatening Iraq, together with "the little puppet-traitor", King Hussein of Jordan.

The Prosecutor-General, Col. Majid Mohammed Amin, in a two-hour speech (during which he accused the Baath Party of being the author of the plot), called for the death penalty for 75 of the accused. The punishment for the other four was left to the discretion of the Court.

He said in his indictment that the assassination plan had been referred to Cairo and Damascus and President G. A. Nasser had cabled his approval and full support.

According to the Prosecutor-General, the plotters had received 4,000 Iraqi dinars (£4,000) which they had spent on a car and weapons.

The plotters had been taught to handle guns and grenades by men trained in Damascus. Twice, they had hired a flat in the area in Baghdad where the attempt was to be made. The assailants had used tear-gas to cover their escape. They had left behind the body of one of their number, and this had led to their discovery. The following day (October 8, 1959) one of the accused, a 21-year-old student, Sameer Aziz Najem, told the Court that he and five others had fired at Gen. Kassem. The banned Arab Socialist Baath Party had arranged for their arms. That party, said Najem, stood for "unity, freedom and Socialism" and Gen. Kassem was an obstruction to their policies. The Party was working in the interests of the United Arab Republic.

Najem quoted another accused, Eyad Saeed Thabet, as having said that after General Kassem's death, nationalists in the Iraqi Army were to take over.

He also quoted another among the accused, Shaker Helaiwa, as saying that the United Arab Republic was prepared to send arms and money, provided it was requested by Fouad Al Rikabi, former Iraqi National Guidance Minister, who was being tried in his absence.

Najem, Eyad and Halaiwa admitted charges of complicity in the plot. The other 54 pleaded not guilty to similar charges. One of the accused was a 22-year-old girl student.

Halaiwa told the Court that the plot to assassinate Gen. Kassem was to have been followed by a liberation army entering Iraq along a road linking Baghdad with the United Arab Republic. Other roads in Iraq were to be destroyed to prevent the entry of troops. Iraqi Air Force planes were to be sabotaged to delay their take-off.

He deposed that he had met Col. Abdel Hamid Serraj, Syrian Interior Minister, in Syria. Col. Serraj was alleged to have told him that he approved of the assassination plot, but that President Nasser had preferred diplomatic methods.

The ADC to Gen. Kassem, Major Kassem Amin Janabi, who was driving with General Kassem when the attack was made, told the Court earlier that more than 100 bullets had hit the car and four of them had hit General Kassem.

The pistols, guns and machine-guns found on the accused were produced in Court.

Sentences:

On February 26, Colonel Fadehl Abbas Al Mahdawi, sentenced 17 persons to death for complicity in the attempt on Gen. Kassem's life.

Fifty-five others were sentenced to terms of imprisonment ranging from six months to hard labour for life. Six persons were acquitted.

No recommendation for mercy was made in the case of Eyad Saeed Thabet, said to be the ring-leader of the plot, who had voluntarily confessed his guilt, but Colonel Mahdawi recommended to General Kassem—who must approve all the death sentences—to reprieve Sameer Abdul Aziz Najem who had also pleaded guilty. General Kassem was also asked to act—"for services rendered" in the case of Shaker Ibrahem Helaiwa, who had confessed and exposed the plot and who was sentenced to life imprisonment.

The sitting of the Court lasted more than 10 hours. Of the 17 people sentenced to death, 11 have already fled from Iraq and were tried in their absence. One was Fuad Rekabi, Minister of Development in General Kassem's first Cabinet: he is reported to be in the United Arab Republic.

Among those sentenced to death was a citizen of the United Arab Republic, Ahmed Hamid Marie, who was alleged to have been sent from Syria to Iraq to plot. Marie's wife, Ysra Saeed Thabit, was acquitted but was bound over for a sum of £3,000 to be of good behaviour or undergo three years' rigorous imprisonment.

The Court ordered £2,640 to be paid out of the confiscated property of the accused as compensation for the death of General Kassem's driver in the assassination attempt and for injuries to eight others, including General Kassem's ADC.

The Court also ordered the payment of £117 and £458 as damages to a public transport bus and General Kassem's car.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The Court accused the United Arab Republic of using its Baghdad Embassy, it diplomatic bag in an attempt to fulfil President Nasser's "dream of an empire from the Atlantic Ocean to the Persian Gulf." The Baghdad Embassy was denounced as "a centre for plotting against Iraq." The Embassy's wireless net-work was said to have been used for transmitting conspiratorial messages and the diplomatic bag for bringing in treacherous literature. The Embassy's Second Secretary, Towfeq Abaza, was alleged to have been the contact-man between the plotters and President Nasser.

ISRAEL

A. **Budget For 1960-61:** The draft Budget for the financial year beginning April 1, 1960 was presented to the Knesset (Parliament) on February 15, somewhat later than usual.

The estimates amounted to a total of I£1,574,000,000. The Ordinary Budget accounted for I£1,029,000,000 and the Development Budget for I£532,000,000.

The largest item on the expenditure side was defence with 27.8 per cent of the State Budget.

The following allocations were made: agriculture I£110,000,000, housing I£67,000,000, yearly allocation for the Jordan diversion scheme I£26,000,000, industries and handicrafts I£65,000,000, transport, including port development I£73,600,000. (I£5.04 = £1).

NEPAL

A. **Mr. Bharat Shamsher Asks For Inquiry Into Chinese Incursions:** Mr. Bharat Shamsher, leader of the Gorkha Parishad, Nepal's main Opposition Party, urged the Prime Minister, Mr. B. P. Koirala, on February 28 to investigate reports of Chinese aggression and infiltration along the northern border.

In a memorandum to Mr. Koirala, he mentioned five specific instances:

(1) A Chinese survey party had penetrated into the Lipu area of north-west Nepal and turned back after completing its job.

(2) Chinese troops were collecting taxes from people in the Limi area in north-west Jumla district. The Chinese were building roads from Taklakot to Khojarnath in Tibet which, when completed, threatened to cut through Nepal.

(3) The Chinese demanded the return to Tibet of Tibetan refugees and threatened to take them back forcibly. The scared villagers came to Khatmandu.

(4) In the Solo Khumbu area badges carrying pictures of Chinese leaders had been distributed.

(5) The Chinese had penetrated into the Olangchung Gola area in the north-east.

[Prev. ref. 3161:NEP:A]

B. **Industrial Development Corporation Begins Work:** The Nepal Industrial Development Corporation, set up with the object of providing an impetus to the country's industrialization, began functioning on February 26.

At a news conference, the Minister for Commerce and Industries, Mr. Ram Narain Misra, announced that the Corporation was now ready to receive applications for loans or participate in equity investment in the industries of the country.

He said that the Corporation would provide land for industry with power, water transportation and other facilities at a reasonable rent or on an instalment basis. It would also provide technical guidance on plant specifications, production, lay-out, management control, etc.

The Corporation's loans may be in US dollars, Indian or Nepalese rupees. The Corporation's loan and equity participation in 1960 may amount in all currencies to about Rs. 1 crore in Nepali currency.

[Prev. ref. 2280:NEP:B]

PAKISTAN

A. **Visit Of Shah Of Iran And President Of Turkey:** The Heads of the States of Iran and Turkey, the Shah of Iran and President Celal Bayar, arrived in Karachi on February 20.

They were welcomed at the airport by the President, Field-Marshal Mohammed Ayub Khan.

The Shah, accompanied by his wife, Queen Farah, was the first to arrive at 2.55 p.m.

The President of Turkey, accompanied by the Turkish Foreign Minister, Mr. Fatin Zorlu, landed two hours later.

Mr. Celal Bayar arrived in Lahore on February 21.

The Shah of Iran and President Ayub Khan went to Lake Chando, about 90 miles from Karachi, on February 21, for a duck shoot.

The Shah and Queen Farah, accompanied by F-M Ayub Khan, arrived in Lahore on February 23.

The following day (February 24), the Shah and Mr. Celal Bayar witnessed a horse and cattle show.

Joint Statement On Fifth Anniversary Of CENTO:

In a Joint Statement issued in Lahore on February 24 marking the fifth anniversary of the Central Treaty Organization (CENTO), the Shah of Iran, Mr. Celal Bayar of Turkey and F-M Ayub Khan of Pakistan stated that the prosperity of the people of Pakistan, Iran and Turkey was the surest way of making the Treaty effective.

The following is the text of the Joint Statement:

"It is a happy coincidence that on the occasion of the fifth anniversary of the Central Treaty Organization we are foregathered in this historic city of Lahore. At this auspicious moment our thoughts and friendly feelings go to Her Majesty Queen Elizabeth II and President Dwight D. Eisenhower, the Heads of States of our other partners in this Organization.

"We take this opportunity to re-iterate our resolve to work in full partnership and with singleness of purpose for the peace and security of the region. This Organization came into being for the purpose of safeguarding the peace, integrity, economic well-being and sovereignty of the member-nations. More than one development in the region has amply justified its *raison d'etre* as an instrument of peace. The Organization has to continue to be vigilant until the threat to the security and stability of its members disappears.

"We firmly believe in and have ever adhered to the principle of non-interference in the internal affairs of all nations, near or far, and naturally expect the same respect by others for this principle which constitutes the basis of peaceful relations among nations.

"The past year has seen the Organization gain in strength. A Permanent Military Deputies Group has been instituted and Area Economic Projects have been promoted.

"The prosperity of the people of the area is the surest means of making the Treaty effective and it is towards this end that our earnest efforts are directed. Here is a fruitful field in which close collaboration among the participating countries is a vital necessity.

"In this world where there is so much fear and suspicion of each others' motives, internationally controlled disarmament will undoubtedly contribute to greater confidence among nations. At the same time we hope that the efforts directed at the elimination of the real causes of world tensions may prove to be successful. However, we believe that until such an atmosphere of confidence comes about like-minded peace-loving nations have no alternative but to co-operate in safeguarding their legitimate rights and security.

"We are firmly wedded to the conception of human freedom and our adherence to the Treaty demonstrates our determination to preserve the way of life which we have chosen for ourselves."

On February 25, the Shah of Iran and Mr. Celal Bayar visited the Warsark Project near Peshawar, which is one of the big irrigation projects of Pakistan. F-M Ayub Khan accompanied them.

The Project includes the construction of a dam over the river Warsak with the help of Canadian engineers.

The Shah of Iran and Mr. Celal Bayar left Karachi for their respective countries by air on February 27.

F-M Ayub Khan, who saw them off, told newsmen later that he had discussed "organizational matters" relating to the Central Treaty Organization with the two distinguished visitors.

He said that the three Heads of States had also discussed matters connected with the economic development of their countries. In this context, Pakistan's adverse balance of trade had also come up for discussion. At present, the foreign aid received by Pakistan had to be utilized to off-set this adverse balance.

Answering questions, F-M Ayub Khan said that he had informed the Shah and Mr. Bayar of the recent developments in Afghanistan.

(*Dawn*, Karachi)

[Prev. ref. 3066:PAK:A]

B. **Agreement With UN For Aid Under Special Fund:** On February 23, Pakistan entered into a general agreement with United Nations for assistance under the Special United Nations Fund.

[The Fund provides assistance in fields essential to integrated technical, economic and social development in the less-developed countries.]

The Fund has already approved two Pakistan projects for assistance. The total amount involved was $2,282,100.

One of the projects is for exploration of minerals and the other for soil survey.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Pakistan, it was said, had sent a request for assistance for two more projects. One of them is for engineering, education and training, and the other management, development and supervision training in East Pakistan.

[Prev. ref. 3028:AOA:A]

C. **Ordinance On Medical Qualifications:** The Government of Pakistan promulgated on February 23 an Ordinance called the Medical Qualifications (Information) Ordinance.

It requires persons qualified in the different branches of medicine, irrespective of whether they are in Government employment or not, and of whether they are Pakistani nationals or not, to furnish their particulars to the Central Government within a month from the date of promulgation of the Ordinance.

Categories of persons to whom the Ordinance applied are persons holding qualifications in allopathic medicine, qualified dentists, nurses, nursing orderlies, health visitors, mid-wives, assistant mid-wives, sanitary inspectors, malaria inspectors, dispensers, compounders, pharmacists, physio-therapists, masseurs, X-ray and hospital laboratory technicians and medical instrument repair technicians.

The Ordinance was promulgated to collect data regarding the man-power situation for purposes of long-term planning in the field of health.

(*Dawn*, Karachi)

[Prev. ref. 3068:PAK:H]

D. **Mr. M. A. Khuhro Acquitted:** Mr. Mohammed Ayub Khuhro, a former Defence Minister, was acquitted of the charge of cheating the Government by a special Anti-Corruption Court at Dadu in Hyderabad district on February 24.

The prosecution had alleged that Mr. Khuhro had obtained a permit for the purchase of a car by misrepresentation of facts, thus evading import restrictions.

This was the second case against Mr. Khuhro. In 1959, he was sentenced to five years' rigorous imprisonment and a fine of Rs. 1,50,000 on a charge of attempting to sell a car in the black market. Later, he was released on bail and his appeal was pending before the Supreme Court.

(*Dawn*, Karachi)

[Prev. ref. 2726:PAK:F]

SUDAN

A. **British Consortium To Build Textile Mill In Khartoum:** It was announced in London on February 25 that one of the largest orders ever to be negotiated in Sudan for a textile mill worth £6,000,000 had been secured by a consortium of British companies against world-wide competition.

The consortium comprised the English Electric Company Limited, Platt Brothers (Sales) Ltd., and Marples Ridgway and Partners.

The mill is to be built in Khartoum for Mr. John Theodoracopulos, President of the Sudan-American Textile Industry, John Theodoracopulos Company Ltd.

The cost of the mill is being financed from American and British sources.

The mill is expected to start operation in 1961. By 1962, it will be in full production with 3,000 employees. It is expected to have an output of 75,000,000 yards of cloth a year. This will be used to meet the demands of a rapidly expanding market.

(*The Egyptian Gazette*, Cairo)

ASIA OUTSIDE ASIA

SUMMARY: Warsaw Treaty Powers' Political Consultative Committee; Mr. D. D. Eisenhower on US Nuclear Arms For Allies; House Of Commons Debate On Supplying Nuclear Weapons For West Germany; US Foreign Aid Programme; FAO Report On Mechanization Of Agriculture.

A. **Warsaw Treaty Powers' Political Consultative Committee Meeting:** There was a one-day meeting in Moscow on February 4 of the Political Consultative Committee of the Warsaw Treaty Powers.

The Conference was attended by the representatives of Albania, Bulgaria, Hungary, the German Democratic Republic, Poland, Rumania, USSR and Czechoslovakia. There were also Observers from China, North Korea and Mongolia.

Also taking part was the Commander-in-Chief of the Warsaw Treaty armed forces, Marshal Koneiv.

The Soviet Prime Minister, Mr. Nikita Khruschev, reported to the Conference on the new substantial reduction of the armed forces undertaken by the Soviet Union and on the position of USSR at the forthcoming 'summit' meeting in May, 1960.

Communique:

A *communique* issued at the end of the Conference said that the Conference discussed the most important problems of the present international situation and exchanged opinions on such major problems as general and complete disarmament and the conclusion of a Peace Treaty with Germany.

It said that in the course of a comprehensive exchange of views, representatives of the Warsaw Treaty Powers co-ordinated their future actions towards the consolidation and development of the present relaxation of international tensions.

It pointed out that the exchange of views revealed complete unanimity both in the estimate of the international situation as well as on the specific issues discussed.

Declaration:

The Political Consultative Committee also adopted a Declaration.

The Declaration emphasized that at present, as never before, there were favourable conditions for fruitful talks on disarmament between the Eastern and Western States.

All member-States of the Warsaw Treaty expressed their desire to become parties to a future Agreement on general and complete disarmament.

It said: "The States participating in the Conference regard the Soviet Union's decision on a new big reduction of her armed forces as an initiative facilitating agreement on total and universal disarmament. Since its establishment, the Warsaw Treaty Organization has reduced the armed forces of its member-States by 2,596,500 men and the present unilateral reduction of the Army of USSR will raise this total to 3,796,500.

"The States represented at the Conference urge the NATO member-States, especially those which have the biggest military power, to respond to the unilateral reduction of the armed forces of USSR by a reduction of their own armed forces.

"The Governments of USSR, Poland, Czechoslovakia, Rumania and Bulgaria—members of the Warsaw Treaty Organization belonging to the 10-nation Disarmament Committee—will instruct their representatives in the Committee to facilitate to the utmost its fruitful work and to press for the early drafting of a Treaty on general and complete disarmament.

"The participants of the Conference express the hope that the Western Powers will also make their contribution to the early solution of the disarmament problem.

"The balance of forces in the world is changing increasingly in favour of those who stand for the termination of the race in rocket, nuclear and other arms, for the liquidation of the 'cold war', for the peaceful co-existence of all States regardless of their social systems and ideology.

"A situation has developed where any attempt by any aggressive States to resort to arms for the solution of international disputes would result in the immediate and complete rout of the violator of peace.

"It is hoped that all parties to the Geneva talks will exert maximum effort to secure in the near future the discontinuance of all kinds of nuclear weapons tests in the atmosphere, on the surface, underground and under water.

"If the efforts directed towards the conclusion of a Peace Treaty with both the German States do not enlist support and a solution of this problem encounters subterfuges, the States represented at the Conference will have no alternative but to conclude, jointly with other States that are willing to do so, a Peace Treaty with the German Democratic Republic and also to settle the issue of West Berlin on this basis.

"The Warsaw Treaty member-States reaffirm that they will continue to strive for the improvement of relations between the countries of the East and the West and for the development of all forms of international co-operation.

"Being convinced that the task of the conclusion of a Non-aggression Pact between NATO and the Warsaw Treaty Organization, far from losing its significance, is becoming increasingly important with every passing year, the participants at the Conference have deemed it necessary to declare that this proposal still stands. They are ready at any time to sign a Non-aggression Pact with NATO member-States.

"At present, on the eve of important discussions between the statesmen of the East and the West, on the eve of the 'summit' meeting, the member-States of the Warsaw Treaty Organization believe that it is highly important that all States should do their utmost to create a situation that would facilitate a successful outcome of the forthcoming 'summit' talks."

Chinese Stand On A Disarmament Agreement:

The leader of the Chinese Observer team, Mr. Lang Sheng, an alternative member of the Chinese Communist Central Committee's Politburo, in an address to the Conference declared that international agreements on disarmament and other matters not signed by China would not be binding on China.

US State Department Statement:

Commenting on the Declaration issued by the Warsaw Treaty Powers, the American State Department said in a statement on February 5 that the Soviet Union should provide "practical confirmation" of its disavowals of aggressive intentions.

It found such disavowals difficult to reconcile with what it called the "Soviet threat to take unilateral action with regard to Germany".

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

It made clear its conviction that a Non-aggression Pact between the NATO and Warsaw Treaty Powers was unnecessary in view of the obligations assumed under the United Nations Charter.

It said that United States' participation in NATO and other regional defence organizations was based upon her conviction that such organizations of 'free world' countries contributed to the realization of the goal through their successful demonstration that aggression cannot succeed.

(*The New York Times* and *Tass*)

[Prev. ref. 2933:AOA:M, 2989:AOA:B, 3133:AOA:A]

B. **US Nuclear Arms For Allies—Mr. D. D. Eisenhower For Liberalization:** President D. D. Eisenhower said at his news conference in Washington on February 3 that he favoured liberalizing the MacMahon Act which forbids the United States to give nuclear weapons to the Western allies.

He added that he had always believed that the United States should not deny its allies what the potential enemy already had. The allies should not be treated as 'junior members' of a firm who were to be seen and not heard.

Such a liberalization, he thought, would be in the interests of the United States; it should apply to those countries in which the United States had confidence, countries which they were sure would stand by the United States in time of trouble.

He believed that where the United States was allied with other nations and was trying to arm herself in such a way as to make certain of her defence, she should try to arm those allies in such methods and ways as would make that defence stronger and more secure.

He would not, even if the law permitted, give away information that was still withheld from the Soviet Union. But, when the Soviet Union had the information, it was pretty hard for him to understand why the United States did not do something with the allies as long as they themselves stood firmly with the United States against possible communist aggression.

The newsman who brought up the question asked the President whether he wanted to put nuclear weapons back in bases in France, from which they were withdrawn because of a dispute about the control of the nuclear weapons they carried. But the President did not deal with this point.

The White House Press Secretary, Mr. James Hagerty, said later that the US Administration was exploring the possibility of amending the MacMahon Act.

(*The New York Times*)

[Prev. ref. 2814:AOA:Q]

C. **Nuclear Weapons For West Germany—Debate In British House Of Commons:** The British House of Commons endorsed on February 11 the British Government's policy of treating West Germany as an equal NATO ally, entitled to have the weapons available to the allies.

It rejected by a majority of 89 votes a Labour Opposition motion censuring Government's policy towards West Germany on nuclear weapons. The voting at the end of a two-day debate was 322 to 233.

Mr. Hugh Gaitskell, Leader of the Opposition, said that to give West Germany nuclear weapons, even without control of the nuclear warheads, before the Paris East-West 'summit' meeting would prejudice the 'summit' conference.

He said that he still favoured German rearmament. It was necessary to get the Americans to accept their responsibilities in Europe. But that was a very different thing from arming the Germans with nuclear weapons.

He added: "It would be utterly foolish for us not to recognize the fears of the Poles, the Czechs and the Russians as far as Germany is concerned".

He asked whether the Supreme Allied Commander in Europe had the sole personal responsibility for deciding when nuclear weapons were to be used in Europe. Did he first of all have to obtain the consent of the American Government?

Answering Mr. Gaitskell's point, the British Foreign Secretary, Mr. Selwyn Lloyd, said that all NATO weapons—conventional and atomic, including tactical weapons—were controlled ultimately by a political authority which was, in fact, a council of their Governments.

He warned against the dangers of a neutralized Germany, trying to play off East against West. It was much safer to have West Germany associated in a free alliance of Western partners.

He extended full support for President Eisenhower's proposal for a partial nuclear test ban. The personality of Mr. Nikita Khruschev had largely contributed to the progress being made with Russia towards peaceful co-existence.

The Defence Minister, Mr. Harold Watkinson, defended West Germany's right to have nuclear weapons without control of war-heads.

(*The Times*, London)

[Prev. ref. 2016:AOA:B]

D. **Canadian-US Satellite To Be Launched In 1961:** It was announced in Washington on February 14 that an Earth satellite would be launched jointly by the United States and Canada some time in 1961.

The US National Space and Aeronautics Administration (NASA) said that the launching would form part of its programme of international co-operation in space sciences.

The Canadian satellite, known as *Top-Side*, would be launched to obtain knowledge of the upper levels of the ionosphere, the electrically-charged regions of the upper atmosphere.

NASA said that soundings made by satellites would be of particular interest to Canada in connexion with special communications problems at high altitudes and in Arctic regions.

Top-Side would be put into a Polar orbit.

It was announced in January, 1960 that a joint satellite launching by Britain and the United States would take place in 1961.

(*The New York Times*)

E. **Unidentified Object Circling Earth:** The United States Defence Department announced on February 10 that an unidentified object was circling the Earth and that it might be of Soviet origin.

The object was orbiting over the North and South Poles. It was the first object of such a nature picked up by the space surveillance net-work operated by the US Navy.

The US Defence Department said that about a dozen man-made objects, now moving around the Earth in varying orbits, were being monitored. All of these, however, had been previously reported from the United States and the Soviet Union.

It described the unidentified object as being "slightly smaller than the carrier-rockets used to launch America's *Discoverer* satellites."

On February 11, the US Defence Department reported that the object was circling the Earth once every 104½ minutes. Its apogee, or highest point above the Earth, was 1,074 miles, while its perigee, nearest approach to the Earth, was 134 miles.

About the origin of the mystery object the Secretary of the US Air Force, Mr. Dudley Sharpe, told a news conference in Columbus (Ohio) on February 11 that it was probably a casing from an American *Discoverer* satellite.

He said the casing of the *Discoverer* measured 19.2 feet and radio-telescope observers had estimated the length of the mystery satellite at 19 feet. This close comparison, he said, could indicate that the missile was of US origin.

US Air Force officials said on February 12 that the so-called mystery object could be the capsule of *Discoverer VIII* launched by the United States in November, 1959.

Officially, the object remains a mystery. But, a US Air Force spokesman described as interesting the speculation that it might be the *Discoverer VIII*. He added that the Air Force could not confirm or deny that such was the case. The Air Force had not suggested that this object was of Soviet origin.

It was stated that several facts supported the theory that it could turn out to be *Discoverer VIII*. The capsule of this satellite was never recovered, but radio signals showed that it had separated from its launching rocket. The US Air Force lost track of the capsule and officials said it was impossible to tell if it was still in orbit.

[Prev. ref. 3045:AOA:R]

F. **New Planet Discovered:** Scientists in Khazakstan (USSR) claimed on February 11 that a new small planet had been discovered accidentally while photographing the constellation of Capricorn.

The newspaper *Khazakstan Pravda* quoted the Director of Khazakstan Astro-Physical Institute, Mr. M. Karimov, as saying that the scientists were put on the track of the planet by a student of Moscow University, Edward Venisuk, who spotted it in 1957.

He was said to have discovered it accidentally while trying to photograph another small planet in the constellation of Capricorn. The photograph was not very clear, but, Mr. Karimov said, his Institute had constructed a new type of apparatus which confirmed the discovery.

[Prev. ref. 2782:AOA:X]

G. **US Foreign Aid Programme For 1960-61—Mr. D. D. Eisenhower's Request To Congress:** On February 16, President D. D. Eisenhower requested Congress to approve a foreign aid programme for the coming year (beginning July 1) amounting to $4,175,000,000.

In a special message to Congress, Mr. Eisenhower declared that the Mutual Security Programme was essential to peace.

He said that increased amounts of assistance were expected to be given to India

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

and Pakistan in the fiscal year beginning July 1 from the Development Loan Fund (DLF).

He did not specify the amount of increase but it was unofficially reported that India would receive about double the amount she received in 1959.

It was also reported that Pakistan would receive a significant increase.

President Eisenhower's message to Congress said: "Of inescapable interest to the United States and the world today is the increasing assumption of self-government by the peoples of the great continent of Africa, especially in the area south of the Sahara. This vast area deserves and commands the full attention and assistance of the 'free world' if it is to develop its institutions and its economy under freedom."

In his request for Appropriations for Special Assistance Programme, he included $20,000,000 for the improvement of education and training in Africa south of the Sahara.

Military assistance would account for a total of $2,000,000,000 of President Eisenhower's total request.

He pointed out that this was more than was requested or provided for the present fiscal year. The amount requested was the result of careful and detailed review of the needs of the allies of the United States to enable them to maintain a level of combat effectiveness.

For defence support programmes, he asked for $724,000,000 — or $111,000,000 less than he asked for in 1959.

President Eisenhower's request also included the following: Special assistance $268,000,000; Bilateral technical assistance $172,500,000; United Nations Technical Assistance Programme $33,500,000; Bilateral programmes with countries in Latin America $1,500,000; Development Loan Fund $700,000,000; Contingency Fund $175,000,000; and other programmes $101,000,000.

This last request would permit, among other things, continued participation in the UN Programme for peaceful uses of atomic energy, United Nations Children's Fund and refugee programmes.

(*The New York Times*)

[Prev. ref. 3150:AOA:B]

H. **FAO Report On Mechanization Of Agriculture:** A Report by the Food and Agriculture Organization published in Rome on February 8 said that farm mechanization had increased by 70 per cent in the past decade, while the number of farm animals in use had decreased by seven per cent. The figures for 1957 were cited as the latest available.

In 1957, there were 8,728,000 tractors in the world, excluding the Soviet Union and China, compared with 5,149,000 in 1949.

Ninety-three per cent of the world's total number of tractors was concentrated in North America, Europe and Oceania. The remaining seven per cent was spread over various countries in Latin America, Far East, West Asia and Africa—regions which account for 65 per cent of the world's arable land.

It said that one of the reasons why mechanization was expanding so far was the more favourable prices obtained for farm produce.

Other reasons for mechanization were the rising costs of labour, a greater variety of machines more suitable to local conditions and increasing machine-consciousness, coupled with widespread Government encouragement.

In Europe, in 1957, there was one tractor for every 148 acres of arable land. Within the region, however, France, Italy, Portugal and Spain and the East European countries could use more tractors. In Britain, West Germany and Switzerland, the peak of tractor-use had been reached. The demand now was for better designed machines and replacements.

The sharpest increase in the number of tractors was recorded in West Asia, but 30 per cent of them were working in Turkey and UAR.

In the Far East, only Japan, Pakistan, India, Philippines and Ceylon possessed a significant number of tractors (in 1957). However, the number of tractors alone did not provide a true indication of the extent to which mechanical power was used on farms, since this was governed by the hours and type of work performed by tractors as well as their horse-power.

Turning to combined harvestor-tractors, it said that in 1957 in Europe, excluding Russia, there was one combine for approximately 1,103 acres of land sown with cereals. In the Soviet Union, the figure was one for every 508 acres; in North America one for 197 acres; in Oceania one for 222 acres; in Latin America one for 1,605 acres; and in West Asia one for every 7,413 acres. Norway, United States, Australia and Israel had the greatest concentration of combined harvestors in that order.

(*Dawn*, Karachi)

[Prev. ref. 3069:AOA:A]

I. **UN Declaration On Freedom Of Information — Government's Comments:** Comments from various Governments on the UN Declaration on Freedom of Information was released at UN Headquarters in New York on February 11.

Very few member-Governments came out fully in favour of the Declaration. The communist countries which replied to a request by the Secretary-General, Mr. Dag Hammarskjoeld, for comment said that they preferred a Convention on freedom of information rather than a Declaration.

The United Arab Republic said that a Declaration "should not be a substitute, prejudice in any way, or delay the adoption of the Convention", which the General Assembly had been working on for the past 10 years.

New Zealand said that she doubted whether it would be opportune to undertake a detailed examination of the Declaration while a draft Convention was under active study in the UN General Assembly.

Britain gave the proposed Declaration full support.

The United States said it was a natural out-growth of the Universal Declaration of Human Rights.

Sweden supported the idea.

Among the 29 replies from Governments listed were "no comments" from Burma, Canada and Malaya; and "no objection" from Austria, Iran and Laos.

Some other comments were as follows: Afghanistan — "superfluous"; Cambodia — "desirable"; Ceylon — "desirable"; Pakistan — "desirable"; and Philippines — "welcomes the initiative".

In its comment, the Pakistan Government said that the proposed Declaration should provide against the circulation or dissemination of religious propaganda against the personality and character of the Holy Prophet which would injure the feelings of the people of Pakistan.

(*The Statesman*, Calcutta and *The Hindustan Times*, New Delhi)

[Prev. ref. 2854:AOA:G]

J. **Change Of Surname For Queen Elizabeth's Descendants:** The following announcement was issued from Buckingham Palace, London, on February 8:

"Her Majesty the Queen, at a meeting of the Privy Council today (February 8), declared her will and pleasure that while she and her children would continue to be known as the House and Family of Windsor, her descendants other than those entitled to the style and title of Royal Highness and Prince and Princess and females who married and their children should bear the surname of Mountbatten-Windsor."

It was pointed out in London that the practical effect of the Queen's decision was that the surname Mountbatten-Windsor was likely to be used by the grand-children of the Prince of Wales—with the exception of the eldest living son of his eldest son—and of any other sons born to the Queen.

The present name of the Royal Family will not change, and Her Majesty will remain Queen of the House and Family of Windsor.

It does not in any way affect the title of the dynasty, nor does it affect any members of the Royal Family other than the Queen's descendants. It will come into operation only when there are descendants of the Queen who need a surname—i.e., those who do not possess any of the styles or titles mentioned in the Declaration. These styles and titles are limited to children of the Sovereign, children of sons of the Sovereign, and the eldest living son of the eldest son of the Prince of Wales.

The decision was a result of the Queen's personal wish, expressed by her to the Prime Minister, who in turn consulted the Cabinet and secured its full approval. Her Majesty felt that the names of those remoter descendants of herself and her husband should include her husband's name. Under the Queen's Declaration of April 9, 1952, such descendants would have borne the surname of Windsor.

The need for a surname would certainly arise in the case of the eldest son of the expected royal baby—if a son. This is the first occasion upon which a child is to be born to Queen Elizabeth since she ascended the throne, and it is appropriate that this child, if a son, should have the power, from birth, to transmit a name which incorporates the name of his father.

(*UK High Commission*, New Delhi)

K. **World Opium Production:** In a report to the UN Economic and Social Council, released in Geneva on January 15, the UN Permanent Central Opium Board said that the production of opium in India had almost doubled in 1958 as compared with 1948.

The report said: "In 1959, India contributed more than two-thirds (657 tons) of the world production of opium (939 tons). The remainder was shared by Turkey (162 tons), Soviet Union (93 tons) and four other countries—Yugoslavia, Pakistan, Japan and Bulgaria—with a total of 27 tons."

The Board said that the demand for raw opium for legal purposes had almost doubled in the 10 years from 1948 to 1958. The increased demand for medical purposes—655 tons in 1948 compared to 898 tons in 1958—was due to the continuous rise in the consumption of codeine.

As compared with 1948, the production also increased by one-quarter in USSR whereas it fell by more than one-half in Turkey.

AFGHANISTAN

A. **People To Be Given Choice Of Form Of Government:** The Afghan Prime Minister, Sardar Mohammed Daud Khan, told a news conference in Kabul on March 7 that the Afghan Monarchy had decided to give the people freedom to choose the form of government and administration they desired.

He said: "We shall go all the way in the domain of democratic principles and social reforms. We want our people to take their destiny into their own hands. We want them to have their own political parties."

He accused Pakistan of taking a lesson from colonialist Powers by indulging in propaganda against the reforms undertaken by the Afghan Government, notably concerning the emancipation of women.

He said that women being unveiled was not banned in Afghanistan. The duty of the Government was to protect both veiled and unveiled women.

He added that in all countries, there were people attached to the old ways, but "if our friends leave us alone, then there will be no reaction whatsoever."

[Prev. ref. 2867:AFG:A]

BURMA

A. **Baluchaung Hydro-electric Plant:** The hydro-electric plant at Baluchaung, near Rangoon, the biggest of its kind in South-East Asia, has been completed with reparation payments from Japan. It has an output of 84,000 kw.

Since all the nearly 2,000 thermal electric power plants in Burma have a total output of only 80,000 kw, the Baluchaung plant is expected to double the power output in the country.

Work on the plant was begun in 1954 as the first project to be covered by reparations from Japan.

Nihon Koei, Hitachi Ltd., Kushima Construction and Japan Steel and Tube Co., jointly put up the 19,000,000,000 yen necessary for the plant.

[Prev. ref. 2121:BUR:B]

CEYLON

A. **Mr. M. W. H. De Silva Dead:** The Minister of Justice in the late Mr. S.W.R.D. Bandaranaike's Cabinet, Mr. M. W. H. De Silva, died in Colombo on March 6. He was 73.

He was formerly Ceylon's High Commissioner in India and had held the offices of Attorney-General and Judge of the Supreme Court.

(*The Times of Ceylon*, Colombo)

B. *A Correction*: On page No. 3047, Vol. V No. 50, for the period December 12—18, 1959, we mentioned that Mr. F. R. de Zoysa, who was arrested, was a Deputy Inspector-General of Police. Actually Mr. F. R. de Zoysa was not Deputy Inspector-General of Police at that time. The error is deeply regretted. [Editor—*A.R.*]

CHINA

A. **Oil Output:** According to an official industrial survey, China now has 32 oil-fields and 18 gas fields.

Of these, 44 oil and gas fields were discovered after 1949 when the communists took over. Of them, 32 oil and gas fields were discovered in 1958 and 1959.

In 1958, China produced 2,260,000 tons of crude oil—9.55 per cent increase over 1957. Crude oil output in 1959, it was estimated, registered an even greater increase—more than 60 per cent.

Progress has also been claimed in the techniques of prospecting and refining, manufacture and repair of machinery and equipment and in oil transport.

Four major oil-fields are being exploited intensively—the Chiuchuan basin in Kiangsu Province, the Dzungarian basin in the Sinkiang-Uighur Autonomous Region, the Tsaidam basin in Chinghai Province and the Szechuan basin, Yumen, in the Chiuchuan basin, Karamai in the Dzungarian basin, Lenghu in the Tsaidam basin and the central and southern parts of Szechuan which are fast becoming petroleum bases producing increasing quantities of oil.

In addition, many structural traps and a number of oil-fields have been discovered in the Tarim and Turfan basins in the Sinkiang-Uighur Autonomous Region, on the Sungari-Liao Plain, in Yinchuan (Ningsia Hui Autonomous Region), the Kwangsi Chuang Autonomous Region and Kweichow Province, as a result of extensive geological reconnaissance and detailed surveying.

Oil and gas seepages as well as structural traps have been found in some provinces in East and North China, in Hunan, Hupeh, Fukien, Kwangtung, Inner Mongolia and Tibet.

The discovery of rich and widespread resources of oil shale and coal with high coal tar content makes it possible for China to develop her synthetic oil production at high speed and on a nation-wide scale.

(*Peking Review*)

[Prev. ref. 1947:CHI:B]

B. **Rail Across Gobi Desert:** The newly-built section of the Lanchow-Sinkiang Railway, which extended westwards into Sinkiang from Kiangsu Province in China's far west, was opened to traffic on December 31, 1959.

The tracks of the new railway extended up to Hami, in the eastern part of Sinkiang across the Gobi Desert. With the completion of the Lanchow-Hami section, 1,315 kilometres of the new Lanchow-Sinkiang railway is now in service.

At the inaugural function at Hami, the Chairman of the Sinkiang-Uighur Autonomous Region, Mr. Saifudin, said that the railway would initiate a fundamental change in Sinkiang's transport and communications services. It had already created favourable conditions for large-scale reconstruction in the Autonomous Regions and the rest of the country.

(*Peking Review*)

[Prev. ref. 3083:CHI:B]

C. **Ancient Cities Unearthed:** It was officially reported in Peking on February 23 that two ancient cities, one more than 2,000 years old, had been unearthed in the Inner Mongolia Region of China.

The report said that a city of the Han dynasty—206 BC to 230 AD—had been uncovered by excavation workers at a reservoir construction site on the outskirts of Huehot, capital of the Inner Mongolia Autonomous Region.

In the ruins of a house in the heart of the city which showed signs of having been destroyed by fire were found iron trappings for horses and chariots, bronze arrowheads, Han dynasty coins, tiles and seal impressions on clay and iron tools.

Remains of kilns, wells and cellars were also reported to have been unearthed.

A second city believed to have been built around the year 1000 AD was excavated in Ningcheng, in the same region.

The area, site of one of the capitals of the Liao dynasty which ruled from the 10th to the early 12th century AD contained remains of buildings and relics estimated to date from the 10th to the mid-17th century.

Three brick pagodas and the city walls were still standing. Bronze masks and glazed pottery including dining sets and vases were found in the tombs of the Liao dynasty around the ancient city.

(*The Nation*, Rangoon)

INDIA

SUMMARY: Third White Paper On Sino-Indian Relations; The Dalai Lama's Statement On Anniversary Of "Tibetan Declaration Of Independence"; The Dalai Lama's Treasures; World Bank Statement On Canal Waters Treaty; Dr. V. J. Sukselainen's Visit; Ad Hoc Committee's Report On Automobile Industry; More State Budgets.

A. **Sino-Indian Relations—Third White Paper:** The third White Paper on India-China relations, laid before Parliament on March 10, contained four Notes exchanged between the Governments of India and of China between November, 1959 to March, 1960 on the demonstrations held before the Chinese Embassy in New Delhi.

Replying to the Chinese Government's protests against the demonstrations, the Government of India, in

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

its Note of December 5, 1959, said that under the Constitution and Laws of India, it was not possible to prohibit demonstrations so long as they remained peaceful.

The Note pointed out that demonstrations in the country were not infrequent even against the Ministers of the Government and many of them were organized by political parties. "The Government of India is mindful of its obligation in regard to the protection of foreign Missions in India. It has given strict instructions to the local authorities to ensure that no demonstration should be permitted within at least 100 yards of the main gates of the Chinese Embassy."

It assured the Chinese Government that the Indian Government was determined to prevent irresponsible demonstrations before the Chinese Embassy and other Chinese offices.

In its Note of November 6, 1959, the Government of India told the Chinese Counsellor in India that his Embassy should be aware of the "great indignation" in India over the (Kong Ka Pass) incident in Ladakh (also called Chang Chenmo) on October 21-22, 1959, which had resulted in several casualties to the Indian police reconnaissance party.

The Government of India, it added, would not be justified in preventing peaceful demonstrations intended to express popular feelings on the subject. "It wishes, however, to assure the Ambassador that no demonstration will be permitted in the immediate vicinity of the Embassy nor will any interference by outsiders in the work of the Embassy be tolerated".

The Indian Note brought forth the renewal of the Chinese allegation that the Kong Ka Pass incident was entirely caused by Indian armed personnel intruding into Chinese territory and by their armed provocations against China's frontier guards.

In its Note of November 16, 1959, the Chinese Government added that the anti-Chinese demonstrations in India were apparently an outcome of deliberate instigation. "The fact that not a few children of about 10 years of age were among the demonstrators on November 4, 1959 is a vivid proof."

The Government of India repudiated in its Note of December 5, 1959 the Chinese suggestion that Indian personnel were responsible for the Kong Ka Pass incident.

Protesting against the burning of the effigies of Mr. Mao Tse-tung and Mr. Chou En-lai by a group of Indians before the Chinese Embassy on November 17, 1959, the Chinese Government said in a Note 10 days later that the Indian Government could not shirk its due responsibility for that act. "These activities have not only seriously affected the normal functioning and tranquillity of the Chinese Embassy and Consulates but have also been calculated to incite an anti-Chinese campaign and damage Sino-Indian friendly relations".

Kalimpong Meeting:

The Chinese Government, in a Note dated October 29, 1959, took exception to a meeting held in the vicinity of Kalimpong on October 10, 1959 by what it called "some 400 Chiang Kai-shek clique elements and Tibetan rebels" to celebrate the "so-called National Day of the Republic of China."

The Note said that at the meeting the national flag of India was hung side by side with "the so-called national flag of the Chiang Kai-shek clique". Photographs of Dr. Rajendra Prasad and Mr. Nehru were also hung with that of General Chiang Kai-shek. "Not only did the Indian local authorities fail to forbid such activities, but a director of the CID of Kalimpong and a police officer attended the rally in person."

The Government of India replied that there was no prior indication that the meeting was intended to express sympathy with the KMT *regime*, and as it was believed that the demonstration would be peaceful, the local authorities did not prohibit it.

It added: "Instructions have, however, been issued to prevent any pro-Kuomintang meeting and demonstration in future. The Government of India will not hesitate to use the power recently taken by it to turn out of Kalimpong any foreigner who indulges in objectionable activities. As the Chinese Embassy must be aware, the Government of India recognizes the Chinese People's Republic. It does not recognize any other Government of China and will not permit any activities designed to promote the idea of two Chinas".

Indians In Tibet:

One of the Chinese Notes set forth the views of the Chinese Government on the nationality of Indians and Ladakh lamas residing in the Tibet Region of China and the Kajis in the region.

The Chinese Government re-iterated that it had never had the intention of regarding Indian residents, who were of Indian origin, and Ladakhi lamas as Chinese.

Concerning the nationality of the Kajis, the Note said that these were adequate proofs to show that the Kajis had always been treated as Tibetans by the legal Governments of the Tibet Region of China. As Chinese they were naturally entitled to the rights and obligations of Chinese citizenship.

The Chinese Government, however, expressed its willingness to settle the question of the nationality of the Kajis in the Tibetan Region in a sympathetic and reasonable manner.

It added: "The Chinese Government, therefore, holds that those of them who desire of their own will to acquire Indian nationality must go through the legal procedure of renouncing Chinese nationality in accordance with the regulations of the authorities of the Tibet Region of China before they can choose Indian nationality. As to those who do not go through the procedure of renouncing Chinese nationality, they no doubt remain Chinese and will continue to enjoy the treatment due to the Chinese."

Trade Agency At Gyantse:

The White Paper also contained a Note about the Indian Trade Agency at Gyantse.

The Government of India, in its Note of February 19, 1960, gave notice to the Chinese Government that if a Lease Agreement for the establishment of the Indian Trade Agency in Gyantse providing for an area of at least 19.13 acres largely on the original site was not concluded in the near future, it would have to consider the closing of the Agency establishment altogether.

The Note said that for three years the Government of India had been trying to secure the necessary facilities and co-operation to re-build its Agency, and engineers had been waiting at Gyantse to start the construction work.

The Indian Government re-iterated its stand that the lease concluded in 1943 for the property on which the Indian Trade Agency was situated remained valid regardless of the internal changes in the Tibet Region of China.

It also re-affirmed that an area approximately equal to that specified in the original lease (29.13 acres of which a third has been eroded and only 19.13 acres remain) was required to reconstruct the various Trade Agency buildings. "The Government of India cannot now accept the contention that it is necessary to negotiate afresh the reasonable extent of the site required for the needs of the Trade Agency."

In one of its Notes on February 27, 1960, the Chinese Government assured the Government of India that it would continue to enjoin the Tibet local authorities to give the Indian organs (Consulate and Trade Agencies) in Tibet various facilities that were possible and necessary in the latter's normal functioning in line with the Sino-Indian Agreement of 1954 and friendship between the two countries.

It said: "It is true that in the course of putting down the rebellion and instituting reforms in Tibet, there have arisen individual temporary difficulties. This is unavoidable and is also fully understandable. The Chinese Government fully believes that, with the gradual restoration of normal order in the Tibet Region, these difficulties will be eliminated step by step".

The Chinese Government, however, urged the Indian Government to instruct the Indian organs in Tibet "likewise to abide strictly by the Five Principles and the Sino-Indian Agreement of 1954 and show full understanding and co-operation with the local authorities of China's Tibet Region in their goodwill measures and assistance."

Air-Space Violation:

The Government of India rejected the Chinese allegations of violation of Chinese air-space by Indian aircraft in recent months as "entirely baseless."

In its Note of February 22, 1960, the Indian Government said that Indian aircraft had strict instructions not to fly over foreign territory without the prior permission of the Governments concerned and those instructions were being carefully observed.

The Chinese Government had, in its Note of December 29, 1959, alleged that, according to reports of Frontier Guards in the past three months, Indian aircraft still kept intruding into the air-space over the Tibet Region of China, circling around and carrying out reconnaissance.

There were also a number of Indian protest Notes relating to the harassment of members of the Indian staff in Peking and restraints on the movement of two Indian nationals in Tibet.

Mr. Nehru Suggests April 20 For Meeting Mr. Chou En-lai:

In a letter to Mr. Chou En-lai dated March 4, Mr. Nehru has suggested that Mr. Chou En-lai might consider a date around April 20 for a meeting between the two Prime Ministers in New Delhi.

Mr. Nehru wrote: "I am glad that you have accepted my invitation to visit Delhi so that we can have talks about our problems and explore avenues which may lead to a peaceful settlement of these problems. I shall look forward to your visit in April.

"We shall naturally try to suit your convenience about the date of your visit here. If I may suggest it, about April 20 might perhaps be suitable. I shall probably have to leave India for Europe on April 29 or so."

Indian Territory In Chinese Hands:

The Prime Minister, Mr. Nehru, told the Lok Sabha (House of the People) on March 9 that the Chinese were now in full possession of practically the entire area claimed by them in Ladakh except for a small strip of territory in the Demchok region.

He added that the Chinese were in occupation of a little over 31,000 square kilometres (about 12,000 square miles) of Indian territory.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Outside of Ladakh, the only other area under Chinese occupation was at Longju in N-EFA where the extent of encroachment was perhaps about ten square miles.

[The Chinese claims in Kashmir have varied from time to time. The most extreme claim has been to some 42,000 square kilometres, but Mr. Chou En-lai has only mentioned a figure of 33,000 square kilometres in more recent correspondence.]

The Lok Sabha was, however, assured that there had been no further illegal occupation of the Indian territory by the Chinese during the last seven or eight months "as far as we know." The position was "static."

The Dalai Lama On Ladakh:

Asked for his comments on the possible outcome of the Nehru-Chou En-lai talks on the future of Tibet, the Dalai Lama said in Mussoorie on March 5 that he would not like to say anything.

But, he said that he regarded the Aksai-chin area of Ladakh as part of India in accordance with the Tibet-Ladakh Treaty of the 19th century.

B. Anniversary of "Tibetan Declaration Of Independence"—Dalai Lama's Statement: The Dalai Lama appealed to the world on March 10 "not to forget the fight of Tibet, a small but independent country" forcibly occupied by "a fanatical and expansionist Power."

In a statement issued to commemorate the first anniversary of "the Tibetan declaration of independence"—March 10—the Dalai Lama paid tribute to those who fell in the "fight for freedom."

He called upon his countrymen in exile to prepare themselves for the tasks that will face them "on our return to our country" and denounced the programme of Chinese reforms in Tibet as a charter of "slavery."

The following is the text of the statement:

"On this day last year (1959), March 10, the Tibetan people denounced the forcible occupation of Tibet and re-proclaimed their independence. It is a glorious day in Tibetan history which Tibetans will remember with pride in their hearts for generations to come. Yet this pride will be mingled with sorrow for those brave patriots who fell fighting. Our sympathies and admiration must also go out to those who are still engaged in, may be an unequal, fight for freedom with the oppressor.

"To the conscience of the world I once again appeal not to forget the fight of Tibet, a small but independent country occupied by force and by a fanatical and expansionist Power. I must take this occasion to answer some people who light-heartedly have suggested that the Chinese occupation is bringing progress to backward Tibet. Even conceding the comparative backwardness of Tibet I want to ask these people if forcible occupation of a small and helpless country and ruthless brutality in attempting to uproot the most cherished beliefs of the people and changing its social systems is to be condoned in the name of 'progress'. History has recorded such occupations as colonialism and imperialism. Calling in the aid of the word 'progress' does not make it any different. I assert that every people have the right to live their own life according to their lights, and whatever change that comes must come from the will of the people themselves.

"I understand that since my departure the communist Chinese have proclaimed that they are going ahead with 'reforms.' Judging from their ways, these reforms consist of denial of religion, herding of people in the so-called communes, a system of slavery reminiscent of the past when people were turned into slaves, the break-up of family by separating husband from wife and children from their parents. If progress must be cast in this pattern I pray that Tibet may be spared this progress.

"May I tell my fellow-exiles that the period of our exile must be spent in preparing ourselves for the great and important tasks that will need our attention on our return to our country. In this task my assistance will ever be available to them. May I also ask them to pray with me for the freedom of our country and the safety of those of us who are still keeping the banner of freedom aloft in Tibet in spite of heavy odds.

"I pray that mankind will have better understanding and tolerance which alone can ensure universal and everlasting peace for which the common man all over the world is pining."

Dalai Lama-Herter Letters On Tibet:

The Dalai Lama's letter to the US Secretary of State, Mr. Christian A. Herter, in January, 1960 and Mr. Herter's reply in February, 1960 were released in Washington on February 29.

The Dalai Lama's letter dated January 5, 1960 from Balrampur said: "Permit me to offer my sincere gratitude to you and to the Government of the United States for your active support during the course of the debates in the United Nations General Assembly regarding the problem of Tibet. I can assure Your Excellency that my people will always remember the help and assistance they have received in USA in their effort to determine for themselves their own political destiny.

"The support and sympathy of the people and Government of the United States have been of great benefit and encouragement to us and we confidently hope that this will be continued."

Mr. C. A. Herter replied as follows on February 20, 1960:

"As you know, while it has been the historical position of the United States to consider Tibet as an autonomous country under the suzerainty of China, the American people have also traditionally stood for the principle of self-determination. It is the belief of the United States Government that this principle should apply to the people of Tibet and that they should have the determining voice in their own political destiny."

On March 5, the Communist Party paper in Peking, *Ta Tung Pao* described Mr. Herter's letter to the Dalai Lama as "another act of flagrant interference by US imperialism in Chinese affairs."

It added: "US imperialism has not for a single moment stopped this intervention and slander against China since the quelling of the rebellion in Tibet. Last October (1959), the United States and her satellites made use of the United Nations forum illegally to discuss the so-called anti-Chinese campaign, but this was foiled."

[Prev. ref. 3166:INI:E]

C. The Dalai Lama's Treasure: The Dalai Lama confirmed in Mussoorie on March 5 reports that his treasure was deposited with the Sikkim Darbar in 1951 but said that most of the reports appearing in the Press about the value of the treasure (some going up to Rs. 80 crores) were exaggerated. This treasure, he added, was his personal property and he wanted to utilize it in the best way for the benefit of his people.

He would not say anything about its value and said that he would issue a statement in this connexion if necessary.

Tibetans close to him, however, placed its value at Rs. 80,00,000 and said that most of the treasure consisted of silver bars.

When asked about the statement of his brother, Mr. Gyale Thondup, (see below) from Darjeeling and a reported telegram from the Kashag (the Tibetan Cabinet) from Mussoorie asking for his authority to sell the gold and silver, he said that all decisions were taken by him and at his instance. The treasure belonged to him and he would decide what to do with it.

Mr. Gyale Thondup's Statement:

The Dalai Lama's eldest brother, Mr. Gyale Thondup, had said in Darjeeling on February 25 that the Dalai Lama's treasure then being sold in Calcutta was worth a little over Rs. 50,00,000.

Mr. Thondup admitted that he was responsible for the sale and investment of the treasure and disclosed that he had been "asked to give a clear picture (of the treasure)" on the authority telegraphed to him by the Kashag (Tibetan Government) in Mussoorie on February 25. "You can take that as the Dalai Lama's authority."

Explaining that his statement was meant to dispel the "confusion and controversies" resulting from Press reports about the treasure, he denied that the treasure contained jewels and ancient coins. It consisted of silver bars and "a little gold".

He repeatedly emphasized that the treasure was indisputably the private property of the Dalai Lama, who had decided to sell it to fulfil various commitments.

He also disclosed that the money realized from the sale of the treasure would be spent on officials travelling "here and there, particularly to UN" to plead his (the Dalai Lama's) and Tibet's case.

The money, he added, would be "soundly invested". He and a Tibetan official of the Fourth Rank, Mr. Rimshi George Tsarong, then in Calcutta, had been consulting bankers and business firms in the city for their advice and assistance. It was hoped that the profits would suffice to meet the growing demands on the Dalai Lama's pockets, without having to spend the capital.

He described the Dalai Lama's commitments as "supporting the various lamas, Tibetan Government officials and students."

He admitted that the State Bank and the Reserve Bank had not been approached, but some other banks and business agencies had been contacted. It was important that the money be correctly invested, for although the Dalai Lama was being cared for by the Indian Government, he had no other means than this money, which was only a fraction of the original treasure lost in Tibet. "His Holiness does not use much himself. So the money will be used for all Tibetans."

He disclosed that the sale was being effected by a Marwari banking house of Calcutta and Sikkim, which was acting voluntarily and not accepting any commission.

While Mr. Thondup claimed that the value of the treasure was only a little over Rs. 50,00,000, he disclosed that the final assessment had not yet been made. It was, therefore, not clear whether the figure quoted represented the sale to-date or the final amount. This figure fell far short of that disclosed by other Tibetan sources.

D. Canal Waters Issue—World Bank's Statement On Negotiations:

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

On February 29, the World Bank issued the following statement on the proposed Treaty between India and Pakistan to settle the question of Indus waters:

"Negotiations for the conclusion of a Water Treaty between India and Pakistan in settlement of the Indus (Canal) waters question are continuing in Washington under the auspices of the World Bank. It is hoped that the final agreement on all the outstanding points to be included in the Treaty will be reached within the next two months.

"The Treaty would be based on a division of the Indus waters on the lines of the proposal made by the Bank to the two Governments in February, 1954. Under this proposal, the three eastern rivers of the Indus system (Sutlej, Beas and Ravi) would be for the use of India, and the three western rivers (Indus, Jhelum and Chenab) would be for the use of Pakistan.

"This division of the waters necessitates the construction of works to transfer, from the three western rivers, supplies to meet the irrigation uses in those areas of Pakistan which have hitherto depended on supplies from the three eastern rivers. The effort of this transfer would be to release the whole flow of the three eastern rivers for irrigation development in India, and, as part of the Treaty, India would agree to contribute towards the costs of these works. The system of works to be constructed would, however, provide further substantial additional irrigation development both in India and Pakistan and would develop important hydro-electric potential in both countries. It would also make an important contribution to soil reclamation and drainage in Pakistan and provide a measure of flood protection in both countries.

"It is estimated that the total cost of the system of works to achieve these results would be of the order of the equivalent of $1,000 million, partly in foreign exchange and partly in local currencies.

"The Bank has evolved a plan to finance the required expenditure and has had assurances from certain friendly Governments of their readiness to participate in the cost of the plan over and above the amounts to be contributed by India and Pakistan and by the Bank itself. The implementation of the financial plan and the participation of the Governments concerned would, of course, be contingent on the ratification of the Water Treaty now under negotiation and would be subject to such parliamentary and Congressional action as may in each case be necessary. The participation of each of the friendly Governments concerned would be as follows:

"A. In foreign exchange: Australia—Australian pounds 6,964,286 in grants; Canada—Can. $22,100,00 in grants; Germany—Dm. 126,000,000 in grants; New Zealand—New Zealand pounds 1,000,000 in grants; United Kingdom—£20,860,000 in grants; and United States—$177,000,000 in grants and $103,000,000 in loans.

"B. In local currency: United States—the equivalent of $235,000,000.

"The President of the World Bank is prepared to recommend to the Bank's Directors that the Bank should participate with loans to India and Pakistan of the order of $103 million.

"The Bank's financial plan envisages that all construction contracts would be open to competitive bidding and the foreign exchange contributions would be freely usable for purchases anywhere in accordance with procedures similar to those followed by the Bank in its normal operations.

"The costs of the construction programme would be spread over a period of approximately 10 years, and the general supervision of the programme would be undertaken by the Bank."

US Statement:

The US Government announced on February 29 that it would contribute $500.000.000 to the Indus (Canal) Waters Project.

The following is the US State Department's statement:

"The International Bank for Reconstruction and Development has today (February 29) announced the readiness of certain friendly Governments, including that of the United States, to participate in the financing of a Bank plan designed to effect a settlement of the Indus waters dispute between India and Pakistan.

"The total cost of the system of works required to achieve this settlement is estimated by the Bank to be in the order of the equivalent of $1,000,000,000, partly in foreign exchange and partly in local currencies.

"The contribution proposed by the Bank for the United States consists of $177,000,000 in grant aid, $103,000,000 in loans and $235,000,000 in local currencies to be derived from the operations of various United States programmes in Pakistan.

"As pointed out by the Bank, the actual implementation of the financial plan and the participation of the Governments concerned would be contingent on the ratification of the Water Treaty now under negotiation between India and Pakistan and would be subject to such legislative action as may be required in each contributing country. The Bank has expressed the hope that final agreement on all the outstanding points to be included in the Water Treaty will be reached within the next two months.

"Subject to Congressional concurrence, the Government of the United States proposes to assist this Project financially because it wishes to see an early settlement of a major dispute which has since 1947 embittered relations between India and Pakistan. The United States is also interested in helping this Project because upon it depends the future welfare of the 40,000,000 people who live in the Indus basin. When completed, the entire system of works will be by far the largest integrated irrigation project in the world.

"The Government of the United States is, therefore, pleased with the progress which the Governments of India and Pakistan have made toward the settlement of the dispute and looks forward to the early conclusion between them of the Water Treaty. The contribution of the World Bank towards the success of these long-drawn-out and difficult negotiations has been invaluable. The plan drawn up by the World Bank constitutes perhaps a unique example of international co-operative help toward the fulfilment of a major programme of economic development in the less developed areas of the world."

British Contribution:

The British Minister of State for Commonwealth Relations, Mr. C. J. M. Alport, told the House of Commons on February 29 that Britain was prepared to contribute more than £20.000.000 towards the cost of the World Bank Project for developing the water resources of the Indus basin.

In a statement, he said: "Her Majesty's Government has learned with great satisfaction that substantial progress has been made in the negotiations between the Governments of India and Pakistan, under the auspices of the International Bank, over the division of the waters of the Indus basin.

"I understand that the Bank hopes that a Water Treaty may be concluded between these two countries within the next two months. On behalf of Her Majesty's Government, I should like to pay warm tribute to the Bank's outstanding services during the long process of negotiations, which has now brought in sight the solution of an extremely difficult problem.

"I am informed that the Bank estimates that the total cost of the works required to implement its proposals will be of the order of £360,000,000 in local and foreign currencies, spread over a period of ten years. A proportion of this total sum is being met from the resources of India and Pakistan.

"In addition, the Governments of Australia, Canada, New Zealand, the United Kingdom, the United States and Western Germany have agreed to make substantial contributions if a Water Treaty is concluded, while the President of the International Bank is to recommend to the Bank's Directors that the Bank should make loans to India and Pakistan. Subject to parliamentary approval, the United Kingdom Government proposes to make a grant of £20,860,000, to be paid over a period of 10 years into a fund to be administered by the International Bank.

"Over 40,000,000 people live in the Indus basin, and the Indus river system is pre-eminent among those whose waters are devoted primarily to irrigation. The United Kingdom Government is glad to be associated with the Commonwealth partners, as well as with the Governments of the United States and Western Germany and the International Bank, in making possible a development plan of great significance to India and Pakistan and, therefore, to the Commonwealth as a whole."

Canada's Contribution:

The Canadian Minister for External Affairs. Mr. Howard Green, announced in the House of Commons in Ottawa on February 29 that Canada would contribute $22,100,000 during the next ten years towards the development of the Indus river basin by India and Pakistan.

The grant would come out of Canada's $50,000,000 contribution every year to the Colombo Plan for economic development in South and South-East Asia.

Pakistan Statement:

The Pakistan Government issued a statement on February 29 thanking the World Bank for its "contribution to the Indus Basin Development Fund and for its endeavours in obtaining from certain friendly Governments assurances of contributions to the Fund."

It also expressed gratitude to the nations that had given assurances of contribution to this Project which would "help remove a grave danger to the peace of the area and bring firm improvement in its economic position."

It said that although the main purpose of the works to be constructed was to replace from the western rivers the water supplies "historically received" by Pakistan from the eastern rivers, they would also enable Pakistan to develop new uses and would, to that extent, benefit the economy of the country.

The works would also develop new hydro-electric potential and contribute to flood protection, reclamation and drainage.

It expressed the hope that the settlement of this dispute would bring with it "promise of further improvement in relations with India and will result in increased co-operation and friendship between the two countries."

[Prev. ref. 3107:PAK:B, 3184:AOA:D]

E. Dr. V. J. Sukselainen's Visit: The Finnish Prime Minister, Dr. V. J. Sukselainen, arrived in New Delhi on February 13 on the invitation of the Government of India for a 12-day State visit to the country.

He was received by Mr. Nehru and members of the Central Cabinet at Palam airport.

In a statement to newsmen at the airport, Dr. Sukselainen said that he was glad to come to India in response to Mr. Nehru's invitation issued a year ago. "In Finland, we have always felt a great interest towards India, her people, history and her ancient culture."

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

This feeling, he said, got a new impetus through Mr. Nehru's visit and was further strengthened by Dr. S. Radhakrishnan's recent visit to his country.

He expressed the hope that his own visit to India would further the development of good and friendly relations between India and Finland.

Civic Reception:

Dr. Sukselainen was given a civic reception by the citizens of Delhi in Red Fort on February 15. Replying to the address of welcome on the occasion, he said that Finland and India were very close to each other in their foreign policies in keeping out of Power groupings and in working for world peace.

He added that Finland too was following the "golden way" shown by Mahatma Gandhi and regarded the whole human family as one.

The respect Finland had for India's foreign policy was based on their conviction. "We esteem those aspirations to which India has dedicated her foreign policy. That is why we rejoice at your achievements and we have noticed that the leading personalities of the Great Powers have frequently visited India."

Referring to Finland's relations with the Soviet Union, he said that "in place of prejudice, a friendship has been built up, founded on the complete sovereignty of both parties, respect for each other and non-interference in the internal affairs of the other."

He then spoke of the new current of thought in international politics and described it as the idea of the "common moral responsibility of mankind, a profound consciousness of the unity and indivisibility of humanity and a realization that nations must learn to live on this earth in harmony, using the natural resources and the knowledge given to them for the common good by doing justice to every individual and every nation." The idea might be weak or brittle but it was "a strong ray of light illuminating the road towards the future."

Mr. Nehru, in his speech, commended the example of Finland to the people of India. The people of Finland were freedom-loving and they had withstood the onslaught of many an enemy. They were a hardy people, for ever alert to guard their nation. They were a dynamic race.

Despite the vast distances that separated them, he said, India and Finland were close friends. They had learnt to admire and respect each other's views. He expressed the hope that their ties of friendship, be it in trade or commerce, would continue to grow in the future.

Dr. Sukselainen was earlier presented with a Kashmiri carpet.

State Banquet:

On February 15, Dr. Sukselainen was entertained at a State banquet by Mr. Nehru. At the banquet, both Mr. Nehru and Dr. Sukselainen emphasized the need of every country in the world to contribute towards peace and friendly relations and towards the ending of the 'cold war' atmosphere.

In his speech, Mr. Nehru expressed the hope that "goodwill will come out of the coming talks between some Great Powers, some good which will lead to further lessening of tensions and further co-operation and less of fear and apprehension."

He added: "We can send our best wishes to them for this outcome and in our own way, wherever the opportunity comes to us, help in bringing about that process."

Mr. Nehru referred to the common approach by India and Finland to international problems and said: "We believe in trying to be friendly with all countries and not in joining any military alliances, that is, the policy of non-alignment and, at the same time, of friendship. That also has necessarily brought us nearer to one another."

In his reply, Dr. Sukselainen said that the development of peaceful relations between nations depended largely on the progress made in the field of disarmament.

He added: "Every step, however small, towards complete disarmament must be regarded as a valuable contribution towards that permanent state of peace between nations which mankind has long yearned for."

He referred to the mutual relations between Finland and India during the last ten years and the visits paid to Finland both by Mr. Nehru and the Vice-President of India, Dr. S. Radhakrishnan, and said that the two countries also had the same kind of approach to international problems.

He declared: "We both strive towards the achievement of peace between the nations of the world; we both try to avoid anything that might cause or promote conflicts and disputes between nations; and we wish to work for that which dispels conflicts and misunderstandings. In our attitude towards different international questions, we can thus find many converging points. It seems to me a source of hope and confidence that so distant and different countries as Finland and India have reached the same conclusions showing spiritual similarity."

Next day (February 16), Dr. Sukselainen left New Delhi for Agra.

On subsequent days he visited Bombay, Bangalore, Madras, Calcutta, Asansol and Chittaranjan before leaving India on February 24.

(*The Statesman*, Calcutta and New Delhi, *The Times of India*, Bombay and New Delhi and *The Hindu*, Madras)

[Prev. ref. 1530:INI:A]

F. **British Help For Aircraft Industry:** Sir Roy Dobson, Managing Director and Vice-Chairman of Hawker Siddeley Aviation, one of Britain's big aircraft groups, said in London on February 26 that Britain was going all out to help India establish her own aircraft industry.

He said: "There is great co-operation between the United Kingdom and India. We are helping India establish her own factories and get an all-Indian airliner into the sky."

Since India signed an Agreement to build Avro-748s in the country under licence, much machinery and aircraft parts had been shipped to India. Assembly had already begun in India with materials sent from England. Besides materials, British experts had been sent to India. British engineers had left Britain to advise on the establishment of aluminium plate and strip mills.

Sir Roy Dobson said that India would pay licence fees on the first 300 Avro-748s she would build. The early ones would be constructed from all-British components; then, as India became better equipped, locally-made parts would be increasingly used until an all-Indian version of Avro-748 was being produced.

Eventually, India might be exporting the Avro-748 to other Asian countries.

Factors which assured Avro-748 its success, he said, were its price—cheaper than its competitors—its special design under "fail safe" principles, the use of well-tried and completely standard components and low operating costs and extremely low maintenance costs.

[Prev. ref. 3098:INI:H]

G. **Agreement With Russia On Petroleum Products:** A long-term Agreement for the supply of petroleum products by the Soviet Union to India was signed in New Delhi on March 8.

The Soviet Union would supply these petroleum products for the first time to India under this Agreement.

It was signed between "Sojuznefte Export" (Foreign Trade Organization of USSR) and an Indian private firm, Hindustan Organizers Private Limited, Bombay.

Under it, the Soviet Union would supply kerosene, high-speed diesel oil, aviation spirit, etc.

The first Soviet tanker bringing the supply of Soviet petroleum products was expected to arrive in Bombay "soon".

The petroleum products from the Soviet Union would be supplied according to Indian specifications.

According to the terms of the Agreement, the supplies would be based on the 1958 Trade Agreement between the two countries —all payments to be made for the Soviet goods by the Indian company in rupees.

The payment in rupees, it was stated, would effect a considerable saving in foreign exchange.

(*The Times of India*, New Delhi)

[Prev. ref. 3003 (corrected):INI:I]

H. **Iron-Ore Agreement With Japan:** An Agreement was signed in New Delhi on March 8 between the Indian Iron-Ore Negotiating Committee and the Japanese Steel Mission for the supply of 4,000,000 tons of iron-ore every year from the middle of 1966 from the Bailadila Iron-Ore Project in the Bastar district of Madhya Pradesh, with which Japan is collaborating.

Subject to ratification by the two Governments, the Agreement will be for 15 years in the first instance.

Japan is already India's biggest buyer of iron-ore, having contracted with the State Trading Corporation of India to buy 7.2 million tons of ore between 1957 and 1962 in addition to the two million tons of iron-ore per year to be supplied to Japanese steel mills for ten years under an Agreement.

The Bailadila Project envisages the development of the iron-ore mine, a railway line connecting the mine to the port of Visakhapatnam and the improvement of facilities at the port.

The Project will open up a large hinterland for Visakhapatnam. The new railway line is likely to connect Jeypore, Koraput and other localities and benefit the Dandakaranya Project for the rehabilitation of East Pakistan refugees.

According to tentative estimates, the cost of the construction of 309 miles of new railway will be Rs. 55 crores and the cost of rolling stock will amount to Rs. 9.5 crores. The estimate for the development of the Bailadila mine is about Rs. 17 crores.

Japan is understood to have offered credit for the Bailadila Project of $21 million (about Rs. 10 crores) to be used mainly for the purchase of mining machinery abroad.

A clause in the Agreement would enable the maximum utilization of Indian ships for the carriage of iron-ore.

I. **Automobile Industry And Low-cost Car—Ad Hoc Committee's Report:** The *Ad Hoc* Committee, appointed by the Government of India

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

to study the problems of the automobile industry and the feasibility of producing a low-cost car in India, in its report, placed before Parliament on March 10, left the choice of the type of car and the agency that should manufacture it to the Government.

The Committee was presided over by Mr. L. K. Jha, Additional Secretary in the Ministry of Commerce and Industry.

It came to the conclusion that there was a definite demand for a low-price car which could not be catered for by the existing production programmes.

It also recommended cuts in the prices of the existing cars in a few months, after giving the industry the necessary foreign exchange to raise production to the highest possible level.

According to its calculations, this cut in the case of the *Fiat* and *Hindustan Ambassador* should be Rs. 500 each and should be effective after four months of the issue of the necessary import licences to enable adjustments to be made in the factories and to ensure a steady flow of raw materials.

In the case of the *Standard* 10, it felt that its manufacture was never likely to be economical or successful, particularly with the introduction of a new economy car. It should, therefore, be given up, but the *Standard Vanguard* should be retained. Until this changeover became effective, the cut in the price of the *Standard* 10 should be Rs. 400.

It further recommended that the controlled price of passenger cars in future should be the price to be paid by the consumer, exclusive of sales-tax, transport charges and other levies. No fixed margin of profit for the dealer should be prescribed by the Government.

It suggested the continuance of price control in the case of jeeps and diesel engines as there were no competitive sources of supply.

In the case of commercial vehicles, however, it recommended the abolition of price controls as it felt that the people who bought these vehicles were now in a position to make substantial profits for themselves. Instead, it suggested that the manufacturers be left free to adjust the prices from time to time.

Dealing with the possible demand in the next five years, it suggested that the target capacity at the end of the Third Plan for commercial vehicles should be fixed at 60,000. It did not favour the bringing in of any new units to meet this target. It was of the view that by increasing the volume of production of the existing units maximum economies could be achieved.

It suggested that before a car was finally selected, it should be tested in Indian conditions. Economy in maintenance was as important as cheapness of the initial price.

In planning production, maximum use should be made of the existing capacity in the country wherever it might exist. But, on the whole it would be necessary to install a special plant and machinery as if a new factory was being planned and only in respect of common services like foundry facilities the existing manufacturers could make use of their installed equipment for the production of an economy car.

Insofar as the car prices had to be controlled, it said, that the governing principles should be to ensure that an efficient producer with lower costs made better profits than the one whose costs were relatively high. Secondly, a firm which used more indigenous components should get a better return than the one using more imported components.

It said that the original decision of the Government to grant protection to the industry was a sound one. The achievement of self-sufficiency regarding transport vehicles was of obvious importance to the economy, and even in regard to passenger cars, the consumer would have been far worse off in the present foreign exchange difficulties if there had been no domestic industry.

The progress made by different manufacturing units in respect of indigenous content had not been uniform. Some vehicles, like the *Ambassador* and the *Tata-Mercedes-Benz* truck, had achieved a high level of indigenous content (70.5 per cent and 64 per cent respectively). Progress in respect of some had been disappointingly slow.

All the units had, however, made commitments for the installation of plant and machinery which would mean steady improvement in their indigenous content over 15 to 18 months so that most of the manufacturing programmes would be either complete or nearly so by the end of the Second Plan.

To ensure that the production programme did not lag behind in future, it suggested that each unit be asked to state categorically whether it had already ordered all the plant and machinery for the programme and, if not, to apply for import licences for the requirement of machinery within three months.

It pointed out that certain levies, such as Customs duties on imported components and raw materials and excise duties on items like tyres and batteries, had an important bearing on the price the consumer paid for the vehicles.

The amount of duties paid varied from Rs. 1,000 in the case of a car to over Rs. 6,000 in the case of a bus.

If taxes were eliminated in either case, the consumer price of the *Ambassador* car in India was 38 per cent higher and of the *Tata-Benz* truck 6 per cent higher than the price of corresponding vehicles in UK and Germany respectively. In the absence of adequate data, a similar comparison for all vehicles had not been made.

The percentage of the total cost of a vehicle which was in the hands of the automobile manufacturer himself was small and generally less than one-third of the total cost of the vehicle. For the *Ambassador* car, the total cost of raw materials and components brought from outside amounted to more than the price of the built-up car in UK.

To lower the price of vehicles, therefore, it was not enough to consider costs within the factory. The Indian manufacturer had also to pay higher prices for his imported raw materials. The industry was particularly handicapped in the matter of steel, for which overseas manufacturers enjoyed substantial advantages in regard to prices and deliveries. Components bought from the ancillary industry also tended to be more expensive for the Indian manufacturer than for overseas manufacturers.

While conceding these difficulties of the industry, it pointed out that neglect of technical training, somewhat wasteful expenditure on sales and distribution and inadequate attention to proper cost accounting had also contributed to higher costs in India. The inadequacy of the capital system of price fixation based on an addition being made to the actual cost of production and the absence of effective competition had also resulted in insufficient attention being paid to costs.

It drew attention to the role of the ancillary industry in lowering costs and emphasized the importance of developing it on a healthy economic basis. It made several recommendations in that direction.

(*The Statesman*, New Delhi)

J. **Punjab Language Formula—Good Relations Committee's Report:** The two-member Good Relations Committee of the Punjab, in its report published in Chandigarh on March 8, disfavoured the Sachar Formula which in its view tended to keep Hindus and Sikhs "always divided."

It came to the conclusion that there could be no single solution of the language dispute applicable to the Hindi and Punjabi regions of the State. It, therefore, made the following separate recommendations for the two regions:

Hindi Region: Punjabi should not be compulsory. It should be the second language, alternative with other modern Indian languages for those who did not want Government service. For those who could not make up their mind from the beginning whether they would take up Government service it felt that the university regulations provided that a student could take up an additional subject after passing the higher secondary or matriculation examination.

Punjabi Region: Punjabi (Gurmukhi) should be the medium of instruction at the primary stage and Hindi in Devnagari script should be taught from the very first class. After the primary stage, a student should have the option of selecting his first language and the medium of instruction.

Mr. Jai Chandra Vidyalankar, however, disagreed with his colleague on the recommendation for the Punjabi zone.

In his Note of Dissent, he objected to the compulsory use of Gurmukhi script in the teaching of Punjabi at the primary stage.

He also did not agree that the Committee's final recommendations for the Punjabi region had a reasonable chance of being accepted if they were put before a conference of all the interested parties.

The Committee's report was laid on the table of the State Assembly seven months after it was submitted to the Government.

The Committee, comprising two eminent Punjab educationists, Mr. Jai Chandra Vidyalankar and Mr. Jodh Singh, was set up in June, 1958. It held discussions with more than 700 persons, including Akalis, Arya Samajists and educationists.

Meanwhile, the State Government approved the appointment of a 27-member Language Committee, headed by the Governor, Mr. N. V. Gadgil.

(*The Times of India*, Bombay)

[Prev. ref. 1358:INI:H, 1916:INI:Q]

K. **Assam Budget:** The Assam Government's Budget estimates for 1960-61 presented to the State Assembly in Shillong on March 4 by the Finance Minister, Mr. Fakhruddin Ali Ahmed, revealed an overall surplus of Rs. 1.01 crores.

There would be a revenue surplus of Rs. 172,72,000 which would be offset by the deficit outside revenue of Rs. 71,20,000.

The next year's revenue receipts were estimated at Rs. 37.6 crores while revenue expenditure was estimated at Rs. 35.87 crores.

Mr. Ahmed said that no new taxation had been proposed and the estimate of receipts had been framed on the basis of current rates of taxation and realization of arrears.

The current financial year was likely to close with a surplus of Rs. 94,33,000 and the opening balance for 1960-61 would be Rs. 80,52,000.

The Budget provided for a total capital expenditure of Rs. 12.78 crores during the next financial year. Of this amount, Rs. 2.49 crores represented provision for repayment of loans by the State Government, Rs. 4.66 crores for new loans and advances by the Government and the balance of Rs. 5.62 crores for capital expenditure on schemes taken up under the Plan and outside. The total debt of the State Government to the Centre on March 31, 1959 was Rs. 34,00,000.

(*The Statesman* and *The Hindusthan Standard*, Calcutta)

[Prev. ref. 2559:INI:F]

L. **Madras Budget:** The Madras Budget estimates for 1960-61 presented to the State Assembly by the Finance Minister, Mr. C. Subramaniam,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

on March 10 showed a deficit of Rs. 34,00,000.

He said that he was not proposing any new taxes to meet the deficit, which was likely to increase as a result of the recommendations of the Pay Commission set up by the State Government.

The only concession he announced was to exempt vegetables, fruits, flowers, betel and plantain leaves, eggs, meat, fish and green tea from sales-tax.

He put revenue at Rs. 80.87 crores and expenditure at Rs. 81.21 crores. Receipts for 1960-61 were expected to exceed by Rs. 2.57 crores the receipts anticipated in the revised estimates for the current year (1959-60). Similarly, the expenditure on revenue account would exceed by Rs. 3.49 crores that of the current year.

The main items of development expenditure provided for in the Budget were education and scientific departments Rs. 15.53 crores, medical Rs. 4.8 crores, public health Rs. 2 crores, agriculture Rs. 3 crores, animal husbandry Rs. 1 crore, co-operation Rs. 1.8 crores, industries and supplies Rs. 4.8 crores, Harijan uplift Rs. 2.9 crores and Community Development and National Extension Service Rs. 3 crores.

The upward trend in prices, he said, was causing hardship to the fixed-income groups. Now that they were formulating the Third Five-Year Plan, they should take note of their experiences during the Second Plan and devise measures to stabilize prices.

He said that the Neiveli Project was progressing according to schedule. Many of the targets fixed for the Second Plan had been exceeded.

(*The Hindu*, Madras)

[Prev. ref. 2552:INI:J]

M. **Mysore Budget:** The Mysore State Budget for the year 1960-61 presented to the Mysore Legislature in Bangalore by the Finance Minister, Mr. T. Mariappa, on March 8 revealed a surplus of Rs. 1.07 crores. The anticipated revenue estimates were put at Rs. 63.70 crores and expenditure at Rs. 62.63 crores.

He announced an *interim* relief of Rs. 5 per month in the shape of an increase in the rate of dearness allowance to all Government employees drawing Rs. 300 and below with effect from January 1, 1960.

This *interim* relief would be allowed to be drawn in cash from April 1, 1960, and it had been decided to pay the arrears in either National Plan certificates or in the form of Prize Bonds announced by the Government of India in the Central Budget.

The grant of this *interim* relief to low-paid Government employees was not included in the Budget estimates for 1960-61, and Mr. Mariappa announced that this increase in the allowances would convert the surplus into a small deficit of about Rs. 42,00,000.

He also announced that the State Government had decided to give the concessions granted by the Government of India regarding pension benefits to the State employees from January 1, 1960.

The Government had also decided to grant free education up to Secondary School Leaving Certificate level to the children of all persons whose annual income does not exceed Rs. 1,200.

While no taxation proposals were announced, Mr. Mariappa referred to the need for finding increased resources for the Third Five-Year Plan. The draft details of the Third Plan of the State, which was of the size of Rs. 270 crores, had already been circulated to the members. Though it might be subject to variations, it was certain to be bigger in size than the Second Plan.

The revised estimates of the current year showed a large surplus of Rs. 4.94 crores as against Rs. 48,40,000 anticipated as a result of improvement in revenue to the extent of Rs. 4.30 crores and reduction in expenditure of Rs. 15,92,000.

The accounts of 1958-59 revealed a huge surplus of Rs. 9.91 crores "mainly due to real increase in revenue receipts and shortfall in expenditure due to various causes."

(*The Hindu*, Madras)

[Prev. ref. 2553:INI:L]

N. **Rajasthan Budget:** Presenting the State Budget for 1960-61 in the Rajasthan Assembly in Jaipur on March 9, the State Finance Minister, Mr. Haribhau Upadhyaya, announced a surcharge on land revenue, slight changes in the State excise duty rates, a re-adjustment in sales-tax rates, adoption of the metric system in motor spirits business, levy of purchase-tax and economies in the administration yielding an estimated revenue of Rs. 90,00,000.

Thus, he converted a revenue deficit of Rs. 74,26,000 into a small surplus of Rs. 15,74,000.

Mr. Upadhyaya also announced the abolition of agricultural income-tax from the next fiscal year.

He said that no appreciable revenue could be expected from this source after the resumption of jagirs and fixation of ceilings. The Government had also decided to raise Rs. 5 crores from public loans during next year.

Revenue receipts and expenditure were estimated at Rs. 45.14 crores and Rs. 45.89 crores respectively, leaving a deficit of Rs. 74,26,000. Capital expenditure was estimated at Rs. 27.22 crores which, he said, would be financed out of public borrowings, loans from the Central Government and the surplus available under public account. Additional taxes would yield Rs. 65,00,000.

The break-up of the receipts position was: economy and retrenchment Rs. 25,00,000, surcharge on land revenue Rs. 10,00,000, State excise duties Rs. 7,00,000, sales-tax Rs. 35,00,000, motor spirits Rs. 4,00,000, purchase-tax Rs. 6,00,000, and stamp and court fees Rs. 3,00,000.

He announced the Government's decision to enforce an *ad hoc* cut of 5 per cent in the ministerial and 10 per cent in Class IV service to "restrain growth of expenditure on establishment" and to effect economy in administrative expenditure.

Sales-tax:

The Rajasthan Government announced on March 9 the imposition of sales-tax ranging from half per cent to 7 per cent on 47 varieties of articles with immediate effect.

Twenty-five of the 47 varieties of articles bore the maximum tax of 7 per cent. They related to motor vehicles, including chassis, motor tyres, tubes and spare parts, refrigerators, air-conditioning plants, wireless reception instruments, radios and radiograms, photographic and other cameras, enlargers and lenses and other accessories, clocks, timepieces and watches, iron and steel safes and almirahs, army and other weapons, cigarette cases and lighters, dictaphone and other apparatus, cinematorgraph and sound transmitting equipment, typewriters, gramophone records, motor cycles, scooters and spare parts, diesel oil, hydrogenated oils, including vanaspati, palm oil, refined coconut oil, all kinds of woollen goods, cutlery, leather goods except foot-wear, potash, fire-works, crackers and explosives and pure silk.

While the official release listed 47 varieties of articles, the Government decided to levy 4 per cent sales-tax on all other goods not covered by the list.

The lowest tax of half per cent was levied on bullion, gold and silver ornaments; and all articles made of gold and silver, jewellery, precious stones and pearls, iron-ore, cotton, oil-seeds, raw wool, allopathic and homoeopathic medicines and drugs, dressed hides and skins, and all goods sold to the Rajasthan Government would bear one per cent sales-tax.

Cotton yarn, all edible oils, coal including coke, iron and steel waste and iron dust would bear one per cent sales-tax.

(*The Times of India*, Bombay)

[Prev. ref. 2553:INI:M]

O. **Himachal Pradesh Budget:** The 1960-61 Budget of Himachal Pradesh, presented to the Territorial Council by the Chairman, Mr. Karam Singh, in Simla on March 7 revealed a deficit of Rs. 1,73,66,000 which would be filled by Central grants.

The total expenditure for the year was put at Rs. 1,39,26,900, excluding the Second Plan expenditure of Rs. 4,73,100. The estimated income of the Council was Rs. 10,33,400.

Mr. Karam Singh said that the Council would spend Rs. 33,77,500 on medical schemes, Rs. 66,44,300 on education, Rs. 8,26,000 on general account, Rs. 3,79,400 on public health, Rs. 6,64,700 on veterinary and Rs. 20,00,000 on works. A sum of Rs. 35,000 was set apart to meet unforeseen charges.

The estimated income, he said, included the following: Rs. 39,820 from the Medical Department, Rs. 2,60,000 from the Education Department, Rs. 210,000 from the General Department, Rs. 10,000 from the Works Department and a payment of Rs. 5,00,000 from the Central Government.

The break-down of the expenditure on Plan schemes was as follows: Education Department Rs. 24,30,000, Medical Department Rs. 3,81,000, Public Health Rs. 1,90,000, Veterinary Rs. 4,72,000 and Works Rs. 10,00,000.

He disclosed that provision had been made for levy of taxes on professions, trades, callings and employment on the same basis as in Punjab, and this was likely to yield Rs. 1,74,000. However, since the Punjab Act had been challenged in the High Court, the levy would be enforced only after its decision was known. The provision had been made during the current year (1959-60) also but was not enforced in view of the pendency of the petition in the High Court.

(*The Statesman*, New Delhi)

[Prev. ref. 2604:INI:O]

P. **Manipur Budget:** The Chairman of the Manipur Territorial Council presented the Manipur Budget for the year 1960-61 to the Council at Imphal on March 9 showing a deficit of Rs. 32,67,222.

The estimated receipts were Rs. 93,66,999 and expenditure Rs. 1,26,34,221.

The following were the main items of expenditure: Administration Rs. 2,38,332. Education Rs. 65,37,428; Health Services Rs. 12,15,985; Veterinary Rs. 2,13,017; and Civil Works Rs. 43,54,459.

Q. **Indian Council of Cultural Relations Annual Meeting:** Addressing the annual general meeting of the Indian Council of Cultural Relations in New Delhi on February 21, the Central Minister for Scientific Research and Cultural Affairs, Mr.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Humayun Kabir, called for efforts to promote understanding of Indian culture abroad.

He said that there was "more need for goodwill and understanding between different peoples today than ever before" and suggested that "we can play our part by projecting the richness and variety of our culture."

To promote understanding of Indian culture, he said, the Council had been sending cultural ambassadors abroad. Melbourne University would shortly institute a Department of Indian Studies. Other countries, he hoped, would follow the lead.

Sir Richard Aluwihare, Ceylon's High Commissioner, spoke of the centuries-old cultural ties between Ceylon and India.

Kakasaheb Kalelkar, Vice-President of the Council, said that tourism should be promoted so that people of various countries could know each other.

Mr. Inam Rahman, Secretary of the Council, in his report, said that the Council had given a grant of Rs. 2,000 to a Danish scholar to enable him to come to India and improve his knowledge of Hindi. Two Japanese students had also been given scholarships for learning Hindi.

The Council had published Persian translations of the *Geeta* and Kalidasa's *Vikram Urvasi*.

The first section of the Maulana Azad Bhavan would be completed by the end of May, 1960. The entire bulding, on completion, would cost Rs. 13,00,000. The first section would house the offices of the Council and a library and have art galleries besides rooms for visiting scholars.

On the same day (February 21), the General Assembly of the Council elected the following as its fellows for their distinguished services in the cause of international understanding through the promotion of closer cultural relations between India and other countries:

Prof. Arnold J. Toynbee (UK), Prof. Zuzuki (Japan), Prof. Norman Brown (USA), Prof. Louis Renou (France), Prof. Von Glasenopp (Germany), Dr. A. A. Hekmat (Iran), Dr. Taha Husain (UAR) and Prof. Guissep Tucci (Italy).

[Prev. ref. 2553:INI:P]

R. **Acharya Vinoba Bhave On World Government:** Acharya Vinoba Bhave told Mr. and Mrs. H. B. Hollins who had come from New York to know his views on the issue of war and peace that people did not like war after suffering heavy casualties in two World Wars and hoped that a moral World Government would be established in the near future.

Mr. Hollins had asked Acharya Bhave: "Do you not believe that people all over the world are more than ready to create a World Government and that on this subject the political leaders are far behind the people? You often say that man must take the new big step in his evolution and reach a stage of spiritual development never attained so far. Do you think this change will come about within the foreseeable future, or do you believe that while this change is taking place a World Government must be established?"

Acharya Bhave replied: "You are right. People are more ready for peace than Governments or political leaders. Governments, however, also now crave for peace but are unable to find a way out of the situation created by themselves. Similarly, the leaders are sincere in thinking about peace but do not know how to get rid of the fear complex. To establish peace an atmosphere must be created against 'cold war', which is a greater curse than regular war".

By World Government, he said, he meant a "moral World Government" and not a physical government. "If we conceive of a physical government, the world will again be faced with complicated problems which this government will not be able to solve. If it enforces law through military force, it will create tension and new problems and will in no way help establish peace. Laws should be local, and a moral government at the Centre to tender advice should be established. As regards the spiritual development of man, we are not going to supplant but supplement spiritualism. As nations have become closer to each other through science there is the possibility of conveying spiritual thoughts to distant nations and a medium for that purpose is possible. Moral and spiritual weapons can be invented."

He added: "The ego within will have to be killed totally—or, to put it in Indian terminology, one will have to reduce oneself to zero".

He said that spiritual hunger was being felt all over the world; that was evident from the fact that a spiritual movement launched in a remote corner of one country had its reaction at the other end of the world.

(*The Statesman*, New Delhi)

[Prev. ref. 2195:PHI:A]

INDONESIA

A. **Parliament Dismissed:** President Sukarno issued a decree on March 5 dismissing Parliament. Djakarta Radio said that the decree was issued after a Cabinet meeting in Bogor.

The decree said that Dr. Sukarno had taken this decision in view of the fact that the present Parliament "had shown that it cannot meet the hope for mutual assistance between the Government and Parliament in accordance with the spirit of the 1945 Constitution, guided democracy and the President's political manifesto of August 17, 1959".

It added that this was "caused mainly by the present structure of Parliament. "It should last no longer because it endangers the unity of the State, the Fatherland and the people and could delay the achievement of a just, prosperous society".

In view of this, the decree said, President Sukarno had decided "to suspend the task and the positions of the present Members of Parliament" and "to renew the organization of Parliament in the shortest possible time".

[The President's decree was vague in that it did not specify what would happen to its present Members who were originally elected to the first Parliament in the 1955 elections. The decree only stated that because of lack of co-operation between Parliament and the Government over the approval of the 1960 Budget estimates President Sukarno felt it necessary to suspend its operation. It was still not clear what further action Dr. Sukarno intended to take in re-constituting Parment which in effect has been dissolved.]

The First Minister, Dr. Djuanda, the Deputy First Minister, Dr. Johannes Leimena, and the National Security Minister and Army Chief of Staff, General Abdul Harris Nasution, were handed a letter from President Sukarno to the Speaker of the Parliament, Mr. R. M. Sartono.

The letter said: "In view of the present situation I deem it necessary to make a decision to renew the organization of Parliament. I hope this decision will be communicated to the Members of Parliament".

On January 12, 1960, President Sukarno took full control of the country's political parties, giving himself the power to dissolve them if he thought it necessary.

He also announced the formation of the National Front, a new mass political organization to be headed by himself, and of a supreme State body—the People's Congress—to which he would be responsible.

Dr. Sukarno called on every citizen to join the National Front which would have the task of co-operating with the Government with three aims: (1) to complete the national revolution in Indonesia; (2) to achieve a just and prosperous society through universal development and construction; (3) to bring West Irian (Dutch New Guinea) into the Indonesian Republic.

The decree was formally passed on to Members of Parliament when it met on March 7.

Speaker's Reaction:

At a closed-door session, the Speaker, Mr. R. M. Sartono, told the House of the Presidential action.

Later, he told newsmen that the Members felt that the House had been treated unjustly.

Parliament, he added, did not regard the decree as dissolution. The Members had been suspended from doing their work but, although they might not be allowed to meet, they still regarded themselves as Members of Parliament.

Asked if the President's action had come as a surprise, he said: "It was unexpected. What surprised me were the reasons given."

He said that Parliament had worked in mutual co-operation with the Government in line with the 1945 Constitution. "We differ only on the issue of state income in the 1960 Budget."

[At the time of dismissal, the House was exercising one of its remaining privileges—debate of the Budget. The Government's financial planning had come under heavy fire during the debate and had the House rejected the Budget, the Government would have been forced under the Constitution to submit the 1959 estimates again.]

The same day (March 7), the Army Command in Djakarta prohibited newspapers throughout the country from commenting on the decree.

(*The Times of India*, Bombay, *The Hindu*, Madras and *The Statesman*, Calcutta)

[Prev. ref. 3124:IND:A]

B. **Mr. N. S. Khruschev's Visit:** The Soviet Prime Minister, Mr. Nikita S. Khruschev, paid a goodwill visit to Indonesia from February 18 to March 1 at the invitation of the Indonesian Government.

During his 12-day stay in the country, he went through a crowded programme of talks with Indonesian leaders, visits to agricultural, industrial and historical centres and public and State receptions. Large crowds cheered him wherever he went.

On his arrival at Kemajoran airport near Djakarta on February 18, he was greeted by President Sukarno, Cabinet Ministers and other senior officials and non-officials.

Welcoming the distinguished visitor, Dr. Sukarno said: "After you have witnessed yourself the situation in my country, you will use it as material to tell the world, especially the coming 'summit' conference, that Indonesia will continue to fight and eliminate imperialism from the face of the globe. May your visit here bring about closer and stronger relations between the Soviet Union and Indonesia."

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Mr. Khruschev, in his reply, said that both Indonesia and the Soviet Union shared the same ideas on colonialism and world peace.

State Banquet:

In the evening (February 18), Dr. Sukarno gave a State banquet in honour of Mr. Khruschev.

Speaking at the banquet, Dr. Sukarno described Mr. Khruschev as "a world leader who works very hard for world peace and who is consistent in opposing imperialism and colonialism."

Replying, Mr. Khruschev said: "All the difficulties suffered by the Indonesian people can be overcome provided the Indonesian people can organize themselves and provided they can get rid of the remnants of undermined and ruined old systems.

"If any of these remnants remain, they can be very dangerous. It often happens that the remnants are more dangerous than what was there before.

"Our sympathies are always on the side of people who struggle to promote their economy and their culture.

"Our people hate colonialism.

"We are prepared to help Indonesia continually as we do with other countries which we consider as our brothers."

He toasted Dr. Sukarno as "our good friend" and pledged "eternal friendship in their common efforts to liberate all peoples from the chains of colonialism and imperialism, to unite our efforts in building up the economies of our countries for mutual help and for strengthening world peace."

Later, Mr. Khruschev went on a tour of Bogor, Bandung, Jogjakarta, Sorabaya and Bali where he had prolonged discussions with Dr. Sukarno.

Address To Members Of Parliament:

One of Mr. Khruschev's major engagements in Indonesia was an address to Parliament on February 26 when he said that the Soviet Union had insisted on convening the forthcoming 'summit' meeting mainly because UN was unable to protect the world from the danger of another catastrophic war.

He listed disarmament, Germany and West Berlin as most urgent problems to be tackled at the 'summit' meeting and violently attacked Japan for signing the Security Pact with the United States, denounced what he called new collective colonialism in the form of political military blocs, advocated Afro-Asian representation at the 'summit' conference and appealed for general and complete disarmament.

He said that Russia had placed very great significance on his friendly meetings with Mr. Nehru and other prominent statesmen in Asia and Africa.

Attacking Japan's Security Pact with the United States, he warned the Government of Japan that it was a gambling performance which was very dangerous for Japan itself.

Quoting the proverb, "if you sow the wind you will reap the whirlwind," he stated that such a storm could wipe out those people who liked to play with fire.

The Soviet Union, he said, would not forget the measures taken by the ruling circles of Japan "which threaten world peace" and asked whether Japan intended to carry out once more the "Tanaka" plan of World War II days.

He supported Dr. Sukarno's view on wider representation at the 'summit' meeting but said that nevertheless the Soviet Union endorsed the Western view that the time was not yet ripe for wider representation. "We are of the opinion that you should not reject small achievements while striving for greater ones." The time would come when the big Powers such as People's China, India, Indonesia and Japan would take their part in deciding all main international questions.

The Soviet Union would never agree to the disregarding of the interests of small nations by big nations.

He expressed the conviction that the 'summit' meeting would open the way towards a wider meeting "really leading to the achievement of deeper mutual understanding between nations."

He added: "We agree to the convening of the 'summit' conference and firmly insist that the conference should take place because United Nations, where countries are divided into blocs, does not always take effective decisions on vital problems.

"At present, it is unable to protect the world from the danger of another war which can bring about catastrophic consequences."

He re-iterated the Soviet Union's sympathy for Indonesia in her struggle to recover Dutch-held West Irian.

Turning to disarmament, he said that the solving of this question would open a new epoch for all humanity—"an epoch of solid world peace."

Recalling his own disarmament proposals laid before United Nations in September, 1959 and the recent cut in Soviet armed forces, he asked the Western countries to shift from "words to concrete deeds."

He deplored the fact that in the last ten years the NATO (North Atlantic Treaty Organization) nations had spent some $500 million on war purposes.

Speaking of Soviet aid to newly independent countries, he said, the Soviet Union would help 22 nations in building 383 different industrial enterprises during 1960.

Ridiculing the Western practice of giving aid in the form of consumer goods, he said that the Soviet Union would, on the contrary, render help for industrialization.

He cited the joint Indo-Soviet steel mill at Bhilai in India as the Soviet way of aid.

Speech At Sorabaya Mass Rally:

Early, on February 23, addressing a mass rally in Sorabaya in West Java, Mr. Khruschev said:

"The Soviet Union is wholeheartedly prepared to extend to countries in the East not only moral or political support but also material support which will grow every year.

"Recently, our competition in the economic field with the United States can be compared to a marathon race. We are still trailing behind the United States, but this does not mean anything, because they started first.

"Now, the speed of the United States is slower. They are exhausted."

Citing common bonds between Indonesia and Russia, he said: "Our nations jointly opposed aggressive blocs, whether it be NATO or CENTO, which form a very dangerous source of tension.

"We both support the efforts to annihilate colonialism. We seek the prohibition of atomic and nuclear weapons. And we support the solution of all international issues by peaceful means."

Speaking from the same platform, Dr. Sukarno called for Asian and African representation at the forthcoming 'summit' conference.

He said: "I am surprised why no representatives of Asian and African nations has been invited to the 'summit' conference. I am very surprised indeed why only four big nations will participate in these peace talks.

"You know the first atomic bomb was exploded in Asia. Where are the most trouble spots in the world? In Viet-Nam, in Algeria—I tell you, in Asia and Africa.

"I tell you Korea is divided. Viet-Nam is divided. Now let me ask you, why are we not invited to participate in the talks toward world peace?

"If all Asian and African territory does not enjoy freedom, there will be no peace in this world. Indonesia will continue fighting towards this world peace, but we have to fight also for our independence.

"We are going to struggle to regain our territory of New Guinea. Let all the leaders who are going to attend the 'summit' meeting be convinced that there will not be world peace without a real solution to the Asian and African problems."

Mr. N. S. Khruschev's News Conference:

In reply to written questions at a news conference, attended by over 100 local and overseas correspondents, in Djakarta on February 29, Mr. Khruschev said that India, Indonesia, China and Japan would have to be represented at the forthcoming 'summit' conference.

He added: "I emphasize the necessity of their participation, but international relations are such that certain countries do not maintain relations with China."

He said that the most urgent task confronting the nations of the world in regard to the 'summit' conference was the strengthening of world peace.

The Soviet Government evaluated the international atmosphere as being favourable for the preservation of peace, but peace depended on the common peoples.

There were "certain stubborn and thick-skulled people" and efforts should be made to soften them up a bit.

He also made the following additional points:

Berlin: He could see no other solution of the West Berlin question than the creation of a free city.

World Peace: The most urgent task confronting the nations of the world in regard to the 'summit' conference was the strengthening of world peace.

Russian Aid: Soviet aid to the underdeveloped countries was different from that provided by capitalist States. Soviet aid had no profit motive—"we want to help countries that are weak."

Power Blocs: On the future of such Power blocs as S-EATO and CENTO, he said: "We are convinced that these blocs are stupid propositions, which, like all stupid propositions, will burst. We will do our utmost to see that that time comes as soon as possible."

Joint Declaration:

On February 28, in Bogor, Dr. Sukarno and Mr. Khruschev signed a Joint Declaration, according to which Russia would give Indonesia a long-term credit of $250,000,000.

The Declaration said that Mr. Khruschev's visit provided him with an opportunity of discussing with Dr. Sukarno various questions concerning the relations between the two countries and international problems in general. These meetings were held in an atmosphere of cordiality, friendship and mutual understanding.

It added that Dr. Sukarno had accepted an invitation from Mr. Khruschev to visit the Soviet Union at a time convenient to him. "Relations between Russia and Indonesia have been developing favourably and it was noted that in these friendly relations both Governments firmly abide by the principles of peaceful co-existence without interference in each other's internal affairs."

Both Governments re-affirmed that all manifestations of colonialism must be liquidated and that their liquidation would be in the interest of world peace.

In this connexion, the Government of the Soviet Union gave its full backing to Indonesia's rights and claims to West Irian.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The two Governments "expressed their great hope" that the current Soviet-American-British conference in Geneva for stopping nuclear tests "may soon reach a favourable agreement which might contribute to the further relaxation of international tensions."

In the course of the talks, the Government of Indonesia expressed the hope that the 'summit' meeting in Paris in May, 1960 could make a start on real steps towards disarmament and announced its support for the Soviet proposal for general and complete disarmament.

Both Mr. Khruschev and Dr. Sukarno stressed that any differences between States should be settled by peaceful means.

It emphasized the tremendous importance of Mr. Khruschev's recent visit to the United States for easing international tensions and improving relations between States.

Both expressed the conviction that the interests of safeguarding peace called for the advance of technically under-developed countries.

It said that important problems relating to the maintenance of universal peace concerned not only the four Great Powers but also the interests of all other peoples. "That is why they express the hope that to solve problems bearing on the destinies of peace and of all mankind, subsequent 'summit' meetings will also be attended, while the above-mentioned problems are discussed, by other countries including those that are not members of the existing military alliances, among them the respective countries of Asia and Africa."

"The Russians respect the active and independent foreign policy pursued by Indonesia and believed that it is making a major contribution to the consolidation of world peace.

"The two leaders discussed aid to Indonesia and, at the request of the Indonesian Government, the granting of a new Soviet loan for the realization of the projects included in the general plan of Indonesia's development in the near future.

"Provision has been made, specially, for the design and construction of steel foundries, steel works, chemical and other plants, textile mills and other industrial establishments.

"It was agreed that the loan granted will be to the value of $250,000,000.

"The Government of USSR will assist Indonesia in some projects under a programme for the peaceful use of atomic energy. This assistance will include delivery of a nuclear reactor for scientific research and the training of specialists."

Cultural Agreement:

Mr. Khruschev and Dr. Sukarno also signed a Cultural Agreement to "promote as much as possible exchanges in the field of culture for mutual benefit."

The Agreement said that the two countries would promote the "exchange of experiences" in the fields of science, education, health, literature, arts and sports by means of personal visits, missions, concerts, lectures and scientific exhibitions.

They would also promote "on a basis acceptable to both sides" the exchange of books and magazines, radio broadcasts and films.

Facilities were also agreed for students to study in each other's country.

[Prev. ref. 2789:IND:A]

IRAN

A. **World Bank Loan:** The World Bank announced in Paris on February 23 its approval of a loan equivalent to $42,000,000 for power development or a multi-purpose project on the Dez river for electric generation and irrigation and flood control in Khuzestan Province.

The First National City Bank of New York and Irving Trust Company were participating in the loan without the World Bank's guarantee to the extent of $6,000,000, representing part of the first three maturities which fall due between August 1, 1964 and August 1, 1965.

[Khuzestan, in south-western Iran, contains most of the country's oil-fields. Abadan, in this region, houses one of the world's largest oil refineries. It was also once a highly productive agricultural area and because of its many river valleys, holds good possibilities for future development.]

(*Dawn*, Karachi)

[Prev. ref. 2746:IRN:B]

B. **Screening Of Officials:** It was announced in Tehran on February 29 that in a massive screening programme then under way, the Government had dismissed 48 corrupt Government officials.

In addition, 84 officials had been temporarily retired, 101 suspended, 141 denied promotion and 581 reprimanded.

The announcement added that the screening of 352 officers was continuing.

The Iranian Press had reported that thousands of officers had been dismissed, but the report lacked official confirmation.

The officers against whom action had been taken came from all departments of the Secretariat and attached offices.

(*Dawn*, Karachi)

JAPAN

SUMMARY: Soviet Protest On Treaty With USA; Trade Agreement With Russia; Co-operation In Singapore Steel Project; Watch Plant For India; Not To Make Atom Bombs.

A. **Soviet Protest Against Mutual Security Pact With USA And Government's Reply:** The Soviet Government sent a formal Note to the Japanese Government on January 27 protesting against the Japanese-American Mutual Security Pact (see page 3127) and revoked its promise to return two Islands—Habomai and Shikotan—until the evacuation of US forces stationed in Japan was effected.

The islands, which are in the Southern Kuriles, had been in Russian possession since the end of World War II.

The protest Note was contained in an *aide memoire* sent through the Japanese Embassy in Moscow.

In a statement rebutting the Soviet arguments, the Director of the Foreign Office's Public Information and Cultural Affairs Bureau, Mr. Shinichi Kondo, said in Tokyo on January 28 that the Russian Note constituted "a breach of international trust" and "interference in the domestic affairs of Japan."

He pointed out that the Soviet condition that the Islands would not be returned unless foreign troops were withdrawn was "not logical".

He charged that the condition violated the provisions of the Bulganin-Hatoyama Joint *communique* of October 19, 1956.

This *communique* ended the state of war between the two countries and re-established diplomatic relations.

Russia had agreed that the Habomai and Shikotan Islands would be returned after the signing of the Peace Treaty. At the time of signing the *communique*, no other conditions had been attached.

Mr. Kondo also emphasized that the new Security Treaty was not aggressive in purpose, that it was limited to ten years and that it was within the framework of the United Nations Charter.

A similar stand repudiating the Soviet arguments was taken in the Japanese Government's formal reply sent to the Soviet Union on February 7.

In another *aide memoire* sent to the Japanese Government on February 24, the Soviet Government again stated that the new Japan-US Security Treaty was "directed against the Soviet Union, China and other Asian countries."

It said that by concluding the new Treaty, the Japanese Government had ignored the interests of maintaining peace and sound relations between Japan and her neighbours.

It repeated that Japan's present policy, especially the Security Pact with USA had changed the whole situation in the Far East.

The Soviet Union, it stressed, threatened no one with nuclear weapons nor did it want these weapons to be used by anyone ever again.

In its reply sent on March 1, Japan re-iterated that the Treaty was not directed against any specific country.

It said that such a charge "completely ignores the fact that Japan is striving for the development of friendly relations with the countries of Asia."

The Japanese Note pointed out that the Treaty was concluded on the basis of the inherent right of individual and collective self-defence under Article 41 of the United Nations Charter which was clearly recognized by both the countries in their Joint Declaration of 1956. The present Soviet attitude which "completely ignores this fact" was "in itself not conducive toward contributing to the maintenance of world peace."

It denied that Japan had brought up unfounded territorial demands and was wilfully delaying the conclusion of a Peace Treaty between the countries.

The territorial problem, it emphasized, was still unsolved. Kunashiri and Etorofu (Southern Kuriles) had inherently and historically been always Japanese territory and had never belonged to any other country.

It said that contrary to the implications of the Soviet *aide memoire*, Japan was observing the terms of the Joint Declaration and hoped to develop good-neighbourly relations with the Soviet Union and thus contribute to world peace.

It called upon the Soviet Government also to abide by the Joint Declaration and further to develop relations between the two nations on the basis of this "basic Agreement".

Mr. N. Khruschev's Criticism:

In the meanwhile, the Treaty was denounced in strong terms by the Soviet Premier, Mr. N. Khruschev, during his Indonesian tour (see page 3230).

Commenting on this statement the Prime Minister, Mr. Nobusuke Kishi, told a news conference in Osaka on

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

February 27 that it was "another in the series of Soviet efforts to neutralize Japan."

He said that Mr. Khruschev's statement was obviously aimed at severing Japan from USA. The threatening tone of his statement was precisely the sort of thing which necessitated the conclusion of the Treaty.

He emphasized that the Treaty was "purely defensive in nature and in no way constituted a violation of the Japan-Soviet Joint Declaration of 1956 ending the State of War between the two countries.

(*The New York Times, Tass* and *The Hindu*, Madras)

[Prev. ref. 1094:JAP:A, 3127:JAP:A]

B. **Term "Far East" Defined:** The Foreign Ministry released on February 27 an official interpretation of the term "Far East" in the new Japan-US Security Treaty signed in Washington on January 19.

It read (in part): "The Far East as a general expression cannot be defined in precise geographical terms, but the common concern of Japan and the United States as stated in the Treaty is the maintenance of international peace and security in the Far East.

"In this sense, as a practical matter, the area of common concern in the Far East, so far as the Treaty is concerned, is the area to the defence of which against armed attack United States forces based in Japan are capable of contributing by the use of facilities and areas in Japan.

"Such an area is primarily the region north of the Philippines inclusive, as well as Japan and the surrounding area, including the Republic of China.

"In supplement to this underlying concept of the Security Treaty, it is added that should an armed attack be made on this area or should the security of this area be threatened by a development in the surrounding area, the action that the United States may take in response would depend on the nature of the attack or threat and would not necessarily be restricted to that particular area".

(*The Nation*, Rangoon)

[Prev. ref. 3127:JAP:A]

C. **Trade Agreement With Russia:** The representatives of Japan and the Soviet Union signed in Tokyo on March 2 a long-term Trade and Payments Agreement providing for expansion of trade between the two countries in the next three years.

It replaced the one which expired in December, 1959.

The volume of trade during the three years under the Agreement was estimated by the Foreign Ministry at approximately $230 million for Japanese exports and about $210 million for Japanese imports. This compared with an estimated $35 million each way under the old one-year Agreement.

The new Agreement provides for large increases in Soviet exports to Japan of crude oil, timber and potash.

Japanese exports to the Soviet Union will include a wide range of industrial equipment, ships, railway rolling stock and chemical and industrial plants.

(*The Hindustan Times*, New Delhi)

[Prev. ref. 2143:JAP:A]

D. **Co-operation In Singapore Steel Project:** Industrial sources in Tokyo said on March 6 that the Japanese steel industry had decided to agree to a Singapore request for co-operation in erecting an iron and steel mill.

The request had been made in the Summer of 1959 by the Singapore Prime Minister, Mr. Lee Kuan Yew.

The sources said that two high Japanese steel industry executives—Mr. Yuji Tejima, Director of the Japan Steel Industries Federation, and Mr. Hisayuki Ohara, Director of the Kawasaki Iron and Steel Company—would visit Singapore shortly. Concrete plans and terms would be decided after a certain measure of agreement had been reached with the local authorities.

(*The Statesman*, Calcutta)

E. **Clock Manufacturing Plant For India:** The Shin Toyo Clock Factory in Tokyo announced on March 6 that it would export to India in June, 1960 a plant manufacturing 5,000 clocks a month.

The plant, worth 35,000,000 yen, is the first of its kind to be shipped overseas. It would also be the first shipment of its kind to be received by India.

It added that a Japanese engineer would accompany the first consignment in June, 1960, to be followed by two successive consignments.

(*The Hindu*, Madras)

F. **Japan Not To Make Atom Bombs:** The Minister of State, Mr. Yasubiro Nakasone, who is also Chairman of the Atomic Energy Commission, told the Diet on March 4 that Japan could not and would not make atomic bombs at present.

He said that 3,000,000 kw hours of electric power was needed annually to build atom bombs and it was impossible for the country to spare so much power. The rigid international controls over the supplies of plutonium also stood in the way.

He added that even if Japan had the capability of building atom bombs, she did not intend to do so.

(*Tokyo Radio*)

[Prev. ref. 2704:JAP:C]

G. **Proposal For Rice Bank:** Tokyo reports said on February 24 that the Minister for International Trade and Industry, Mr. Hayato Ikeda, had proposed the establishment by Japan of a Rice Bank for Far Eastern nations as a means of promoting economic co-operation within the area.

The proposal called for Japan to purchase surplus rice from the rice-producing countries in the region and then sell grain at low prices to the rice-purchasing countries.

Under the plan, Japan would act as a clearing house for rice transactions by buying grain from surplus countries such as Burma, Thailand and Formosa and selling it to rice-importing countries like India, Indonesia and the Philippines. Japan would buy all the rice any country wanted to export and then sell it at low prices. Japan would pay the freight and other expenses involved. Where necessary a dual price system would be established.

The supply of grain to rice-deficit nations would be in the nature of straight trade transactions, but the possibility is considered of rice sales being included in Japan's reparations payments to the claimant nations such as the Philippines and Indonesia.

Although the plan, if realized, would impose a burden on Japan, it would nevertheless benefit the country in the long-run in establishing markets for Japanese goods in South-East Asia, even taking into consideration the fact that Japan would have to meet the costs of importing and stocking rice which she does not need.

Japan, which was once a big rice importer, imports hardly any rice now as a result of successive bumper harvests in the last several years. But, some rice is being imported from countries like Burma because of political considerations.

LAOS

A. **UN Economic Aid:** The Director-General of the UN Special Development Fund, Mr. Paul Hoffman, who was on a tour of East Asian countries, announced in Vientiane on March 6 that the UN Special Fund would contribute $1,326,000 for the economic development of Laos.

[For background on UN report on Laotian economy see page 3169.]

(*The Statesman*, Calcutta)

[Prev. ref. 3169:LAO:A]

MONGOLIA (Outer)

A. **Chinese Gift Of Woollen Mill:** A modern woollen textile mill which China helped to build for the Mongolian People's Republic was handed over to the Mongolian Government on January 15.

The mill was one of the projects constructed under the 1956 Agreement on Chinese economic and technical aid to Mongolia.

Completed in November, 1959, it has an annual capacity of more than 1,110,000 metres of woollen fabric. Trial production had given full satisfaction.

The Presidium of the Great People's Hural and the Council of Ministers of Mongolia conferred orders, medals and diplomas on the 104 Chinese workers who took part in building the mill.

(*Peking Review*)

[Prev. ref. 1033:MON:A]

PAKISTAN

SUMMARY: Trade Accord With Burma; World Bank Missions' Visits; Decimal Coinage; Three-Year Degree Course.

A. **Trade And Financial Accord With Burma:** The Government approved on March 1 the "agreed Minutes" of discussions between the representatives of the Governments of Pakistan and of Burma which were signed in Rangoon on January 9, 1960.

According to a Press Note issued in Karachi, the "agreed Minutes" *inter alia* provided for: (i) the extension of the existing Trade Agreement between Pakistan and Burma for a further period of three years from March 1, 1960; (ii) settlement of the outstanding financial issues between the two countries; and (iii) purchase of 2 to 3 lakh tons of rice every year for a period of three years.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The "agreed Minutes" also stated that the Government of Burma had agreed to balance the trade as far as possible between the two countries.

It will be recalled that a trade delegation headed by Mr. I. A. Khan, Joint Secretary, Ministry of Commerce, had visited Rangoon in December, 1959.

The delegation had prolonged discussions with the Burmese authorities, particularly in respect of financial issues which had remained unsolved for a long period. Burma had to pay several crores of rupees to Pakistan as part of her separation debt and pensionary liabilities. She had settled the financial issues with India five years earlier.

As a result of successful negotiations, a mutually satisfactory Agreement had been arrived at under which Burma would discharge her debts to Pakistan in a period of three years beginning from the current year. The payment would be made in the shape of supply of rice which will be utilized in East Pakistan. Burma has also agreed in addition to the payment of arrears of pensions to discharge her current and future liabilities on this account regularly on receipt of certified statements of payments made by the Comptroller and Auditor-General of Pakistan.

B. **World Bank Missions In Pakistan:** The Bankers' Mission made up of Sir Oliver Franks, Mr. Allan Sproul and Dr. Hermann Abs, which toured Pakistan in the middle of February, 1960, had their second meeting in Karachi with the Pakistan Finance Minister, Mr. Mohammed Shoaib, on February 23. The Mission was sponsored by the World Bank.

They had met Mr. Shoaib earlier in Rawalpindi.

In Karachi, the Mission also met Choudhury Mohammed Ali, Chairman of the Board of Directors of the Pakistan Industrial Credit and Investment Corporation, on February 24.

The second Economic Mission sent by the World Bank to Pakistan left Karachi for Dacca on February 24 to survey the existing economic conditions in East Pakistan.

(*Dawn*, Karachi)

[Prev. ref. 2023:PAK:E]

C. **Foreign Investments:** According to a survey conducted by the State Bank of Pakistan, published on December 31, 1959, India's share of foreign investment in the private sector in Pakistan up to the end of 1956 was about Rs. 35.74 crores.

The share of UK and USA for the same period stood at Rs. 55.83 crores and Rs. 4,00,000 respectively.

The aggregate foreign investment in the private sector up to the end of 1956 amounted to Rs. 111.15 crores, of which the commercial sector comprising trading, insurance and banking accounted for Rs. 47.89 crores. This was followed by the manufacturing industries wherein foreign private investment amounted to Rs. 31.09 crores. Investment in extractive and allied industries was of the order of Rs. 10.74 crores.

(*Dawn*, Karachi)

[Prev. ref. 2916:PAK:C]

D. **Pakistan Enters "Jet Age":** Pakistan entered the "jet age" on March 7.

On that day, the first jet flight of the Pakistan International Airlines was inaugurated at the London airport when a *Boeing* 707 international airliner took off at 9-30 a.m. (GMT) for Karachi. The plane arrived in Karachi the following morning.

The first west-bound jet flight of the Pakistan International Airlines took off for London on the morning of March 8 from Karachi.

(*Dawn*, Karachi)

[Prev. ref. 3068:PAK:F]

E. **Adoption Of Decimal Coinage From 1961:** In Rawalpindi on March 2, the Presidential Cabinet decided to introduce the decimal coinage system all over the country on January 1, 1961.

The Cabinet also decided to introduce the metric system of weights and measures from "as close a date to January 1, 1961 as possible".

With the introduction of decimal coinage, a Pakistani rupee will have 100 pice instead of 64 as at present. The intrinsic value of the rupee will, however, remain unchanged.

It was stated that the decimal coinage system would facilitate the adjustment of accounts, especially in terms of foreign exchange, to the lowest possible extent.

(*Dawn*, Karachi)

[Prev. ref. 349:PAK:A]

F. **Enforcement Organization Created In West Pakistan:** The West Pakistan Government announced on March 4 the creation of an Enforcement Wing to ensure the sale of controlled articles at controlled prices.

Making this announcement at a news conference in Lahore, the Chief Secretary of the West Pakistan Government, Mr. M. Khurshid, said that the staff would comprise handpicked police officers and would go into action in big towns of the Province, like Lahore, Lyallpur, Multan, Hyderabad, Rawalpindi and Peshawar.

Mr. Khurshid said that no scheme of distribution could work without the sympathetic understanding and co-operation of the public with the controlling agencies.

He added that the prices of certain articles had gone up. There had been an increase in population; there had been a change in the mode of living of the people; and there was shortage of foreign exchange to import adequate quantities of consumer goods as well as to import raw materials and spare parts to keep the indigenous production at full level. Added to these causes was the inflationary trend. Steps were being taken to combat inflation and to increase foreign exchange holdings, but he uttered the warning that despite gradual and perceptible steps, the spectre of inflation or high prices could not be done away in a day.

(*Dawn*, Karachi)

[Prev. ref. 3207:PAK:C]

G. **Universities To Introduce Three-Year Degree Course:** It was stated in Rawalpindi on March 4 that the Central Education Ministry had directed all the six universities in Pakistan to make arrangements for introducing the three-year degree course from the next academic year.

The Education Minister, Mr. Habibur Rehman, told newsmen that preliminary steps were being taken for introducing compulsory primary education in East Pakistan.

He said that the three-year degree course was recommended by the Education Commission. A fortnightly report would be received by the Education Ministry from April recording the progress made in the implementation of the reforms. The various parts of the national education programme were being implemented, but results would be visible only after some time.

(*Dawn*, Karachi)

[Prev. ref. 3130:PAK:I]

H. **New Capital To Be Named "Islamabad":** The Pakistan Cabinet meeting in Lahore on February 24 decided to name the new capital to be built near Rawalpindi as "Islamabad".

It was stated officially that the Federal Capital Commission was working out a master plan for the capital which would be constructed in the Potwar plateau between Rawalpindi and Murree.

(*Dawn*, Karachi)

[Prev. ref. 2908:PAK:B, 3081:PAK:N]

SUDAN

A. **Central Bank Starts Functioning:** The Central Bank of Sudan started functioning on February 25 when the formal take-over from the National Bank of Egypt took place.

The Bank will be in charge of issuing Sudanese currency instead of the Currency Board which was dissolved.

(*Middle East Economic Digest*, London)

[Prev. ref. 1417:SUD:A]

THAILAND

A. **ECAFE Committee On Industry and Natural Resources:** The 12th session of the ECAFE Committee on Industry and Natural Resources met in Bangkok from January 28 to February 5 under the chairmanship of Mr. Porn Srichamara of Thailand. Representatives of 24 Asian and non-Asian countries and UN specialized agencies attended.

The Committee adopted several recommendations, including one for joint projects which might be developed in the ECAFE region.

The Committee took note of the resolution of the UN General Assembly of December 12, 1959 recommending the establishment of a Commission for Industrial Development, and the delegates felt that such a specialized body would be of great benefit to the countries of the region.

It was also of the view that the countries of the region should explore the possibility of developing a series of projects such as:

(a) Field studies of specific industries which are of common interest to two or more countries;

(b) Co-operation in training extension specialists and preparation of demonstration and instruction materials through joint industrial development and service institutes to be established by the countries concerned;

(c) Establishment of a clearing house for technical information and joint training centres in each important field of specialization; and

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

(d) Promoting mutual assistance among industries.

The organization and administration of manufacturing and other industrial associations might be singled out for a joint study through a conference of these associations.

It considered that there was great scope for international co-operation for the development of the machine-tool industry and suggested that the countries of the region should start with the production of small and medium-sized machine-tools of light and simple types.

In the field of small industries, it recommended the establishment of joint small industry development institutes to assist countries in preparing overall small industry development programmes. It recommended the compilation of a small industry equipment manual.

It called on its Sub-committee on Mineral Resources Development and the ECAFE Secretariat to examine the proposal made by a study group of Asian geologists and mining engineers who toured USA in 1959 in regard to the feasibility of establishing a Regional Geological Survey Centre for South-East Asia.

It endorsed the proposal for forming a panel of rural electrification experts to visit the countries of the region at the request of the member-Governments and make specific recommendations.

It directed the Secretariat to compile information on the electrical equipment manufacturing industry.

It also requested the ECAFE Secretariat to explore the possibilities of convening a Seminar on the effect of meteorological changes on stream-flow in rivers.

It endorsed the suggestion for a list of public industrial enterprises in the countries of the region to be compiled and circulated by the ECAFE Secretariat with a view to providing opportunities for exchange of experience.

It felt that particular emphasis should be given in the UN Programme of Technical Assistance to the training of local personnel in management at suitable centres within or outside the region.

It recommended the holding of a Symposium on the development of bauxite resources and the organization of a Regional Cartographic Conference by ECAFE in co-operation with the UN Cartographic Office.

(*UN Information Service*, Bangkok)

TURKEY

A. **Budget For 1960-61:** The Grand National Assembly began in February debating the £T7,000,000,000 (£280,000,000) Budget for 1960, which, by Turkish law, must be passed by midnight on the last day of February. The Finance Minister, Mr. Potatkin, claimed that the Budget was balanced, though it was 21.5 per cent higher than the previous year's.

More than £T2,000,000,000, he said, had been allocated to capital investment. The Turkish application to join the European Common Market had been accepted and would contribute to a higher standard of living in Turkey. The economic stabilization programme, which had been in operation since August, 1958, had already increased the value of the Turkish pound (£) in foreign markets and had reduced the price of imported goods.

A spokesman for the Opposition People's Party denied that the Budget was balanced.

It was a breach of the economic stabilization programme which Turkey had undertaken, he added, that the full amount of the Turkish foreign debt had never been disclosed by the Government and nothing had been done to correct the Turkish trade gap, which was getting steadily worse.

(*The Times*, London)

[Prev. ref. 2652:TUR:A]

B. **New Technical University:** The Charter of the Middle East Technical University, which was approved by the Grand National Assembly in May, 1959, came into effect on March 2.

This means that the new University will no longer come under Turkish civil administration but will henceforth be autonomous.

The University will function as an independent body governed by a Board of Trustees, all of Turkish nationality, whose chairman will be the Prime Minister, Mr. Adnan Menderes.

The Consultant-President of the University, who must be of a nationality other than Turkish, is at present an American, Dr. Edwin S. Burdell, a former President of the Cooper Union for the Advancement of Science and Art in New York.

The idea of a Middle East Technical University was conceived in 1953 when a United Nations Mission visited Turkey. Originally intended merely as a small School of Architecture and City Planning, the enthusiasm of the Turkish Government caused these first ideas to blossom into a project for one of the largest universities in the world, with a student membership of 20,000 by 1980. Two-thirds of them will be Turkish.

The aim is to make the new University a centre for the teaching of all forms of modern technology. At present, about 700 students are working in the Faculties of Architecture, various branches of Engineering, Physics and Administrative Science, installed in temporary premises in Ankara.

There will later be facilities for Agriculture, Arts and Sciences, and other subjects.

A site of nearly 11,000 acres has been reserved for the University outside Ankara. Construction of the first building will begin in the Summer of 1960.

Britain has taken a direct interest in the University, contributing technical assistance through the Central Treaty Organization, laboratory equipment for the engineering department and teaching staff.

The language of instruction, mainly for technical reasons, will be English.

(*The Times*, London)

[Prev. ref. 2742:TUR:B]

UNITED ARAB REPUBLIC

A. **Trade Protocol With China:** China and the United Arab Republic signed in Peking on February 24 a Protocol for the second year of their Trade Agreement under which the two countries would endeavour to export commodities to each other for an amount of £15,000,000.

China would buy mainly cotton (long staple and medium staple) from UAR, which would purchase from China frozen meat, chemicals, silk, tea, edible oil, iron, steel, paper and other articles.

The Protocol covered the second year of the three-year Agreement between the two countries signed in Cairo in December, 1958.

(*The Egyptian Gazette*, Cairo)

[Prev. ref. 2463:CHI:A]

B. **Meeting Of Arab League Council—Decisions On Policy Towards Israel:** The Arab League Council began a secret session in Cairo on February 8 to take a collective decision on the Arab attitude towards Israel.

[Relations between the Arab countries and Israel had been tense since the border clashes early in February, 1960 and Israel's earlier decision to divert the waters of the river Jordan to irrigate the Negev desert.]

The Council decided to make another appeal to Iraq and Tunisia to attend the Conference. These two countries did not attend the session because of differences with the United Arab Republic. They also wanted the Conference to be held outside Cairo.

Before the session began, the Arab League Secretary-General, Mr. Abdul Khalek Hassouna, described the meeting as "the most important meeting in the League's history."

He said that if the Arab Governments were able to reach a unified attitude, the Palestine case would realize important achievements both in the Arab and in the international fields, and the way would be open for a top-level Arab Conference.

In Mr. Hassouna's phrase, the Arab League Council meeting was in connexion with "Palestine and its future". One of the most important issues which the Council faced was the question of Israel diverting the waters of the Jordan river to irrigate the Negev desert.

A Technical Committee was formed by the United Arab Republic, Jordan and the Lebanon to report on the Israeli project for the river Jordan and on Arab counter-measures.

According to Cairo Press reports on February 11, the Arab League Council discussed methods of co-ordinating the armies of the Arab countries under a Joint Command in the event of declaration of war on Israel.

Details of the Joint Command plan had been agreed upon but they were kept secret.

Another report concerning the proceedings of the Council on February 11 was that its members were divided over the issue of forming an Arab State for Palestine refugees.

The chief hurdle in the way of forming such a State, according to Conference sources, was Jordan's unwillingness to part with the Arab sector of Palestine which it annexed in 1950 when King Abdullah was the ruler.

It was also said that one of the reasons why King Hussein of Jordan paid a visit to Saudi Arabia earlier in the week was to enlist the support of the Saudi Arabian ruler to Jordan's stand on the Arab part of Palestine.

The Council was reported on February 11 to have decided unanimously to declare a collective war on Israel if Israel diverted the waters of the river Jordan to irrigate the Negev desert.

Another decision arrived at was to build a number of dams across the river to prevent the flow of water into Israel.

Resolutions:

The Council ended on February 29 after passing a number of resolutions.

In one resolution, it called on the Arab countries to co-operate immediately in joint defence against any

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

aggression by Israel or Powers supporting Zionism.

It declared that any foreign interference in West Asian affairs would menace West Asian security and world peace.

It postponed discussion on the formation of a Palestine Army and "Palestine Entity" to the next session.

It described the Israeli scheme for diversion of the river Jordan as an aggressive plan against Arabs.

The Israeli scheme, it was said, justified "legal self-defence" in which all Arab countries should co-operate.

It denounced French nuclear tests in the Sahara and supported Algerian self-determination.

In another resolution, the Council decided to form a committee of five to carry on Arab plans on the Palestine issue in national and international fields.

It also accepted a Moroccan proposal that an extraordinary Arab League Council session at Foreign Ministers' level should be held on April 30 to discuss Arab affairs and Arab solidarity.

A Council source said later that the meeting would deal with differences between the United Arab Republic, Tunisia and Iraq.

Gen. A. K. Kassem On Palestine:

The Iraqi Prime Minister, General Abdel Karim Kassem, said in Baghdad on December 21, 1959 that the days of using palliatives to intoxicate the Arab people and the people of Iraq were gone. Eleven years had elapsed since the Palestine episode. and the people of Palestine continued to be displaced and homeless.

He went on: "The Palestine issue can only be solved by doing justice to the people of Palestine and by forming a Palestine State comprising all its coveted parts. We will help this Palestine State with money, men and arms and with everything we possess. The day of victory is very near, when the people of Palestine will enjoy in their Republic full freedom, independence and sovereignty."

(*The Egyptian Gazette*, Cairo and *The Hindustan Times*, New Delhi)

[Prev. ref. 465:ISR:C, 2797:UAR:C, 3204:ISR:A]

C. **Construction Of Aleppo-Lattakia Railway Begins:** Work on the first section of the Aleppo-Lattakia railway began on February 18 as part of the ceremonies marking the second anniversary of the formation of the United Arab Republic.

It had been announced four days earlier that the contractor for this 35-mile stretch was an Aleppo firm, whose offer of £S2,850,000 (about £285,000) had been accepted.

The cost of the whole 350-mile railway was estimated at £S500,000,000. [£S9.96 = £1]

(*Middle East Economic Digest*, London)

[Prev. ref. 3208:UAR:A]

D. **4,000-Year-Old Necropolis Discovered In Nubia:** According to Cairo reports on February 28, archaeologists excavating in Nubia in Upper Egypt had found a giant necropolis with over 1,000 mummies, many of them of children, dating back to more than 4,000 years.

The condition of the mummies suggested that they had been the victims of a massacre. Some were tied up and some had been strangled.

Egyptian archaeologists expressed the hope that further study would reveal more details of the massacre.

The Director-General of the Antiquities Department of UAR said that the discovery of the necropolis was important as it shed light on Nubia's ancient history, from pre-historic times till the end of the rule of the Pharaohs.

He added that further important discoveries were expected before the area was submerged by the waters of the Aswan High Dam.

(*The Egyptian Gazette*, Cairo)

[Prev. ref. 3132:UAR:D]

E. **UNESCO's Efforts To Save Egypt's Archaeological Monuments Threatened With Submersion By Aswan High Dam:** Details of the world-wide campaign that UNESCO launched in Paris on March 8 for the defence of archaeological monuments threatened by the Aswan High Dam project were disclosed by its Director-General, Mr. Vittorino Veronese, at a news conference in Milan on March 2.

The Dam will raise the level of the Nile by about 12 metres over several hundred kilometres in its lower and middle reaches. A number of monuments of great archaeological interest would thus be submerged both in Egyptian and Sudanese territory. In April, 1959, the Egyptian Government appealed to UNESCO for help in devising and carrying out a scheme to prevent this. A similar request was addressed some months afterwards by Sudan.

The appeal was promptly taken up by the UNESCO Executive Council. Missions were despatched to make a survey of the zone that would be affected by the project, and in October, 1959 a conference of archaeologists and technicians was convened in Cairo to discuss various proposals. The problem offered four different aspects.

There were some big and valuable monuments such as the Abu Simbel and Philae Temples that must be preserved on the spot.

In the case of Abu Simbel, a project envisaging injections of cement under the foundations that would have gradually raised the whole structure above the new level of the water was discarded because of being too dangerous. It was decided instead to protect these temples by a dyke built at a distance of about 300 metres from them. The same result would be obtained in the case of the Philae Temple by means of a net-work of smaller dykes. In this case, the problem was just the opposite, that is, it was necessary to ensure a constant flow of water around the island to prevent the erosion that would follow drying up.

Smaller monuments of artistic value and historical interest would be moved to a safe place.

Excavations and archaeological research must be speeded up, particularly in Sudanese Nubia, to bring out all that is worthwhile.

The cost of this programme would be high. For the dyke protecting the Abu Simbel Temple only, it is estimated at around $40,000,000 (approximately £14,285,714). About $5,000,000 would be needed for the Philae project.

The Egyptian and Sudanese Governments were not in a position to contribute funds for the purpose. They would, however, take the following measures aimed at encouraging the work of the archaeological missions:

(1) At least 50 per cent of the findings from excavations would be allotted to the missions;

(2) Excavation would be authorized in all regions for which an exclusive concession had not already been granted;

(3) Export to foreign countries of some of the monuments removed from the threatened zone would be authorized;

(4) Pieces now preserved in Egyptian museums would be offered as a token of gratitude to those Governments, Foundations, institutions and individuals which had made substantial contributions to raising the funds needed.

It is with a view to raising this fund that UNESCO launched its campaign. An International Committee has already been set up presided over by the King of Sweden.

(*The Times*, London)

[Prev. ref. 3132:UAR:D]

VIET-NAM (DR)

A. **Notes On Espionage To Co-Chairmen Of Geneva Conference:** The Premier and Foreign Minister, Mr. Pham Van Dong, sent on March 3 identical Notes to Britain and the Soviet Union (co-Chairmen of the Geneva Conference that ended the Indo-China war in 1954) on Laos.

The Notes alleged that the Laotian authorities had been allowing the South Viet-Namese authorities to use Laos as a base for espionage activities against the Democratic Republic of Viet-Nam.

The Notes said: "Most seriously, under US instigation, the Laotian authorities have been organizing General Election campaigning, while the Neo-Lao Haksat leaders, illegally detained, have not been released to contest the Elections. It is crystal clear that their scheme to keep the Neo-Lao Haksat Party away from the General Elections is a brazen violation of the Vientiane Agreements and contrary to the Geneva Agreements."

The Notes asked the co-Chairmen to take appropriate measures to end the US intervention in Laos, to re-activize the International Commission, to ensure the respect and full implementation of the Geneva Agreement on Laos and the Vientiane Agreements, to release Prince Souphanouvong and other Neo-Lao Haksat leaders so that they could contest the General Elections in accordance with the Laotian Constitution and the Articles of the Vientiane Agreements.

(*Consulate-General of the Democratic Republic of Viet-Nam*, New Delhi)

[Prev. ref. 3039:VND:A]

B. **Salient Features Of New Constitution:** The new Constitution, unanimously adopted by the National Assembly in January (see page 3172) consists of ten Chapters, with 12 Articles. Apart from defining the political, economic and social system of the Democratic Republic, it provides a basis for the struggle to re-unify the country.

Elections are scheduled to be held under the Constitution on May 8.

Chapter I of the Constitution says, among other things: "The territory of Viet-Nam is a single, indivisible whole from North to South.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

"All powers in the Democratic Republic of Viet-Nam belong to the people.

"All organs of the State must rely on the people, maintain close contacts with them, help their opinions and accept their supervision.

"The Democratic Republic of Viet-Nam is a united multi-national State.

"All the nationalities living on Viet-Namese territory are equal in rights and duties. The State has the duty to preserve and develop the solidarity between the various nationalities and endeavours to help the national minorities to advance rapidly and to keep pace with the general economic and cultural advance."

Dealing with the economic and social system, Chapter 2 stipulates:

"The Democratic Republic of Viet-Nam is advancing gradually from People's Democracy to Socialism by developing and transforming the national economy along socialist lines, by turning its backward economy into a socialist economy with modern industry and agriculture, and an advanced science and technology.

"All mineral resources, waters, forests, undeveloped land and other resources, which the State owns by law, belong to the whole people.

"The State particularly encourages, guides and helps the development of the co-operative sector of the economy.

"It is the economic policy of the Democratic Republic of Viet-Nam to unceasingly develop production in order to continually raise the material and cultural standards of the people."

As regards the fundamental rights and duties of citizens, Chapter 3 provides that all citizens are equal before the law, that women enjoy equal rights with men in all aspects of life—political, economic, cultural and social.

"For equal work, women enjoy equal pay with men. The State protects the right of mothers and children and ensures the development of maternity hospitals, *creches* and kindergartens.

"Citizens enjoy freedom of speech, freedom of Press, freedom of assembly, freedom of association and freedom of demonstration. The State guarantees all the necessary material conditions for citizens to enjoy these freedoms. They also enjoy freedom of belief.

"Working people have the right to work, to rest and to material assistance in old age, in case of illness or disability. To guarantee the enjoyment of these rights by working people, the State gradually improves working conditions and wages, gradually expands material facilities to enable working people to rest and build up their health and gradually expands social insurance, welfare and health organizations.

"To guarantee the enjoyment of the right to education by citizens, the State introduces step by step the system of compulsory education, gradually develops various types of schools and cultural institutions and expands the various forms of supplementary cultural, technical and professional education in public services and factories and in the basic organization in the cities and countryside."

Background:

In March, 1946, the National Assembly held its first session and on November 11, 1946 it adopted the first Constitution for the whole of Viet-Nam.

The 1946 Constitution which suited the conditions and revolutionary tasks at that time was now said to be no longer compatible with the new situation and new tasks. It had now fulfilled its historic task.

The draft amended Constitution had been submitted for discussions by members of Parliament, political parties, mass organizations and Government services since July, 1958. For four months beginning April, 1959 there were discussions by several sections of the people on the draft.

The Constitution Amendment Committee, presided over by President Ho Chi-Minh, met on 27 occasions to study the suggestions.

Electoral Law:

The Electoral Law having nine Chapters provides for Election Committees and detailed electoral procedure.

Its general provisions state that the members of Parliament of the Democratic Republic of Viet-Nam shall be elected on the principle of universal suffrage, equal, direct and secret ballot. All the citizens who have reached the age of 18 shall have the right to vote and all those who have reached the age of 21 shall have the right to stand for election, irrespective of nationality, race, sex, social origin, religious belief, property status, education, occupation and the length of residence.... Citizens serving in the Army also have the right to vote and stand for election. Election expenses shall be borne by the State.

(*Consulate-General of the Democratic Republic of Viet-Nam*, New Delhi)

[Prev. ref. 3172:VND:A]

ASIA OUTSIDE ASIA

SUMMARY: UN Economic Commission For Africa Meets; Safety Precautions For Operation Of Nuclear Merchantships; Friendship University In Moscow.

A. **UN Economic Commission For Africa—Second Session:** The second session of the United Nations Economic Commission for Africa concluded in Tangier on February 6.

The Commission decided that its next session should be held in January or February, 1961 in Addis Ababa, capital of Ethiopia.

It also approved a number of resolutions on February 5. These dealt with, among other things, multilateral economic and financial assistance to Africa, international co-operation in respect of former United Nations Trust territories, development of sea fisheries and an inventory of Africa's natural resources.

It also approved its work programme for 1960 and adopted resolutions relating to the training of African economists, facilitation of attendance by the Federal Republic of Germany at the Commission's sessions and recruitment of staff.

The first resolution, jointly sponsored by Ethiopia, Ghana and Guinea, welcoming the UN General Assembly resolution on the study of opportunities for international co-operation on behalf of the former Trust territories which had become independent was unanimously adopted.

It recommended that the United Nations Economic and Social Council take advantage of the establishment of the Economic Commission for Africa and requested the UN Secretary-General to use to the fullest possible extent the Commission's Secretariat in carrying out such tasks as the Council may entrust to him to carry out this resolution.

The second resolution dealing with the recruitment of staff for the Commission was also adopted unanimously.

It was jointly sponsored by Ghana, Guinea, Liberia and Morocco.

Under this resolution, the Governments of member- and associate-member-States would be asked to give every assistance to facilitate the task of the Commission's Executive Secretary in recruitment, particularly of Africans and including a number of young officers, for in-service training either on secondment, or career appointment to the staff of the Commission.

Another resolution, jointly sponsored by Ethiopia, Ghana, Guinea, Liberia, Morocco, Tanganyika and Tunisia, adopted by 12 votes to none, with 4 abstentions, expressed the belief that the Commission should play an important role in consideration of any new proposal that may be made for multilateral economic and financial assistance to Africa, and hoped that any new multilateral machinery which might be considered necessary for the implementation of such proposals should consult and collaborate closely with ECA and its Secretariat in co-ordinating aid directed to Africa.

The fourth resolution, jointly sponsored by Guinea and Morocco, unanimously adopted, took note of the report of the Executive Secretary on ways of helping the Governments of North Africa to develop their sea fisheries and requested him to get in touch with the appropriate specialized agencies, particularly the Food and Agriculture Organization, with a view to the establishment by FAO of a General Fisheries Board for the North-eastern Tropical Atlantic (Cape Spartel to the Gulf of Guinea).

Another resolution, also unanimously approved, dealt with the subject of an inventory of Africa's natural resources. This was jointly sponsored by Ghana, Guinea, Libya, Morocco, Somalia, Sierra-Leone and Tunisia.

It requested the ECA Executive Secretary that, in carrying out mineral resources surveys of the African countries, he may bear in mind the possibility of establishing industries based on such resources and to orientate such surveys in that direction.

On previous day (February 4), the Commission unanimously adopted two resolutions aiming at promoting the training of African economists at UN Headquarters, at the Commission's headquarters in Addis Ababa, and at various institutions throughout the African continent.

The first resolution, on in-service training, was jointly sponsored by Ghana, Guinea, Ethiopia and Liberia.

Under it, the Commission welcomed the establishment, at UN Headquarters, of a training course for African economists, now in its second year of operation, and noted that the other UN regional economic commissions, together with their Secretariats, had already accumulated considerable knowledge and experience in the programming of economic development and techniques of international co-operation in economic, statistical and social fields.

It expressed the hope that the in-service training courses of African economists at UN Headquarters would be continued and requested the Executive Secretary to arrange, in agreement with the Executive Secretaries of the other UN Regional Economic Commissions, the in-service training of African economists and statisticians. The establishment of in-service training at the Commission's Headquarters was also mentioned.

The other resolution, on the subject of training facilities for African States, expressed appreciation for the study made by the UN Educational, Scientific and Cultural Organization (UNESCO) of the facilities available for the training of Africans in economics, statistics and related fields of study.

Jointly sponsored by Ghana, Guinea, Liberia and Libya, it also noted that the rate of progress of economic development in Africa required an increasing number of economists, statisticians, public administrators, managers of industries and other professional, technical and skilled personnel at all levels.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

It stated that it was more desirable and practical to train Africans in these fields on the continent of Africa.

Referring to the availability of the facilities of the United Nations Technical Assistance Programmes as well as the UN Special Fund, it requested the ECA Executive Secretary to take steps at the earliest opportunity to consult with colleges, universities, research institutions and other appropriate organizations in Africa regarding arrangements for the training of African staffs in the field of economic development.

The Executive Secretary was further requested to study the possibility of enlarging and strengthening the existing institutions or establishing new institutions at the regional level for the purpose of undertaking the accelerated training of African staffs at all levels.

(*UN Information Centre*, New Delhi)

[Prev. ref. 2513:AOA:E]

B. **Safety Precautions For Operation Of Nuclear-Powered Merchantships—British Committee's Report:** A Committee appointed by the British Government to investigate safety precautions for the operation of nuclear-powered merchantships urged stringent safety precautions.

The Committee's report was made public in London on February 27.

The precautions urged by the Committee included the establishment of emergency committees in every port and a central salvage team of atomic, naval and other experts.

It also recommended that the nuclear ships should not be berthed near large numbers of people.

It concluded from an examination of shipping casualties that with certain exceptions no accident to a nuclear ship of the size and type envisaged at present would result in a discharge of fission products to the sea or atmosphere "subject to the criteria for design, construction and operation proposed to be followed".

Possible exceptions were where the containment structure and primary circuit were simultaneously breached either in a severe collision—which the Committee considered as the greatest hazard—or in a violent explosion caused by high explosives.

Such an event could lead to the death of all people closely associated with the accident. Also vessels within a mile and to leeward of the accident might suffer contamination with dangerous exposure of those on board.

If the catastrophe occurred within 25 miles of land, the spread of fission products could have a direct effect on people living in the affected area, which, in some coastal regions, could number well over 100,000.

Within ten miles of land, the consequences would be much more serious.

Nuclear ships should have the right of passage through territorial waters, but entry into ports should be subject to the permission of the Governments and Port authorities concerned.

The ships should be designed, constructed, surveyed and operated in accordance with certain principles.

But, its broad conclusion was that nuclear-powered ships could be built and operated within acceptable standards of safety. "It can be stated categorically that it is impossible for an explosion of the atomic bomb type to occur in any nuclear reaction from any cause whatsoever."

(*The Times*, London and *The Hindustan Times*, New Delhi)

C. **New Low-Priced British Nuclear Research Reactor:** It was made known on February 23 that a low-priced nuclear research reactor, to meet particularly the specialized research and training requirements of universities and colleges in any part of the world, would be marketed by the British General Electric Company Ltd. shortly.

The reactor is named *Consort*. It is the only completely British-designed research reactor in the 10-kilowatt range. It was designed jointly by the G.E.C.-Simon-Carves Atomic Energy Group and the Nuclear Power Group at the Imperial College of Science and Technology, London.

It was stated in London on February 23 that plans for the reactor were originally produced for an installation to be operated by the Nuclear Power Group of the Imperial College of Science and Technology. This proposal was an integral part of the College's programme for the expansion of nuclear engineering, training and research facilities.

The cost of the reactor is about £50,000.

The General Electric Company said that the new reactor was designed with a view to combining some of the principal advantages of the two well-known existing types of water moderated research reactors, namely the "Swimming Pool" type and the "Enclosed Tank" type.

It added that the *Consort* would provide a most effective compromise between these designs, combining ease of fuel handling with compactness and good accessibility to the core for experimental facilities.

(*UK High Commission*, New Delhi)

[Prev. ref. 3042:AOA:D]

D. **Rice Production In 1959-60:** The Commonwealth Economic Committee, in its February Rice Supplement released in London on February 24, said that world rice production for 1959-1960 would probably be around the same high level as in the previous season.

Large crops, it said, had been reported in Japan, Formosa, Thailand and Burma, while increases in acreage were indicated in India and Pakistan.

It added that trade in 1959 outside Russia would probably be around the 1958 level. Shipments from the main Asian exporters were well maintained, while those from the United States registered an increase. Ceylon's imports rose together with Malaya's, but most other Asian importers showed a decline. However, consignments to Western Europe rose substantially.

(*The Hindu*, Madras)

[Prev. ref. 2854:AOA:L]

E. **People's Friendship University To Be Established In Moscow:** It was announced in Moscow on February 23 that the Russian Government had decided to set up a People's Friendship University in Moscow with the object of helping the countries of Asia, Africa and Latin America in training their own specialists.

The University would train engineers, specialists in agriculture, teachers, doctors, economists and specialists in other branches of knowledge.

A four-year term has been established for all faculties, except the medical, where it is five years. There will also be a preparatory department for one to three years for general subjects and the Russian language.

The Moscow announcement said: "The decision to open the University has been taken because the progressive public and Government quarters, as well as individual persons from many countries of Asia, Africa and Latin America, have repeatedly asked for broader facilities to train their national cadres at scientific institutions in the Soviet Union.

"The University will enlist persons of both sexes of ages up to 35 regardless of race, nationality or religion.

"Tuition will be provided free of charge. All the students will be granted scholarships, free medical services and housing accommodation. The students' fares to Moscow and back will be paid for.

"It is planned to enlist 500 students this year (1960) and raise the student body to 3,000 or 4,000 in the next few years.

"The University will enlist the services of prominent scientists of Asia, Africa, Latin America and other countries."

On February 22, in a statement made during his tour in Indonesia, Mr. N. S. Khruschev had disclosed the Soviet Government's plan to build such a university.

The decision was said to have been taken at the request of "socialist progressive Government circles and private citizens in the countries of Asia, Africa and Latin America".

(*Tass*)

[Prev. ref. 3230:IND:B]

F. **Princess Margaret Engaged:** It was announced from Clarence House, London, on February 26 that Princess Margaret, sister of Queen Elizabeth, was engaged to be married to Mr. Anthony Armstrong-Jones, a society photographer.

Both the Princess and Mr. Armstrong-Jones are 29. They met at a party in London two years previously.

The Clarence House Press Secretary, Major John Griffin, said: "They have met continuously since that time at various places and they have been together at Balmoral and at Sandringham."

Queen Elizabeth gave her consent to the proposed marriage.

(*The Times*, London)

G. **First All-British Nuclear Submarine Planned:** A reference to the development of nuclear-propelled submarines was made in the Explanatory Statement accompanying the British Navy Estimates for 1960-61 presented to the House of Commons on February 17 by the First Lord of the Admiralty, Lord Carrington.

The First Lord's statement said that progress was being made in the construction of the Royal Navy's first nuclear submarine, *Dreadnaught*. The keel of the vessel was laid by the Duke of Edinburgh in June, 1959. It would be launched in 1960.

An order was also expected to be placed in 1960-61 for a second vessel, which would be the first all-British nuclear submarine.

Lord Carrington said: "Its design will be basically the same as for the *Dreadnaught*, but British propulsion machinery will be installed."

(*UK High Commission*, New Delhi)

ASIAN RECORDER

April 2—8, 1960

Regd. No. D-727

Vol. VI. No. 14

AFGHANISTAN

A. Visit Of Mr. N. S. Khruschev:

The Soviet Prime Minister, Mr. Nikita S. Khruschev, arrived in Kabul from Calcutta on March 2.

There was a large gathering at the airport to greet him. As he landed, a 21-gun salute was fired.

He was greeted at the airport by King Mohammed Zahir Shah, the Prime Minister, Sardar Mohammad Daud Khan, other Cabinet Ministers and distinguished citizens.

King Zahir Shah said in his welcoming speech that he was convinced that the Soviet leader's visit would strengthen relations between Afghanistan and USSR.

He assured him of the good wishes of the Afghan people towards the Soviet Union.

Mr. Khruschev, in his reply, praised Afghanistan's policy of independence and neutrality which enabled it to develop her economy under peaceful conditions.

He said he had arrived in Kabul at a very important and historic time. Thirty-nine years ago, in 1921, the Soviet Union, which was then a young country, had signed an Agreement with Afghanistan which laid the foundations of mutual respect and good-neighbourly relations between the two countries. These relations constituted an example of peaceful co-existence and co-operation inspite of the fact that Afghanistan and the Soviet Union had different ways of life.

He said that the Soviet Union was a faithful friend of the Afghan Government and people.

Great crowds lined the road as Mr. Khruschev drove into Kabul from the airport. An estimated half-a-million people gave him a tumultuous welcome.

Afghanistan's Women's Army Corps was seen for the first time in the Afghan capital when, with white-gloved cadets, they lined the streets to the Royal Palace.

When the car carrying King Zahir Shah and Mr. Khruschev reached Pushtoonistan Place, a dense crowd halted the car. Mr. Khruschev then got to his feet arm-in-arm with the King, and security precautions went by the board as the crowd surrounded the car.

State Banquet:

The Afghan Prime Minister, Sardar Mohammad Daud Khan, gave a State banquet in honour of Mr. Khruschev in Kabul on March 2.

Speaking on the occasion, Sardar Daud Khan said that the opportunity afforded by Mr. Khruschev's visit was, to him, another positive step for the strengthening and consolidation of friendly relations between Afghanistan and the Soviet Union.

He went on: "I have the greatest pleasure in assuring Your Excellency that the fruits of this friendly co-operation have been sincerely appreciated by the Government and people of Afghanistan.

"Our history bears witness to the fact that the continuous struggle of our people against colonialism has placed the Afghan nation in the vanguard of the struggle against colonialism in Asia and has turned freedom into an indivisible part of Afghan nationalism.

"The Government of Afghanistan, by adhering to a policy of neutrality, has kept away from political and military alignments. The real meaning of this policy is the preservation of peace through friendship and co-operation with all nations.

"Your Excellency's proposal in the United Nations General Assembly concerning general disarmament and banning of nuclear weapons is a step upon which firm foundations of a stable and lasting peace can be laid. If this task is effectively accomplished, then it will surely save mankind from destruction and will help in realizing the ultimate goal of human prosperity and contentment. By appreciating and supporting this far-sighted proposal, the Government of Afghanistan hopes that it would receive the close attention of the Great Powers.

"The economic and technical assistance given by our friend, the Soviet Union, has an important role in the reconstruction of our country. A number of beneficial projects have been undertaken within the framework of this assistance. Some of these have been completed and work on others is progressing satisfactorily.

"The mis-interpretation and malicious actions of those who cast unfriendly glances upon Afghanistan cannot prevent us from advancing towards this vital objective."

Replying, Mr. Khruschev said: "We are pleased to state that the expansion of personal contacts between USSR and the Afghan Government helps to create better understanding and gives further strength to the future friendship and co-operation between our two countries. There had never existed any differences between USSR and Afghanistan, nor do such differences exist today. Our countries have separate governmental and social systems. But, this fact does not stand in the way of our being good neighbours and sincere friends.

"Our friendly relations are based on the desire of our nations and Governments to preserve and strengthen peace and to establish relations on the basis of mutual respect and non-interference in each other's internal affairs. The Governments of Afghanistan and the Soviet Union are following a peaceful policy in order to attain the expansion of a peaceful economy. Afghan-Soviet relations can furnish a satisfactory example of peaceful co-existence and co-operation between two countries possessing different political and social systems. It would have been very good if other countries too followed this example.

"Numerous false and malicious allegations are made regarding the relations between Afghanistan and the Soviet Union. Special effort is made in this connexion by certain circles of countries which have unfriendly sentiments towards USSR and Afghanistan. But, we have just the right medicine for these forces. The Soviet Union unwaveringly pursues one foreign policy—a policy of equal rights among all nations and Governments, of peace and non-interference in other Governments' internal affairs and of friendship between all nations. Afghanistan continuously follows the policy of neutrality for strengthening her independence and co-operation with other Governments in the interests of peace.

"From the very first moment of Afghanistan's independent existence, our young Soviet Government, headed by the great Lenin, supported Afghanistan in her just struggle for national freedom. Many Asian and African nations also attained their national independence in those years and the years following the War. The time is not far off when disgraceful colonialism will be for ever wiped out, but the attainment of political freedom is only the beginning of liberty from the imperialists' yoke.

"We have sincerely helped the Eastern countries including Afghanistan and will continue to do so in future in order that they may quickly reach the level of the economically more advanced countries. The Soviet Union and all the socialist countries continually follow the principle of aid to the economically backward countries.

"We are aware that the Afghan Government and nation are undertaking definite measures for the development of their national economy and the raising of their people's cultural standards. The Government and the nation of the Soviet Union welcome these efforts of the Afghan Government and nation with deep understanding and give them their most friendly support.

"Women play an important role in the raising of the young generation, whose duty is to toil for securing their nation's prosperity and defence of their freedom. Permit me to congratulate the Afghan women, some of whom are here with us, and wish them great progress in their noble and valuable undertakings.

"The Soviet Union has never left her good and friendly neighbour alone in adversity. We were always aware of Afghanistan's needs and are prepared to assist her in future also. If you so wish, we are ready to share our experiences with you in order that the Afghan nation may quickly further her economy and culture. Our friendship and co-operation will be further strengthened in future.

"We fully appreciate the anxiety created in Afghanistan by the attitude of certain circles in some countries which are oblivious of the respect demanded of the people by other peoples' justifiable rights. It must be mentioned that these circles are situated in countries which have only recently attained their independence. It would seem that they want the legal rights of other peoples to have their special sanction. A question arises. Cannot the Soviet Union, opposed that she is to all oppression, raise her voice in support of all the peoples' justifiable demands?

"We forcefully denounce a policy which gives rise to seriously deteriorated relations between countries, specially the neighbouring ones. It is impossible to think that the gravity of conditions and the threat of difference between them will not attract the attention of other countries including the Soviet Union which not only supports the legal interest of all nations as the inalienable right of independence but is also the most devout and steady campaigner of peace the world over."

Earlier in the day, Mr. Khruschev presented Sardar Mohammad Daud Khan with a replica of the rocket launched by Soviet scientists to the Moon—*Lunik II*.

On the following day (March 3), Mr. Khruschev inspected the silo and bakery which were built with Soviet aid. It was raining hard at the time.

The silo, begun in 1953 and finished in 1957, is the highest building in Kabul. It has a 20,000-ton capacity.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Also on March 3, Mr. Khruschev visited the airfield on which Russian engineers began work about three months previously and subjected it to close inspection.

Later in the night (March 3), he dined with King Zahir Shah and Cabinet Ministers.

Civic Reception:

Thousands of Kabul residents and peasants from the neighbouring villages gathered on March 4 in the Gazi Stadium, which was decorated with Afghan and Soviet flags, to attend a Civic Reception in honour of Mr. Khruschev.

The Mayor of Kabul, Mr. Mohammed Sadyk, greeted Mr. Khruschev on behalf of the people of the Afghan capital.

He said: "The Soviet Union is an old friend of the Afghan people. The Soviet people and their Government firmly abide by a peaceful foreign policy aimed at the strengthening of friendship between all the peoples of the world.

"Our people enthusiastically welcome Mr. Nikita Khruschev's visit to Afghanistan which, we are confident, will further strengthen the friendly good-neighbourly relations between our countries.

"Our people will never forget that it was the Soviet people and their Government that first recognized our independence. We trust that the friendship, the good-neighbourly relations between our nations will continue to grow stronger because the Soviet and Afghan peoples march together along the road of peace."

Addressing the gathering, Mr. Khruschev noted that in the relations between the Soviet Union and Afghanistan there had never been even a trace of superiority of a big nation over a small one. On the contrary, their relations provided a convincing example of sincere co-operation between a big and a small State on an equal footing.

He went on: "We value our friendly relations. We appreciate the fact that throughout the existence of the Soviet State and your State which gained independence in the struggle against the colonialist and imperialist vultures, not even small clouds of conflict darkened the sky of our relations and nothing marred our friendship. I want to say once more that we highly appreciate this, because the whole world sees that, given goodwill and joint effort, countries with different social systems can happily co-exist without conflict or strain, and even be on the most friendly terms.

"USSR has been and will be rendering Afghanistan many-sided assistance in building different enterprises, roads and housing, in promoting the economy and raising the cultural level of the Afghan people. We do it in a way in which a good man helps his neighbour. The Afghan people may rest assured that in their efforts for the further development of their country, in their struggle for consolidating political and economic independence they will always have the reliable support of the Soviet people.

"With the present level of science and technology when such frightful weapons have been developed as hydrogen and atomic bombs, when inter-continental rockets have been produced capable of taking a lethal cargo to any point on the globe and when it is impossible to halt or prevent their flight, special importance is acquired by a new, realistic, reasonable diplomacy.

"To direct his efforts towards peace—this is the duty of every statesman and political leader, of every honest-minded person, irrespective of the post he holds, or the political or religious views he professes. This means that in conditions when there are differing social systems in the world only the people themselves have the right to decide upon the social system they like best. We must live in peace because we walk on one planet, and there is no getting away from it. We must learn to co-exist peacefully."

Mr. Khruschev recalled his proposals for general and total disarmament put forward before the UN General Assembly in September, 1959 (page 3088) and said: "We have done so not because of our weakness. It is generally known that, militarily, the Soviet Union is the world's most powerful State. It was the Soviet rocket—*Lunik II*—that carried a pennant with the USSR coat-of-arms to the Moon. It was the Soviet super-powerful rockets that hit with marvellous precision a pre-set square in the Pacific. But, we do not want to use these dreadful weapons and we do not want to attack anyone. We were the first to lift our voice in favour of total and complete disarmament. The Governments and peoples of most countries of the world have supported this humanitarian proposal of the Soviet Union.

"Without waiting for a practical agreement to be achieved with other States for adopting our proposal, we have undertaken another unilateral reduction of the Soviet armed forces by one-third or by 1,200,000 men.

"Afghanistan approves our foreign policy because she is our friend. But I think that those Governments, too, which regard us with reserve or, to put it plainly, coolly, cannot ignore, cannot pretend, that they do not see our goodwill because they will thereby increasingly isolate themselves from their own peoples."

Joint Communique:

Sardar Mohammad Daud Khan and Mr. Khruschev signed a joint *communique* on March 4.

After referring to the talks which Mr. Khruschev had with King Mohammad Zahir Shah, Sardar Mohammad Daud Khan and other members of Government, the *communique* said:

"During these talks which took place in an atmosphere of sincerity and complete mutual understanding, Mr. Khruschev exchanged views in a friendly way on matters regarding relations between Afghanistan and the Soviet Union and on important international problems, including conditions in West Asia and South-East Asia.

"The Prime Minister of Afghanistan and the Soviet Prime Minister expressed deep satisfaction at the continuation of friendly relations between Afghanistan and the Soviet Union which are resting on the principles of peaceful co-existence, mutual respect and friendly co-operation. Both sides also expressed the conviction that the existing friendly relations between Afghanistan and the Soviet Union are a positive and useful factor in the interests of peace in West Asia and South-East Asia.

"The Prime Minister of Afghanistan once again re-affirmed Afghanistan's policy of neutrality and non-alignment in military blocs. The Chairman of the USSR Council of Ministers said that this policy of Afghanistan was a useful factor in the relaxation of international tensions and the strengthening of peace and enjoyed the deep respect of the Soviet Union. Both sides expressed the opinion that military blocs did not in any way help to strengthen peace and that this great desire of humanity can only be attained by the joint efforts of big and small countries and friendly co-operation between them.

"The Prime Minister of Afghanistan and the Soviet Prime Minister expressed strong hope during their discussions that those nations which have not still attained their aim of rightful independence may do so as quickly as possible.

"In this connexion, both sides exchanged opinions on the fate of the people of Pakhtoonistan and expressed agreement that in order to relax tensions and to establish peace in West Asia and in accordance with the UN Charter, the application of the principle of self-determination is a reasonable way of solving the problem.

"The Prime Minister of Afghanistan and the Chairman of the USSR Council of Ministers re-affirmed that the establishment of personal contacts between statesmen and the friendly exchange of opinions help strengthen friendly relations and co-operation between nations.

"Both sides expressed their belief that all differences between States must be solved through peaceful negotiations and not by resorting to force.

"Both sides also expressed their satisfaction at the movement of the present international conditions towards the removal of tensions and an end of the 'cold war'. Both sides expressed high hopes that the forthcoming visit of President Eisenhower to the Soviet Union and the exchange of opinions between the leaders of the two countries would prove to be another useful stage in mutual understanding between nations and the strengthening of peace.

"Both sides jointly expressed the opinion that the forthcoming conference of the Heads of the Great Powers ('Summit') in May, 1960 would be another important and useful step in the direction of solving important disputed international problems and the establishment of an atmosphere of better understanding.

"The Governments of USSR and Afghanistan believe that the question of general and complete disarmament is the most vital problem of our time and that all people are interested in its solution. Both sides agreed that the means and great energies now being used for the manufacture of destructive weapons should be used for the raising of the living standards of the world's peoples, especially for the assistance of under-developed countries.

"The Prime Minister of Afghanistan expressed the confirmation and appreciation of the Afghan Government regarding the proposal for the general and complete disarmament made by the Soviet Prime Minister at the UN General Assembly and expressed the hope that the proposal may attract the serious attention of nations and receive their acceptance in order that the fear of war may be eliminated for ever.

"They expressed the hope that the talks on banning nuclear weapons tests would ultimately lead to an agreement and that the nuclear explosions poisoning the Earth's atmosphere would be stopped for ever.

"Mr. Khruschev, during his stay in Kabul, saw some of the important projects situated in Kabul and constructed with USSR assistance. He expressed pleasure at Afghanistan's economic progress.

"The Prime Minister of Afghanistan expressed appreciation regarding the economic assistance of the Soviet Union to Afghanistan towards the development of the latter's national economy.

"Mr. Khruschev said that USSR realized Afghanistan's economic needs and she should and would also help her in her economic development.

"Both sides agreed that the fruitful progress of economic co-operation between the two countries explained the good-neighbourly and friendly relations existing between the two nations."

Mr. Khruschev left Kabul for Moscow on March 4.

Sardar Daud Khan's News Conference:

Sardar Daud Khan referred to the visit of Mr. Khruschev at a news conference in Kabul on March 7 and said that the visit had been a good-will gesture and there was nothing secret about it. Its aims had been set forth in the *communique* published simultaneously in Moscow and Kabul on March 5.

He added that he did not understand the Western Press labelling his country as 'communist' for accepting Soviet aid. Afghanistan needed aid urgently and was willing to accept assistance from all countries, provided no conditions were attached.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

One correspondent suggested that a difference existed between India's interpretation of non-alignment and Afghanistan's, as Mr. Nehru refused military aid, and he replied that defence was the first duty of any country. Afghanistan, as a non-industrial country, must buy arms from where she could. All weapons so far received had been purchased.

Answering questions on Pakhtoonistan, he said that Afghanistan wanted the question solved according to the UN Charter by self-determination.

Asked what territories Afghanistan included in Pakhtoonistan, he said that Pakhtoonistan had been separated by force from Afghanistan. "We have not invaded it; others came and invaded our territories." Pakhtoonistan meant all areas where Pakhtoons lived.

BURMA

A. **Mr. B. P. Koirala's Visit:** The Nepal Prime Minister, Mr. B. P. Koirala, paid a visit to Rangoon from March 7 to 9 at the invitation of the Burmese Government.

During his visit, he fulfilled a fairly heavy schedule of political talks, State receptions and sight-seeing.

On the conclusion of the visit, Mr. Koirala and the Burmese Premier, Gen. Ne Win, issued a joint *communique* which announced their decision to establish diplomatic relations between the two countries at embassy level.

The *communique* said: "On the invitation of the Government of the Union of Burma, His Excellency Mr. B. P. Koirala, Prime Minister of Nepal, accompanied by Madame Koirala, His Excellency Mr. Surya Prasad Upadhyaya, Minister of Home and Law Affairs, His Excellency Mr. Ganeshman Singh, Minister of Works and Communications, and other senior officials of His Majesty's Government of Nepal, paid an official visit to the Union of Burma from March 7 to 9, 1960.

"During his stay in the Union of Burma, the Prime Minister of Nepal had discussions with the Prime Minister of the Union of Burma. These discussions, which were conducted in a most friendly atmosphere, afforded opportunities for a free and frank exchange of views on the present international situation as well as on matters of direct interest to the two countries.

"The two Prime Ministers noted with satisfaction that there is a strong similarity between the foreign policies of the Union of Burma and Nepal and that the two countries have, therefore, been able to work closely in the past on many international problems both within and outside United Nations. They also expressed their desire to continue to work closely in the cause of peace and for the promotion of good-neighbourly relations and co-operation among nations.

"The two Prime Ministers welcome the efforts now being made by the Great Powers for the reduction of tensions in the world and for the settlement of outstanding world problems by peaceful means. It was hoped that the spirit of negotiation and conciliation would prevail and that these efforts would succeed and eventually bring about a just and durable peace in the world.

"Prime Minister Ne Win and Prime Minister Koirala also reviewed the relations between the Union of Burma and Nepal and noted with satisfaction that these relations have developed satisfactorily over the past years. In order to promote further development of friendly relations and co-operation between the two countries, it was agreed that diplomatic relations should be established between them at embassy level.

"The two Prime Ministers agreed that the most important task facing their countries was the raising, through democratic means, of the living standards of their peoples. The General Elections recently held in both countries—that in Nepal for the first time in her history—reflect their belief in the democratic way of life.

"The two Prime Ministers expressed their satisfaction at having established personal contact and they believe that their talks will go a long way towards consolidating and further strengthening the existing ties of friendship between the two countries.

"The Prime Minister of Nepal has extended an invitation to the Prime Minister of the Union of Burma to visit Nepal at a convenient time. The Prime Minister of the Union of Burma has accepted the invitation."

(*The Nation*, Rangoon)

[Prev. ref. 3156:INI:B]

B. **Army Investiture:** President U Win Maung held an investiture at the President's House in Rangoon on March 10 at which he presented military decorations and awards to members of the Armed Forces.

The *Aung San Thuriya* award was given to four persons (three posthumously), the *Thiha Thura* to 16 persons and the *Thiha Bala* to 14 persons.

One hundred and forty-three persons received the *Thura* award.

This was the first time since 1949 that an investiture was held to decorate members of the Armed Forces for gallantry.

President U Win Maung eulogized the devotion to duty and gallantry displayed by the members of the Armed Forces in dealing with the enemies of the country. He made special mention of the fact that only six persons had earned *Aung San Thuriya* and only one person had lived to receive the decoration personally. All others had died in action.

(*The Nation*, Rangoon)

CHINA

A. **New Chairman Of Journalists' Association:** Mr. Wu Lenghai, General Manager of the *New China News Agency* was elected Chairman of the All-China Journalists' Association in Peking on March 11.

Mr. Wu replaced as Chairman of the Agency Mr. Teng To, formerly chief editorial writer of *New China* whose name did not figure on the list of new Vice-Chairmen and members of the Secretariat.

The new Chairman, who already combines the direction of the official news agency handling all news to and from foreign countries, with the editorship of the Government organ *People's Daily*, thus takes charge of all information media throughout China—becoming Minister of Information and Propaganda in all but name.

The Journalists' Association controls the employment and "ideological correctness" in the Chinese Press and promotes relations with foreign newsmen through invitations and organized tours of the country.

INDIA

SUMMARY: Letter To UN On Pakistan's Note On Kashmir; New Administrative Set-up In Ladakh; Bhutan Ruler On China's Claims; Supreme Court Opinion On Berubari Union's Transfer To Pakistan; Reserve Bank's Credit Control Measures; Chambal Bridge Opened.

A. **Pakistan's Facts About Kashmir "Misleading"—India's Letter To UN Security Council:** India told the Security Council on March 2 that the Pakistan Representative at UN was persisting in "misleading the Council about the basic facts of the Kashmir situation."

The acting chief delegate of India, Mr. T. J. Natarajan, transmitted the following letter to the Security Council President, Mr. Henry Cabot Lodge (United States):

"I have the honour to refer to the letter of the acting Permanent Representative of Pakistan dated January 22, 1960 and to state that it is a matter of deep regret that the acting Permanent Representative of Pakistan should continue to make sweeping statements unsupported by any authority and persist in misleading the Council regarding the basic facts of the Kashmir situation.

"The following comments on the statements made by the acting Permanent Representative of Pakistan would show that it is the Pakistan representative and not the representative of India who had made statements which are entirely baseless.

"(I) Para 2 (8) of the Pakistan Permanent Representative's letter on the status of Jammu and Kashmir:

"That Jammu and Kashmir is a constituent State of the Indian Union has been recognized in the debates in the Security Council on the Kashmir situation from the very beginning—

" 'The external sovereignty of Jammu and Kashmir is no longer under the control of the Maharaja. This is an affair between nations, and with the accession of Jammu and Kashmir to India, this foreign sovereignty went over to India and is exercised by India, and that is how India happens to be here as a petitioner.' (Mr. Warren Austin, US representative on the Security Council at the 240th meeting of the Council.)

" 'It is generally accepted that the right of maintaining an army for the security of a territory is an essential attribute of sovereignty over that territory. Neither the Security Council resolution of January 7, 1948 nor the UNCIP resolutions of August 13, 1948 and January 5, 1949 permit Pakistan to maintain any armed force in Kashmir. On the other hand, these resolutions specifically recognize India's right to maintain its army in Kashmir and, at the same time, require Pakistan to withdraw its armed forces completely from the State.

" 'As the presence of the troops of Pakistan in the territory of the State of Jammu and Kashmir constitutes a material change in the situation, the Government of Pakistan agrees to withdraw its troops from that State. (UNCIP resolution of August 13, 1948).

" 'Pending the acceptance of the conditions for a final settlement of the situation in the State of Jammu and Kashmir, the Indian Government will maintain within the lines existing at the moment of the cease-fire the minimum strength of its forces which, in agreement with the Commission, are considered necessary to assist local authorities in the observance of law and order' (UNCIP resolution of August, 1948).

"(II) Para 2 (2) of the Pakistan Permanent Representative's letter on the basis of UN Commission's resolutions:

"That these resolutions were framed on the basis of India's complaint to the Security Council is clear from the fact that the Commission itself has recorded that its approach to the task entrusted to it by the Security Council's resolution of April 21, 1948 'was initially based on the complaint of the Government of India,' and 'on the reply and

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

counter-complaints of the Government of Pakistan.'

"(III) Para 2 (3) of Pakistan Permanent Representative's letter regarding the assurances given to the Prime Minister of India by the UN Commission being extraneous etc:

"These assurances are part of the Security Council record (Annexure V) on pages 57-63 of Security Council official records for the 12th year, supplement for January, February and March 1957). The Government of India accepted the UN resolutions only on the basis of these categorical assurances and the resolutions cannot, as the Government of Pakistan repeatedly thought, be interpreted except in conformity with them.

"(IV) Para 2 (4) of Pakistan Permanent Representative's letter that the withdrawal of forces should be 'synchronized etc.

"This point has been dealt with and categorically rejected by the UN Commission some years back.

"The Pakistan Government could not in reason accept nor could the Commission have granted a 'synchronization' which would have been incompatible with the terms of the resolution of August 13, 1948. That resolution does not suggest that Pakistan should be entitled to make its withdrawals conditional upon the fact of the consultations envisaged between the Commission and the Government of India having led to an agreed schedule of withdrawal of Indian troops.

"(S|1430, Para 243). Pakistan's objective in pursuing these obstructive tactics was to consolidate its own position in the area which it had unlawfully occupied. It is clear that Pakistan has succeeded in its objective and has violated and continues to violate the assurances given by the Chairman of UNCIP to the Prime Minister of India that Pakistan would not be permitted to consolidate in any way the territory it has unlawfully occupied to the disadvantage of the State.

"(S|1100, Paras 78 and 79). Pakistan armed forces are still in Jammu and Kashmir; 12 years have passed since Pakistan accepted the resolution which required total withdrawal of its forces.

"(V) Paras 2 (5) and 3 of the Pakistan Permanent Representative's letter casting malicious aspersions on the Government of the State of Jammu and Kashmir:

"It is well known that UNCIP not only refused to recognized the so-called 'Azad Kashmir Government' but also specifically agreed not to 'bring into question the sovereignty of the Jammu and Kashmir Government over the portion of their territory evacuated by the Pakistan troops.'

"(S|1100 paras 78 and 79). The Commission specifically recorded: 'nor did it put into question the legality of the Jammu and Kashmir Government' (S|1430, para 265). It is because of this view of the Commission that the UNCIP resolution of August 3, 1948, part 11 para B3 makes a pointed reference to this Government and its authority:

" 'The Government of India will undertake to ensure that the Government of the State of Jammu and Kashmir will take all measures within its power to make it publicly known that peace, law and order will be safeguarded and that all human and political rights will be guaranteed.'

"The extent to which the Government of Jammu and Kashmir has, despite the continuance of Pakistan aggression, safeguarded peace and law and order and carried out the guarantee of human and political rights, can be judged by statements made by independent observers who have visited this part of India from time to time: Mr. Khruschev, Soviet Prime Minister— ....'The peoples of the State who belong to different nationalities and different faiths live as friends and ought to work for the well-being of their beloved State—the Republic of India. (Srinagar, December 10, 1955). Earl Attlee— 'Certainly they are very busy with development plans which were badly needed in this formerly backward State. Education is making great strides, both primary and advanced. We visited a girls' college with 600 students. We saw also hospitals and had detailed statistics as to social progress which, considering the difficulties, were very impressive....although my impression is that, judging by results, the present *regime* is successful. It is also thoroughly democratic with local self-government all the way up from the village.' (*Indian Express*, November 28, 1956). Gen. Nadir Batmanzhlidj, then Iran's Minister of the Interior— 'I and my companions are carrying unforgettable memories of our stay in Kashmir, though of a short duration. Wherever we went, we found practical and earnest efforts being made for the betterment of life and welfare of the people. The steps that have been taken during such a short period in Kashmir are commendable and augur a very bright and glorious future.... We hope the people of Kashmir will march ahead steadfastly towards progress and prosperity under the inspiring guidance of its Government and leadership.' (Srinagar, April 21, 1959).

"I request that this letter be circulated to the members of the Security Council as a Security Council document."

(*The Statesman*, Calcutta)

[Prev. ref. 3036:INI:D]

B. **Trade Agreement With Chile:** A new Trade Agreement was signed at Santiago on March 10 between India and Chile, replacing the earlier Agreement of 1955.

The new Agreement, which would be valid up to the end of 1962, envisages import by India of 75,000 tons of Chilean nitrate during the next three years. Chile is expected to take larger quantities of India's jute manufactures, tea and coir products.

Other important items included in the schedule of imports from Chile are sulphur, copper (raw), lead and newsprint. The main items included in the schedule of Indian exports to Chile are tea, jute manufactures, coir products, shellac, light engineering goods, cotton textiles, paraffin wax, vegetable oils, sports goods and hosiery.

India's imports from Chile in 1958 amounted to Rs. 17,00,000. Exports to Chile were valued at Rs. 97,00,000. During the first 11 months of 1959, imports from Chile were of the order of Rs. 78,00,000 while exports from India to Chile amounted to Rs. 82,00,000.

(*The Hindu*, Madras)

C. **Cultural Agreement With Yugoslavia:** A Cultural Agreement between India and Yugoslavia was signed in New Delhi on March 11.

The Central Minister for Scientific Research and Cultural Affairs, Mr. Humayun Kabir, signed the Agreement on behalf of India and the Yugoslav Ambassador in India, Mr. Dusan Kveder, signed on behalf of his country.

Under the Agreement, the two Governments will promote the exchange of representatives and delegations in the fields of education, science, culture and arts, arrange reciprocal visits by professors and research workers as well as exchange of students on scholarship basis as well as reciprocal visits and attendance in congresses and conferences between literary, scientific, artistic, sports and journalists' associations and organizations, arrange the exchange of cultural, scientific and educational material and equipment, translation and exchange of books, periodicals and other scientific, cultural and technical publications, and, as far as feasible, the exchange of copies of archaeological specimens and of ancient manuscripts, organization of scientific and artistic exhibitions, theatrical and artistic performances, film shows including documentary films and newsreels and the dissemination of knowledge of each other's culture through radio, press and other means.

(*The Hindustan Times*, New Delhi)

[Prev. ref. 2464:INI:A]

D. **Heavy Engineering Corporation—Agreement With USSR:** An Agreement between the Heavy Engineering Corporation and Promaschexport of Moscow for the supply of machinery and equipment for heavy machine-building and coal-mining machinery plants was signed in Ranchi on March 12.

The heavy machinery building plant would be located at Hatia near Ranchi and the coal-mining machinery plant at Durgapur.

The contract for the supply of machinery and equipment from USSR to the heavy machine-building project is to the value of Rs. 12.8 crores. This will cover the 45,000-ton stage of the project.

Negotiations are being carried on for increasing the capacity of the project for producing 80,000 tons of machinery every year.

The contract for the supply of machinery and equipment for the coal-mining machinery plant is of the value of Rs. 7.5 crores. The plant will produce 30,000 tons of machinery annually.

The two projects are being financed from a 500-million rouble credit given by USSR.

(*The Hindusthan Standard*, Calcutta)

[Prev. ref. 2901:INI:A]

E. **New Ladakh Administrative Set-up:** It was stated in Srinagar on March 13 that the entire frontier district of Ladakh, vast stretches of which had been unadministered regions so far, would soon have a N-EFA-type set-up, manned by the Indian Frontier Administrative Service personnel.

The first step in strengthening and extending administration in this border district skirting Chinese Sinkiang in the north and Tibet in the east was the appointment of a senior political officer of N-EFA, Col. K. A.A. Raja, formerly Paratroop Commander, to the post of Deputy Commissioner. He would also hold the posts of District Magistrate and Development Commissioner.

Col. Raja's services were loaned by the Government of India to the Kashmir State Government in October, 1959. Under the Administration Extension Scheme, it was proposed to appoint at least three Additional Deputy Commissioners to be stationed at Leh, Khalsi (mid-way between Kargil near the cease-fire line with Pakistan and Leh town) and Zanskar Division (north of Lahaul).

These Additional Deputy Commissioners would be assisted by a number of Assistant Commissioners to be posted in all major regions of Ladakh. All these officers would be from the Indian Frontier Administrative Service.

Before the border trouble with China, Ladakh, with an area of 22,000 square miles and a population of about 40,000, was administered by a Deputy Commissioner stationed at Leh. He was assisted by a tehsildar posted in Kargil and one nalb tehsildar posted in Zanskar Division. The tehsildar and nalb tehsildar had also the rank and powers of an inspector and sub-inspector of police respectively. A small force of constabulary armed with antiquated equipment assisted them in the maintenance of law and order.

At the turn of the first quarter of the 20th century, the British Government also maintained a nucleus of political agency in Ladakh.

Areas like Nubra and Hanle have practically remained outside the administration since the conquest of Ladakh by Maharaja Gulab Singh, founder of the Dogra dynasty of Kashmir. The police administration which is now headed by an Assistant Superintendent of Police stationed at Leh will also be strengthened and headed by a Superintendent of Police with police posts and chowkis all over the district.

During the last few years, the State Government has opened a number of hospitals and schools in the district, besides branches

of the State-owned Jammu and Kashmir Bank.

F. Maharaja Of Bhutan On Chinese Claims: The Maharaja of Bhutan told newsmen in Calcutta on March 16 that he hoped that China's unjust claim for over 300 square miles in north-eastern Bhutan would be taken up by Mr. Nehru at his forthcoming meeting with the Chinese Prime Minister, Mr. Chou En-lai, in New Delhi in April.

[The questions put to him were answered by his Prime Minister, Mr. Jigme Dorji.]

He said that he had already written to Mr. Nehru explaining Bhutan's position and a protest against the Chinese claim had been lodged through the Government of India.

Bhutan's future relations with China, he said, would largely depend on how India and China got on. China's refusal to accept the MacMahon Line as the border between India and China constituted a potential threat to the security of Bhutan.

The operation of Chinese troops on the northern border, he added, was a threat to Bhutan.

In reply to another question, he said that his Government would do its best to defend the frontiers against aggression. "But as yet we do not propose to raise the question of making a comprehensive Defence Treaty with the Government of India or any other Government, nor are we asking the Government of India to station Indian troops in Bhutan."

A fairly strict watch was being kept on the border and so far no subversive activities had been detected inside Bhutan.

The Government of Bhutan did not intend at present to enter into any direct Treaty negotiations with China or any other State nor had there been any move by China for direct diplomatic relations with the Government of Bhutan.

[Prev. ref. 2903:INI:D]

G. Berubari Union's Transfer To Pakistan—Supreme Court's Opinion: A Special Bench of the Supreme Court gave its opinion on March 14 that the Agreement of September 10, 1958 between the Prime Ministers of India and Pakistan regarding the transfer of a part of Berubari Union No. 12 and the exchange of Cooch-Behar enclaves amounted to cession of territory in favour of Pakistan.

It added that Parliament was not competent to make a law under Article 3 of the Constitution for the implementation of the Agreement. The implementation of the Agreement could only be effected by an amendment of the Constitution under Article 368.

[This matter had been referred to the Supreme Court for its opinion by the President under Article 143 of the Constitution. The Indo-Pakistan Agreement was entered into with a view to removing the causes of tension and resolving disputes and problems relating to Indo-Pakistan border areas and establishing peaceful conditions along these areas.]

Subsequently, a doubt arose whether the implementation of the Agreement relating to Berubari Union and the exchange of enclaves required any legislative action either by way of a suitable law of Parliament under Article 3 of the Constitution or by way of amendment of the Constitution under Article 368, or both.

Three Questions Answered:

The President, accordingly, referred the following three questions to the Supreme Court for consideration and report:

"(1) Is any legislative action necessary for the implementation of the Agreement relating to Berubari Union?

"(2) If so, is a law of Parliament relatable to Article 3 of the Constitution sufficient for the purpose, or is an amendment of the Constitution necessary, in addition or in the alternative?

"(3) Is a law of Parliament relatable to Article 3 sufficient for the implementation of the Agreement relating to the exchange of the enclaves, or is an amendment of the Constitution in accordance with Article 368 necessary for the purpose, in addition or in the alternative?"

Mr. Justice P. B. Gajendragadkar, who delivered the opinion of the Court, answered the three questions as under:

"(1) Yes.

"(2) (a) A law of Parliament relatable to Article 3 of the Constitution would be incompetent; (b) A law of Parliament relatable to Article 368 is competent and necessary; (c) A law of Parliament relatable to both Article 368 and Article 3 would be necessary only if Parliament chooses first to pass a law amending Article 3. In that case, Parliament may have to pass a law on those lines under Article 368 and then follow it up with a law relatable to the amended Article 3 to implement the Agreement.

"(3) Same as answers (a), (b) and (c) to question (2)."

Background:

Before dealing with the above questions, Mr. Justice Gajendragadkar set out the historical, political and constitutional background of the Prime Ministers' Agreement and said that since the date of the Radcliffe Award Berubari Union No. 12 had in fact formed part of the State of West Bengal.

Berubari Union has an area of 8.75 square miles and a population of 10,000 to 12,000. The question of Berubari Union was raised by Pakistan two years after the Bagge Award of January 26, 1950. Pakistan thought that this area should have formed part of East Bengal.

The State of Cooch-Behar merged with India and later became a part of West Bengal. But certain areas became enclaves in Pakistan and certain Pakistan enclaves were found in India. These enclaves became a constant source of tension and conflict between the two countries. With a view to removing these causes of tension, the Prime Ministers of India and of Pakistan agreed to solve the problem and establish peaceful conditions along the border.

On behalf of the Government of India it was contended before the Supreme Court that no legislative action was necessary for the implementation of the Agreement relating to Berubari Union as well as the exchange of enclaves.

The Agreement, it was said, was really a recognition or ascertainment of the boundary which had already been fixed and in no sense was it a substitution of a new boundary or the alteration of the boundary implying any alteration of the territorial limits of India.

It was emphasized that this did not amount to alienation or cession of Indian territory even if some territory was yielded in the process of settlement of the boundary. It was further contended by the Attorney-General that the true boundary could be settled by executive action, and as such the Agreement could be implemented without any legislative action.

The Judge examined Entry 14 in List 1 of the Seventh Schedule in the Constitution and said that there was no doubt about the competence of Parliament to legislate about any Treaty, Agreement or Convention with any other country and to give effect to such Agreement or Convention. The question for determination was whether the Agreement purported to determine the boundaries in the light of the Award, or whether it sought to settle the dispute amicably on an *ad hoc* basis by dividing the disputed territory half-and-half.

Reading the relevant portions of the Premiers' Agreement, he said, it was difficult to escape the conclusion that the parties to it came to the conclusion that the most expedient and reasonable way to resolve the dispute would be to divide the area half-and-half. There was no trace in the Agreement of any attempt to interpret the Radcliffe Award or to determine what the Award really meant. In other words, the Agreement said that, though the whole of the area of the Berubari Union No. 12 was within India, India was prepared to give half of it to Pakistan in a spirit of give-and-take in order to ensure friendly relations between the parties and remove causes of tension between them.

He said that in their opinion every one of the clauses in the Agreement clearly and unambiguously showed that apart from, and independently of, the Award, it was agreed to divide the area half-and-half and the method of effecting this division was specifically indicated by making four material provisions in that behalf. If that be so, it was difficult to accept the argument that this part of the Agreement amounted to no more than ascertainment and delineation of the boundaries in the light of the Radcliffe Award.

He said: "We have carefully considered all the clauses in the Agreement and we are satisfied that it does not purport to be, and has not been reached as a result of any interpretation of the Award and its terms; it has been reached independently of the Award and for reasons and considerations which appeared to the parties to be wise and expedient.

"It is an Agreement by which a part of the territory of India has been ceded to Pakistan and the question referred to us in respect of this Agreement must, therefore, be considered on the basis that it involves cession or alienation of a part of India's territory."

What was true about the Agreement in respect of Berubari Union No. 12, he said, was still more emphatically true about the exchange of Cooch-Behar enclaves. Since they had held that the Agreement in respect of Berubari itself involved the cession of Indian territory *a fortiori*, the Agreement in respect of the exchange of Cooch-Behar enclaves did involve the cession of Indian territory.

He held that the Premiers' Agreement amounted to cession or alienation of a part of Indian territory and was not a mere ascertainment or determination of the boundary in the light of, and by reference to, the Radcliffe Award.

The Judge next considered the Treaty-making power of a sovereign State and said that it was an essential attribute of sovereignty that a sovereign State could acquire foreign territory and could, in case of necessity, cede a part of its territory in favour of a sovereign State, and this could be done in exercise of its Treaty-making power. There could be no doubt that such cession was possible and indeed history presented several examples of such transfer of sovereignty. But this Treaty-making power would be exercised in the manner contemplated by the Constitution and subject to the limitations imposed by it. Whether the Treaty made could be implemented by ordinary legislation or by constitutional amendment would depend on the provisions of the Constitution itself.

Article 1 of the Constitution described India as a Union of States and specified its territories. Article 2 provided that Parliament by law might admit into the Union of India or establish new States. Article 3 dealt with the formation of States and alteration of areas. The crux of the problem was: could Parliament legislate in regard to the Premiers' Agreement under Article 3?

The Judge came to the conclusion that even if Article 3(c) received the widest interpretation it would be difficult to accept the argument that it covered a case of cession of a part of the national territory in favour of a foreign State.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

He, accordingly, had no hesitation in holding that the power to cede national territory could not be read in Article 3(c) by implication. An Agreement which involved cession of a part of the territory of India in favour of a foreign State could not be implemented by Parliament by passing a law under Article 3.

"Therefore, our conclusion is," he said, "that it would not be competent for Parliament to make law relatable to Article 3 of the Constitution for the purpose of implementing the Agreement. It is conceded by the learned Attorney-General that this conclusion must inevitably mean that the law necessary to implement the Agreement has to be passed under Article 368."

So it followed, he added, that acting under this Article Parliament might make a law to give effect to, and implement, the Premiers' Agreement covering the cession of a part of Berubari Union No. 12 as well as some of the Cooch-Behar enclaves which by exchange were given to Pakistan. Parliament might, if it so chose, pass a law amending Article 3 so as to cover cases of cession of the territory of India in favour of a foreign State. If such a law were passed, Parliament might be competent to make a law under the amended Article 3 to implement the Agreement in question. On the other hand, if the necessary law was passed under Article 368 itself, that alone would be sufficient to implement the Agreement.

The Bench, which heard the reference, comprised the Chief Justice (Mr. B. P. Sinha), who presided, Mr. Justice S. K. Das, Mr. Justice P. B. Gajendragadkar, Mr. Justice A. K. Sarkar, Mr. Justice K. Subba Rao, Mr. Justice M. Hidayatullah, Mr. Justice K. C. Das Gupta and Mr. Justice J. C. Shah.

[Prev. ref. 2612:INI:E]

H. **Credit Control Tightening Measures:** With a view to ensuring effective implementation of the already prevailing selective credit control measures, the Reserve Bank announced a number of steps further to tighten credit on March 11.

Observing that the substantial liquidity of the banking system, the marked expansion of money supply and bank credit and their impact on the price level have been causing concern to the Bank, a Press *communique* issued by the Reserve Bank said that it had decided for the present to take the following steps:

"(1) Impounding with the Reserve Bank, by way of additional deposits by all scheduled banks, 25 per cent of any addition to the demand and time liabilities after March 11, 1960. These are over and above the deposit required at present, namely, five per cent of demand liabilities and two per cent of time liabilities. The additional deposits will, however, be entitled to a reasonable rate of interest unlike in other countries.

"(2) A directive to all banks to keep a minimum margin of 50 per cent in respect of all advances against shares (other than preference shares) above Rs. 5,000.

"(3) Banks are forbidden to engage in direct financing of *badla* transactions (purchase of shares in their name for the current settlement and sale for the next settlement).

"(4) A ceiling on the clean loans of scheduled banks, so that the proportion of such advances to total advances of each scheduled bank in any month may not exceed the proportion for the corresponding month in 1959."

The *communique* added: "The trend of activity in the stock market in recent months has also been a source of some concern to the Reserve Bank. In this respect, the growth in bank credit in respect of advances against stocks and shares in recent months has been high, and the situation appears to call for a measure of caution on the part of the banks in extending credit against stocks and shares. "By a directive, the Reserve Bank is, therefore, directing banks to keep a minimum margin of 50 per cent in respect of all advances against shares other than preference shares, above the amount of Rs. 5,000. The latter exemption is intended to assist small investors. A period of one month has been given to comply with the new margin requirement generally and a period of three months to brokers of recognized stock exchanges."

[Prev. ref. 2891:INI:L]

I. **Railways Adopt Metric System Of Weights And Measures:** The commercial departments of the Railways adopted the metric system of weights and measures from April 1.

From that date, passenger fare tables gave fares in terms of kilometres instead of miles, one kilometre being equal to about 0.62 miles.

The passenger fares tax, instead of being based on the distance zones of up to 15, 30 and 500 miles, would now be based on distance zones of 25, 49 and 805 kilometres.

The unit of weight for purposes of freight charges, for goods, parcels and other traffic would be a quintal (100 kilograms), one quintal being equivalent to about two maunds and 27 seers.

The rates for coal would similarly be notified per metric "tonne" instead of per ton as at present, the metric "tonne" representing the weight of 1,000 kilograms, equal to approximately 0.98 ton.

The change-over to the metric system of weights and measures is expected to result in slight variations in fares and freight due to rounding off rules. The variations which will be upward or downward are inescapable and have been kept down to the minimum.

[Prev. ref. 3178:INI:B]

J. **Chambal Bridge Opened:** The Prime Minister, Mr. Nehru, inaugurated in Dholpur (Rajasthan) on March 15 the Rs. 43,00,000 submersible type of bridge across the Chambal river on the Agra-Bombay national highway.

Completed in about five years, this 2,432-ft. long bridge, with its deck 90 ft. above the deepest river-bed level and fitted with collapsible railings, is said to be perhaps the tallest of its kind in the world.

Known to be one of the most turbulent rivers, the Chambal is liable to sudden floods, when communication between the two banks often remains interrupted for days together. The existing pontoon bridge and the ferry system have proved inadequate for the heavy traffic that passes this point.

The submersible bridge will now eliminate the traffic bottle-necks on the Agra-Bombay national highway and will provide another direct road link between Rajasthan and Madhya Pradesh. It will also permit uninterrupted traffic between Delhi and Bombay.

After declaring the bridge open, Mr. Nehru walked over the bridge for about a furlong and then motored to the other end in the Madhya Pradesh territory. He then boarded *Hansa*—a motor boat—and cruised in the river for a few minutes.

[Prev. ref. 2666:INI:L]

K. **Kerala Legislature—Governor's Address:** The Governor of Kerala, Dr. B. Ramakrishna Rao, in his address to the State Legislative Assembly on March 12, said that the first need in the circumstances in which the present Government assumed office was to restore normalcy in the State and he was happy to say that this had been in a large measure achieved.

He added: "But my Government is conscious that eternal vigilance is called for. No disruption of the life of the community will be permitted. At the same time, no class of persons will be allowed to dominate or exploit any other class."

He referred to the events leading to the mid-term Elections and said that the recent changes had been brought about "in an orderly manner". It was now up to all of them to work together to create a Kerala "where the common man comes into his own, where there is safety and security of the property and person of citizens, where human dignity is not allowed to be trampled in the dust. My Government is determined that there shall be no political vendetta. Let us all now join together, all of us, in the immense tasks that await us".

He announced the extension of free education to the eighth standard and reduction of the price of rice distributed through fair-price shops from 56 nP per measure to 30 nP. [At present there is free education up to the seventh standard.]

He also announced that the Government proposed to restore the system of noon-day meals for students.

The Government also proposed to initiate studies for drawing up schemes for the special protection of the very old and the very young in the State.

Mr. P. T. Pillai On Government's Policy:

Addressing a news conference in Trivandrum on March 10, the Chief Minister, Mr. Pattom Thanu Pillai, said that the new Government was "determined to see that the rule of law is firmly re-established and maintained in the State."

Under the Constitution, he said, no Government was called upon to make a new policy in regard to matters like the rule of law. "It is only as a consequence of the inroads made into our Constitution by the wrong policies of the previous (communist) Ministry that such a necessity has arisen."

The consequences of the wrong policies were disastrous to the common man—"indeed, to all except those who submitted to the party in power".

To the officers and men of the police force and the magistracy "who have been subjected to the greatest strain on account of the double standards evolved by the Communists", he said, "do your duty fearlessly, impartially and strictly according to law, without favour to anyone, without spite or hatred to anyone. The Government does not want to interfere with the discretion vested in you by law".

He said that no harm would come to any public servant for enforcing the law and added: "But we shall not hesitate to take the most stringent action against those who act with a partisan spirit, who are motivated by considerations extraneous to the provisions of law.

"It is an unhappy fact that a number of officers and men who comprise the police force were so misguided as to fall into the communist trap and had allowed themselves to be used as tools of the Communist Party. We believe they did so under the greatest pressure.

"We are sure that now that the rule of law is firmly enforced they will forget their past efforts and again become ideal citizens and servants of the people. If they do so the Government and the people will forgive their past sins. If they persist in actions based on false standards unacceptable to the people and the Constitution they will be severely dealt with."

He referred to the policy statement made by Mr. E. M. S. Namboodiripad in July, 1957 on the role of the police and said: "In order to introduce ideas and ideologies repulsive to our Constitution, an elaborate thesis was propounded to make it appear

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

that some wonderful new benefit was being conferred by the communist Government, while in reality the object was to suppress all freedoms".

The premises on which that thesis was sought to be built up, Mr. Thanu Pillai said, were themselves false. A close examination of the statement would reveal that the entire argument was based on the false premise that the law of the country was designed to give different classes of people. "This is obviously wrong. The law in no case differentiated as to whether the offender was a capitalist or a communist, or whether he was an employer or an employee. The duty to maintain peace and tranquillity is a duty imposed by statute and anyone overriding it by an executive order is guilty of subverting the Constitution".

Mr. K. M. Seethi Sahib Elected Speaker:

Mr. K. M. Seethi Sahib (Muslim League) was unanimously elected Speaker of the Kerala Legislative Assembly on March 12.

The election result was declared immediately after the swearing-in of the new members of the Assembly by Mr. N. Kunjuraman, who acted as the Speaker.

Mr Seethi Sahib's was the only nomination for the post. He had been proposed by Mr. Pattom Thanu Pillai, Chief Minister, and seconded by Mr. P. T. Chacko, Home Minister.

[Prev. ref. 2539:INI:J]

L. **Akali Dal Members To Quit Congress In Punjab:** The Akali Dal passed a resolution at Anandpur Sahib (about 8 miles from Nangal) on March 14 directing its members to quit the Congress, thus revoking the permission given to them to join the Congress just before the last General Elections.

The resolution blamed the Congress for upsetting the very basis of the Regional Formula Pact by increasing its interference in Gurdwara affairs.

The Regional Committees, it complained, had been left with only nominal powers. The only provision of the Pact—on language—that was being respected was now sought to be changed unilaterally through the agency of the 27-member Committee recently set up.

Though the Akali Dal leadership fell out with the Congress soon after the General Elections, Akalis, including their legislators, continued to be members of the Congress.

This decision linked the Akalis with the opposition for the first time after the Regional Formula Pact (see page 1916).

The Akali members of the Congress parties in the Legislature and the committees were told to organize separate Panthic groups in the Opposition. In the Punjab Legislative Assembly, at least five members, who have been openly advocating Master Tara Singh's policies, would now sit with the Opposition.

Master Tara Singh told newsmen that the resolution was the acceptance of the challenge thrown by the Congress that it would oppose the formation of a Punjabi Subha.

The Akali legislators had decided to join the Congress about four years ago following a compromise between the Congress and the Akali Dal on the basis of the Regional Formula.

Although Master Tara Singh had in the past repudiated the alliance between the Congress and the Akali Dal, his stand prior to the SGPC elections was that the Akali legislators should fight the Congress from within and prefer expulsion to quitting it.

(*The Statesman* and *The Times of India*, New Delhi)

[Prev. ref. 2522:INI:U]

M. **Mr. C. Rajagopalachari On Socialism:** The Swatantra Party leader, Mr. C. Rajagopalachari, told the Eastern Study Group in Calcutta on March 15 that the socialism which the Congress Government had adopted as the basis of its policy, would make the whole country a prison house.

He said that socialism should not be confused with social happiness, social equality and general welfare. "It pretends to be an economic means to general welfare. I do not think it is. Without compulsion, without forced labour, socialism could not produce what India needed today. We must work for the prosperity of the country by private individual effort, with freedom and with minimum overlordship of the Government. Socialistic policy cannot bring prosperity to the country. It is putting the cart before the horse. It is putting distribution before production which is not only disorder but fatal to production itself.

"We want production and for production we want investment of capital. But distribution before production, according to the socialistic plan, will not allow that accumulation of capital which is necessary for real production."

It was known to all what socialism meant in other countries. If, therefore, there was no party in opposition to this policy the Government would go on doing one wrong after another. To achieve the goal of prosperity, he added, only incentives to private capital, private energies and enterprises were necessary. The State would not be able to do it. It would make matters worse and worse.

He added: "Once wedded to socialism, Congress cannot give it up. They may withdraw the rigours of socialism only to get on with the next General Elections but they are bound by the dogma. The Swatantra Party does not want socialism. We want general welfare but not through socialism. Even if it succeeds in slowing the process of socialism, it would do good to the community."

United Front In Asia:

Later, on March 15, Mr. Rajagopalachari told newsmen in Calcutta that his party would organize a United Front in South Asia to deal with the neighbours in a more satisfactory way than the present Government was doing.

Recalling the foreign policy of the Swatantra Party, as defined at its Hyderabad Conference (page 3064), he said: "We hitherto did not want to take sides in the 'cold war'. But now one of the important nations in the communist bloc had displayed a spirit of aggression. "We are, therefore, compelled to drop the non-alignment policy as one side of the bloc has made it impossible.

"It does not mean that we give up our goal of peace. American and other Western assistance is essential to cope with any communist aggression and our strength is not enough. We cannot get that assistance unless we have a united front.

"I greatly appreciate the difficulties of the Western Powers so long as we are divided against one another. Their assistance to any single nation is looked upon by other nations as dangerous. This is best illustrated by the discontent exhibited in regard to assistance to Pakistan.

"If we have a united body of nations in Asia ranged against communism, then the Western assistance on honourable terms can be brought about easily without creating any mutual tension among ourselves. I think the present Government does not accept this policy which it should."

On Communist Party:

Mr. C. Rajagopalachari told a public meeting in Calcutta on March 16 that the Congress was only his "enemy No. 2" and that the Communist Party, which was actually ruling India through Mr. Nehru, was his "enemy No. 1."

He added that the present policy of the Government of India was identical to communism.

He said: "As far as I am concerned, the Congress has adopted communism, I am opposed to both and while communism is my No. 1 enemy, the Congress is enemy No. 2."

Mr. Nehru was following this "communistic policy" not because he wanted to do so but because he was compelled to do so. The people around him wanted to be in office at any cost. At one time, the Government used to depend on the Congress, but today the Congress depended on the Government.

[Prev. ref. 3145:INI:O]

N. **New Shankaracharya Of Puri:** It was stated in Banaras on March 12 that Shri Kashi Sachidanand Saraswati of Hanuman Ghat, Banaras, would succeed the late Jagadguru Shankaracharya Shri Bharati Krishna Tirth of Govardhan Peeth, Puri, to the Shankaracharya "gadi" at Puri.

He was nominated by the late Jagadguru Shankaracharya to succeed him, according to the Will.

(*National Herald*, Lucknow)

O. **No Constructional Defects In Taj Mahal:** According to an official report of the Director-General of Archaeology, an examination by experts had revealed no inherent constructional defects in the Taj Mahal.

The report denied some recent Press reports that the monument had developed cracks.

The sinking of the floor of the court-yard in front of the mosque attached to the Taj Mahal was explained by the decay of the concrete bed, over which the stone flags are laid. The brick-work under the concrete was said to be quite sound.

It added: "It is also not a fact that the authorities have been faced with the problem of cracks and crevices in the Taj Mahal building. The mausoleum and the connected buildings are in a normal and sound condition."

(*The Statesman*, New Delhi)

[Prev. ref. 621:INI:N, 700:INI:A]

P. **Lothal Excavations Reveal Harappan Culture:** A team of archaeologists of the Government of India has uncovered the remains of the biggest settlement of the Indus Valley civilization at Lothal, 50 miles from Ahmedabad, and placed this little known site on India's archaeological map after excavations lasting five years. Lothal conveys the same meaning as Mohenjo Daro, the mound of the dead.

The team was led by Mr. S. R. Rao, Superintendent of the Excavation Branch of the Archaeological Department.

As early as in 1935, Rangpur, near Dhandhuka in Ahmedabad district, was found to yield painted pottery similar to the ones found at Harappa and Mohenjo Daro. The site was excavated four times by different organizations.

In 1953-54 the excavations by the Archaeological Department established that Rangpur was a Harappan Settlement. This appeared to have served as an incentive for a thorough

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

exploration of the area in order to trace the route followed by the Harappans in their southward march from Sind.

This search led the archaeologists to Lothal where after over five years the remains of the old township lay exposed. A visitor finds the remains spread over an area about a mile long and a quarter of a mile wide. There are nearly 50 Harappan sites in Gujerat, Saurashtra and Kutch. Two sites in the Ambala district of Punjab have been located and the Bikaner Division of Rajasthan claims 20 sites. Among these, Lothal is the largest known Harappan town.

Lothal rises to a height of 12 to 15 feet above the surrounding flat and featureless area. Till recently, it was surrounded by water for several miles in Monsoon. An approach road is now being constructed for the benefit of visitors.

Lothal was an important port on the western cost of India in the 3rd millennium BC. Small ships could reach the port through the Sabarmati estuary and take shelter in the harbour. The find of a dockyard at Lothal throws lights on the maritime activities of the Harappans. It is a brick structure about 710 feet long and 116 feet wide. The dockyard is comparable to the modern dockyard at Gogha except that the former is bigger and has brick walls instead of the mud bund at Gogha.

This season's excavations have revealed channels going into and out of the dockyard, the latter being cut into the bedrock at a depth of 19 ft. below ground level. Ships, it appears, were brought in at high tide and the spill channel allowed excess water to escape exactly on the same lines as at Gogha.

Lothal imported raw material such as agate from smaller ports such as Bhagatrav and Mehgam, the two other Harappan sites in the estuaries of the Kim and Narbada rivers. It manufactured stone blades and beads which must have been exported to the Indus Valley cities and other places.

Contact With Foreigners:

There is evidence at Lothal to show that it had contacts with countries such as Mesopotamia and Egypt. One of the terracottas represents an Assyrian with his square-cut beard, while another suggests an Egyptian mummy.

Painted pottery includes some sherds closely resembling those from Uruq and Brak, sites of the 3rd millennium BC in the Euphrates-Tigris Valley. The main reason for finding the "black and red ware" in Lothal may, according to archaeologists, be that it had contacts with Egypt where also black topped wares are found.

Another outstanding Lothal contribution is that the terracotta seals—baked clay objects bearing impressions taken from steatite and copper seals—have thrown light on the famous Indus seals. Before the discovery of Lothal seals, it was presumed that the seals bearing pictures of animals or human figures and pictographic writings were meant to be used as amulets. But now it is certain that they were meant for sealing packages of goods exported or to seal documents. In some cases, even the string marks and impressions of packing material can be seen.

The use of trade marks and a uniform system of weights indicate a very high degree of trade development in those days. Cubical stone weights found at Lothal conform to the standard then obtaining in the Indus Valley.

Visitors are impressed by the elaborate arrangements of public and private drains for carrying sullage. It is stated that no other ancient civilization had so well planned a city as Harappa, Mohenjo Daro or Lothal. The excavations at Lothal have brought to light four streets. One of them must have been a bazaar with shops of bead makers and copper smiths, for beads and raw materials for beads and a copper-smith's workshop and other instruments have been found there.

The intricate system of surface and underground drains reveals a well planned sewage system with arrangements for easy flow of water into cess-pools through small control holes and manholes. It appears that the people sometimes used soakage jars too. Floods presented a danger to the town which was washed away in 1500 BC.

Post-flood Story:

Lothal shows different building periods. At Harappa and Mohenjo Daro, the civilization is said to have come to a sudden end in 1,500 BC, but it survived for another 500 years at Lothal. Thus, it has helped to throw more light on the Dark Age of Indian history.

The civilization gradually degenerated after the destruction of Lothal by a flood in 1,500 BC. The pre-flood period shows the maturity of a civilization similar to the maturity at Harappa and Mohenjo Daro. The post-flood period reveals that the people were not, prosperous, the town was dirty and the people had lost contact with other parts of the sub-continent.

Lothal which narrowed the gap in Indian history between 1500 BC and 600 BC has indirectly helped to understand the vague Harappan affinities that have come to notice at the late Chalcolithic sites of the first millennium BC such as Prakash and Bahal in the Tapti Valley and Nasik and Newasa further south. In Central India too, the late Chalcolithic sites such as Maheswar and Ahar had contact with the successors of the Harappans.

The tools and weapons of the Lothal folk consist of copper and bronze knives, daggels, axes, bone pins and awls, stone blades and terracotta sling balls. Copper fish, hooks and terracotta fish nets and a rivetted copper jar have also been found.

Among the objects of amusement, cut objects and personal ornaments are terracotta animal and human figures, miniature vessels, beads of gold, steatite, copper, shell, ivory, faience and semi-precious stones. The micro-gold beads of a necklace bear testimony to the skill of the craftsmen. The Lothal people used acids for etching on carnelian bead, alkali for providing a coating on steatite seals and lime and gypsum for plaster. Their knowledge of engineering is stated to be really astounding.

Light has also been thrown on the religion of the people. The excavations brought to light at several places rectangular brick enclosures used as places of fire worship. The unique system of double burial has also been observed. In some graves two bodies have been found suggesting that the people followed a custom similar to *sati*. The excavations have confirmed that this practice was given up later.

Extent Of Empire:

Other interesting finds include a terracotta model of a boat, an ivory scale marked in one-tenths and a right angle measuring instrument in shell.

Lothal has established that the Harappan Empire extended 500 miles south of Mohenjo Daro and that the Harappans survived there longer than they did in the Indus Valley. Gujerat and Saurashtra, which played no less an important part than the Indus Valley in developing the most ancient civilization of India, hold the key to the deciphering of the Indus Valley script too. It is here that the Harappan culture survived far longer, gradually evolving new traditions. With the transformation of the Harappan civilization as made known to us at Rangpur and Lothal, the script too might have undergone a change.

Having completed the excavations, the authorities were faced with the preservation of the remains. The bricks were sun-dried ones. The archaeologists evolved water-proof bricks similar to the sun-dried bricks to cover the structures. Drains are also being provided.

Some 17,000 objects found at Lothal are kept in a Rs. 5,00,000 museum constructed by the Archaeological Department at Lothal itself.

INDONESIA

A. **Air Force Pilot Strafes President's Palaces:** An Air Force pilot, identified as Second-Lieut. Danial Maukar, machine-gunned two Presidential palaces in Djakarta and Bogor and a fishing village on March 9 before he ran out of fuel and baled out of his MIG-17 jet fighter.

He was later captured and taken to Djakarta for interrogation.

His father had been arrested a few days earlier for alleged illegal possession of arms.

Second-Lieut. Maukar was on a training flight with two other aircraft when he broke away to make the attack on the Palace in Djakarta.

At the time of the attack, President Sukarno was in a building next door, but his five children were in the Palace. Four persons, including a security officer and a painter, were wounded at the Palace.

The pilot then flew 35 miles south to Bogar where the President's Summer Palace is situated, but no targets were hit there. Finally, he flew to the fishing village of Tjilintjing, ten miles north-east of Djakarta and sprayed bullets there as a result of which 15 villagers were injured.

[This was said to be the second attempt on President Sukarno's life. The first was a grenade attack when he visited a school in Djakarta in November, 1957. This attempt was followed by military uprisings in Sumatra and the Celebes, which had not yet been completely stamped out.]

In Hong Kong, a self-styled spokesman of the Indonesian 'rebels' said: "The attack was carried out by a pilot of the Indonesian armed forces who sympathizes with our movement."

After stating that this was a planned attack, the spokesman, who wished his name to be withheld, said that the rebels had sympathizers in the Indonesian Air Force and hoped to be able to take over control of the country shortly.

In a broadcast on March 13, the Information Minister, Mr. M. Maladi, said that a subversive organization had been planning to murder President Sukarno and the Army Chief of Staff, Gen. A. H. Nasution.

Two days later (March 15), *Antara* quoted Dr. Sukarno as saying that the machine-gunning of the Presidential Palaces had convinced him that martial law should be maintained in Indonesia.

According to the Agency, Dr. Sukarno had also decided to assume the functions of the "Supreme Chief of the War Administration"—the nation's highest military body.

Dr. Sukarno said that the incident clearly showed that the people who were appealing for lifting the State of Emergency were wrong.

Meanwhile, the Djakarta Region Army Commander called up all men aged between 18 and 25 for compulsory as well as voluntary military service.

B. **Plan For New Parliament:** Addressing a meeting held in celebration of International Women's Day in Djakarta on March 9, President Sukarno said that he proposed to set up a Gotong Rojong (co-operative) Parliament to replace the one that had been suspended.

He said: "Those who know me and my mind will know too that it is my intention to establish a Gotong Rojong Parliament."

He did not elaborate on the term Gotong Rojong (an old Javanese phrase for co-operative) nor did he say how soon the new Parliament would be established.

But, he indicated that he had no plans to be a dictator by saying: "I am known as the one who counts on the potential of the entire people. I believe in the strength of the 90,000,000 people of Indonesia."

He had decreed the suspension of the last Parliament on the ground that there was a lack of co-operation between the House and Government.

(*The Hindustan Times*, New Delhi)

C. **Directive To Naval Ships:** The Navy Information Officer, Major Iman Sardjono, said on February 29 that Indonesian naval ships on the high seas had been instructed to report to headquarters the positions of merchant vessels in Indonesian waters.

He said that the action followed reports that some merchantships had reverted from their original schedules and had violated Government instructions.

He added that naval vessels were to report as soon as possible the position of merchantships they came across with details like destination and direction. The information was considered necessary to ascertain whether the merchantships concerned were abiding by the orders given to them as to route and other details.

ISRAEL

A. **Plan To Divert Jordan River Waters To Irrigate Negev Desert:** Technical experts from eight Arab countries (UAR, Jordan, the Lebanon, Morocco, the Yemen, Saudi Arabia, Libya and Sudan) met in Cairo on January 28 to begin a study of counter-measures to thwart Israeli plans to divert the Jordan river to reclaim the desert land in the Negev desert.

On December 25, 1959, Jordan had suggested to the Lebanese and Syrian authorities that the sources of the Jordan river should be diverted.

An announcement in Amman said that the sources—the rivers Hazbani, Mizirib and Banyas—should be diverted to the river Yarmok in Syrian and Jordanian territories if Israel insisted on diverting the course of the river Jordan.

It added that this proposal had been submitted to the Arab League for consideration.

Political observers in Amman said that the proposal was "the most effective action the Arab States could take against Israel's plan."

Earlier, on December 19, 1959, the Ambassadors of Jordan and Lebanon and UAR's Under-Secretary for Foreign Affairs met in Cairo to discuss Israel's plan.

The Lebanese Parliamentary Foreign Affairs Committee announced in Beirut on January 15, 1960 that the Lebanese Government had decided to divert the river Hazbani, a tributary of the Jordan, to deny Israel the use of its waters.

The Committee said that the Lebanese Foreign Minister, Mr. Hussain Eweini, had told the Committee that the Hazbani, which rises in the Lebanon, would be diverted into the river Litani, now being harnessed for irrigation purposes.

In Jerusalem, the Israeli Foreign Minister, Mrs. Golda Meir, told Knesset a month earlier that work would continue on the Israeli project to divert the Jordan river. The aim was to irrigate the Negev desert.

The UN Secretary-General, Mr. Dag Hammarskjoeld, who was on a tour of the African countries, had long talks on major West Asian issues with the UAR Foreign Minister, Dr. Mahmoud Fawzi, in Cairo on January 21.

A UAR Foreign Ministry source said that Mr. Hammarskjoeld and Dr. Fawzi, had discussed the question of the Jordan river, which Israel had said she would divert.

According to the *Middle East News Agency*, Dr. Fawzi told Mr. Hammarskjoeld that Israel's attempt to divert the waters of the Jordan was "a flagrant violation of UN resolutions and the Armistice Agreement."

General E. L. M. Burns, the retiring Commander of the United Nations Emergency Force (UNEF) in Gaza told a news conference in Cairo on December 23, 1959 that if Israel diverted the Jordan river waters, it would "constitute a change. in the situation."

He expressed the hope that Israel would not do such a thing.

Background:

The Jordan waters, the subject of the dispute between Israel and her Arab neighbours, are a complex of three lakes and several rivers involving four countries—Jordan, Israel, Syria and the Lebanon.

At the north of the complex, Lake Huleh is fed by three main streams—the Hazbani (rising in Lebanon), the Banyas and the Dan, rising in Syria. Between Lake Huleh and Lake Tiberias (Sea of Galilee), no tributaries join the river Jordan. Between Lake Tiberias and the Dead Sea, there are two large tributaries—the Yarmuk (which rises in Jordan and Syria) and the Zerka (which rises wholly in Jordan).

The Yarmuk forms the boundary between Jordan and Syria, except for the last six miles where it is the boundary between Jordan and Israel. For 20 miles south of Lake Tiberias, the river Jordan also forms the boundary between Jordan and Israel and, thereafter, it runs wholly in Jordan territory. Water courses (*wadis*) on both banks of the river Jordan supplement the flow with seasonal rain water.

The average annual flow of rivers in million cubic metres is: Hazbani 157, Banyas 157, Dan 258, Jordan (at outlet from Lake Tiberias) 538, Yarmuk 475, *wadis* between Lake Tiberias and Dead Sea 490, Jordan (at entry to Dead Sea) 1250. The total flow of the Jordan river watershed is 1800 million cubic metres, of which 77 per cent originates in Arab territory and 23 per cent in Israel.

At present, only about one-seventh of the water of the Jordan watershed area is used and the rest evaporates or flows into the Dead Sea. Before World War II, while both banks of the Jordan were under British mandate, the need for exploiting Jordan water hardly arose.

Today, Israel needs the water to irrigate the Negev and cope with her expanding population. Jordan needs it also for increasing the irrigated land on which the Palestine refugees might be settled. A fair division of the waters has been shown to be technically possible, but has so far proved politically impossible.

Utilization Proposals:

Many plans for utilizing the Jordan river waters have been prepared of which the most important were:

(1) *Lowdermilk-Hays project (1944-48) for a "Jordan Valley Authority" on lines of TVA*: Primarily aimed at meeting Israel's needs in the south.

(2) *MacDonald Plan (1951)*: Drawn up by Sir Murdoch MacDonald and Partners at the request of the Jordan Government, it provided for watering all irrigable land in the Jordan Valley—140,000 acres in Jordan and 25,000 acres in Israel. Lake Tiberias would be the storage reservoir with two main canals—west bank from Lake Tiberias, east bank from Yarmuk. Its estimated cost was £23,000,000 and the time for completion 16 years.

(3) *Johnston Plan*: This was negotiated with the West Asian Governments by President Eisenhower's personal envoy in West Asia, Mr. Eric Johnston. It was designed by the Tennessee Valley Authority at the request of UN (1953) as a "broad plan for the effective and efficient use" of the waters "disregarding political boundaries". Lake Tiberias would be the storage reservoir, with the east and west bank canals along the Jordan Valley. The low storage dam would be at Maqarin on the Yarmuk. Its estimated cost was £43,000,000. Jordan would receive 828,000,000 cubic metres of water to irrigate 120,000 acres, Israel 427,000,000 million cubic metres for 104,000 acres and Syria 50,000,000 cubic metres for 7,000 acres.

(4) *Arab Plan*: This was drawn up by a Technical Committee of the Arab League (1954) with a high dam at Maqarin and a low dam above Adasia to feed the east bank canal. The west bank canal would be fed from Lake Tiberias. The main interest of the plan was that it admitted that Israel existed and had some rights in the waters.

(5) *Israel Plan (1954)*: The main difference with the previous plans was that it included the Litani river in the Lebanon, most of whose waters now flowed into the Mediterranean.

(6) *Revised Johnston Plan after several modifications during 1953-56*: According to it, the final allocation of water would be 60 per cent for the Arabs and 40 per cent for Israel. The main gain for the Arabs was Lake Tiberias, which is surrounded by Israeli territory, which would no longer be the central storage reservoir but the Maqarin dam on the Yarmuk would be heightened instead. The main gain for Israel was that it accepted that the Jordan waters could be used for regions outside Jordan area—i.e., for Negev irrigation. The plan was agreed to at technical level by both Israel and the Arabs but broke down at the political level, chiefly because of Syrian opposition.

Position At Beginning Of 1960:

Failing agreement on an international plan, the countries involved are going ahead with their own projects. These were:

(1) *Jordan*: A 44-mile canal from the Yarmuk irrigating by gravity 30,000 acres on the east bank of the river Jordan. River Zerka would also be tapped. It would be financed jointly by the American and Jordan Governments. Its estimated cost was £4,000,000. It would take three to five years to complete.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

(2) *Israel*: The current plan for the Jordan waters is part of a national water plan, which also involves the drainage of Huleh marshes (completed), the tapping of wells in western Galilee, damming of river Kishon and diversion of the Yarkon waters for the Negev (partly completed). The Jordan-Negev scheme would carry water by canal, tunnel and 108-inch pipe-line from Lake Tiberias to Negev. Israel would be prepared to give an undertaking that no more water would be taken from the river Jordan than was allotted to Israel under the Johnston Plan.

Political Position:

Israel's plan for the Jordan waters would involve using the water from Lake Huleh to provide hydro-electric power for pumping water from Lake Tiberias.

It is this part of the scheme which means the undertaking of works in the demilitarized zone south of Lake Huleh. But, it is the demilitarized zone south of Lake Tiberias which has recently been the scene of serious incidents between Israel and Syria.

The Huleh project is not essential to the main Jordan-Negev scheme, since power for pumping could be provided by other means, though this would be more costly. Arab objections are now to any Israeli use of any Jordan water. Counter-measures have been threatened, including the diversion of the rivers Hazbani, Yarmuk and Banyas.

The Arab League is reported to have agreed that the diversion of the Jordan waters by Israel might be regarded as a *casus belli*.

The Times, London, carried the following story from its correspondent in Jerusalem on December 8:

"Israel's reaction to the Egyptian attitude is that to take from the abundant waters of the north for the arid south is not only an inalienable right but indeed a cardinal necessity for the country's development, and any attempt to thwart the fulfilment of this need will be fought with every available weapon. The Israelis see no real danger, however, as the work that is being done is within their own territory and the United Arab Republic would need to invade their country to interfere with it—an outcome which is neither thought likely nor feared in Israel.

"The Israelis, who have shown unswerving consistency in regarding President Nasser as an arch enemy and the greatest menace in West Asia, charge him now with embarking on this policy of attempting to stir up trouble over their legitimate constructive activities only in order to re-instate his leadership of the Arab world, which may have tottered slightly by his resumption of diplomatic relations with Britain at a time when he can no longer exploit his blockade of the Suez Canal or demonstrate in any other way his hostility toward Israel.

"Beneath these confident words, however, there is discernible some apprehensions of President Nasser's intentions, for without financial aid from the United States, a request for which has been under negotiation for the past year or more, completion of this project would be much delayed, if not made impossible. And Syria, whose policy on this issue President Nasser has now completely taken over, succeeded in the past in hindering such a development.

"Israel began work on a hydro-electric project involving the bringing of the Jordan waters south in 1953, and clashed, in military as well as political sense, with Syria; she suspended work at the request of the Security Council in 1954, pending discussions. In the meantime, the Johnston regional plan was conceived and reached the stage where both Israel and the Kingdom of Jordan initialled it in 1956, but it fell through because of Syria's obstruction. Now, the Israelis say, President G. A. Nasser is following the same line and using the same tactics against Israel's national project. And this objection, they point out, comes from Cairo, where the effects of using the Jordan waters cannot possibly be felt, and not from Amman, which might conceivably be directly concerned.

"Colonel G. A. Nasser's interest would certainly appear to be somewhat premature. Israel's plan to bring the Jordan waters south to about the level of Beersheba will take 12 years. With pipes of 108-inch diameter in some parts, open canals in others (depending on the ground) with pumping and booster stations, pressure conduits, reservoirs and operating ponds along the way and a power plant provided by the difference in elevation between Lake Kinneret (the Sea of Galilee) and the River Jordan, a water life-line is being constructed. But until 1963, that is, in the first stage, the waters will be drawn only from Lake Kinneret, which is indisputably in Israeli territory. Thereafter, quantities of water exactly as allocated for Israel under the Johnston plan will be diverted from the river Jordan.

"The Israelis have become rather plaintive at Cairo's vociferousness on this subject: when Egypt is getting aid for the Aswan Dam and Jordan for the Yarmuk project, 'why should the Arabs begrudge us this essential flow of water? Why indeed, unless Colonel G. A. Nasser sees this merely as another means of denying viability to Israel —which is the Israelis' version of this affair".

(*The Times*, London and *The Egyptian Gazette*, Cairo)

[Prev. ref. 3235:UAR:B]

B. **Border Tension With UAR:** According to well-informed sources in Cairo on February 25, the United Arab Republic had issued an ultimatum to Israel through UN to evacuate its forces from the demilitarized zone, especially from the village of Tawafik, within three days.

The ultimatum, which was said to have been issued on February 24, followed a warning given through UAR's chief delegate at UN in the Security Council the previous week.

The tension between the two countries mounted early in February when Israeli forces destroyed Tawafik village, south-east of the Sea of Galilee. The UN Mixed Armistice Commission condemned Israel for the act immediately after the incident. Israel had boycotted the meeting of the Commission.

Jordan-UAR Tension:

Side by side with this tension was the crisis in the Arab League created by Jordan. (See under UAR in this issue).

Jordan was reported to have taken objection to President G. A. Nasser's repudiation of the 1950 Three-Power Declaration by the United States, Britain and France guaranteeing the frontiers of West Asia.

Jordan was stated to have told the Arab League meeting on February 25 that the Tripartite Declaration was important as it guaranteed her frontiers against any other attack.

The Indian Ambassador to UAR, Mr. R. K. Nehru, conferred with the UAR Minister for Presidential Affairs, Mr. Ali Sabry, for over an hour on February 25 on the latest developments in West Asia.

The UN Truce Observer, General Carl von Horn, reported a lull in the situation in the demilitarized zone on February 25.

In a report to the Security Council, General Horn said that the Sea of Galilee region was calm for the moment. But, it was vital to settle the Arab-Israeli differences regarding the cultivation of the land along the frontier area if the area was to be really demilitarized as laid down in the Syrian-Israel Armistice Agreement.

Israeli newspapers on February 25 reported that an Egyptian armoured division and an infantry division had been moved from the Suez Canal zone to the northern Sinai in the biggest military build-up there since the Suez crisis in 1956.

According to a Tel Aviv message on February 29, UAR had withdrawn her forces concentrated near the Israeli border on the Gaza strip.

On February 25, Israel sent a letter to the UN Security Council charging UAR with making extensive military preparations on the border between the two countries.

The letter said that President Nasser's "war-like threats" had been accompanied by military measures in both Syria and Egypt.

It, however, did not make any request for a meeting of the Security Council.

Also, on February 25, a UN spokesman denied reports that UAR troops had entered the Gaza strip.

He added that the reports of heavy troop activity in the region were "rather exaggerated."

The US State Department said on February 26 that it was much concerned about the reported military build-up in West Asia and appealed to UAR and Israel to exercise restraint.

It said: "We have noted with concern a number of recent developments in West Asia. We are hopeful that all parties will exercise restraint, in keeping with their commitments under the United Nations Charter."

(*The New York Times* and *The Egyptian Gazette*, Cairo)

[Prev. ref. 3204:ISR:A]

C. **Oldest Hebrew Epistle:** A 2,700-year-old letter, said to be the oldest Hebrew epistle ever unearthed, was made public in Jerusalem on March 9.

The 14 lines of the script, inked on a potsherd, were addressed to a Prince by a peasant.

The writer of the message appears to have complained to the Prince that his cloak was taken by a creditor as a pledge, and he appealed to the Prince to get it back.

The Hebrew of the text is not as good as the hand-writing, and it is believed that the peasant dictated the letter to a scribe.

It was discovered in January at an ancient fort near the Mediterranean coast, one mile) south of Yavneh Yam, by a group of archaeologists headed by Mr. Joseph Naveh, Inspector of Antiquities in the Israeli Ministry of Education.

There has been no earlier evidence of Hebrew occupation of that part of Palestine in the second half of the 7th century BC. It has been recorded that King Josiah of Judah took advantage of the decline of the Assyrian Empire at that time to re-occupy part of northern Palestine.

Mr. Naveh said that his discovery suggested that the King of Judah took advantage of the political situation to expand his kingdom along the coast.

The earliest Hebrew letters previously unearthed were the 6th century BC messages from officers in the provinces to their Commandant at Lachish, discovered in 1935.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Mr. Naveh said that the new discovery was half a century older. There have been earlier inscriptions found, however.

(*The Times*, London)

[Prev. ref. 3194:ISR:A]

LAOS

A. UN Co-ordinator Named: The UN Secretary-General, Mr. Dag Hammarskjoeld, announced at a news conference in New York on February 18 that Dr. Edouard Zellweger of Switzerland had been appointed as Co-ordinator of UN Economic Activities in Laos.

He succeeded Mr. Sakari Tuomioja who had been in Laos since November, 1959.

Dr. Zellweger, an eminent Swiss jurist, had been Constitutional Adviser to the Government of Libya since 1955. Earlier, from 1945 to 1950, he was Swiss Ambassador to Yugoslavia.

Mr. Hammarskjoeld expressed the hope that UN would now embark "on the third phase of the work for economic development and integration in Laos." First, there had been the report submitted by Mr. S. Tuomioja in December, 1959. Then, the UN Commissioner for Technical Assistance, Mr. Roberto M. Heurtematte, had visited Laos and had translated the report into "action terms." "And now, we have come to the stage where, I hope, we are ripe for action under the leadership of Dr. Zellweger."

Mr. S. Tuomioja's report, which he submitted after studying the situation in Laos for four weeks, contained a series of recommendations for long-term and short-term projects aimed at the general development of the country.

(*UN Information Centre*, New Delhi)

[Prev. ref. 3169:LAO:A]

MALDIVES

A. Suadive Republic Disbanded: The Maldivian Government's Representative in Colombo, Mr. Hilmy Didi, said in Colombo on March 14 that the rebel Republic of Suadive set up by Mr. Abdullah Afif in the southern atolls of the British-protected Maldivian Archipelago in the Indian Ocean had been disbanded.

The dissolution had been brought about through the good offices of Britain whom the Sultanate of Male had originally accused of instigating the rebellion in the southern atolls and of inspiring the setting up of the Republic.

An Atoll Committee of which Mr. Abdullah Afif is a member now rules over the territory under the sovereign control of the Sultan of Male.

Britain's good offices were used in terms of the recent Agreement between the two countries whereby Britain secured rights to use the Gan Island as an Air Force base and promised to recognize the Sultanate of Male as the sole Government of the Maldives.

(*The Hindu*, Madras)

PAKISTAN

A. Mr. Manzoor Qadir On International Affairs, Kashmir Question And Relations With India: The Foreign Minister, Mr. Manzoor Qadir, spoke at length on the Kashmir problem and his country's relations with India at a reception organized by the Pakistan Institute of International Affairs in Karachi on March 11.

He said that the Kashmir question was not insoluble and it would be solved one day no matter how insoluble it might look today.

Any solution of the dispute, he said, must satisfy the interests of Pakistan, the people of Kashmir and of India. The only solution which, "so far as we can see", will safeguard all the interests was "the one we have been talking about"—a fair and impartial plebiscite. "We cannot see any other solution, but that does not mean that if anybody has got another one, we will not listen to it. If somebody has it, he should suggest it."

Talking of Pakistan's relations with Afghanistan and Afghanistan's "anti-Pakistan propaganda," he reiterated Pakistan's policy of friendship for Afghanistan and said that with all the Afghan propaganda, "the desire of Pakistan to come closer to Afghanistan as far as possible remains unshaken, and Pakistan will do all she can to win over Afghanistan."

Pakistan's desire to have "peaceful relations all around" had received recognition in many countries where it was not recognized previously.

Pakistan's relations with the Arab countries have grown, and her sympathies with the newly-emerging countries of Africa are recognized to a great extent.

He was very happy to say that Pakistan's relations with India were progressing in a direction which was most desirable, and he ardently hoped that very soon there would be no further need for the two countries to waste their resources and energies in maintaining defensive postures against each other.

Talking of Pakistan's interest in Kashmir, he mentioned the economic and defence aspects of the issue and said: "There is also the question of defence of certain areas, certain vulnerable areas. With the hills behind you, it is one kind of proposition, and with the hills before you, it is another kind of proposition.

"Under the principle in accordance with which the Canal Waters issue is being settled, the importance of Kashmir to Pakistan has become much greater than before. Pakistan will be restricted to use the waters of only three of the Indus basin rivers, one of which takes off in Kashmir and another one passes through Kashmir. The fact that India had once turned off the supplies of water to Pakistan canals had to be borne in mind. The same thing can happen again. That means a stranglehold on West Pakistan's economy."

He also pointed out that the storages that Pakistan would build to use the waters of the three rivers would be built in the hills and not in the plains.

Because of the existence of this dispute, he said, the two countries were wasting enormous resources on defence. To avoid this wastage, the President of Pakistan had offered a joint defence proposal to India, which could become a reality only if the Kashmir issue was out of the way.

In this context, he pointed out that internal strife in the Indian sub-continent had always been responsible for invasions.

He divided disputes between India and Pakistan into two categories—those arising out of Partition and those consequent to the Partition. The disputes in the first category —those relating to the boundary line, overall financial settlement, evacuee properties and Canal Waters—were either matters of the past or were well on the way to solution. The most important of the disputes in the second category covering disputes relating to accession of States was that of Kashmir.

Answering a question on the accession of Junagadh and Manavadar States to Pakistan, he said that the position in Junagadh was the exact reverse of the position in Kashmir, a little more than the exact reverse of the position in Kashmir. The Muslim ruler of Junagadh had acceded to Pakistan, though the majority of its people were not Muslims. The Maharaja of Kashmir acceded to India, though an overwhelming majority of the people of the State were Muslims. But, in Kashmir, the people registered their protest against the accession and even rose in revolt, whereas in Junagadh no protest was registered by the people.

Talking of Israel, he said that Pakistan's consistent stand in this regard might not have been appreciated in some quarters. "Our stand is not against the people of Israel. It is based on the fact that by creating a new country in the heart of the Arab world, the problems of the Arab world have been aggravated. Therefore, we can do nothing to support that State." Pakistan supported actions, consistent with the UN Charter, which aim at removing this State from the Arab world.

He re-iterated that any settlement that India and China might reach about Ladakh would not be binding on Pakistan.

The people of Algeria were "our brothers in faith and our sympathies cannot but be with them."

He was very much in favour of a one World Government. If he had the power he would not hesitate to bring it about.

On March 12, however, Mr. Qadir clarified his remarks about Israel.

[He was earlier reported to have said that "Pakistan would like to see the State of Israel removed from the Arab world."]

In a statement, he explained that he was speaking without notes and could not reproduce exactly what words he had used. But, it was to the following effect:

"Our stand is not against the people of Jewish faith for whom we have the greatest respect. It is based on the fact that by creating a new country in the heart of the Arab world, the problems of the Arab world have been aggravated. Therefore, we can do nothing to support that State. Indeed, we shall lend support to all those actions, consistent with the UN Charter, which are calculated to remove causes of tension in the Arab world."

He said that he was issuing the statement because reports which had appeared in the Press had "created an impression somewhat different from my intention."

Diplomatic observers in Karachi interpreted Mr. Qadir's statement as a "calculated stroke to boost Pakistan's stock in the Arab world."

The statement was considered significant in view of the visit of President G. A. Nasser of the United Arab Republic.

hydro-electric station, now under construction, to Chittagong.

The Pakistan Government would bear the rupee cost of the project.

Canada has already agreed to provide $5,600,000 for the construction of a transmission line from Chittagong to Dacca.

The Agreement signed on March 10 would enable the power generated at Karnafuli power station to be brought to Chittagong for onward transmission to Dacca.

C. **Dr. P. D. Periera's Visit:** The Deputy Prime Minister of Portugal, Dr. P. D. Periera, arrived in Karachi from Goa on January 17 on a seven-day official visit to Pakistan.

He was welcomed at the airport, among others, by the Minister of Information and Broadcasting, Mr. Z. A. Bhutto.

Dr. Periera said that it was a great privilege and also a fascinating opportunity to know a country with which Portugal was associated by ties of mutual and sincere friendship.

The following day (January 18), he left for Rawalpindi and then for home on January 24.

During his stay in Pakistan, he visited a number of places and industrial works. He also met President Mohammed Ayub Khan and other Pakistan leaders.

Before leaving Karachi on January 24, he told newsmen that he was much impressed by the industrial development in Pakistan. He particularly praised the Korangi township which he called "a magnificent demonstration in the sphere of housing and rehabilitation."

UNITED ARAB REPUBLIC

A. **Differences With Jordan Over Palestine:** The authoritative Cairo newspaper, *Al Ahram*, brought out into the open on March 7 the rift between the United Arab Republic and Jordan over Palestine, because, it said, "it was not prudent to allow the rift to remain secret any longer."

In the first account of the issue published in the United Arab Republic, *Al Ahram* disclosed that Mr. Moussa Nasser, Jordan's Foreign Minister, had disagreed with three steps in the Palestine dispute proposed at the recent Arab League Council meeting in Cairo (see page 3235).

These were the creation of a Palestinian entity and of an organization to represent Palestinians, as well as the denunciation of the 1950 Tripartite Declaration under which Britain, France and the United States undertook to maintain peace in West Asia.

It said that at one point the Arab League Council Chairman, Mr. Hussain Eweini (Lebanon's Foreign Minister) had threatened to walk out and return home to publish Jordan's attitude.

According to it, Mr. Moussa Nasser had said: "We do not recognize the existence of a Palestinian status and a Jordanian status, because there exists but one people which owes its allegiance to King Hussein. This matter is over, and we do not approve of underlining the Palestinian existence."

[Two-thirds of the population of Jordan are Palestinians.]

Al Ahram said that Mr. Moussa Nasser was then reminded that, in 1948, Egypt and Jordan had agreed that on the re-fixation of the Palestinians in their Fatherland (Israel), Egypt would return the parts of Palestine that she held and Jordan would return the west bank of the Jordan river.

Mr. Moussa Nasser returned to Amman after being asked by the Arab League Council to compile a plan for the re-organization of a Palestine State.

On his return to Cairo, he told the Council that King Hussein of Jordan felt that the project was part of a general plan and should be left over for an Arab 'summit' meeting.

Al Ahram said that the disputed topics were then postponed for consideration at the next Council meeting in September, 1960.

(*Al Ahram*, Cairo)

[Prev. ref. 2875:JOR:A, 3235:UAR:B]

B. **Arab League Economic Council Meeting:** Addressing the opening session of the Arab League Economic Council in Cairo on March 5, the Secretary-General of the League, Mr. Abdul Khalek Hassouna, said that the achievement of Arab economic unity was imperative and reminded the Council of the world-wide tendency among nations to integrate their economies in regional blocs.

The Council was reported to have prepared draft agreements on March 6 to establish a joint Arab Navigation Company and to build a pipe-line from the Persian Gulf to a Syrian port on the Mediterranean.

The Council also discussed in three Sub-Committees questions relating to petroleum, communications and economy and finance. These Sub-Committees were said to have reached agreement on almost all issues on their agendas.

Five countries took part in the Council session. They were the Lebanon, Jordan, the Yemen, Saudi Arabia and UAR.

There were Observers from Sudan, Libya, Kuwait, Qatar, Bahrein and the "Provisional Government" of Algeria.

Iraq did not attend the session.

Agreement On Oil Policy:

The Oil Sub-Committee of the Arab League Economic Council unanimously approved an Agreement on March 10 on a unified policy to be followed by all the Arab countries.

The Agreement, among other things, dealt with relations between the Arab States and the oil companies operating in the area on financial, technical and labour matters.

It said that in granting new oil concessions, priority should be given to Arab companies or companies in which Arab capital was interested.

Also, the Arab countries should undertake not to allow their oil to flow into pipe-lines which ran through non-Arab territories or which terminate at non-Arab ports.

The Agreement said that all foreign oil companies operating in the area should take 90 per cent of their labour force and 70 per cent of other employees from amongst the nationals of the countries wherein they operated.

Vocational training centres were to be set up to train Arab nationals for work in the oil industry.

They also agreed not to allow oil companies to change their prices without the consent of the country granting the Concession.

Decisions:

On March 13, the Council passed all the draft resolutions and recommendations presented by its technical Sub-Committees.

It was decided that the present session of the Economic Council should be kept 'open.' The Council advised the Arab countries to collaborate in working out a system for industrial co-ordination to help realize Arab self-sufficiency and contribute to realizing Arab economic unity.

Another decision was that a conference of economic experts should convene in Cairo on April 23 to make a complete study of matters related to the issue of Arab economic unity.

It approved the proceedings of the first Arab Petroleum Conference (page 2677) and decided that an annual Arab Oil Conference should be convened.

It also decided to approve the conclusion of an Agreement on the co-ordination of the oil policy of the Arab States for the common benefit of Arab States, to seek the issue of unified laws on the exploitation of petroleum and its products which will embody basic principles for the regulation of Governments' relations with *concessionnaire* companies in the financial, technical, social, hygienic and labour spheres and to call on the League's General Secretariat to appoint an *ad hoc* Technical Committee to study ways and means of regulating the boycott of oil companies operating in Algeria.

The meeting ended on March 13.

A spokesman of the Arab League told newsmen at the conclusion of the session that the Council had ratified plans to establish an Arab-owned Pipe-lines Company, a Navigation Company and an Airline.

He said that the Council referred back for further study projects for the establishment of an Arab Tankers Company, an economic development fund and a proposal to set aside five per cent of all oil revenues for development in Arab countries which did not produce oil.

INDIA

SUMMARY: National Development Council Meeting; FICCI Session; Trade Pact With Pakistan; Air Violations; State Bank of India Strike; Bombay And Kerala Budgets; Kundah Project Inaugurated; Rajya Sabha Elections.

A. National Development Council On Third Plan Targets: The National Development Council comprising the Chief Ministers of all States and some senior Central Ministers met in New Delhi on March 19 and 20 and accepted a Rs. 9,950-crore investment target for the Third Five-Year Plan in the public and private sectors. The public sector component would be Rs. 5,950 crores (investment) which, together with a current outlay of Rs. 1,050 crores, would give an overall Plan outlay of Rs. 7,000 crores.

The Council also accepted in principle the proposals for raising the internal resources corresponding to this outlay.

Although not specifically proposed or discussed, it was taken as understood that agriculture, steel, machine-building, fuel and the related power, transport and technical education would comprise the 'core' of the Third Plan.

Further, schemes totalling up to Rs. 300-400 crores that could not be accommodated in the Rs. 7,000-crore outlay might be placed on a priority waiting list, to be taken up as and when resources permit.

The States' share of the proposed Rs. 7,000-crore outlay in the public sector during the Third Plan period was expected to be about Rs. 3,650 crores.

The size and composition of the individual State Plans and the quantum of resources to be raised by them would now be settled in discussion with the Planning Commission.

It was understood that the Working Group on Resources had suggested that the Rs. 7,000-crore outlay be finalized as follows:

Additional taxation—Rs. 1,650 crores, the States' share being about Rs. 500 crores and that of the Centre about Rs. 1,150 crores. The States were expected to raise Rs. 200-250 crores through surcharges on land revenue, water rates, betterment levies, commodity cesses and other direct taxes on the rural sector. Sales-taxes and levies on road transport and electricity were calculated to make a substantial contribution. The bulk of the additional Central taxation was expected to come from excises. Another major head would be increased surcharges on railway fares and freights.

Loans—Rs. 850 crores.

Small savings—Rs. 550 crores.

Deficit-financing—Rs. 550 crores.

Credit expansion by Reserve Bank—Rs. 200 crores.

Profits from public enterprises—Rs. 470 crores.

Surplus from railways—Rs. 150 crores.

Provident funds and miscellaneous receipts —Rs. 300 crores (approximately).

Balances from current revenues—Rs. 200 crores.

Foreign assistance (excluding requirements of private sector and for repayments)—Rs. 2,000 crores.

Working Group's Report:

According to the proposals of the Working Group on Resources, out of the outlay of about Rs. 3,650 crores which was likely to fall within the States' Plans, the latter's total contribution was expected to amount to about Rs. 1,150 crores, including resources on revenue account, contribution of public enterprises and resources on capital account.

After considering generally the scope for rural taxation, betterment levies and electricity duties, the Council agreed that more detailed discussions between the Planning Commission and individual States should now proceed on the basis of the recommendations made by the Resources Working Group.

In the course of the discussion, reference was also made to the Prize Bonds Scheme.

The Central Finance Minister, Mr. Morarji Desai, indicated that half the proceeds of Prize Bonds would be made available to the States.

Considerable attention was devoted to the question of prices and it was agreed that every effort must be made to hold the price-line. The detailed measures by which this might be achieved would be further considered.

Some suggestions were made regarding State trading, but the Central Food Minister, Mr. S. K. Patil, explained his view that this could at best be regarded as a 'temporary expedient' and that a more permanent solution lay in increased agricultural production. He also outlined his proposals for building up a buffer-stock of foodstuffs.

A proposal by one of the members of the Council for a 'wage freeze' was vigorously resisted by the Central Labour Minister, Mr. G. L. Nanda, and others.

It was pointed out that a national policy of relating wages to productivity, prices and minimum standards was being sought to be pursued.

The employment aspect of the Third Plan was touched upon briefly and it was felt that the employment potential of rural industries should be tapped to the fullest extent possible.

The Council also briefly discussed the issue of administrative efficiency and economy.

The Planning Commission had recommended that the Cabinet Secretary at the Centre and the Chief Secretary in each of the States should lead an Official Committee to examine administrative codes and procedures and eliminate delays.

Next day (March 20), the Council discussed the pattern of investment, physical targets, phasing and a detailed price policy.

[Prev. ref. 2613:INI:F]

B. FICCI Session: The thirty-third annual session of the Federation of Indian Chambers of Commerce and Industry met in New Delhi on March 27, 28 and 29.

Inaugurating the session, the Prime Minister, Mr. Nehru, called for increased production on which alone, he said, the country's security depended.

He explained the Government's socialist approach by which economic advance was sought to be brought about through Five-Year Plans and said that modern thinking was inevitably becoming increasingly socialistic and he, as a believer in Socialism, believed in the dignity of the individual as well as equal opportunities for all.

He said that it was a wrong approach to the problem to talk in terms of "first priorities" in regard to the Third Plan since both agriculture and industry depended on each other and should go hand in hand. Both the public and the private sectors had to fit in their activities within the broad objectives of the Third Plan.

The controversy regarding the two sectors of the economy, he declared, concerned a few selected items of industry and the area of this controversy was small, though important. It was, for instance, open to the private sector to open a million or 10 million small and medium-sized industries in the country.

In his view, the slogans of both "free enterprise" and of the communists were divorced from free thinking. Free enterprise led to monopolies and, therefore, "unfree enterprise". The major objective of planning was, on the other hand, to raise the level of the common peasant in India.

Mr. M. R. Ruia's Speech:

The out-going President of the Federation, Mr. Madanmohan Ruia,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

in his speech, said that the country had "not done too badly" in the economic sphere and doubts expressed in the first few years of the Second Plan seemed to have been answered by events.

He also referred to the brighter international picture in terms of foreign appreciation and help given by friendly countries and said that the foreign investor was evincing greater interest in investment opportunities in India and, so far as the indigenous capital was concerned, it had proved its capacity to make the best use of the country's resources made available to it and that "it can be relied upon for development effort on the required scale".

He proposed that a substantial allocation should be made in the Third Plan for family planning.

Regarding the connected problem of unemployment, he suggested that a conscious effort should be made to spread industrialization to smaller towns and to invoke the enterprise of the local population.

The crux of the country's problem, he declared, lay in increased production all round. In this context, he favoured controlled deficit-financing and said that it would be worth while, even from the point of view of increased revenues to the exchequer, to reduce the burden of taxation which would lead to broad-based economic development.

He added: "Even for the development of corporate enterprise, individual savings must be augmented and individual shareholders must be given an opportunity to interest themselves not only in the expansion of existing companies but also in the establishing of new companies by entrepreneurs, old and new. It is in this light, I hope, that the proposals for raising resources through taxation for the Third Plan will be considered."

Resolutions:

The session adopted a resolution calling for the maximum opportunity being provided to units in different sectors of the economy "to play an effective part in meeting all defence requirements."

Stating that a strong industrial base was a *sine qua non* for the effective defence of India, it said that every avenue must be explored to set up different kinds of industries "to rapidly and adequately meet the defence and other requirements of the nation."

It underlined the need for accelerating agricultural production and said that it was essential for maintaining higher industrial production and achieving increased exports.

The resolution on national defence expressed deep concern over the Chinese aggression on the northern frontier and said that while supporting such action as had been taken by the Government so far in this regard, the Federation would request the authorities and the public to firmly recognize that the country's political sovereignty could only be effectively safeguarded by augmenting defence potential, of men and materials both qualitatively and quantitatively, inspired by a unity of purpose.

In the view of the Federation, it said, there was no basic conflict between the objective of effective defence on the one hand and of securing reasonable improvement in living standards on the other.

It re-affirmed its assurance to the Prime Minister that the commercial community would be firmly behind the Government in all steps that might be taken for the defence and honour of the country.

By another resolution, it pleaded for a modification of the Government's economic policy.

It said that the contribution of the private sector, against the background of planning and in the context of various legislative measures and executive directions, had so far not only matched the targets but also exceeded them in different fields.

Keeping in view the objectives of increased employment, increased production through greater productivity of men and machinery, increase in the savings of the community "which should fructify in the hands of individuals" and a reasonable increase in and diversification of consumption which alone could sustain and improve all economic plans, it said, there must be a "distinct modification of the Government's economic policies and procedures".

It advocated, among other things, a re-orientation of the fiscal policy and the gearing up of the credit policy of the Reserve Bank and commercial banks to developmental requirements.

Referring to the need for increased exports to sustain economic development, it said that the prices of export articles must be competitive.

New Office-bearers:

The new office-bearers of FICCI elected for 1960-61 were: Mr. A. M. M. Murugappa Chettiar—President; Mr. Karamchand Thapar—Vice President; and Mr. P. N. Talukdar—Treasurer.

The following were co-opted to the Executive Committee to represent special trading and industrial as well as regional interests: Mr. Madanmohan R. Ruia, Mr. Lakshmipat Singhania, Sir B. P. Singh-Roy, Mr. Naval H. Tata, Mr. S. L. Kirloskar, Mr. Ramnath A. Podar, Mr. J. V. Somayajulu, Mr. Lal Chand Sethi and Mr. Satyapaul.

(*The Hindustan Times* and *The Statesman*, New Delhi)

[Prev. ref. 2575:INI:A]

C. **Indo-Pakistan Trade Agreement:** A new two-year Indo-Pakistan Trade Agreement was signed in New Delhi on March 21, paving the way for a considerable expansion of trade and economic co-operation between the two countries.

The scope and range of commodities listed for exchange under the Limited Payments Agreement (in non-convertible Indian rupees) signed in December, 1959 was enlarged from Rs. 2 crores to Rs. 4.10 crores per annum each way.

The principal items of trade under the Payments Agreement would be jute cuttings and raw cotton (to be supplied by Pakistan) and iron and steel, cement and *biris* (to be supplied by India).

Under a separate Protocol signed, India would export 130,000 tons of coal per month to Pakistan and import raw jute from that country.

Two Schedules of commodities pertaining to normal trade were also drawn up.

It was felt that there was scope for co-operation in respect of the production and exchange of several commodities, such as raw jute, raw cotton, coal, newsprint, pig-iron, steel of different sorts (including structurals), cement and wood and timber.

It was agreed that it would be desirable to take such steps as might be found practicable to promote commodity consultations with a view to entering into long-term arrangements of mutual benefit.

The Agreement was signed at official level by Mr. K. B. Lall and Mr. I. A. Khan on behalf of India and Pakistan respectively.

The Commerce Ministers of both countries, who were also present, spoke briefly at the signing ceremony.

The Pakistan Minister, Mr. Hafizur Rahman, expressed the hope that the Agreement would "lead to a further improvement in our relations in all other fields and spheres."

Replying Mr. Lal Bahadur Shastri said that India was ready to discharge all the obligations that devolved on a good neighbour.

He was optimistic that the two countries would be able to co-ordinate their "economic endeavours" and "co-operate in meeting each other's requirements with a view to achieving rapid progress and advancement."

Appended to the Agreement were two Schedules indicating the commodities available for export from India and Pakistan respectively.

There were also two Protocols to the Agreement.

The first Protocol superseded the Limited Payments Agreement signed in Karachi on December 3, 1959 and provided for increased exchange of commodities between the two countries, payments being made on the same basis as under the superseded Agreement. The values of commodities to be exchanged under this Protocol were raised from Rs. 2 crores to Rs. 4.10 crores either way.

Under this arrangement, Pakistan agreed to supply India jute cuttings to the extent of Rs. 1 crore and also to raise the ceiling for cotton from Rs. 1 crore to Rs. 1.5 crores.

India, on her part, agreed to supply Pakistan iron and steel to the extent of Rs. 1 crore and raised the ceiling for cement and *biri* leaves from Rs. 70,00,000 to Rs. 1,50,00,000. The list of items to be exchanged was also enlarged to cover, among others, betel leaves, films, fish (dried and salted), drugs and medicines (Ayurvedic and Unani), rock salt, betel nuts, kapok, etc., from Pakistan and betel leaves, films, spices, groundnut seeds, mica, dyeing and tanning substances, chemicals, machinery, electrical goods, bicycles and spares, iron and steel, sewing machines and typewriters etc., from India.

Under the second Protocol, both Governments entered into special arrangements for the supply, by India, of coal, hard and soft wood and stone-boulders to Pakistan. Pakistan agreed to supply India with raw jute, the quantity and value of it to be determined as heretofore. Despite difficulties in regard to movement and supply of coal, India agreed to supply by rail and by sea to Pakistan an additional quantity of 30,000 tons per month. This is over and above the 1,00,000 tons of coal per month to both Wings of Pakistan as under the previous Agreement.

A joint *communique* issued in New Delhi on the same day (March 21) said that the Pakistan delegation felt that border trade between East Pakistan and the adjoining Indian areas did not lead to *bona fide* trade. However, both the delegations agreed to hold further consultations in regard to this matter.

The Agreement and the Protocols are subject to periodic review and take effect from March 20, 1960.

The total volume of Indo-Pakistan trade was only about Rs. 11 crores in 1959 and this figure was expected to be doubled as a result of the new Agreement.

[Prev. ref. 2816:INI:E]

D. **New Agreement Under PL 480 For Purchases Of Rice From USA:** The United States Agriculture Department announced on March 21 a new Public Law 480 Agreement with India supplementing the Agreement signed between the two countries in November, 1959.

Under the Supplementary Agreement, India would buy in rupees rice approximate-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

ly worth Rs. 36,900,000, including transportation costs. Five per cent of the rupee proceeds would be set aside for loans to US and Indian private businesses.

At the same time, it was announced that India would also buy milled rice in bags worth about another Rs. 30,000,000. The contracts for this rice might be made between March 28 and June 30, 1960.

(*US Embassy*, New Delhi)

[Prev. ref. 3023:INI:C, 3053:INI:F]

E. **Import Of Rice From UAR:** Representatives of the Government of India and the Government of the United Arab Republic signed in New Delhi on March 21 an Agreement providing for the import by India of 1,00,000 tons of rice from UAR.

The import will be against non-convertible rupees which will be utilized by the sellers for purchasing from India jute, tea and other items.

The supplies will be completed by July, 1960.

(*The Hindustan Times*, New Delhi)

[Prev. ref. 2830:INI:F]

F. **Export Earnings From Jute:** According to official sources in Calcutta, India's earnings from the export of jute goods rose to Rs. 108.44 crores in 1959 from Rs. 102.09 crores in the previous year.

There has been some improvement in the export earnings of fabrics of jute (jute canvas, hessian cloth, sacking cloth and other jute fabrics) from Rs. 58.87 crores in 1958 to Rs. 65.78 crores last year.

Export earnings from hessian and sacking bags (new) at Rs. 33.49 crores showed an increase of Rs. 1.06 crores, but those from other goods declined from Rs. 10.81 crores to Rs. 9.17 crores.

America was the principal importing country of Indian hessian, with an off-take valued at Rs. 33 crores in 1959 against Rs. 28.4 crores in the previous year. Other important customers of Indian hessian were Argentina, Canada, UK, Australia, West Germany and USSR.

The most important purchaser of hessian new bags in both the years was USSR, whose off-take increased from Rs. 1.4 crores in 1958 to Rs. 1.8 crores in 1959.

The principal countries importing new sacking bags were China with an off-take worth Rs. 4.7 crores in 1959 against only Rs. 70,00,000 in the previous year, and Cuba whose share declined from Rs. 4.1 crores to Rs. 2.1 crores between 1958 and 1959. Nigeria, Syria and UK also showed declines, while Burma, Sudan, Indonesia, Thailand and Egypt registered small increases.

(*The Hindu*, Madras)

[Prev. ref. 3216:INI:M]

G. **Watch Factory — Agreement With Japanese Firm:** An Agreement between the Government of India and the Citizen Watch Company of Japan for the establishment of a watch factory in India, was signed in New Delhi on March 25.

The proposed watch factory, which would be in the public sector, would be located in Bangalore, near the Hindustan Machine Tools Limited, and would undertake the manufacture of low and medium priced watches of 17-jewel type with shock-absorber device.

The factory is expected to go into production in 1962. Beginning with an annual output of 1,20,000 watches in the second year, it will attain full production of 3,60,000 watches from the sixth year onwards.

The indigenous content of the watches will also progressively rise from 54 per cent at the beginning to about 84 per cent by the time full production is attained. Only items like main and hair springs, shock absorbers, and for some time, jewels may have to be imported.

The capital cost of the plant and equipment over the five-year period when full production will be achieved, is estimated to be about Rs. 70,00,000, including the cost of the jigs and tools manufacturing plant. Inclusive of the cost of the factory blocks and services, the total capital cost will be about Rs. 1.25 crores.

The Citizen Watch Company will assist the Central Government in establishing the factory, in the preparation of specifications for the plant and the equipment, supply of technical 'know-how,' research and development. It will also render assistance in the manufacture of jigs, tools and fixtures and guarantee the performance of the plant and the product for an eight-year period, when the Agreement will remain in force. The import of plant and equipment will be financed out of the Yen credit facilities made available by the Japanese Government.

Besides providing technical experts, the Japanese firm will also train 100 Indian technicians for a five-year period in their factories.

So far, no manufacture of watches has been undertaken in the country, though some parts like cases, dials and some other components for replacement purposes have been produced. The beginning of watch manufacture would mark an important stage in the country's endeavours to develop skills and a tradition of precision work.

It may be recalled that the Government have already approved a scheme of the Phoenix Watch Company, Bombay, to set up a watch manufacturing plant in collaboration with a French group of firms, with an annual capacity of 3,00,000 watches. Two more proposals from industrialists for the manufacture of watches are said to be under Government's consideration at present.

(*The Hindu*, Madras)

[Prev. ref. 3233:JAP:E]

H. **Sikkim Proclamation On Mineral Exploitation:** The Sikkim Durbar has issued a proclamation providing the legal and constitutional basis for the joint venture with India to exploit Sikkim's reportedly large mineral resources.

A Corporation has now been established to develop minerals. The Maharajkumar of Sikkim will be its Chairman, while India will be represented on its executive by three senior officials.

India will provide the technical 'know-how' and equipment for the undertaking. Sikkim will, however, hold the controlling share in the Corporation's capital.

Sikkim has extensive deposits of copper which have already been proved. It is also generally believed that further search may reveal other industrial and precious minerals in commercial quantities.

(*The Statesman*, Calcutta)

[Prev. ref. 2870:INI:A]

I. **Air Violations:** Both the Prime Minister, Mr. Nehru, and the Defence Minister, Mr. V. K. Krishna Menon, told the Lok Sabha (House of the People) on March 18 that the Indian Air Force was keeping strict vigilance over the country's frontiers and had taken all possible steps to prevent violation of India's air-space by foreign aircraft.

Mr. Menon informed the House earlier in a statement that between February 6 and 23, they had received 42 reports of "having heard sounds of aircraft or having seen some lights" over the North-East Frontier Agency (N-EFA).

According to Air Force experts, he said, these flights appeared to "follow a pattern wherein the sounds disappear towards the north" (China), and in "some cases, report of the sound as being of jet aircraft had been heard." All the reports were of flights "at night between the hours of sun-set and day-break." The sources of information were varied. The reports were mostly of "sounds heard."

Air Force experts, he added, had examined all these reports. The reports were believed to be of sounds of aircraft or having seen them at a great height at night in cloudy weather. The experts could, therefore, "only speak at present of unidentified aircraft."

They were also of the opinion that these could not be reconnaissance aircraft as the ground features could not be seen by aircraft "from that height at night and if photographs were being taken at night there would be flashes. Such flashes had not been observed by anyone."

These flights followed a pattern and the experts had 'certain views about their purpose." But he did not disclose what these views were in the larger defence interests.

Most of the 42 reports no doubt referred to the flights of the same aircraft "seen several times or reported by different persons or at different places at short intervals." "It was not possible to state the number of aircraft engaged in these violations though they must be much smaller than 42."

Between January 15 and February 23, there had also been intrusions into India's airspace, "as reported by the Indian Air Force and Army establishments in the Punjab and West Bengal areas." These aircraft, which were all unidentified, flew back to Pakistan. Protests had been lodged against these violations.

Mr. Nehru, intervening, explained that it was not possible to make statements in public, in the House or elsewhere as to the steps the Government was taking to prevent air violations. Giving such information would amount to giving information to the wrong party also. There was no doubt that every possible step should be taken. But what steps were feasible and how they should be taken was a matter for experts and they were sufficiently alive to these matters.

[Prev. ref. 2692:PAK:C, 3224:INI:A]

J. **State Bank Employees' Strike:** For 20 days from March 5, the employees of the State Bank of India were on strike demanding revision of pay scales and better service conditions.

Consequent on the break-down of negotiations between the representatives of the All-India State Bank Employees' Federation and the Management of the Bank over the demands, the Federation issued a strike call on March 5. On the first day, the Bank offices in metropolitan cities were affected and the strike soon spread to all branches. A sympathetic token strike was observed by other bank employees as well.

The beginning of the strike also set off a fresh round of talks among the management, the Central Government and the Federation resulting in the appointment of a National Tribunal on March 24.

On March 25, the Federation's President, Mr. S M. Joshi, gave the call for the withdrawal of the strike and directed the employees to report for duty.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

According to him, the decision to call off the strike was taken following an understanding reached with the Government and the management of the Bank that the constitution of a National Tribunal to adjudicate on the disputes in the banking industry did not preclude the parties from discussing any issues referred to it and to come to a satisfactory settlement.

Tribunal Appointed:

The Central Government constituted the National Tribunal to adjudicate the dispute between the banking companies and their employees on March 21.

Mr. Justice Kantilal Thakoredas Desai of the Bombay High Court was appointed the Presiding Officer of the Tribunal with headquarters at Bombay.

Simultaneously, the Government passed an Order prohibiting the continuance of the strike by the employees of the State Bank.

The notification stated that the constitution of the National Tribunal had become necessary because the dispute involved questions of national importance and was likely to affect industrial establishments in more than one State.

Important among the issues referred to the National Tribunal were the question of *interim* relief and the special needs of the State Bank and its subsidiaries, having regard to their responsibility for the conduct of Government business.

Other issues referred to the Tribunal were: categorization of banks and areas for adjudication; scales of pay and the method of their adjustment; dearness allowance, house rent and other allowances; provident fund, pension and gratuity; leave rules; hours of work and over-time; medical aid; cash deposits and other securities to be furnished by staff; the *seniority question*; age of retirement; subsistence allowance during suspension; date of effect of the new Award and option, if any; anomalies in the existing Award; and the need for the development of banking in rural areas.

The names of 67 banking companies and corporations, where disputes existed or were apprehended and which would be adjudicated, were also published.

The terms of reference in the case of the Reserve Bank dispute related to Class II, III and IV staff of the Bank.

[Prev. ref. 3203:INI:M]

K. **Bombay Budget:** The last Budget estimates (for 1960-61) for the bilingual Bombay State presented to the Bombay Legislative Assembly by the Finance Minister, Dr. Jivraj Mehta, on March 18 showed a revenue surplus of Rs. 7,00,000, without any change in the existing taxation.

Revenue receipts for 1960-61 were estimated at Rs. 150.06 crores and revenue expenditure Rs. 149.99.

In a brief seven-page Budget Speech, Dr. Mehta said that the Budget was being presented to obtain a "vote on account" to carry on the administration and development programme till the final shape of the budgets of the two States of Gujerat and the residual State (Maharashtra) was decided by their respective Legislatures.

He said that he would be separately moving for a "vote on account" of Rs. 92.11 crores for covering expenditure for a part of 1960-61. This figure would consist of an amount of Rs. 44.38 crores on revenue account, Rs. 38.17 crores for capital expenditure outside revenue account and Rs. 9.56 crores under loans and advances.

The amount of Rs. 92.11 crores was intended to cover expenditure for one month of the existing composite State and for a period of four months thereafter for the residuary Bombay State.

Referring to the progress of the Second Five-Year Plan in the composite State, he said, the year about to end (1959-60) had been one of all-round progress and achievements for the State.

The Plan outlay by the end of 1959-60 was estimated at over 70 per cent of the total outlay of Rs. 350 crores for the entire Plan period.

A table giving the actual outlay for the first three years of the Plan, the estimated outlay for the current year and the provision proposed for 1960-61 showed that the aggregate outlay on the five years would amount to Rs. 349.81 crores or 99.9 per cent of the total outlay.

The actual outlay on the first three years worked out to Rs. 46.93 crores in 1956-57, Rs. 51.21 crores in 1957-58 and Rs. 70.96 crores in 1958-59. The revised estimates for 1959-60 aggregated to Rs. 79.25 crores and the Budget estimates for 1960-61—the last year of the Plan—provided for an outlay of Rs. 101.46 crores. "It will be seen that the tempo of our Plan expenditure has been rising from year to year and it is hoped that we shall be fulfilling our financial target of Rs. 350 crores for Plan expenditure."

It would also be seen, he said, that the targets under Agriculture and Community Development, Transport and Communications and Housing would be substantially exceeded.

Dr. Mehta gave the House a statement showing the proposed Plan outlay for 1960-61 separately for Gujerat and Maharashtra regions under the nine major sectors of development, providing Rs. 66.77 crores for Maharashtra and Rs. 34.69 crores for Gujerat.

The provisions included Rs. 18.82 crores for Maharashtra and Rs. 10.45 crores for Gujerat under the head Agriculture and Community Development; Rs. 23.30 crores and Rs. 12.04 crores respectively for Irrigation and Power; Rs. 5.58 crores and Rs. 3.17 crores for Transport and Communications; Rs. 5.92 crores and Rs. 1.46 crores for Housing; Rs. 4.43 crores and Rs. 3.01 crores for Education; Rs. 4.36 crores and Rs. 2.26 crores for Health and Rs. 2.18 crores and Rs. 1.24 crores under the head "other social services."

Industry and mining accounted for an outlay of Rs. 1.43 crores in Maharashtra and Rs. 76,00,000 in Gujerat and scientific and industrial research, etc. for Rs. 75,00,000 and Rs. 30,00,000 respectively.

(*The Times of India*, Bombay and *The Hindu*, Madras)

[Prev. ref. 2540:INI:M]

L. **Kerala Budget:** Mr. R. Shankar, Deputy Chief Minister of Kerala who holds the Finance portfolio, presented the State Budget for 1960-61 to the Kerala Legislative Assembly in Trivandrum on March 18.

According to the Budget, the total revenue for the year 1960-61 was estimated at Rs. 42.95 crores. The expenditure on Revenue account for the year was estimated at Rs. 44.94 crores, resulting in a deficit of Rs. 1.99 crores. It was not now proposed to cover the deficit by any new measures of taxation.

The estimated expenditure on Capital account for 1960-61 was Rs. 9.06 crores, as compared to Rs. 8.77 crores in the revised estimates for 1959-60, thus showing an increase of Rs. 0.29 crores.

The Government proposed to float an open market loan of Rs. 4.40 crores during 1960-61.

Capital expenditure outside Revenue account, he said, stood at Rs. 9.06 crores and provision was made for a net expenditure of Rs. 4.48 crores under Loans and Advances.

With a view to finding resources to meet these expenditures, the Government had, besides the open market loan, taken credit for Rs. 1.50 crores on account of the State's share of the National Savings collections and Rs. 7.41 crores as loans from the Government of India, which were mainly intended for the implementation of the Five-Year Plan schemes. Transactions under other debt, deposit and remittance heads were expected to bring in Rs. 1.72 crores.

The revised Revenue and Expenditure for 1959-60 stood at Rs. 39.53 crores and Rs. 40.56 crores respectively, resulting in a Revenue deficit of Rs. 1.03 crores against Rs. 72,00,000 estimated in the Budget.

He said that within the short time at the Government's disposal (the Ministry was sworn-in on February 22), it had not been possible for them to make a comprehensive review of the finances of the State and lay down a programme of expenditure which would reflect the Government's policies and objectives for 1960-61.

He said he, therefore, proposed to present to the House a "preliminary programme" of expenditure and added that the proposals would be subjected to a more minute scrutiny later. The final picture, which emerged out of such examination, would be presented to the House at its next session.

He also sought a "vote on account" for the first four months of the financial year (1960-61) to enable the Government to carry on the day-to-day administration of the State.

Economic Review:

He also gave a short review of the economic situation in the State and said that as the field of State taxation was limited it would be wise for them to develop its non-tax revenues to the maximum extent.

As part of this programme, he said, the Government was taking steps for the re-afforestation of the available areas, cultivation of cashew in suitable forest lands, expansion of the area under rubber cultivation on lands excluded from the reserve forests and improvement of the working of the State Transport Department.

He announced that the Government had made a provision for the distribution of 180,000 tons of rice next year (1960-61) through fair-price shops at a price of 50 nP per measure. This would involve an additional expenditure of Rs. 1.07 crores per year to Government.

Besides the extension of free education to the Eighth Standard, as announced in the Governor's Address, (page 3244) he said that a larger provision had been made for aid to nursery schools in the State. The Government had also decided to establish a Hindi Teachers' Training College, recognizing the growing importance of Hindi in the national sphere.

On food production, he said, the only possibility for the State was to resort to intensive cultivation. The per acre production of rice in the State could be stepped up by providing irrigation facilities in a larger measure and supplying manure in larger quantities.

For the rapid industrialization of the State, he said, the present Government proposed to pursue a definite policy of assisting the private sector to organize new industries in the State by giving them all facilities, including participation in the share capital of industries.

He added that, in the two previous years of communist rule, the deficit had gone beyond the anticipation of the then Finance Minister, Mr. Shelat Achuta Menon (who is now the Deputy Leader of the Communist

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Opposition). The first year of communist rule (1958-59) closed with a revenue deficit of Rs. 40,00,000 against an anticipated surplus of Rs. 34,00,000. The current year (1959-60) was expected to close with a deficit of Rs. 1.63 crores, although in the Budget, he made a larger provision for development works.

The present Government, he said, proposed to pursue a "definite policy" of assisting the private industrial sector by giving it all facilities including capital participation.

[Prev. ref. 2559:INI:E]

M. **Kundah Hydro-Electric Project Inaugurated:** The Rs. 35-crore Kundah Hydro-Electric Project, the sixth and the biggest hydro-electric scheme so far undertaken by the Madras Government, was formally inaugurated by two workers—a man and a woman—in the presence of the Prime Minister, Mr. Nehru, at Kundah on March 25.

Later, Mr. Nehru commissioned the first power unit of the Project which, when completed in 1961, is expected to add 180,000 k.w. to the grid in two plants.

The Canadian Government helped in the Project.

In his speech, Mr. Nehru commended the implementation of the Project with the co-operation of the Canadian Government and engineers on the one hand and the Indian Government and engineers on the other and called upon the engineers to explain to the workers that they were embarking upon something big, which would bring happiness to a large number of people and that they were taking part in the building up of a new India.

The Kundah Project is the largest hydro-electric scheme and the sixth undertaken in Madras under the Second Five-Year Plan. It was inaugurated on June 29, 1956 by the then Central Finance Minister, Mr. C. D. Deshmukh.

Under the terms of the Agreement signed by the Canadian Government, the Government of India and the Madras Government, in New Delhi on December 29, 1956, the Project was assisted by the Canadian Government under the Colombo Plan by the supply of machinery and equipment to the tune of $25,000,000 (Rs. 12.5 crores). Originally, the Canadian Government's offer was Rs. 10 crores, but later they agreed to give an additional aid to the extent of Rs. 2.5 crores for the completion of the transmission lines. A sum of Rs. 9.34 crores worth of equipment and machinery had so far been received from the Canadian Government. The supplies included hydraulic control equipment, pen-stock, turbine generator and sub-station equipment and 230-kw transmission lines. The two power houses of the Project, when completed, will add an installed capacity of 180,000 kw. to the State grid. The Kundah system is linked to the Pykara hydro-electric system at Thudayalur, with the Mettur system at Salem and with the Madras system at Villivakkam.

Water will be impounded in the Emerald and Avalanche reservoirs above the Power House No. 1 from this Monsoon period, since the date of inauguration of the first generator has been advanced to suit the convenience of Mr. Nehru who expressed his inability to come to Madras in April and May, 1960. Arrangements had been made to pump water along the tunnels to the pen-stock.

(*The Hindu*, Madras)

[Prev. ref. 912:INI:S, 1218:INI:Y]

N. **Upper India Chamber Of Commerce Annual Meeting:** In his presidential address to the 72nd annual general meeting of the Upper India Chamber of Commerce held in Kanpur on March 16, Mr. J. K. Srivastava made a strong plea for stepping up production in all sectors of the country's economy.

Welcoming the change in Government's attitude towards the private sector, Mr. Srivastava suggested that apart from public utility services, the Government should encourage public participation in share capital, management and control of other public sector undertakings to relieve the pressure on financial and managerial resources.

He said that the Government's taxation policy had restricted consumer demand and inhibited industrial production.

In a pointed reference to the Textile Wage Board's recommendations, he said that up-country mills making coarse and medium cloth had shown phenomenal deterioration in the rate of profits during the last nine years with the result that the acceptance of the Wage Board's recommendations was bound to affect the working of many of them and might even lead to the closure of some. The per man-hour cost in the textile industry was already the highest in the world and any increase in wages without a corresponding increase in the work-load would increase prices still further.

(*National Herald*, Lucknow)

[Prev. ref. 3215:INI:K]

O. **Rajya Sabha Biennial Elections:** The Congress annexed 56 out of 72 seats in the biennial elections to the Rajya Sabha (Council of States) which ended on March 24.

The remaining 16 seats were won by other political parties and independents as follows: Praja-Socialist Party 5; Communists 2; Samyukta Maharashtra Samiti 2; Muslim League 1; Ganatantra Parishad 2; Independents 4.

The results State-wise were:

West Bengal: Congress 3; P-SP 1; Independent 1.

Madras: Congress 5; Communist 1.

Andhra Pradesh: Congress 5; Communist 1.

Kerala: Congress 2; Muslim League 1.

Mysore: Congress 3; P-SP 1.

Delhi: Congress 1.

Madhya Pradesh: Congress 3.

Rajasthan: Congress 3.

Manipur: Congress 1.

Bihar: Congress 5; P-SP 1; Independent 1.

Bombay: Congress 6; Samyukta Maharashtra Samiti 2; P-SP 1.

Orissa: Congress 2; Ganatantra Parishad 2.

Punjab: Congress 4.

Assam: Congress 3.

Uttar Pradesh: Congress 8; P-SP 1; Independents 2.

The total strength of the Rajya Sabha is 232, of which Congress strength now became 171, P-SP 12, Communists 11, Democrats 8, Independents 16, Nominated 12 and Vacancies 2.

The biennial elections were held in view of the Constitutional provision that one-third of the members of the Rajya Sabha retire after every two years. The elections were indirect, the allotted quota of every State being elected by the elected members of the Legislative Assembly of that State in accordance with the system of proportional representation by means of the single transferable vote.

[Prev. ref. 2083:INI:G]

P. **Lignite Deposits In Rajasthan:** The Central Minister of Steel, Mines and Fuel, Sardar Swaran Singh, said in the Lok Sabha (House of the People) on March 24 that investigations had revealed the existence of an additional deposit of 8,000,000 tons of lignite in the Palana area in the Bikaner division of Rajasthan.

According to original estimates, the deposits in the area were 10,000,000 tons.

He said that the report submitted by an Expert Committee on the Palana mines had been examined by the Government of India and sent to the Rajasthan Government, which was informed that the Central Government mainly agreed with the main recommendations of the Committee and that the State Government should consider the report and arrange to have a scheme for the exploitation of lignite for inclusion in its Third Five-Year Plan in consultation with the Planning Commission. It was for the State Government to take further action in the matter.

He added that the Committee's recommendations dealt with the methods of mining to be adopted in the area.

(*The Hindustan Times*, New Delhi)

[Prev. ref. 2833:INI:M]

Q. **Pyrites And Chemicals Development Company Formed:** The National Industrial Development Corporation set up a subsidiary Company on March 25 for the manufacture of sulphur, sulphuric acid and other products from the pyrites deposits in the Amjor area of Bihar State.

The Pyrites and Chemicals Development Co., Ltd., which would undertake this public sector project, would have an authorized capital of Rs. 5 crores. The entire capital would be held by NIDC.

The estimated cost of the project was between Rs. 6 crores and Rs. 7 crores. Mr. K. N. Kaul, Chairman of the National Mineral Development Corporation, was appointed Chairman of the Company.

At present, India imports over 100,000 tons of sulphur annually.

(*The Hindu*, Madras)

[Prev. ref. 1743:INI:I]

R. **Industrial Machinery Output:** An official Press Note issued in New Delhi on March 26 said that the production of industrial machinery in the country had nearly doubled since the beginning of the Second Five-Year Plan.

Details of industrial machinery manufacture in 1959, it said, showed that not only had production increased in established fields, but several new lines of manufacture had also been taken up for the first time in the country.

A significant rise was recorded in the production of sugar mill machinery in 1959. As against Rs. 32,00,000 worth of machinery fabricated in 1956, the 1959 production was valued at about Rs. 2.5 crores. Six firms were now in the field for manufacturing complete sugar mill machinery. These had formed into two consortia for the supply of complete sugar plants to the co-operative factories.

The production of spinning and weaving machinery increased by about 25 per cent in 1959 as compared with the previous year. Twenty-six new units were granted licences during the year for manufacturing different items of textile machinery.

Jute mill machinery worth about Rs. 1.8 crores was produced in 1959. This represented a six-fold increase since the beginning of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the Second Plan. Carpet-making looms were manufactured for the first time in the country.

A number of schemes for the manufacture of mining machinery in collaboration with foreign agencies were approved during the year. Besides, work in connexion with the coal-mining machinery project at Durgapur was taken in hand. About Rs. 12,00,000 worth of machinery was produced in 1959 as against Rs. 9,00,000 in 1958.

The manufacture of construction machinery in 1959 was double that of the previous year and valued at about Rs. 62,00,000. During the year, two more units were approved for the manufacture of 4,000 concrete vibrators annually.

The rise in the production of tea machinery was from Rs. 58,00,000 in 1957 to Rs. 82,00,000 in 1959. With two more units starting production during the year, the present production capacity was sufficient to meet the entire domestic demand.

The production of chemical and pharmaceutical machinery amounted to about Rs. 75,00,000 in 1959, as against Rs. 41,00,000 in 1957. In the case of weighing machines, production increased from Rs. 17,00,000 in 1956 to Rs. 48,00,000 in 1959. A scheme for substantial expansion of one of the units was approved in 1959.

The production of other types of machinery like the oil-mill machinery, flour-mill machinery, agricultural machinery, etc. also recorded a rise during 1959.

Apart from this, fresh ground was covered in taking up new lines of production for the first time. In the case of printing machinery, for manufacture of which no indigenous capacity whatsoever exists at present, a scheme for producing flat-bed machines was approved.

For paper-mill machinery, as many as 10 schemes were approved during the year with a total production capacity of 14 complete paper plants per annum. Paper machinery worth about Rs. 1 crore would be produced every year under these schemes.

Steps were also taken during the year for the manufacture of a complete range of dairy machinery for the first time in the country.

(*The Hindu*, Madras)

[Prev. ref. 2044:INI:H]

S. **Ashoka Chakra Awards:** The President of India approved on March 19 the award of eight *Ashoka Chakra* decorations for acts of conspicuous gallantry.

The recipients were: 2|Lieutenant Raj Mohan Sharma, Subedar Satlal Pun, Rifleman Jut Bahadur Thapa, Mr. Pfudilhu Angami, Grenadier Sardari Lal, Lance-Havildar Bombahadur Thapa, Naik Lalbahadur Thapa and Mr. Sono Loveraj. The first four were given *Ashoka Chakra* Class II and the others *Ashoka Chakra* Class III.

(*The Statesman*, New Delhi)

[Prev. ref. 3145:INI:R]

JAPAN

A. **World Bank Loan For Road:** The World Bank made a loan equivalent to $40 million in Japan on March 16 for the construction of a 45-mile express way from Amagasaki to Ritto, linking the Osaka metropolitan area with that of Kyoto.

This is one of the most heavily populated and industrialized areas of Japan.

The loan was made to Nihon Doro Kodan (Japan Highway Public Corporation).

The total cost of the project is estimated at $131 million. The Bank's loan will cover about 31 per cent of the total costs and the balance will be met in part from Doro Kodan's revenues, but mainly from grants from the Japanese Government, loans from funds under Government control and borrowings on the Japanese market to be guaranteed by the Government. It is expected to take 25 years at most for the express-way to re-pay its cost from tolls.

(*The Times*, London)

[Prev. ref. 2186:JAP:B]

B. **Royal Wedding:** The youngest daughter of Emperor Hirohito, Princess Suga (21), was married in Tokyo on March 10 to Mr. Hisanaga Shimazu (25), an employee of the Japanese Export-Import Bank.

The ceremony was conducted according to traditional Shinto rites.

Princess Suga now ceased to be a member of the Imperial family and, like her three elder sisters, became a commoner as a result.

(*The New York Times*)

C. **Baby Born Without Brain:** The Japanese News Agency *Kyodo* reported on March 14 from Nagasaki (southern Japan) that a baby boy, without a brain, had been born to a 30-year-old clerk and his 28-year-old wife, who were exposed to radiation at the time of the burst of the atomic bomb over Nagasaki towards the end of World War II in 1945.

The Agency quoted doctors as saying that the baby—which had survived 24 hours—could be deformed as a result of atomic radiation on the parents.

Doctors said that they had seen 36 brainless babies in the past, but all of them had been still-born or miscarried.

(*The Statesman*, Calcutta)

JORDAN

A. **King Hussein On Ex-Palestinians And Palestine "Entity":** Addressing Jordanian Army units and National Guardsmen along Jordan's west bank outposts in Nablus on March 17, King Hussein announced that he would agree to a plebiscite conducted among ex-Palestinians living in Jordan by a neutral body to decide the future of Jordan's west bank.

He said: "I challenge all those who question our presence on Jordan's west bank and all those who allege that our presence is merely for territorial gains to set up a neutral body which would contact ex-Palestinians living in Jordan and supervise a plebiscite among them to determine their future. I am fully prepared to accept the plebiscite results whatever they may be."

Referring to the "entities" which the UAR President, Col. G. A. Nasser, and the Iraqi Prime Minister, General Abdel Karim Kassem, had been advocating, he said: "Their arguments and allegations are in fact desperate attempts on their part to evade responsibility towards Palestine.

"If I was sure that my brothers here really want a Palestinian 'entity', I would never have hesitated for a moment to help them achieve what they want.

"If I feel that my Throne and my remaining on it were inconsistent with the desire of my people, I will not hesitate to give them up and remain as a simple soldier to serve my country."

[Prev. ref. 3195:JOR:D]

ASIA OUTSIDE ASIA

SUMMARY: Mr. N. S. Khruschev Reports On His Asian Tour; West Germany's Efforts For Military Bases In Spain; Arab League Council Meeting; Morocco Earthquake.

A. **Mr. N. Khruschev Reports To Nation On His Asian Tour:** Mr. N. S. Khruschev returned to Moscow on March 5 after his visits to India, Burma, Indonesia and Afghanistan from February 11 to March 4.

Immediately on arrival home, he reported to the people of USSR on his tour.

Below is a summary of Mr. Khruschev's speech:

"We, the envoys of the Soviet Union, were welcomed in Indonesia as close friends, as brothers, and this is said without any exaggeration. This warmth and cordiality came from everyone whom we met. And this is particularly gratifying.

"From the moment we set foot on Indonesian soil and until the last day of our stay there, hundreds of thousands and even millions of people expressed their sincere feelings by greeting us as the representatives of the great Soviet people.

"We spent 12 days in Indonesia. And we shall keep for ever the recollections of the warm, friendly meetings in the capital of Indonesia, Djakarta, in Bandung, in Jogjakarta, in Sorabaya, on Bali Island, in Bogor. These meetings resolved into a stirring manifestation of the inviolable friendship between the peoples of the Soviet Union and the Republic of Indonesia.

"The landscape of Indonesia indeed resembles a fairyland. They have very favourable conditions for a flourishing economy. When people created the tales of paradise in the Bible, they evidently had in mind the fertile valley between the Tigris and the Euphrates, but the authors of the biblical legend certainly did not know Indonesia; otherwise, they would have shifted their Garden of Eden to the Indonesian islands, whose beauty and wealth stun the imagination of anyone.

"I want to share with you the impression which moved us to the very depths of our hearts. And what moved us most were the people of Indonesia. For a long time, the colonialists and their servitors spread foul fabrications that the people of Indonesia and other colonial countries are backward peoples, something in between the primitive and the highly developed, cultured modern man.

"But, these colonialist fables have nothing in common with reality. We saw that Indonesia is a country with a great ancient culture. We saw ancient monuments created by the ancestors of the Indonesian people. We saw a Buddhist temple in Borobudra, built in as early as the 8th century.

"Indonesia is now an independent country. Her people are gathering strength, her economy and culture are developing. It was a pleasure for us to see all this, and we rejoiced in the successes of the Indonesians.

"As you already know, the Government of the Soviet Union has agreed to co-operate with the Government of Indonesia in the building of industrial and other projects, including enterprises of the iron and non-ferrous metal industry, chemical works and textile mills, in the construction of irrigation projects, in the development of cotton

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

growing and other branches of the economy, in the use of atomic energy for peaceful purposes. All this will help in advancing the economy, culture and well-being of the Indonesian people.

"The Soviet Union's assistance has been highly assessed by the Indonesian people and their Government. The Head of the State, President Sukarno, noted this both in private conservations and in his official statements.

Visit To India:

"You know, of course, that we were invited to visit friendly India *en route* to Indonesia. This invitation came from Mr. Nehru, the esteemed Prime Minister of India. Important and interesting meetings and conversations were held during our visit to India.

"I visited India for the second time and I knew that the great Indian people are hospitable and cordial. Our new meeting can be called a meeting of old friends.

"Permit me to express sincere gratitude to Mr. Nehru, the Prime Minister of India, for the warm welcome. We had long conversations with him and I gained the conviction that they promoted better mutual understanding and still further strengthened the friendly relations between our countries.

"We also held discussions with Dr. Rajendra Prasad, the President of India, Dr. S. Radhakrishnan, the Vice-President, and other prominent statesmen of the Republic of India.

"Though we spent less time in India than in Indonesia, each day of our stay in that wonderful country was fruitful and will long remain in our memory.

"I should like to give a brief account of an interesting trip to Suratgarh where we inspected an agricultural State farm. It made an exceptionally good impression on me. During the visit to this farm, I felt at home as if I was visiting our large agricultural enterprises at home.

"This farm is directed by a former Army General, Mahadeo Singh, whom it is very fine to see on the soil, engaged in peaceful labour. Let it be a hint to our Generals and officers in connexion with the reduction of the armed forces. It is pleasing to see how a high-ranking military man retired from military service and went to manage this farm. He manages it now with interest, operates with a knowledge of affairs, greatly promoting the development of agricultural production in India. When he showed us his farm and machinery in action, he made a number of comments on Soviet agricultural machinery. I do not conceal it was pleasant to hear that our Soviet machines function faultlessly in India's hot climate.

"As pointed out by the Indian Press, the example of Suratgarh gives reason to the Indian Government to set up new similar large farms in the different States of India. Later, during our second visit to Calcutta, Mr. Nehru, in a conversation with us, most favourably commented on the work of the farm and told us that the Indian Government intends to set up several more farms of this type.

"Another day of meetings in India is particularly memorable. I have already spoken of the tremendous impression produced on us by the metallurgical combine in Bhilai. As we were told, Bhilai had formerly been a small village with a few scores of dilapidated huts. Now, a new town has sprung up nearby, in which the powerful breath of the new India in construction is felt with particular force. It is there that burn the lights that will soon spread far and wide through the land of India; it is precisely in Bhilai that a large industrial centre of India is being created. It is there that the ore is smelted, metal is produced and the new people grow and are steeled.

"The Soviet people know full well from the experience of their history that no State can successfully develop its economy without heavy industry, without big plants, factories and combines. Heavy industry is the source of strength and power of a country, the basis of its independence.

"The Press has already reported that several new undertakings will be built in India with the most active help of Soviet engineers, technicians and workers. In addition to the earlier allotted credits, the Soviet Union has recently granted India a new credit of 1½ billion roubles. It is said in the joint Soviet-Indian *communique* that economic and technical co-operation between India and the Soviet Union covers a considerable number of construction sites—the Bhilai Iron and Steel Plant, which has already been commissioned and whose initial output capacity is now being more than doubled; the engineering plant at Ranchi, the electric power station at Neiveli; the coal workings in Korba; the oil refinery at Barauni with a capacity of 2,000,000 tons; and the prospecting for oil, etc.

"I should like to express gratitude to the Governor of the State of West Bengal, Miss Padmaja Naidu, the Chief Minister, Dr. B. C. Roy, the Mayor, Mr. Bijoy Kumar Bannerjee, and all the people of Calcutta, who ardently greeted us, representatives of the Soviet people, at a huge meeting there.

"I wish to thank Mr. Nehru for the fact that he found it possible to come to Calcutta again when we arrived there on our way back from Indonesia, and to see us off personally when we emplaned for Afghanistan. The talks which I had with Mr. Nehru in Calcutta have again confirmed that the foreign policy of the Soviet Government, our struggle for peace and international friendship is meeting with due understanding in India, just as we respect the peace-loving policy of the Republic of India.

Visit To Burma:

"After a four-day visit to India, we proceeded to Burma at the invitation of the Government of the Union of Burma.

"The two days we spent in this ancient, inimitable and interesting country were, in our opinion, very useful for the further development of Soviet-Burmese relations. Both the officials and the common people welcomed us in a very friendly and warm manner. And, here too, we felt how high the prestige of our socialist homeland is, how attentively her voice is heeded even in countries situated so far from us.

"It was a pleasure to resume contacts with our old Burmese acquaintances, in particular the ex-Prime Minister U Nu, a champion of the policy of peace and peaceful co-existence. His party has received most of the votes in the recent General Elections and is to form a new Government this April.

"In Rangoon we saw the construction of buildings for a Technological Institute and a hotel which will be turned over to the Burmese people as a gift from the peoples of the Soviet Union. It was a great pleasure for me to see at first-hand how these projects are getting on. They are part of the sizable contribution which the Soviet Union is making to the economic and cultural development of Burma.

"In both places, we were warmly greeted by the workers, Burmese and Soviet specialists and teachers of the Technological Institute which is to become one of the major educational centres for training national cadres for the country's industrialization.

"We left Rangoon with a feeling of sincere satisfaction as we had seen anew that the relations between the Soviet Union and Burma are on the right road. We are in agreement on all the principal questions of the struggle for peace against colonialism. Our aims coincide. This was confirmed in the joint Soviet-Burmese *communique* issued on the occasion of our visit.

Visit To Afghanistan:

"We were very well received in Afghanistan. The welcome in Kabul was as warm and cordial as in the hot countries—in India, Burma and Indonesia.

"I travelled in the same car with King Zahir Shah and it was touching to see how the people of the villages along our route from the airport to the Afghan capital had turned out to welcome us with Afghan and Soviet flags, how they sang and danced for the envoys of the Soviet people, how they joyfully greeted us in a friendly way. When we passed through Kabul streets, it seemed that the entire population had turned out to welcome us.

"What moved me most were the people, their shining eyes, their smiles. I will not conceal from you that I was especially touched to see many unveiled and smiling women among the tens of thousands of Kabul residents lining the streets, to hear their greetings. They stood alongside men, without their *yashmaks* which disfigured them so, turning them into face-less shadows. I remembered that I had not seen a single open face of a woman in Kabul but four years ago.

"Along the way to Kabul and in the city itself many Afghans greeted us not only in their language but also in Russian: *Spasibo, Mir* and *Drushba*.

"In talking with Afghan workers and specialists who work in close, friendly co-operation with Soviet specialists and learn from them, we heard many kind words about the Soviet Union. In Afghanistan, in any of the countries we have just visited, we are regarded as loyal friends.

"Yes, the Soviet Union has been and always will be the loyal friend of the people of any country which is striving for freedom and independence. This is the source of our strength, the source of the tremendous international prestige of the Soviet Union.

"It is pleasant to note that during this visit to Afghanistan, as well as during our previous meetings with the King and the Prime Minister of Afghanistan, no differences were recorded in our evaluation of the international situation. The peaceful foreign policy of the Soviet Union, we became convinced once more, meets with understanding by the Royal Government of Afghanistan in the same way as we, on our part, understand and respect Afghanistan's traditional policy of neutrality and non-alignment. Afghanistan can always rely on the friendly support of the Soviet Union in its struggle for strengthening and consolidating its national forces, for promoting economy and culture.

"The unsettled problem of Pakhtoonistan is a sore issue for Afghanistan. It is generally known that historically Pakhtoonistan has always been part of Afghanistan. After establishing its domination over India, Britain, expanding its colonial empire, began penetrating into Afghan lands as well, imposing on Afghanistan a number of enslaving treaties and agreements in an effort to subjugate the Pushtu people and to seize the whole of Afghanistan.

"But the Afghan people offered stubborn resistance to the colonialists, which eventually resolved into a general struggle for independence. The colonialists' army was routed and driven away and Afghanistan gained its national independence.

"The Soviet Union was the first to recognize the Afghan State and to establish diplomatic relations with it.

"After the collapse of the colonial system in India, the colonialists, loyal to their policy of 'divide and rule', split the country into two States—India and Pakistan.

"Afghanistan has never recognized nor recognizes the fairness of this situation. It demands that Pakhtoonistan should be given the right of self-determination in conditions of freedom and non-interference. However, the national rights of the Pakhtoons and the lawful demands of Afghanistan have not been reckoned with.

"For many years now, this question remains unresolved which causes tension in the relations between Pakistan and Afghanistan.

"What is our position in this question? Our position stems from the Leninist national policy, which says that every nation has the right to self-determination, that national questions must be solved in conformity with the will of the peoples.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

"We believe that Afghanistan's demand to grant the Pushtu people the right to express their will through a referendum, a plebiscite, in conditions of freedom, so as to decide whether they wish to remain within the boundaries of Pakistan, to establish a new independent State, or to re-unite with Afghanistan, is correct. This demand is absolutely legitimate.

"Many Soviet engineers, technicians and workers now work everywhere—in India, Burma, Indonesia and Afghanistan—helping the peoples of these countries, passing on their experience to them, training them in new professions. Like all the Soviet people, they are well aware that we extend friendly aid to the economically backward countries because the international sense of fraternal mutual assistance is highly developed in the Soviet people. We extend aid to all peoples who have rid themselves of colonialist slavery and who want our assistance. We help them selflessly and we sincerely want them to overcome their economic backwardness. When they grow stronger, these countries will uphold even more energetically the great cause of peace."

Pakistan Reaction:

The Pakistan President, Field-Marshal Mohammed Ayub Khan, criticised in Rawalpindi on March 8 the remarks of Mr. N. Khruschev on Afghanistan's claim on the Pushto-speaking areas of Pakistan.

He said that the Afghan claim was without any legal foundation.

He added that the Russians had a quality to support their friends even in problems which were not justified.

The Pakistan Foreign Minister, Mr. Manzoor Qadir, described as "regrettable" on March 6 the Soviet Union's pledge to support Afghanistan on its "phoney" claim on Pakistan territory.

He told newsmen in Peshawar that it was unfortunate on the part of Russia to interfere in the internal affairs of Pakistan. "This kind of interference in our affairs is unwarranted."

Asked if the Pakistan Government proposed to take up the matter with the Soviet Union, he said that appropriate action would be taken after he had studied in detail the text of the Soviet-Afghan joint *communique*.

In a statement in Rawalpindi on March 7, Mr. Qadir said that Pakhtoons in Pakistan had already exercised their right of self-determination through a plebiscite held in 1947 and all that remained now was to give an opportunity to the Pakhtoons in Afghanistan to decide whether they wanted to continue there or go over to Pakistan.

Mr. Qadir added: "It is perhaps reasonable to assume that the Pakhtoons, whether they live in Pakistan or Afghanistan, belonging generally to the same stock, want to be together under the same flag. That flag can be either of Pakistan or of Afghanistan.

"In order to ascertain the wishes of the Pakhtoons, whether they happen to be in Pakistan or Afghanistan, it is only right that we should ask them. In all probability, the verdict of the Pakhtoons in Afghanistan will be in favour of Pakistan.

"In the unlikely event of their choosing freely not to join Pakistan, any further steps to be taken can be considered."

He, however, made his offer of a plebiscite only as an alternative to Afghan "ruling circles" not abandoning their demand of Pakhtoonistan.

[The Afghan stand has been that the Pakhtoons in Pakistan never got an unfettered right of self-determination, because the choice in 1947 was confined to India and Pakistan. Afghanistan has also said that even then, almost 50 per cent of the Pakhtoons in Pakistan boycotted the plebiscite.]

B. **West German Efforts To Secure Military Supply Bases In Spain:** A despatch to *The Times,* London, from Bonn on February 23 said that there had been tentative and informal conversations between the Federal Republic of (West) Germany and Spain on the possibility of establishing German military supply bases on Spanish soil.

The West German Defence Ministry had also inquired about facilities for Air Force training, but there had been no request for missile ranges.

The despatch went on to say:

"The Defence Ministry, with more than half of its military equipment imported, has always paid special attention to its supply lines. Suitably secure areas for storing arms and equipment in Germany are few. In the event of a war, much of the country might be a battlefield, and the demands of the allied armies stationed here (West Germany) reduce the areas available west of the Rhine.

"Even this narrow strip is not far back enough for base supplies, and arrangements have been made with the Low Countries for the establishment of depots in their territory. The tentative approach to Spain was presumably made because the Defence Ministry would like to establish depots near ports with unconfined approaches.

"Land communications between Spain and Germany are not particularly good, however, and the value of such bases in time of war would be questionable, unless the West German Defence Minister, Mr. Franz Joseph Strauss, is contemplating a German redoubt in some sierra. Certainly, the political wisdom of seeking facilities there can be questioned, but the Federal Government has never been inhibited by the nature of the *regime* in Madrid.

"It would be willing to support any proposal that Spain be admitted to NATO, and the inquiries about establishing supply depots in Spain, if not the thin edge of the wedge, can be regarded as typical of the German attitude. It is understood that there have been negotiations for the supply of Spanish ammunition for the *Bundeswehr*.

"The *Luftwaffe* is also facing the problem of training hundreds of pilots for the new fighters that have been ordered. Instructors will be trained in the United States, but there appears to be no adequate plan to train others in North America.

"After basic training, the problem will remain of finding enough air-space, which here (West Germany) is shared with RAF and American and other allied air forces, for advance training and practice flights. The East German frontier is too close for supersonic aircraft to train in the numbers that will be available in the next few years.

"Meanwhile, the Defence Ministry is denying all knowledge of the informal conversations, though a British Foreign Office spokesman in London has said that the UK Government had been informed. The West German Press Office also denied that negotiations had taken place with Spain for training facilities and the establishment of military bases but admitted the difficulties mentioned above.

"It was stated that the West German Government, in agreement with NATO, had in part successfully concluded agreements with the neighbouring countries which were prepared to take over such logistic installations. If the West German Government decided to continue along these lines, it would be done in close co-operation with NATO because such installations could serve only the Joint defence effort of the Alliance."

Spanish Government's Statement:

The Spanish Government denied on February 24 that there were any negotiations with West Germany for the lease of bases for West German military installations in Spain.

The previous night (February 23), General Franco called his National Defence Council together to explain the Government's attitude on the question of German bases in Spain.

According to a reliable source, at this meeting at General Franco's residence, near Madrid, he made two points:

(1) West Germany was a member of NATO, and Spain was not. Spain could not, under any circumstances, come to an agreement on military questions with West Germany except with the full consent of NATO.

(2) Given Spain's Military Agreements with Portugal and with the United States, under no circumstances could any other commitments be entered into by Spain without first obtaining the agreement of both Portugal and the United States.

[The Spanish National Defence Council is composed of the Army, Navy and Air Ministers and the Chief of the General Staff.]

In London, usually reliable sources said on February 24 that the British Government felt concerned over the West German approach to Madrid to secure military facilities in Spain.

It was reported that Britain had informed Bonn in January, 1960 that for political reasons it doubted the expediency of any move to seek supply bases or other military facilities in Spain.

A British Foreign Office spokesman told journalists that the British Government had not been informed by West Germany about any mission going from Bonn to Madrid to look into the possibility of having supply depots in Spain.

Asked whether the British and Spanish Governments had discussed the problem, he replied: "No".

He said that newsmen could assume that Britain had been in touch with the United States and France through their NATO representatives in Paris on the problem.

British Statement:

In a statement in the House of Commons on February 25, the Foreign Secretary, Mr. Selwyn Lloyd, said that he had told the Federal (West) German Republic that it would be wiser for her to seek the military facilities she required in NATO countries instead of in Spain.

He said: "I heard last month of the possibility of an agreement between the Federal German Republic and Spain for Germany to have military facilities on Spanish territory.

"I made it clear that we thought it would be wiser for Germany to seek the required facilities in countries which are members of NATO. That remains the view of Her Majesty's Government."

The British Labour Party's National Executive, in a statement on February 24, said: "West German rearmament was permitted entirely on the basis of incorporating West Germany within NATO.

"Any proposal that would give Germany independent control over sections of her armed forces would be contrary to accepted principles and should be strongly opposed by the British Government and the NATO Council".

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

West German Statement:

A West German Government statement said that the Federal Republic was thinking about negotiations for establishing supply depots in some West European countries but denied that it was searching for training facilities or bases. It said it had not opened any negotiations with Spain.

The West German Defence Ministry said that after negotiating with France, Belgium, Holland and Denmark about establishing military supply bases on their territories, West Germany was considering talks with other countries.

This statement did not mention whether these other countries included Spain. A military spokesman declined to elaborate on the point.

The West German Opposition Social Democratic Party attacked the Government on February 24 for "monstrous stupidity and tactlessness" in the matter.

In a newsletter, the Party said: "The link between Dr. K. Adenauer and Gen. Franco brings back evil memories of another alliance to our Western alliance."

In a statement on February 27, the Chancellor of West Germany, Dr. Konrad Adenauer, said that his Government would conduct negotiations, as in the past, on matters of military policy only in close understanding with NATO.

He said that he would have no objection to passing on the whole question of supplies to NATO, but so long as this German problem was not accepted, the matter remained the responsibility of each nation concerned.

He added that the West German Government only dealt with these matters in agreement with NATO.

The West German Defence Minister, Mr. Franz Josef Strauss, said in Bonn on February 25: "I believe there can be no doubt as to the justification of our conception."

He reported on the issue to the Defence Committee of the West German Parliament on February 25 and said afterwards that he was "very satisfied".

The West German Defence Ministry spokesman, Col. Gerd Schmeuckle, told newsmen in Bonn the same day (February 25) that every step taken by West Germany in every foreign country had been taken with the knowledge of NATO.

He said he was at a loss to understand American and British annoyance. There had been, according to him, neither negotiations nor any agreement with Spain.

He affirmed that nothing was being done without the consent of NATO. Everything that was said in the newspapers beyond this was wrong.

Mr. F. J. Strauss's Admission:

The British and American Ambassadors in Bonn, Sir Christopher Steele and Mr. W. C. Dowling, separately met the West German Defence Minister, Mr. F. J. Strauss, in Bonn on February 24.

Mr. Strauss told the envoys that a three-man Mission had just returned from Madrid, where it had had tentative and exploratory conversations on the establishment of German military supply bases on Spanish soil.

The Spanish Government, according to the Bonn correspondent of *The Times*, London, was now considering the proposal and awaiting the decision of NATO.

The *Times* correspondent said it was learnt from German sources that Mr. F. J. Strauss was angry, because he believed that information had been deliberately leaked to the Press.

The correspondent said: "Mr. Dowling is understood to have reminded the Minister that he had been forewarned of the unfavourable reaction that was to be expected. He denied that there had been a deliberate leak and apparently intimated that this was of secondary importance.

"While Mr. Strauss was informing the Ambassadors that a German Mission had visited Madrid against the advice of the Allies and General Lauris Norstad, the Government spokesman was still denying that negotiations had taken place. It seems certain that Mr. Strauss is determined to pursue the matter in spite of opposition. In an interview published on February 24, he said that the establishment of German bases in the whole Iberian Peninsula might be considered.

"The history of the affair clearly demonstrates the German attitude. The approach was first made when the Spanish Foreign Minister visited Bonn in November, 1959. The initiative was purely German, and the Western allies and General L. Norstad were informed of it only two months afterwards.

"When it was evident that Mr. Strauss intended to send a Mission to Spain, General Norstad called on him and tried to dissuade him. The reply was non-committal. In spite of denial, Mr. Strauss has now admitted that a Mission was sent."

French View:

A spokesman of the French Foreign Office said in Paris on February 26 that France recognized the need for West Germany to have supply bases outside her own territory.

He said that arrangements had already been concluded to grant the West German Government certain facilities in France, particularly for warehousing and stock-piling.

The question of a training base in France for German pilots had yet to be settled.

US Statement:

The US State Department told the West German Government on February 26 that any plan for German supply bases in Spain should be put off until the matter could be discussed by the NATO Council.

It added that the problem of providing adequate support for the West German forces was raised at the meeting of the NATO Ministerial Council in Paris in December, 1959 only in the most tentative manner.

An earlier West German report had claimed that the US Secretary of State, Mr. Christian A. Herter, had approved the West German plan for bases in Spain.

American officials in Washington, however, said that West Germany had made a "highly tentative and preliminary" approach to Spain about the furnishing of training bases on Spanish soil.

Soviet Statement:

The Soviet Government issued the following statement on February 25:

"The reports about the establishment of military co-operation between the Governments of Dr. K. Adenauer and Gen. Franco must alert all those who are not indifferent to the future of peace. The ruling circles of the Federal Republic of Germany are taking yet another step leading to further complications in Europe and raising additional difficulties in the way of solving pressing international problems.

"The Soviet Government has constantly warned about the sinister danger inherent in the militarization of the West Germany which is being conducted in violation of the terms of unconditional surrender of Germany and the quadri-partite Allied Agreements, the purpose of which is to ensure a peaceful democratic development of the German nation and preclude German militarism from starting new bloody wars.

"Today, there is more than enough evidence that the only purpose behind the professions of its love for peace, which the Adenauer Government made at the time when the Paris Agreements were being drafted and the Federal Republic of Germany was admitted to NATO, was to disguise the true plans of the German militarists and re-assure public opinion in the Western countries. The Western Powers' consent to the militarization of the Federal Republic of Germany, its integration in NATO and the appointment of ex-Nazi Generals to commanding posts in the North Atlantic bloc are regarded by the top leaders of West Germany as a sign of the past crimes of German militarism having been forgotten and as a kind of bonus for the present war-like policy of the West German Government and for its efforts to keep the 'cold war' going.

"For some time, it is already apparent that even the framework of NATO became too narrow for the West German militarists who have their own far-reaching plans, a fresh evidence of which is the military co-operation established between West Germany and Spain.

"Negotiations on military co-operation between the two most reactionary States in Europe indicate that the West German Government is forced to seek support for its policy, which is directed against the interests of peace, from a *regime* which is the offspring of Hitlerite Nazism and Italian Fascism. The back-stage deal between West Germany and Spain involuntarily brings back to memory the notorious 'Berlin-Madrid' axis, the military alliance between Hitler and Franco. The world knows with whom the Spain of Franco sided in World War II. Fresh in everybody's memory are the heinous crimes of Hitlerite troops in which the so-called 'Blue Division', sent from across the Pyrenees to the battlefields of the Soviet Union, also took a hand.

"The military collusion between the Federal Republic of Germany and Spain is regarded in the Soviet Union as an attempt of the most belligerently-minded and reactionary West European elements to obstruct the relaxation of international tensions, the achievement of East-West agreement and the laying of sound foundations for international peace and security. This collusion underlines once more the urgent need for all those really interested in strengthening peace to take joint action against the manoeuvrings of the West German militarists and steps to ensure early agreement on general total disarmament and a peaceful settlement with Germany."

(*The Times*, London, *The New York Times* and *Tass*)

[Prev. ref. 3134:AOA:B, 3221:AOA:C]

C. **Soviet Criticism Of NATO Proposals For Mobile Atomic Units:** In an official statement released in Moscow on March 11, the Soviet Government said that General Lauris Norstad's proposals for the setting up of mobile atomic units in the NATO area would jeopardize the chances of achieving disarmament and a real relaxation of world tensions.

It said: "On March 2, 1960, the Supreme Commander of NATO forces in Europe, General Lauris Norstad, made a statement to the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

effect that multi-national mobile striking forces of NATO equipped with nuclear weapons, will be formed in Western Europe during the year. At first, Gen. Norstad stated that these forces will comprise American, British and French military units, but they will later include military units of other NATO countries.

"In connexion with this statement by Gen. Norstad, *Tass* has been authorized to make the following statement:

"The development of international relations has now entered an exceedingly important stage. There has appeared a real possibility of settling the problem of general and total disarmament and, by this very fact, of putting an end once and for all to the arms race and the threat of war which is fraught with unforeseen calamities for mankind.

"Prejudices and misconceptions of some States about others are beginning to dissipate due to the efforts of the peace-loving nations and peoples. Most of the Government leaders now approve of the principle of peaceful co-existence.

"The 10-nation Disarmament Committee is meeting on March 15. It is faced with the task of turning as soon as possible the great idea of total and universal disarmament into a concrete international Agreement on measures towards its implementation.

"One cannot ignore in such conditions the great importance of the steps taken by States towards a further improvement in the international climate and thus creating the most favourable conditions for an early solution of the vital and most important problem confronting mankind—the problem of general and complete disarmament.

"It was precisely with this object in view that the Soviet Union, as is universally known, recently resolved to effect another substantial reduction of the Soviet armed forces by 1,200,000 men or by one-third.... It could only be welcomed if the Western Powers, on their part, took similar steps.

"But we are obliged to note that measures are now being drafted and implemented within NATO which run counter to this. How else can we regard the new plan announced by General Norstad to establish joint forces in West Europe equipped with nuclear weapons?

"It is absolutely obvious that the point in question is further to concentrate mass annihilation weapons in an area where big NATO armed forces are already massed.

"Now, the leading NATO quarters are obviously pressing for a still greater aggravation of tensions.... This NATO policy, far from being conducive to the forthcoming disarmament talks, is aimed at complicating the situation on the eve of these negotiations.

"There is not a shadow of doubt that the new plan to set up multinational mobile nuclear NATO forces in Western Europe is largely designed to serve as a new disguise of the nuclear arming of the West German militarists and revanchists.

"General Norstad did not venture openly to name West Germany among these six, eight or more NATO member-States whose military units, as he said, would be excluded in the joint nuclear forces of NATO. But could there be even the slightest doubt that it is primarily the Federal Republic of Germany that is in question?

"It is expected in the Soviet Union that the Western Powers and, above all, those of them that will take part in the forthcoming disarmament talks within the 10-nation Committee and at the 'summit' meeting, will weigh with due responsibility the consequences of any further steps to intensify the arms race and will refrain from them in the interests of facilitating the reaching of agreement on total and universal disarmament."

(*The Hindu*, Madras)

[Prev. ref. 3134:AOA:B]

D. Arab League Council Meeting: The 32nd session of the Arab League Council opened in Casablanca (Morocco) on September 1.

Delegates from Jordan, the Lebanon, Libya, Yemen, Saudi Arabia, UAR and Morocco attended.

Tunisia did not take part in the day's meeting. It was expected that that country would attend later sessions. (There is an unresolved political quarrel between Tunisia and the United Arab Republic—see page 2341).

Another absentee was Iraq. It was believed that Iraq would not attend.

Observers from Guinea, Ghana and the Algerian "Provisional" Government were also present.

Representatives from the Algerian Liberation Movement took seats at the Council table after an extended meeting with the Secretary-General of the Arab League, Mr. Abdul Khaleq Hassouna.

Crown Prince Moulay Hassan of Morocco, substituting for his ailing father, King Mohammed V, opened the session with a tribute to "Algerian martyrs" whose efforts, he said, "are not in vain, because they will give Algeria its victory and its liberation."

His speech proclaimed Morocco's allegiance to the Arab League and called for a meeting of the Chiefs of Arab States to study problems of mutual interest.

A Guinea representative then read a message in French from the Prime Minister of Guinea, Mr. Sekou Toure, criticizing French colonialism and calling for the solidarity of the African peoples.

Welcoming the delegates, the Secretary-General of the Arab League, Mr. Abdul Khalek Hassouna, said:

"I repeat our determination to assert Palestine's sacred rights and to continue our struggle against Zionist expansionism."

Council sources revealed on September 6 that the Algerian delegates to the Arab League Council's Political Committee meeting were in favour of a negotiated solution to the Algerian question.

[It appeared that the Algerian "Provisional Government" was not opposed to autonomy for Algeria within the framework of the French Community, but insisted that it must be negotiated. Any autonomy conceded by France without reference to the "Provisional Government", which considers itself to be the only organization with which France might negotiate on Algeria's future, would be incompatible with their honour.]

It was stated after the Political Committee had discussed the Algerian question on September 6 that the delegates did not attach much importance to the announcements made after the meeting in Paris between President Charles de Gaulle and President Eisenhower.

These sources said that the delegates felt that the reference to North Africa in the final de Gaulle-Eisenhower *communique* after the Paris meeting and reports that President de Gaulle would make an announcement about Algeria were a continuation of France's past tactics and that the Arab States must continue their own efforts to achieve an Algerian solution.

The Political Committee decided that the Arab delegates at the forthcoming UN General Assembly session would vote for the United Arab Republic to succeed Tunisia in 1960 as a non-permanent member of the Security Council.

It was further decided that the Arab delegates would be free to vote as they liked in the case of non-Arab candidates to other United Nations posts.

The Political Committee decided on September 6 to ask United Nations to send an International Investigation Mission to Algeria to enquire into French repression in re-grouping camps.

It also decided to ask the members of NATO to stop military and economic aid to France and to prevent France from using NATO equipment in Algeria.

It said that the member-States of the Arab League should make diplomatic approaches to the Afro-Asian group of nations in UN to suggest recognition of the "Provisional Algerian Government" and to get support from the other members of United Nations to the Algerian cause.

It added that the member-States of the Arab League should help to raise a total of £ (Egyptian) 12,000,000 for the "Provisional Algerian Government". This amount was the subsidy for the "Provisional Algerian Government" fixed by the Arab League.

On September 7, the Political Committee decided to support Morocco's plan for a protest in United Nations against the proposed French nuclear tests in the Sahara.

It also decided to ask United Nations to enquire into the question of concentration camps in Algeria.

On September 8, the Committee issued a declaration favouring consideration by the United Nations General Assembly of the situation created by the French plan to hold nuclear tests in the Sahara.

It also decided to hold a conference in January, 1960 of the Arab League Council at Foreign Ministers' level to consider the Palestine question.

The Council passed a resolution calling for continued co-operation between the Arab countries and African States in all fields.

It decided to consider March 22 as a National Day throughout the Arab States. This was the day on which the Arab League was inaugurated.

(*The Egyptian Gazette*, Cairo)

[Prev. ref. 2340:UAR:A, 2545:UAR:A]

E. Morocco Earthquake: Two massive earthquakes, fire and a tidal wave destroyed the Moroccan port and holiday resort of Agadir on March 1. Thousands of people were killed and thousands more were injured.

The King of Morocco ordered a special command post to be set up outside Agadir, which had a population of between 30,000 and 40,000.

The Casablanca Observatory said that the two tremors took place at 5.11 a.m. I.S.T. and 6.30 a.m. I.S.T. The first tremor was of an exceptional magnitude. The earthquake was so strong that it damaged delicate measuring instruments in the Observatory.

At the time of the 'quake, there was a large number of foreign tourists in the city, including Americans, Swedes, Britons, Germans and Italians.

According to one estimate, about 70 per cent of the buildings in the modern "new town" were destroyed and nearly 90 per cent were wrecked in the thickly-populated Talborit quarter to the north-west.

There was less destruction and damage in the old city of Casbah.

A vast relief air-lift was quickly organized by Moroccan officials with French and American military organizations. Private organizations lent a hand in the rescue and relief operations.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Ten thousand men were toiling on March 3 in an all-out effort against disease in the shattered city with the slim hope of finding some victims still alive in the ruins.

Up to March 3, 107 trapped people were rescued.

Most of the survivors were evacuated by March 3 to permit sanitary workers to disinfect the festering city.

Casualties:

Crown Prince Moulay Hassan said at a news conference in Rabat on March 4 that 10,000 to 12,000 persons were killed in the earthquake.

He added that more than 4,000 bodies had already been recovered. He believed that another 6,000 or 8,000 more dead lay under the ruins of the city and about 2,000 people had been injured.

There were about 25,000 who came out alive from the stricken city.

On the night of March 3, the Moroccan authorities ordered a halt of all demolition work in the city and withdrew all demolition squads. The reason was the risk of disease spreading by the rotting corpses of victims lying beneath the rubble.

It was decided on March 3 to evacuate all people from the city and throw a sanitary cordon round the area. Another decision was to permit only small teams to enter the forbidden zone on disinfecting missions.

Two new under-water whirlpools were observed on March 6 two miles off Agadir. Prince Hassan flew over the seething water.

Connexion With Atomic Test In Sahara:

The noted British scientist, Prof. J. D. Bernal, said on March 4 that he would not altogether rule out the possibility that the Agadir earthquake might have had at least some connexion with the French atomic explosion in the Sahara.

He said that energy required for such an upheaval as the one that struck Agadir would approximate to the strength of 1,000 Hydrogen bombs and no one had yet suggested any means of setting off an earthquake which represented the release of strains long accumulated in the Earth's crust. "Consequently, it is not possible to associate this particular earthquake with the Sahara explosion of the atom bomb. But, neither is it possible to say that the bomb has nothing to do with its occurring at this date. The best way of being sure that bomb tests do not set off earthquakes is not to have bomb tests."

(*The Egyptian Gazette*, Cairo and *The Times*, London)

F. USA Completes High Explosive Tests In Salt Mines: The United States Atomic Energy Commission announced the conclusion on March 4 of a series of non-nuclear high explosive underground tests, designed to get information on the detection of small sub-surface explosions.

The series, which began last in December, 1959, included 17 explosions, ranging from 20 lbs. deep in a salt mine in the State of Louisiana.

Scientists measured the seismic (underground sound wave) effects of the blasts in order to determine the ability of present instruments to detect very small nuclear explosions. The results were being analysed and a report would be issued later.

Complementary data would be sought in a series of three non-nuclear explosions in March, 1960 deep in a volcanic rock formation in the State of Nevada.

(*US Embassy*, New Delhi)

G. US Nuclear Submarine Completes Arctic Exploration: It was announced in Pearl Harbour on March 5 that the US Navy's nuclear submarine *USS Sargo* had returned to Pearl Harbour after cruising 6,000 miles under the Arctic ice-cap and surfacing at the North Pole.

During its Arctic cruise, which began on January 18, 1960, the *Sargo* spent 31 days under the ice and surfaced 20 times. Several times it punched its way to the surface through as much as three feet of ice.

The purpose of the Arctic cruise was to gain geological and oceanographic information about the Arctic basin. During the trip, the scientists on the *Sargo* measured ice thicknesses, observed water temperatures, salinity, gravity and other physical data.

The *Sargo* surfaced at the North Pole on February 9, 1960 and the flag of Hawaii, America's newest State, was placed at the top of the world—North Pole.

This marked the second time a US submarine surfaced exactly at the North Pole.

The first was the *USS Skate*—on March 17, 1959.

The first submarine to make the trans-Polar trip was the *USS Nautilus*, which crossed under the North Pole, and emerged in the Atlantic Ocean after a submerged voyage of 1,800 miles in August, 1958.

(*US Embassy*, New Delhi)

[Prev. ref. 2234:AOA:C]

H. US Spy Rocket Fails To Go Into Orbit: On February 26, America failed in an attempt to launch her first "burglar alarm" satellite—the *Midas*—designed to extend the period of early warning against missile attack by 30 minutes. The attempt was made at Cape Canaveral in Florida.

The *Midas*—its stands for missile defence alarm system—apparently failed to go into orbit because the separation of the two-stage *Atlas-Agenda* rocket did not take place.

More than three hours after a successful launching, the US Air Force announced that ground tracking equipment had lost the space vehicle and it was presumed to have burned up on re-entering the Earth's atmosphere about 2,500 miles from the launching site.

Officials said that the *Midas* was designed to orbit at a height of between 100 and 200 miles, but not over Soviet territory.

It measured 88 feet overall, and it had been hoped that the entire second stage would go into orbit.

The weight of this stage was kept secret, but informed sources estimated it at about 4,500 lbs., three-quarters of which was instruments.

This would have made it the world's second heaviest satellite. The largest ever to go into the orbit was the 8,750 lbs "talking *Atlas*" which carried President Eisenhower's Christmas message round the world in December, 1958.

Russia's Sputnik III is third, weighing 2,925 lbs, which is still orbiting.

[Prev. ref. 3185:AOA:H]

I. New British Reactor For Neutron Physics And Radio-Chemical Studies Begins Operation: The British Atomic Energy Authority announced on March 3 that a new research reactor named *Herald* which would be used for neutron physics and radio-chemical studies had begun operations at the Authority's Atomic Weapons Research Establishment at Aldermaston, Berkshire.

The announcement said that the *Herald* was a light, water-moderated and water-cooled tank-type thermal reactor designed to operate at five megawatts continuously. The core of the reactor is in the form of thin plates of enriched uranium-aluminium alloy, suitably spaced in water.

The reactor was built by the AEI-John Thompson Nuclear Energy Company and is an adaptation of that firm's *Merlin* reactor.

(*UK High Commission*, New Delhi)

[Prev. ref. 3106:AOA:I]

J. New Atomic Weight Of Silver: A Washington message on March 4 said that a new value of the atomic weight of silver—a key element in determining atomic weights of other elements—had been obtained by the National Bureau of Standards in USA with the co-operation of the US Atomic Energy Commission.

The new value results directly from a highly accurate determination of the absolute isotopic abundance ratio of silver using the techniques of mass spectrometry.

This determination was carried out by Mr. W. R. Shields and Dr. V. H. Dibeler, of the Bureau's Mass Spectrometry Laboratory, and Dr. D. H. Craig, of the Electro-Chemistry Laboratory.

The new atomic weight is 107.8731 plus or minus 0.0018 on the chemical scale, and 107.9028 plus or minus 0.0011 on the physical scale. The indicated uncertainties are overall limits of error, based on 95 per cent confidence limits for the mean and allowances for the effects of known sources of possible systematic error.

The work on the atomic weight of silver was part of a broad programme, the purpose of which is to obtain more accurate values of fundamental constants in order to meet the continuing demands of science and industry for more precise measurements. Besides its use in establishing the atomic weights of other elements, the atomic weight of silver plays an important part in the assignment of values to other fundamental constants such as the Avogadro's Number, the Faraday and the Gas Constant. Re-determination of the Faraday was the principal reason that this research on silver was initiated.

Natural silver consists of two isotopes of approximately equal abundance: Ag 107 and Ag 109. Although the mass of each isotope is known in relative atomic units, until recently the isotopic abundance ratio has not been measured accurately—that is, by using synthetic mixtures of silver isotopes as calibration samples.

A scientist of the National Bureau of Standards said that while the discovery was of prime importance to theoretical science and could lead to certain changes in the atomic weights listed in text-books it would have little or no effect on the practical application of physics or chemistry in the foreseeable future.

(*The Times*, London)

K. Non-Self-governing Territories Unable To Influence World Market Prices—UN Study: A Paper prepared by the UN Secretariat for the Committee on Information from Non-Self-governing Territories and released at UN Headquarters on February 24 showed that these territories were unable to influence world market prices for their primary products.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The study covered the terms of trade of a number of non-self-governing territories—Uganda, Kenya, Belgian Congo, Nigeria, Trinidad and Fiji—during the greater part of the previous decade.

In all the territories under consideration, the terms of trade had been subject to sharp fluctuations of considerable magnitude. For example, in Uganda and Belgian Congo, the proportion of exports of domestic products amounted to about 35 to 40 per cent.

A decline of similar magnitude in the domestic product occurred in Belgian Congo as a result of the deterioration of its terms of trade from 161.6 to 114.5 during the years 1956 to 1958.

It added: "None of the non-self-governing territories, and not even all of them combined, possess for any major commodity a share of world production sufficiently high to enable it to exercise some control on the market and to influence the level of world prices."

Insofar as imports were concerned, the non-self-governing territories, mainly because of the limited purchasing power of their indigenous population, absorbed only a very small part of the world exports of industrial products. Their bargaining power was, therefore, far too limited to enable them to influence in their favour the prices of their imports.

Stabilization through international commodity agreements of prices of primary products exported by non-self-governing territories would have undoubtedly provided substantial economic relief from the difficulties arising from fluctuations in their terms of trade. However, stabilization of this type, recommended in a number of resolutions of the UN General Assembly and of the Economic and Social Council had not yet been generally achieved.

(*The New York Times* and *The Hindu*, Madras)

[Prev. ref. 3045:AOA:O]

L. **Mr. C. V. Narasimhan's New Post In UN:** It was announced in New York on March 11 that Mr. C. V. Narasimhan, UN Under-Secretary for Special Political Affairs, had been named as Associate Managing Director of the United Nations Special Fund.

He succeeded Prof. Arthur Lewis, who was appointed Principal of the University College of the West Indies at St. Andrews, Jamaica.

In the UN Special Fund, Mr. Narasimhan would be the right-hand man of the Managing Director, Mr. Paul Hoffman.

He would retain his rank and status as UN Under-Secretary, and his secondment to the Fund was agreed to by the Secretary-General, Mr. Dag Hammarskjoeld.

(*The New York Times*)

[Prev. ref. 2652:AOA:A]

M. **WHO Report For 1959:** The World Health Organization (WHO), in its annual report for 1959 released in Geneva on March 11, said that venereal diseases were spreading in various countries and that gonorrhoea, in particular, was growing as a public health problem.

The incidence of gonorrhoea increased in 15 of the 22 countries surveyed, while a "disturbing recrudescence" of venereal syphillis continued in some countries, including USA where there was an increase of 15 per cent from 1958.

It said that communicable diseases such as malaria, small-pox, tuberculosis and poliomyelitis would continue to be the main target of WHO during 1960.

About 568,000,000 people in Asia and South America were being protected from malaria by the end of 1959 and preparatory work was being carried out in malarial areas as part of WHO's world-wide eradication campa.gn.

New technical developments had made it possible to think of eradicating other communicable diseases, such as yaws, endemic syphillis and small-pox, while practical methods were now available for large-scale treatment of leprosy and tuberculosis.

Progress was made in the study of live attenuated polio virus vaccines, administered orally.

It added that the Soviet Union vaccinated more than 12,000,000 people by this method during 1959 and preliminary data suggested satisfactory results.

(*The Hindu*, Madras)

[Prev. ref. 2921:AOA:M]

N. **IMCO Council Meeting:** The 16-member Council of the Inter-Governmental Maritime Consultative Organization (IMCO), a specialized agency of United Nations, held its third session in London between March 1 and March 4.

The Council met as the Organization's governing body in the period between the sessions of the IMCO Assembly, which are held every two years.

The Chairman of the Council, who was elected in 1959, is M Jean G. Roullier of France.

Both the previous sessions of the Council were held in London, the Agency's headquarters.

At its session, the Council considered the status of the IMCO Convention, under which the Organization was established, and the present membership of IMCO. Yugoslavia, by accepting the IMCO Convention on February 12, 1960, became the 35th member-State.

Britain notified to the Organization that the Federation of Nigeria had become an associate-member of IMCO in accordance with Article 9 of the Convention.

Two other items on the agenda dealt with the report of the IMCO Maritime Safety Committee and with arrangements now being made for the International Conference on the Revision of the Convention on Safety of Life at Sea. The Conference, organized by IMCO, will be held in London from May 17 to June 17, 1960.

The major task of the Council's session was to review the first year's work in the light of a report submitted by the IMCO Secretary-General, Mr. Ove Nielson.

An additional item dealt with the role of IMCO in technical assistance in the maritime sphere.

The Council also considered a report of a small *ad hoc* Committee on provisional rules of procedure for the IMCO Assembly and the Council. The *ad hoc* Committee met in London just before the Council's session.

Among its domestic items, the Council revised the relationship of IMCO with other UN Specialized Agencies and with non-Governmental organizations, accounts, staff rules, pensions and other financial or personnel questions.

The membership of the Council for the present two-year period is: Argentina, Australia, Belgium, Canada, France, the Federal Republic of Germany, Greece, India, Italy, Japan, the Netherlands, Norway, Sweden, USSR, United Kingdom and United States.

[Prev. ref. 3113:AOA:F]

O. **Rockefeller Grants To IPI TO Assist Press In Asia:** The International Press Institute (IPI) announced in Zurich on February 12 that it had received two grants totalling $116,700 from the Rockefeller Foundation for a two-year programme designed to assist the Press in Asia.

It said that the grants would enable it to appoint an Asian Representative to study editorial problems, particularly of the language newspapers and, where desired, to act in an advisory capacity to them.

The Institute would also review all the existing training problems of Asian journalists and, in addition, it would launch a programme for training the editorial staffs of Asian newspapers through the medium of workshop seminars, drawing on experienced newspapermen from Asia and the West.

The Rockefeller Foundation announced in New York on February 10 a grant of $38,700 to finance the new post of Asian Representative for IPI and said that the Institute, with headquarters in Zurich, had appointed Mr. A. G. P. Vittachi, now Editor of *The Ceylon Observer*, to the post.

[Prev. ref. 2752:AOA:B]

P. **Commonwealth Scholarship Scheme—Chairman Of British Commission:** It was made known in New Delhi on January 14 that the Earl of Scarborough, a former Governor of Bombay, had been appointed (by the Secretary for Commonwealth Relations, Lord Home, and the Secretary of State for the Colonies, Mr. Ian Macleod) to be the Chairman of the Commonwealth Scholarship Commission in the United Kingdom.

The Commission was being set up (under the Commonwealth Scholarships Act, 1959, recently passed by the British Parliament) to administer the Commonwealth Scholarship and Fellowship Plan in Britain.

The Plan was worked out by the Commonwealth Education Conference at Oxford on July, 1959 and created 1,000 new post-graduate awards throughout the Commonwealth. Of these, the United Kingdom would contribute 500 scholarships and fellowships tenable in the United Kingdom at any one time.

(*UK High Commission*, New Delhi)

[Prev. ref. 2853:AOA:D]

Q. **World Peace Medal For Mr. N. Khruschev:** In Moscow on January 15, the Soviet Prime Minister, Mr. Nikita Khruschev, was presented the Commemorative Medal of the World Peace Council.

The Medal was given him for his "immense contribution to the cause of strengthening world peace."

ASIAN RECORDER

April 16—22, 1960

Regd. No. D-727

Vol. VI. No. 16

BURMA

A. General Elections: In the General Elections to the Burmese Chamber of Deputies (Lower House) on February 6, the "Clean" faction of the Anti-Fascist People's Freedom League (A-FPFL) won an overwhelming majority.

The results for 207 out of 250 elective seats were confirmed by February 15. Elections in 23 constituencies which were to return the remaining candidates had been postponed for security reasons.

Over 900 candidates, nominees of political parties and Independents, were in the field, but the main contest was between U Nu's "Clean" faction and U Ba Swe's "Stable" faction of A-FPFL.

A significant feature of the Elections was the defeat of top "Stable" faction leaders, including U Ba Swe and U Kyaw Nyein.

The state of parties as on February 15 was as follows:

"Clean" faction of A-FPFL ..	155
Allies of "Clean" faction ..	8
"Stable" faction of A-FPFL	24
Arakan National United Organization	6
National United Front ..	1
Independents (mainly in Shan States)	6
Others	7

The new Parliament assembled on April 1 for the swearing-in ceremony and then, on April 4, elected a new Premier to take over the administration from General Ne Win.

Gen. Ne Win, who had been the Prime Minister of a 'care-taker Government' since October, 1958, was called to power from his office of Chief of Staff of Defence Forces by the then Prime Minister, U Nu, for the purpose of holding free and fair Elections.

(*The Nation*, Rangoon)

[Prev. ref. 2572:BUR:A]

B. Minister Dismissed: The Prime Minister of the 'care-taker Government', Gen. Ne Win, dismissed the Minister for the Chin Hills, U Ral Humung, from office on March 30 five days before the entire Cabinet was to quit in favour of a parliamentary government.

It was alleged in certain quarters that U Ral Humung had misused his official authority in the General Elections.

However, the official announcement did not mention any reason for the dismissal.

(*The Nation*, Rangoon)

CEYLON

SUMMARY: General Elections Results—UNP Largest Majority Party—Mr. D. Senanayake Becomes Premier—New Cabinet—Policy Statement—Speaker's Election; Assurance To Private Sector.

A. General Elections: In the General Elections held on March 19, the United National Party (UNP) emerged as the largest single party in the House of Representatives.

The UNP, led by an ex-Premier, Mr. Dudley Senanayake, won 50 of the 151 seats.

The Sri Lanka Freedom Party (SLFP), founded by the late Mr. S. W. R. D. Bandaranaike, won 46 seats.

The party position was:

United National Party ..	50
Sri Lanka Freedom Party ..	46
Tamil Federal Party ..	15
Mahajana Ek Sath Peramuna (M.E.P.)	10
Lanka Sama Samaj Party ..	10
Lanka Prajathanthrawadi ..	4
Communist Party ..	3
Independents and others ..	13

A significant feature of the Elections was that no party could secure an absolute majority. The Leftist parties fared badly.

Another highlight of the Elections was the complete rout of the Lanka Prajathanthrawadi Party led by the care-taker Premier, Mr. W. Dahanayake, which managed to secure only four seats. Mr. Dahanayake was himself defeated in his home constituency of Galle which he had represented for 12 years.

The Federal (Tamil) Party emerged as the third largest party with 15 seats and appeared to hold the balance.

Background:

Ceylon's first two Parliamentary Elections (in 1948 and 1952) were tame affairs. The United National Party was unshakable and victory for it on both occasions was a foregone conclusion.

But, in April, 1956, Mr. S. W. R. D. Bandaranaike, whose Sri Lanka Freedom Party had forced a pre-election coalition with the Trotskyist, Mr. Philip Gunewardena, and his followers who had broken away from Ceylon's main Trotskyist group led by Dr. N. M. Perera, defeated the United National Party by winning 51 of the 95 seats in the House of Representatives. Only eight UNP candidates were returned, and the Party's prestige was at its lowest.

For some time afterwards, UNP did not contest even village committee elections under the Party label. They stood as Independents instead. But, towards the end of 1959, UNP was again sweeping local Government polls throughout the country.

The strongest contenders on the Left were Mr. Philip Gunewardena, who led the M.E.P. Front and Dr. N. M. Perera, the other Trotskyist and former Leader of the Opposition in Parliament.

The UNP opposed nationalization. The SLFP held that nationalization of foreign-owned estates (mostly British-owned) was desirable in the interests of the national economy, but it did not favour immediate nationalization.

The late Mr. S. W. R. D. Bandaranaike, who, as the leader of SLFP, had nationalization of foreign estates as a plank of his 1956 Election programme, gave a guarantee in 1958 that foreign estates would not be touched for 10 years. Nearly two-thirds of Ceylon's foreign trade earnings come from these estates.

The Tamil Federal Party wanted a Swiss-model constitution to safeguard Tamil rights and the extension of the franchise to Tamils of Indian origin who are at present stateless under Ceylon law.

Of Ceylon's 10,000,000 population, about 1,000,000 are Ceylon Tamils and 1,000,000 Indian Tamils, mostly tea estate labourers.

New Ministry:

Following the Elections, the Governor-General, Sir Oliver Goonetilleke, had discussions with Mr. Dudley Senanayake and the leader of the SLFP, Mr. C. P. De Silva, on the formation of a Ministry.

Later, he invited Mr. D. Senanayake to form the new Government. On March 21, Mr. Dudley Senanayake was sworn-in as Prime Minister.

In a statement issued after the swearing-in ceremony, Mr. Senanayake said that he had accepted office "with profound awareness of the complexity of the problems involved and also of the necessity of overcoming them without sacrificing principle for expediency."

The most significant feature in the mandate given by the people to the new Government, he said, was "the positive and overwhelming verdict against the Marxist parties and those who tried to inflame racial and communal passions to gain political power."

He said: "There is no gainsaying the fact that certain circumstances prevented the verdict in favour of the United National Party from being as numerically decisive and effective as we would have wished. But that is the people's decision and we must accept the judgment with grace and humility.

"It would be unreal to minimize the difficulties that confront us, but it would be even more unwise not to see that this period of testing that we shall have to go through may well prove to be advantageous for the welfare of the nation as a whole.

"From the complexity of this situation, we may yet be able to bring about the reunification of the people of Ceylon without which no Government can hope to carry out the urgent task of regeneration and economic development."

Appealing for the co-operation of all sections of the people, he said: "During an election campaign, the issues that are raised by the various parties tend to divide the nation into conflicting sections of opinion. In a democratic country, however, these differences should be resolved as far as possible after the campaign is over and before the new Government begins its work.

"It is with deep sincerity, therefore, that I ask for the co-operation of every Ceylonese to enable the new Government to give this country the peace and stability needed to produce the fruits of freedom."

He also told newsmen that he expected to go to London for the Commonwealth Prime Ministers' Conference in May, 1960. He hoped to be able to discuss the problem of Indian settlers in the country with Mr. Nehru when he met him at the London Conference or earlier, if necessary.

He said: "I propose to, as early as possible, try and implement the Nehru-Kotelawala Agreement which was arrived at some time back." (see page 378).

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

He said that he was opposed to nationalization of estates—a demand which left-wing parties had canvassed vigorously during the Elections.

Mr. Dudley Senanayake (49) was the youngest Prime Minister in South-East Asia in 1952 when he succeeded his father, the late Mr. D. S. Senanayake. He renewed his mandate from the people at the Elections in 1952 but relinquished office in 1953 owing to ill-health following violent demonstrations against the increase in the subsidized price of rationed rice.

His disagreement with Sir John Kotelawala led him to withdraw from active politics and participation in the last Elections. He however, took over the leadership of the Party after it was defeated in 1956.

He entered Parliament in 1936 and became a Minister in his father's Cabinet in 1947. He was a vehement critic of the late Mr. Bandaranaike's language policy. He had expressed himself in favour of Sinhalese, the language of the majority, being given the status of the one and only official language and he opposed the Pact that the late Mr. Bandaranaike made with the Tamil Federal Party in 1957 concerning, among other things, the recognition of Tamil as a national language and regional autonomy. (pages 1569 and 1593).

The following day (March 22), seven other members of the new Government were sworn-in.

The following were the members of the new Cabinet and their portfolios:

Mr. Dudley Senanayake—Prime Minister, Defence and External Affairs;

Mr. J. R. Jayawardene—Finance, Broadcasting and Information, Local Government and Housing;

Mr. M. D. Banda—Agriculture and Land, Food, Commerce and Trade;

Mr. Bernard Aluwihare—Education and Cultural Affairs, Labour, Industries and Fisheries;

Mr. M. V. P. Peiris—Health and Social Services;

Mr. Montague Jayawickreme—Nationalized Services and Transport, and Works, Power and Posts;

Dr. M. C. M. Kaleel—Home Affairs and Rural Development; and

Mr. Edmund Cooray—Justice.

The eight-member Cabinet was the smallest so far. The previous UNP Cabinet had 13 members and the late Mr. Bandaranaike's Cabinet had 15.

Speaker's Election:

The Government party met its first reverse in the House of Representatives on March 30 when the Opposition nominee, Mr. T. B. Subasinghe, was elected Speaker.

He polled 93 votes as against 60 secured by Sir Albert Peries, the UNP candidate.

(*The Times of Ceylon*, Colombo and *The Hindu*, Madras)

[Prev. ref. 3059:CEY:A]

B. **Assurance To Private Sector:** Addressing the annual meeting of the European-dominated Ceylon Chamber of Commerce in Colombo on March 26, the new Prime Minister, Mr. Dudley Senanayake, promised his Government's fullest support to the private sector.

He said he was opposed to nationalization as an end in itself, because it would bring in slavery on a large scale. It was irreconcilable with his conception of progress.

He stressed the need for foreign capital to invest in Ceylon and said that the phobia against foreign investment was a "hang-over of the colonial past".

He said: "There is no question that foreign investment must take place, and it is the intention of my Government very soon to issue a statement on the precise terms under which foreign capital investment would be welcomed in the country."

He said he discarded the notion that the path to freedom lay through nationalization, because concentration of wealth and power in the hands of a few was as iniquitous as concentration of wealth and power in one omnipotent State.

He declared: "The path to an egalitarian society, path to the normally accepted socialist society does not lie through State ownership as an end in itself but in ownership and management of the affairs of the community by the community at large, i.e. by dispersal of ownership and decentralization of functions.

"In such a scheme of things, I can assure you with all sincerity that I visualize a most important place for the private sector, and it shall be the objective of my Government to see that every opportunity is afforded to the private sector to fulfil that very important role for pulling this country from the depths into which it has fallen".

(*The Times of Ceylon*, Colombo and *The Hindu*, Madras)

[Prev. ref. 2925:CEY:B]

C. **First Tyre Factory Being Designed In Moscow:** It was made known on March 17 that Ceylon's first tyre factory to be built within seven miles of Colombo with the Soviet Union's assistance was on the drawing boards in Moscow.

Initially, the plant will produce 300,000 tubeless and ordinary tyres, but provision has been made to bring the output up to 600,000 tyres a year, which will fully meet Ceylon's demand.

The plant will have the same kind of equipment as similar factories in the Soviet Union.

The Soviet Union will also help Ceylon to train her own specialists for the new industry.

(*Tass*)

CHINA

SUMMARY: Mr. B. P. Koirala's Visit—Agreement On Boundary Question—Aid To Nepal; Churchmen Jailed; Counter-revolutionary Executed; Shortage Of Man-power; Fossilized Skull Found.

A. **Mr. B. P. Koirala's Visit:** At the invitation of the Government, a Nepalese official delegation, led by the Prime Minister, Mr. B. P. Koirala, paid a visit to China from March 11 to March 23.

Mr. Koirala had discussions with Chinese leaders and visited, along with other members of his party, agricultural, industrial and educational centres.

Wherever he went, crowds gave him a warm welcome. There were several receptions arranged in his honour, at all of which the dominating theme of speeches was growing Sino-Nepalese friendship.

The Chinese leaders, including the Premier, Mr. Chou En-lai, stressed at these functions the need of solidarity among Asian nations and peaceful settlement of problems among them.

The need for friendly relations among Asian nations was again emphasized at a farewell banquet given to Mr. Koirala by Mr. Chou En-lai on March 21.

Mr. Chou En-lai said at the banquet: "Facts have proved again and again that so long as Asian and African countries adopt an attitude of mutual understanding and mutual trust, and persist in the principles of equality, mutual benefit, friendship and mutual accommodation, there is no question between them that cannot be settled reasonably through peaceful consultation."

He said the fact that the Chinese and Nepalese Governments had been able to achieve "such great results in these talks" was inseparably connected with the fact that the two sides "have always had profound mutual understanding and mutual confidence."

The same theme was also developed by Mr. Koirala in his speech.

He said that his visit to China and his talks with the Chinese leaders had enabled him to understand better and had also been of mutual advantage. "This I think is a good example of how two neighbouring countries should live together in peace and friendship."

He re-affirmed his resolve "to continue our efforts for the strengthening and consolidation of intimate friendship between our two countries in keeping with the lofty principle of peaceful co-existence."

On March 18, the Nepalese delegation was received by the Communist Party Chairman, Mr. Mao Tse-tung, and the Chairman of the People's Republic, Mr. Liu Shao-chi.

At a formal ceremony in Peking on March 21, Mr. Koirala and Mr. Chou En-lai signed a joint *communique*, an Agreement on the boundary question and another on Chinese economic aid to Nepal.

Joint Communique:

The following is the text of the joint *communique*:

"At the invitation of Mr. Chou En-lai, Premier of the State Council of the People's Republic of China, His Excellency Bishweshwar Prasad Koirala, Prime Minister of the Kingdom of Nepal, arrived in the People's Republic of China on March 11, 1960 on a friendly visit. Accompanying Prime Minister Koirala to China were: Mr. Ganeshman Singh, Minister for Works and Communications; Mr. Surya Prasad Upadhyaya, Minister for Home and Law; Mr. Nara Pratap Thapa, Foreign Secretary of the Ministry of Foreign Affairs; Mr. Viswa Shankar Sukla, Secretary of the Ministry of Commerce and Industry, and other officials of His Majesty's Government of Nepal.

"During his visit in China, Prime Minister Koirala was received by Mr. Mao Tse-tung, Chairman of the Central Committee of the Chinese Communist Party, and Mr. Liu Shao-chi, Chairman of the People's Republic of China.

"Cordial and friendly talks were held between Premier Chou En-lai and Prime Minister Koirala. Taking part also in the talks were: on the Chinese side—Mr. Chen Yi, Vice-Premier of the State Council and Minister of Foreign Affairs; Mr. Lei Jen-min, acting Minister of Foreign Trade; Mr. Chang Han-fu, Vice-Minister of Foreign Affairs; Mr. Ku Tso-hsin, Vice-Chairman of the State Planning Commission; Mr. Pan Tzu-li, Ambassador of the People's Republic of China to the Kingdom of Nepal; and Mr. Chang Shih-chieh, Deputy Director of the First Asian Department of the Ministry of Foreign Affairs; and on the side of the Kingdom of Nepal—Mr. Ganeshman Singh, Minister for Works and Communications; Mr. Surya Prasad Upadhyaya, Minister for Home and Law; Mr. Nara Pratap Thapa, Foreign Secretary of the Ministry of Foreign Affairs; and Mr. Viswa Shankar Sukla, Secretary of the Ministry of Commerce and Industry.

"During the talks, the two sides held frank and free discussions on matters of common interest, in particular, on the question of consolidating and further developing friendly relations between China and Nepal.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

"The two sides pointed out with satisfaction that China and Nepal, in their mutual relations, had consistently and faithfully adhered to the Five Principles of peaceful co-existence. In order to ensure tranquillity on the border of the two countries and to bring about the formal delimitation of the boundary between China and Nepal as soon as possible, the Governments of the two countries signed the 'Agreement Between the Government of the People's Republic of China and His Majesty's Government of Nepal on the Question of the Boundary Between the Two Countries' (see below). Under the guidance of the Five Principles, the two sides settled smoothly through friendly consultations this question inherited from history, thus adding a new page to the annals of friendly relations between the two countries.

"Out of its profound desire to maintain lasting peace and close friendship between the two countries, the Chinese Government proposed that the two countries conclude a Treaty of Peace and Friendship. Prime Minister Koirala appreciated this proposal of the Chinese Government.

"In order to further strengthen economic co-operation between the two countries so as to promote the prosperity of the two countries and the well-being of their peoples, the Governments of the two countries, in accordance with the principles of non-interference in each other's internal affairs and equality and mutual benefit, signed the 'Agreement Between the Government of the People's Republic of China and His Majesty's Government of Nepal on Economic Aid.' According to this Agreement, the Chinese Government, at the request of His Majesty's Government of Nepal, agreed to give the latter, within a period of three years, a free grant of aid of a total value of 100,000,000 Indian rupees, without any political conditions attached. This aid does not include the remaining 40,000,000 Indian rupees provided under the Agreement Between China and Nepal on Economic Aid of 1956, which has not yet been used by His Majesty's Government of Nepal.

"Prime Minister Koirala brought to the Chinese people the profound friendship of the Nepalese people. At the same time, he also saw during his visit the sincere friendship the Chinese people cherished for the Nepalese people. To further strengthen the ties and co-operation between the two countries, the two Governments agreed to establish embassies mutually in Peking and Khatmandu. The two sides confirmed that the continuous development of friendly co-operation between China and Nepal were not only in the interests of the peoples of the two countries but also in the interests of the solidarity of Asian countries and world peace.

"Prime Minister Koirala invited Premier Chou En-lai to visit Nepal. Premier Chou En-lai accepted the invitation with pleasure. The two sides agreed that they would discuss and sign the Treaty of Peace and Friendship between the two countries during Premier Chou En-lai's visit in Nepal."

Agreement On Boundary Question:

The following is the Boundary Agreement:

"The Government of the People's Republic of China and His Majesty's Government of Nepal have noted with satisfaction that the two countries have always respected the existing traditional customary boundary line and lived in amity. With a view to bringing about the formal settlement of some existing discrepancies in the boundary line between the two countries and the scientific delineation and formal demarcation of the whole boundary line, and to consolidating and further developing friendly relations between the two countries, the two Governments have decided to conclude the present Agreement under the guidance of the Five Principles of peaceful co-existence and have agreed upon the following:

"*Article* 1: The Contracting Parties have agreed that the entire boundary between the two countries shall be scientifically delineated and formally demarcated through friendly consultations, on the basis of the existing traditional customary line.

"*Article* 2: In order to determine the specific alignment of the boundary line and to enable the fixing of the boundary between the two countries in legal form, the Contracting Parties have decided to set up a Joint Committee composed of an equal number of delegates from each side and enjoin the Committee, in accordance with the provisions of Article 3 of the present Agreement, to discuss and solve the concrete problems concerning the Sino-Nepalese boundary, conduct survey of the boundary, erect boundary markers and draft a Sino-Nepalese Boundary Treaty. The Joint Committee will hold its meetings in the capitals or other places of China and Nepal.

"*Article* 3: Having studied the delineation of the boundary line between the two countries as shown on the maps mutually exchanged and the information furnished by each side about its actual jurisdiction over the area bordering on the other country, the Contracting Parties deem that, except for discrepancies in certain sections, their understanding of the traditional customary line is basically the same. The Contracting Parties have decided to determine concretely the boundary between the two countries in the following ways in accordance with three different cases:

"(1) Sections where the delineation of the boundary line between the two countries on the maps of the two sides is identical—

"In these sections, the boundary line shall be fixed according to the identical delineation on the maps of the two sides. The Joint Committee will send out joint survey teams composed of an equal number of persons from each side to conduct survey on the spot and erect boundary markers.

"After the boundary line in these sections is fixed in accordance with the provisions of the above paragraph, the territory north of the line will conclusively belong to China, while the territory south of the line will conclusively belong to Nepal, and neither Contracting Party will any longer lay claim to certain areas within the territory of the other party.

"(2) Sections where the delineation of the boundary line between the two countries on the maps of the two sides is not identical, whereas the state of actual jurisdiction by each side is undisputed—

"The Joint Committee will send out joint survey teams composed of an equal number of persons from each side to conduct survey on the spot, determine the boundary line and erect boundary markers in these sections in accordance with concrete terrain features (watersheds, valleys, passes, etc.) and the actual jurisdiction by each side.

"(3) Sections where the delineation of the boundary line between the two countries on the maps of the two sides is not identical and the two sides differ in their understanding of the state of actual jurisdiction—

"The Joint Committee will send out joint teams composed of an equal number of persons from each side to ascertain on the spot the state of actual jurisdiction in these sections, make adjustments in accordance with the principles of equality, mutual benefit, friendship and mutual accommodation, determine the boundary line and erect boundary markers in these sections.

"*Article* 4: The Contracting Parties have decided that, in order to ensure tranquillity and friendliness on the border, each side will no longer dispatch armed personnel to patrol the area on its side within 20 kilometers of the border but only maintain its administrative personnel and civil police there.

"*Article* 5: The present Agreement is subject to ratification and the Instruments of Ratification shall be exchanged in Khatmandu as soon as possible.

"The present Agreement will come into force immediately on the exchange of the Instruments of Ratification and will automatically cease to be in force when the Sino-Nepalese Boundary Treaty to be signed by the two Governments comes into force."

Agreement On Economic Aid:

The following is the Agreement on Economic Aid:

"The Government of the People's Republic of China and His Majesty's Government of Nepal, for the purpose of further promoting their friendly relations and of strengthening the economic and technical co-operation between the two countries have, on the basis of the Five Principles of peaceful co-existence, concluded the present Agreement, the Articles of which are as follows:

"*Article* 1: With a view to helping His Majesty's Government of Nepal to develop its economy, the Government of the People's Republic of China is willing to give His Majesty's Government of Nepal, within a period of three years as from the date of coming into force of the present Agreement, a free grant of economic aid without any conditions or privileges attached. The amount of the aid is 100,000,000 Indian rupees. This amount, together with the remaining 40,000,000 Indian rupees provided under the Agreement between China and Nepal on Economic Aid of 1956, which has not yet been used by His Majesty's Government of Nepal, making a total of 140,000,000 Indian rupees, shall be utilized by instalments during the period of the validity of the present Agreement by His Majesty's Government of Nepal in accordance with the items of economic aid to be agreed upon by both sides.

"*Article* 2: The economic aid to be given by the Government of the People's Republic of China to His Majesty's Government of Nepal shall cover equipment, machinery and materials, technique and other commodities.

"*Article* 3: According to the requirement of His Majesty's Government of Nepal, the Government of the People's Republic of China is willing to supply, on the basis of the principles of economy and usefulness, equipment, machinery and materials and designs relating to the items of aid in order to help develop the economy of the Kingdom of Nepal.

"*Article* 4: At the request of His Majesty's Government of Nepal, the Government of the People's Republic of China agrees to dispatch a necessary number of experts and technicians to help the Kingdom of Nepal in the construction of the items of aid to be specified under the present Agreement. The travelling expenses of the Chinese experts and technicians to the Kingdom of Nepal and back to China and their salaries during their period of work in the Kingdom of Nepal shall be borne by the Government of the People's Republic of China; the living expenses of the Chinese experts and technicians during their period of work in the Kingdom of Nepal shall be paid from the amount of the aid, with their standard of living not exceeding that of the personnel of the same level in the Kingdom of Nepal.

"At the request of His Majesty's Government of Nepal, the Government of the People's Republic of China agrees to accept trainees dispatched by His Majesty's Government of Nepal to learn technical skill in China. The expenses of the trainees shall be paid from the amount of the aid.

"*Article* 5: The items of aid to be given by the Government of the People's Republic of China to His Majesty's Government of Nepal and the methods of their implementation, in accordance with Article 2 of the present Agreement, shall be discussed and decided upon separately in a Protocol to be concluded by the representatives to be appointed by the two Governments.

"*Article* 6: The organs to carry out the present Agreement shall be the Ministry of Foreign Trade of the People's Republic of China for the People's Republic of China, and the Ministry of Finance of His Majesty's Government of Nepal for Nepal.

"*Article* 7: The present Agreement will come into force on the date of its signing and will remain in force for a period of three years. At the expiry of the present Agreement, if the amount of the aid is not yet used up, the period of validity of the present Agreement may be extended by the agreement of the two Governments."

Mr. B. P. Koirala's News Conference:

Addressing a news conference in Hong Kong on March 25, the Nepalese Premier, Mr. B. P. Koirala, said that the delineation of the border

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

between Nepal and China could be completed within a few months. A two-nation Border Commission set up under the Agreement signed in Peking would start work immediately.

Answering questions on his visit to China, he said that India would not be consulted on these frontier adjustments as it was strictly a matter between Nepal and China.

He said that only a few miles of territory were in question.

There was no border dispute as such but for 50 to 60 years there had been differences between Nepal and China over some areas.

He said that he had no information of any violation of Nepalese territory by the Chinese in the last 12 months.

Chinese leaders had told him that they had so much work to do at home that they were not looking beyond their own frontiers and wanted to be left in peace.

(*The Statesman*, Calcutta and *Hsinhua News*)

[Prev. ref. 2907:NEP:A]

B. **Bishop And US Missionary Jailed:** The official *Hsinhua News* said on March 18 that the Roman Catholic Bishop of Shanghai, Mr. Kung Pin-mei, had been sentenced the previous day (March 17) by a Shanghai court to life imprisonment, while 13 others were given prison terms ranging from 5 to 20 years on charges of committing "serious crimes of high treason, sabotage and counter-revolutionary activities."

It said that it had been shown at the trial that "using the cloak of religion" a "traitorous counter-revolutionary clique" had been organized "under a scheme of the United States' imperialists and The Vatican to subvert the Chinese People's democratic *regime*."

According to the report, Mr. James Edward Walsh, an American Bishop and Mr. Antonio Riberi, a former Apostolic Internuncio in China, had allegedly connived in hatching a plot with The Vatican's approval under which Mr. Kung Pin-mei, as Bishop of Shanghai would carry out "traitorous activities" under personal instructions from Bishop Walsh.

Mr. Walsh, who was described as a "United States spy" and who was now under detention was alleged to have been in "direct control of this counter-revolutionary organization" and of having directed "counter-revolutionary elements hidden in the Catholic Church to carry out sabotage activities".

Bishop Walsh was sentenced to 20 years' imprisonment.

The activities of the group had been brought to a head in September 1955 by the Shanghai Public Security authorities. It said that public trials had been held on March 16 and 17 and sentences were passed on the accused on March 17.

The court had examined a "large body of evidence showing the counter-revolutionary activities" of the accused and had studied data "exposing the crimes".

It added that "confronted with the mass of conclusive evidence of their crimes, the accused were unable to deny the charges".

It described a long list of crimes alleged to have been committed by the group, among them "to undermine various political movements in the country and the implementation of the State policies, laws and decrees" and efforts to "sabotage the anti-imperialist and patriotic movement of Catholics all over the country".

Other charges included collusion with and offering shelter to "imperialist spies", harbouring counter-revolutionaries secretly, storing arms and ammunition and maintaining clandestine radio-communications, inventing and circulating rumours, advocating an "aggressive war by United States Imperialism" and persecuting "patriotic Catholics". Arms, ammunition, radio-communication equipment and Kuomintang flags hidden by the group in churches and schools under their control had been found when the ring was unearthed. The group had also "secretly set up prisons in churches to persecute Catholics".

In addition to life imprisonment, Bishop Kung was deprived of political rights for life while others were deprived of political rights for periods ranging from four to ten years.

US Reaction:

In Washington, the Secretary of State, Mr. Christian A. Herter, said on March 18 that USA was making "the strongest possible protest" to Peking over China's action in sentencing Bishop J. E. Walsh.

In a strongly-worded statement, he said: "I find it difficult to emphasize sufficiently the revulsion that I personally and the United States Government feel today. I am certain that the rest of the world will join me in condemning this action against an innocent citizen of the United States and a distinguished member of the Catholic clergy."

[Prev. ref. 3175:CHI:B]

C. **Shortage Of Man-power:** The official *Hsinhua News* quoted the Vice-Premier, Mr. Tan Chen-lin, on March 17 as saying that China, with a population of over 600,000,000, was faced with man-power shortage.

According to the Agency, in an article in the *Red Flag* (the journal of the Central Committee of the Chinese Communist Party), Mr. Tan Chen-lin said that progress in agriculture, industrial development, science and culture had "come up against the shortage of man-power."

He wrote that if China wanted to continue the "overall Leap Forward" in agriculture, it would be necessary to apply the basic measures of good farming systematically and develop fully a multi-sided economy combining agriculture, animal husbandry, fishery, forestry and side occupations, all of which required more man-power.

Quoting a statement by the Communist Party chairman, Mr. Mao Tse-tung, that if within the period of "roughly three Five-Year Plans" China could not solve the problem of changing over to large-scale farming with machinery, she would not be able to complete her socialist industrialization," it said that China had set up the beginnings of an agricultural machine-building industry and a farm-machinery manufacture and repairs industry.

This meant that industrially China had, to a certain extent, laid the first material foundations for the mechanization of agriculture.

(*Hsinhua News*)

[Prev. ref. 3139:CHI:A]

D. **Fossilized Skull Found:** Official Chinese reports said on March 15 that a fairly complete fossilized human skull cap, believed to be about 200,000 years old, had been unearthed in a limestone cave in north-west Kwantung province.

The skull cap, believed to be that of a middle-aged male and consisting of the orbital ridge and nasal bones, was found with large numbers of animal fossils.

Research members at the Institute of Vertebrate Palaeontology of the Chinese Academy of Sciences described the fossil as the earliest form of the palaeo-anthropic stage found in China.

It was accidentally unearthed by peasants in a mountain cave, together with large numbers of fossils including those of hyenas, bears, pandas, tigers, rhinoceroses, boars, deer, oxen, sheep, porcupines, stegodons (elephant-like mammals) and ancient elephants.

(*The Statesman*, Calcutta)

[Prev. ref. 2934:AOA:R]

HONG KONG

A. **Budget Estimates For 1960-61:** The Budget estimates for 1960-61 presented to the Legislative Council by the Financial Secretary, Mr. A. G. Clarke, on February 24 showed a deficit of HK$267 million.

Expenditure was estimated at HK$936 million, of which Public Works accounted for almost HK$290 million. Revenue was estimated at HK$669 million.

Increased taxes were imposed on petrol and tobacco and water charges were raised to yield an additional HK$35 million. Further economies were sought to reduce the call on reserves.

He further indicated that the time had come to abandon the traditional policy of *laissez-faire*, at least in the matter of exports, which must be guided and directed, and might require measures to regulate and control them.

Sir Robert Black's Address:

The Governor, Sir Robert Black, in his address to the Council earlier, surveyed the economic problems facing the Colony and said that the costs of providing work, housing, schools and medical care for the swollen population of the Colony were rising and that there were still 500,000 squatters on the ground as well as 70,000 on roof-tops.

Re-settlement and slum clearance, he said, must be continued at full pressure for some years. The schools had 500,000 pupils, but the problem was now moving to the sphere of secondary, technical and higher education.

He welcomed the prospect of a second university in the Chinese language as well as the expansion of Hong Kong University.

He also mentioned that the notable achievements in the health movement, including a fall in the tuberculosis death-rate, were now complicated by the new menace of drug addiction, against which an intensive drive had been started. Land reclamation and other schemes would provide 400 acres of new land near Tsuen Wan and would assist the provision of housing for another 1,500,000 persons, with new sites for industry.

He referred to the building of a large reservoir across the Sino-Hong Kong border near Shumchun and hoped that arrangements would be made with the Chinese authorities for water to be supplied from this source. The World Refugee Year had enabled the Government to hasten the construction of Community Centres in the Refugee Settlement.

Referring to the great increase in exports, the value of which had reached HK$2,300 million, he uttered a warning that the fundamental change in the trade pattern that had made Hong Kong the focus of controversy abroad held dangers which might worsen the problem.

Trade Survey:

The total volume of trade in 1959 was about 8½ per cent higher than in the previous year, imports increas-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

ing by about 7½ per cent and exports by 9½ per cent.

The total value amounted to HK$3,230 million, of which imports were HK$4,950 million and exports HK$3,280 million. Imports from China decreased by about one-quarter although they still remained substantial, but imports from a number of other countries showed increases, particularly Japan, Pakistan, United States and United Kingdom. Exports to USA, Japan and United Kingdom were substantially higher, United States replacing United Kingdom as the largest market, but exports to Indonesia, Thailand and China declined.

The value of exports of Hong Kong products was HK$2,282 million, an increase of about 80 per cent compared with 1958, of which clothing accounted for about 35 per cent of the total and textiles 18 per cent.

Trade with countries in South-East Asia in 1959 was not as favourable as in previous years.

Although shipments of native produce from the South-East Asian countries to Hong Kong rose, Hong Kong's own exports to these countries shrank. Formerly, they were Hong Kong's principal buyers of many commodities—either manufactured in Hong Kong or re-exported.

Official figures covering trade with Indonesia, Malaya, Singapore, Thailand, Cambodia, North Viet-Nam and South Viet-Nam in the first 10 months of 1959 showed that there was an increase of 31.3 per cent of Hong Kong's imports and a drop of 18.2 per cent for exports as compared with 1958.

In the first 10 months of 1959, Hong Kong imported HK$484.62 million worth of goods while she sold HK$655 million worth of goods, as compared with HK$370 million of imports and HK$800 million of exports in 1958.

In 1959, nearly all countries in South-East Asia increased their sales to Hong Kong.

Imports during January-October, 1959 showed the following increase: Malaya 16.4 per cent, Burma 182 per cent, Cambodia 7.5 per cent, Indonesia 10 per cent, North Viet-Nam 9 per cent, South Viet-Nam 662 per cent and Thailand 30.7 per cent. The import items noting big increases were rice, maize, beans, cattle, edible oils and raw rubber.

The factors leading to increased imports were: Hong Kong's growing population (almost 3 million) that caused a rising demand for foodstuffs such as rice, cattle and sugar, a general improvement in Hong Kong's entrepot trade and rapid industrial growth, calling for more raw materials.

Trade sources have given three causes for the drop in exports: widespread discrimination against Chinese goods in many countries in South-East Asia (the Thai Government ban on Chinese goods, the Philippines' checking up of import firms in April and May, 1959 and Indonesia's action against the retail trade of overseas Chinese); few countries in South-East Asia enjoyed economic prosperity in 1959; and the flow of Japanese and US goods into Asian countries (Malaya and Singapore allowed direct imports of dollar goods, while exports of Japanese products were helped through reparation arrangements).

INDIA

A. Swatantra Party Convention: Inaugurating the All-India Swatantra Party Convention in Patna on March 19, Mr. C. Rajagopalachari called upon the people to shed fear and join the Swatantra Party which sought to provide "real opposition to the Congress in the interests of the country and democracy."

He said it was wrong to think that the Socialists or the Communists were in opposition to the Congress and added: "The Socialist and Communist parties are only 'ginger groups' of the Congress."

He went on: "It is not so easy to build opposition against the Congress unless large numbers of people combined together. Those who suffer most are afraid to support the Swatantra Party. Those who are here are fearless. I want more people to show such courage. But, I do not want people to become rowdies. I want more people to become thoughtful and courageous. Courage does not consist in breaking heads. Courage consists in speaking out your mind.

"Why are people afraid? Because they have property, they dare not speak out for fear of loss of property. The policy of the Congress has put a halter round their neck. People who suffer say that you first become a good opposition, then we shall join you. That is like saying that I shall drive the car after reaching the goal.

"I have come to tell you why we have started this new Party. Most of us put the Congress in power when the Britishers left us. The Congress then was a well-organized party, ready and willing to govern the country. And there were also good people in it at that time. They deserved to be handed over the power for ruling the country. Now, however, I am of opinion that they are more concerned about their party than the Government."

Over 1,000 delegates from all over India attended the Convention. Prominent among them were: Mr. K. M. Munshi, Mr. H. P. Mody, Mr. S. K. D. Paliwal, Mr. R. Agnibhoj, Sardar Lal Singh and Mr. N. C. Chatterji. Some Congressmen of Bihar, including Mr. Shyama Prasad Singh, former Chairman of the Bihar Legislative Council, also attended.

Mr. N. G. Ranga's Presidential Address:

In his presidential address, the President of the Swatantra Party, Mr. N. G. Ranga, said that just as in the decade of 1918-28 India had to make her choice between Imperialism and Gandhian nationalism, she had to make a "courageous choice" in the present decade between the approaches of Mr. Nehru and Mahatma Gandhi to planning.

He declared: "It also means making a choice between centralized totalitarian governance and decentralized governance.

"Do we want to march in the direction of Sovietism with all its horrors of totalitarian social controls, regulations and bureaucratic management of social relations and economic activities of individuals and their groups? Do we wish to allow our everyday social and economic life to be planned and modulated by the Planning Commission and the Government? If people do not want to go that way and run the 'inescapable risks' of becoming automatons and being enslaved to the State and its agencies, then they must decide to oppose the Congress plan.

"The socialism of Mr. Nehru has become synonymous with State control, regulation or management of ever-expanding spheres of social life and the Soviet-type of socialism has come to dominate the minds of the Planning Commission.

"The Congress is hoping to put out of practical political action both the Praja-Socialist and Communist parties by making them realize the fact that Mr. Nehru is keen on fulfilling their tasks. Indian politics will soon come to be popularized between those who stood for State socialism with the Congress as its major exponent and liberal democracy standing for a Welfare Society represented predominantly by the Swatantra Party.

"If we are keen on promoting the creative passion of the people for freedom, which is ordinarily so irrepressible and not to allow it to become atrophied, we must free ourselves from the 14-year-old political power-of-attorney given to Mr. Nehru.

"The phenomenal economic progress of USSR can no longer be claimed to be the special prerogative of socialist production. Equal if not greater progress is claimed to have been achieved by the West German Republic through non-socialistic economy, in addition to increasing the area of freedom of every worker and entrepreneur and ensuring the welfare of all toilers. The British Labour Party is also trying to abjure its half-a-century-old faith in the efficacy of nationalization of all production and distribution. It is no longer, therefore, necessary for every one to claim to be a socialist if he wishes to strive for economic progress, social welfare, human rights and development of general prosperity and happiness of all human beings."

He said that the Party stood, among other things, for the following:

(1) It would seek to encourage all voluntary efforts on the part of industrialists and commercial concerns and welfare schemes so as to (a) minimize all possibilities for conciety by putting a premium on all such peomaximize the efforts of both parties to develop the practice of trusteeship and redistribution of a part of the profits through voluntarily chosen schemes of social welfare.

(2) It stood for a Welfare Society and, when necessary, for a Welfare State also. It would help people to develop a Welfare Society by putting a premium on all such people as were good enough to spare a liberal share of their surplus wealth for helping the socially under-developed people and economically needy but enterprising individuals and groups. It would not allow the State to become the *Ma-Baap* (mother and father) under the pretext of becoming a Welfare State and thus stunt the growth of people into fully developed and self-reliant personalities.

(3) The Party stood for the development of crop and cattle insurance and insurance against famines and floods. It would seek to make the State help the concerned classes or sections of people to develop all such insurances as far as possible through their own contributory schemes with the State offering to bear a part of the expenses, premium or risks and allowing competition to take place between a number of insurance enterprises.

(4) The Party was opposed to making the 'engine of taxation' so oppressive, all-pervasive and politically suffocating. It was ready to put a stop to this ever-recurring threat of increasing tax burdens and making their imposition and collection such a process of interference and political manoeuvring in the domestic and professional life of the people.

(5) The Party would seek to protect the interests of shareholders and employees of all private enterprises as well as consumers as much by giving encouragement as by regulation without in any way weakening the sources and means of continually augmenting production. It would foster the self-employed producers and encourage and strengthen their efforts to help themselves and raise their productive capacity. The Party wished to do its best to strengthen the source of freedom and means of living of all self-employed people through the organization of co-operatives and other social institutions freed from all official or political controls.

Policy Statement:

Next day (March 20), the Convention adopted its Policy Statement and Constitution and four resolutions on Party flag, General Secretary's report, national defence and Tibet.

Describing itself as "the party with a difference," the Swatantra Party had issued a draft statement of policy (on March 8) holding out to the nation the promise of a clear-cut alternative way of life and Government and "prosperity through freedom."

A clean and good Government, disbanding of the Planning Commission, radical reform of the land revenue system, nationalization of any industry whenever found desirable in the national interest, restoration of the Constitution to its original form and a nation-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

wide housing programme—these were some of the assurances given by the Party.

The Statement was claimed as a "more concrete and detailed exposition" of the Party's basic policies than the Statement of 21 Principles adopted at the Preparatory Convention in Bombay in August, 1959 (page 2831).

Assailing the record of the Congress Government, it said that the cumulative effect of the current policies had been to create an all-pervading sense of uncertainty leading to the "drying up" of initiative and enterprise in farms, shops and factories alike and that "statism" was threatening many other spheres of life.

It rejected the current policies of "excessive taxation, reckless deficit-financing and excessive regulation which have acted as disincentives to enterprise and production and have set in motion an inflationary spiral as a result of which the middle classes are being victimized."

Another consequence of "these misguided activities" of the Government was a lowering of the moral standards of the nation. "Controls create scarcity in the market and give rise to corruption. Respect for law is being undermined."

Other highlights of the Statement were:

Agriculture: "Increased food production can be attained through the self-employed peasant proprietor who is interested in obtaining, and is equipped to obtain, the highest yield from his land.

"Collectivization cannot solve the problem posed by the increase in population.

"The Party believes that the co-operative movement can only serve its objective to the extent that it remains a voluntary and non-official one. It will, therefore, work for freeing co-operative societies from the present practice of official control and political exploitation.

"*The Party believes in consumer co-operative societies, co-operative banks, industrial co-operatives and multi-purpose co-operatives for the agriculturist. It rejects the claim that 'joint farming' can be introduced on a massive scale on a voluntary basis as impracticable.* The Nagpur resolution will replace the old zamindar with one big super zamindar—Government."

The scheme of ceilings on land holdings was rejected as likely to injure efficient farming and the maximization of the movement of foodgrains to industrial and urban centres.

The Party was also opposed to State trading in foodgrains which was "an attack not only on lakhs of shopkeepers and dealers throughout the country but also on millions of peasants."

Industry: "The Party believes in the decentralized distribution of industry. As opposed to the obsession of gigantism that dominates current governmental thinking and planning, the Swatantra Party holds with Mahatma Gandhi that a great part of the process of industrialization must take place in a decentralized distribution of industry, throughout the country-side."

It did not stand for *laissez-faire* but for socially regulated free enterprise. It believed in the incentives for higher production and expansion inherent in competitive enterprise, with adequate safeguards for the protection of labour and against unreasonable prices, profits and dividends in those cases where there was no competition or where competition was not adequate to secure the necessary corrective.

Labour: "A good day's wage for a good day's work" was the Party's attitude to industrial labour. It would strive for economic progress, social betterment and cultural advance of labour and a voice in the determination of national policies for agricultural and industrial labourers and office workers. It accepted the workers' right to organize themselves for collective bargaining and to strike.

The Constitution and Rule of Law: The Party would work to restore to the citizen his fundamental rights in the form in which they were guaranteed by the Constitution as it was originally adopted but later modified by the ruling party "to suit its totalitarian approach."

National Defence: While the Party was yet to formulate its policy in regard to various aspects of India's international relations, the aggression committed by the Chinese against India and the occupation of many thousands of square miles of Indian territory were described as a crisis in the field of national defence.

The measures for ensuring the country's security and defence included: (1) The settlement of outstanding issues with Pakistan and serious consideration of the offer made by Pakistan for collaboration in the defence of the sub-continent; (2) collaboration with the countries of South and South-East Asia with a view to evolving measures for the security of the region; and (3) vigilance against infiltration and 'fifth column' activities.

Education: The Party believed that every citizen had the fundamental right to educate his children according to his choice in a free atmosphere untrammelled by official directives. Taking note of the "great interest" in politics on the part of students, it was of the view that students should abstain from active participation in the furtherance of any political party.

Public Administration: Describing the public servants of India to be "as good as in any other country," it said that in spite of their hard work and loyalty, the Administration was inefficient. It was because they were prevented from performing their functions in the most efficient manner by the unreasonable and politics-motivated interference in their day-to-day work by Ministers and other members of the ruling Party. This should be remedied.

Discussion:

Moving the Policy Statement, Mr. K. M. Munshi, Vice-President of the Party, said that the policies of the Congress were inspired by an ideology which was materialistic, totalitarian and anti-Indian. "The time has come, therefore, to combat this new menace. That is why the Swatantra Party, armed with faith in our people and our traditions, has emerged with a firm determination to resist it."

He added: "The common man has been the first victim of the policies of the ruling Party. He has been denied his basic needs. He is faced with a perpetual food crisis. Food production is under-planned, under-estimated and under-financed; naturally, food sufficiency is not within sight.

"Slogans of social and economic programme are mouthed by the leaders of the ruling party. But illiteracy persists; attempts at organizing higher education is confined to unco-ordinated experiments. Nobility of work is loudly preached, yet unemployment flourishes, while our man-power, the greatest asset of the country, is allowed to run waste."

Mr. Homi P. Mody, seconding the resolution, referred to the description of Swatantra Party members as 'old and frustrated people' and said: "I am certainly not one of those ancient monuments that adorn the Ministerial 'gaddies' at the Centre." Those who charged that the Swatantra Party had no roots should come to Bihar and see how the Convention had given a crushing reply.

He wanted to know if the Congress leaders, during the last 13 years of "undisturbed and autocratic power have been able to give a clean administration or maintain the standard of efficiency that the British had left behind."

In India, Abraham Lincoln's definition of democracy had been changed into "Government of the people, for the leaders and by the leaders." (Laughter).

Resolution On National Defence:

The resolution on national defence re-affirmed the "desirability of forging bonds of co-operation with all South and South-East Asian nations as the best means of facilitating aid to flow from the prosperous non-communist nations of the world on honourable terms and so as not to give rise to mutual apprehensions."

It added: "The Convention disapproves of the unresponsive attitude of the Government to the proposals and approaches of Pakistan while, at the same time, it is slow to react in a proper manner to the insulting and aggressive attitude of China. The policies of China in regard to India are a potential and growing danger to international friendship with the non-Communist Powers. Such a policy is not inconsistent with our general policy of peace and disarmament to which the nation is rightly committed and to its declared policy of opposition to the use of nuclear weapons of any kind."

On Tibet:

The resolution on Tibet declared: "Whereas the recent observance of the first anniversary of the Tibetan revolution of March, 1959 has come to the people of this country as a grim reminder of the cruel fate that has befallen a nation of peace-loving people at the hands of aggressive and imperialist communism,

"And whereas the Swatantra Party believes that a strengthening of the moral order in the world can only result from the inner discipline which practice of religion gives to each people and the freedom and dignity of individual in every free nation,

"The Swatantra Party looks forward to the time when Tibet will be freed of its aggressors and the people of Tibet will enjoy a full and free life of national self-determination."

The draft Constitution of the Party was also adopted with minor amendments. One of these amendments authorized the Central Organizing Committee to make transitional arrangements for purposes necessary for or incidental to the functioning of the Party.

General Secretary's Report:

The General Secretary, Mr. M. R. Masani, in his report presented to the Convention on March 19, said:

"If we perform our primary task of educating the public and building up our party organization under Mr. C. Rajagopalachari's leadership between now and 1962, I have no doubt that the Swatantra Party will provide powerful opposition to the Congress and offer the country an alternative Government.

"The Congress is now on the way out. The question is who shall replace it—a democratic party such as the Swatantra Party, or a communist dictatorship? Whatever else it may or may not be able to achieve, the Swatantra Party will render service by seeking to divert into democratic channels the natural discontent with the Government of the day, which otherwise may make India 'go the China way.' That is why there is need for the Swatantra Party.

"The Party is gathering a large measure of lower middle class support in cities and is beginning to attract trade union functionaries. But, it is weakest precisely where the people think it thrives, namely, among businessmen and industrialists.

"The Party's capacity to keep pace with public support and expectations is inadequate in terms of available resources in men and money.

"The Party is in consequence unable to reach more than a small proportion of those who are ready to receive its message."

Emphasizing the task before the Party, he said: "It is primarily that of educating public opinion and mobilizing potential sympathy and support into a mass movement. It is also that of providing the people with an

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

alternative Government. Finally, it is that of providing the country with a new Government when the people call it to that high responsibility.

"One of the Party's immediate tasks is to find, train and throw into the field of action a large number of men and women carrying its message. The placing of right men in right positions of influence within the organization is not an easy one. Certain defections from the Party within a few months of its establishment have naturally caused some concern.

"The Congress Party has plenty of jobs to offer, but, knowing this, the Swatantra Party should be careful not to depend on dubious elements.

"The enthusiasm and eagerness to see the Party grow should not lead one to welcome into its fold people without due determination.

"In the pursuit of numbers, quality should not be overlooked."

In this context, he said: "A wide field of service lies open to us. In one or two places, the Party has organized Swatantra Service Centres with such departments as a Civil Grievances Bureau, a Youth Service Centre and a Legal Grievances Bureau.

"Another measure in that direction is the establishment of a Public Advice Committee with Mr. K. M. Munshi as Chairman. It has called upon the people to forward cases which involve matters relating to public policy, fundamental rights, corruption and favouritism of Ministers and officials and interference by members of the ruling party in administrative and judicial matters."

Party Membership:

Mr. Masani told newsmen on March 18 that 336,150 members had so far been enrolled by the Party throughout the country.

The break-up figures were as follows: Madras 116,000, Uttar Pradesh 80,000, Bihar 71,700, Andhra Pradesh 25,000, Gujerat 10,200, Punjab 8,700, Mysore 6,500, Bombay 4,100, Rajasthan 1,500, Delhi, Madhya Pradesh and Orissa 1,000 each, West Bengal 800, Maharashtra 500 and Assam 150.

He added that in Himachal Pradesh, a Party unit was formed only recently and a membership drive in that territory would begin after the Patna Convention.

INDONESIA

A. **New Parliament Formed:** President Sukarno announced on March 27 the formation of what he called *Gotong Rojong* (mutual help) Parliament.

The new Parliament had 261 members, 130 of whom were from political parties. The rest were from "functional groups," the strongest of which was the Armed Forces.

The Muslim Masjumi, one of the four major parties, disappeared altogether, along with six splinter groups.

Two Masjumi leaders, however, were represented in the Scholars and Labour "functional groups."

The strength of the political parties was as follows:

The pro-Government Indonesian National Party had 44 seats (formerly 58), the Orthodox Muslim Nahdat-ul-Ulema 36 (formerly 22), Christian Party 6 (formerly 8), Catholic Party 5 (formerly 8), Indonesian Muslim Association 5 (formerly 8), another Muslim Party—Perti—2 (formerly 9), Marxist Murba (Proletarian) Party 1 (formerly 4), and Nationalist Indonesian Party 1 (formerly 2) (as before).

The "functional groups" were represented, among others, as follows:

Army 15, Navy 7, Air Force 7, Police 5, Village Guard Force 1, Farmers 25, Bout ("workers") 25, Muslim scholars 8, Protestant scholars 3, Catholic scholars 2, Bali Hindus 2, Youth 6, Women 6, General scholars 5, Co-operatives 3, Businessmen 2, 1945 Groups (people connected with the revolution against the Dutch) 2, Veterans 2, Artists 2, Journalists 2 and West New Guinea inhabitants 1.

Announcing the names of members of the new Parliament, Dr. Sukarno said: "I order the new Parliament to start work after receiving my message and after the installation which will be after I return from my world tour early in June, 1960.

"I name this new Parliament a 'Mutual help' Parliament in the sense that the parties and functional groups included will co-operate with the Government in the sphere of guided democracy based on democratic principles and recognition of the existing leadership."

The President had suspended the old fully-elected Parliament on March 5 on the ground that it had "failed to co-operate with the Government and because its structure had endangered the unity of the State."

[Prev. ref. 3230:IND:A]

B. **Diplomatic Relations with Ghana And Iraq:** It was announced in Djakarta on March 17 that Indonesia and Ghana had agreed to establish diplomatic representation both in Djakarta and Accra at embassy level.

Another announcement the same day (March 17) said that Indonesia and Iraq had agreed to raise their respective legations in Baghdad and Djakarta to embassy level.

A third announcement said that the Ambassador to the Soviet Union, Mr. Adam Malik, had also been appointed Ambassador to Rumania.

(*Information Service Indonesia*)

ISRAEL

A. **Mr. D. Ben-Gurion's Visit To USA And Britain:** The Israeli Prime Minister, Mr. David Ben-Gurion, arrived in London on March 18 on his return journey from a visit to the United States, where he met President D. D. Eisenhower, the West German Chancellor, Dr. Konrad Adenauer, and the UN Secretary-General, Mr. D. Hammarskjoeld.

Mr. Ben-Gurion's first engagement in London was an informal luncheon given by the British Prime Minister, Mr. Harold Macmillan, at which the Foreign Secretary, Mr. Selwyn Lloyd, the Labour leader, Mr. Hugh Gaitskell, and the Liberal leader, Mr. P. Grimmond, were among the guests.

In the evening, Mr. Ben-Gurion, with the Israeli Ambassador Mr. Lourie, again saw Mr. Macmillan and Mr. Selwyn Lloyd at 10, Downing Street for talks which lasted for nearly two hours, and which were later said to have covered the Middle East and world problems.

The Times, London, made the following comment on the visit:

"If the *status quo* in the Middle East cannot be adequately guaranteed and if the negotiations between the Soviet Union and the United Arab Republic result in a delivery of the latest MIG jet fighters to the United Arab Republic, Israel will be obliged to purchase modern jet fighters wherever possible.

"At present, Israel's adverse balance of payments, although greatly reduced in the past ten years, is running at about $290,000,000 a year, the difference being made up by German reparations which end in 1965, German payment of restitution, claims which will soon begin to tail off, US economic assistance, which may also soon tail off, the sale of Government bonds and subventions from world Jewry and other public and private supporters.

"The Israeli Government has, therefore, no wish to be faced with a bill for perhaps $10,000,000 for some 20 jet fighters when the economic situation over the next few years is bound to become considerably harder for Israel."

More than 100 Arab students in London gathered at the London airport with giant banners reading "Not Another Suez" and "No More British Arms for Israel" when Mr. Ben-Gurion arrived.

The Lebanese Embassy stated on March 18 that the Heads of all Arab Missions in London had delegated the Lebanese Ambassador to call at the Foreign Office on their behalf, and that a meeting had taken place between the Lebanese Ambassador and the Minister of State for Foreign Affairs, Mr. John Profumo, on March 16. The Lebanese Ambassador had expressed great anxiety on behalf of the Arab States regarding recent "concerted and engineered incidents" (presumably the incidents on the Israel-Syrian frontier and the military manoeuvres near Beersheba).

He had also spoken of their implications in view of Mr. Ben-Gurion's visit to London.

The Times said: "Evidently, there is much anxiety lest some agreement with Israel might encourage Israeli aggression. Mr. Profumo assured the Lebanese Ambassador that Mr. Ben-Gurion was paying a private visit to London on his way home from the United States (ie that he had not come on the invitation of the British Government).

News Conference:

Analyzing the situation in the Middle East at a news conference in London on March 18, Mr. Ben-Gurion said that peace might come to the Middle East sooner than many people thought. "This region needs peace more than other areas of the world."

Israel, he added, could make a very important contribution to the development of its neighbouring countries, as it was already doing in many parts of Asia and Africa. Peace in the Middle East still seemed far away. But there would be better chances of peace if world tensions were relaxed, as many hoped would be the case after the 'summit' conference on May 16, 1960.

He told a questioner that he supported disarmament in the Middle East and would attend a Disarmament Conference on the Middle East if one was convened.

Asked about his talks with the West German Chancellor, Dr. Konrad Adenauer (whom he met in the United States before his journey home), he said that they had an instructive discussion on world problems and some Middle East problems.

Asked if he favoured Big Power guarantees for the Middle East, he replied that the safety of the peoples in the area lay in their own strength.

He said that his willingness to meet President Gamal Abdel Nasser of the United Arab Republic at any time and in any place still stood.

Asked if he was concerned at the revival of anti-Semitism in the Western world, he

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

replied: 'Of course, I am. But, really I am not so frightened because we are not so hopeless as we were. The Jews now have a place where they can be safe and free, I mean Israel".

He said that his Government had not given up its original plan to use the waters of the upper Jordan river to irrigate the Negev desert. However, Israel intended to use the waters of the Sea of Galilee in order to avoid trouble. Neither President Eisenhower nor UN Secretary-General, Mr. Dag Hammarskjoeld, had attempted to dissuade Israel from carrying out the Jordan river project.

Mr. H. Macmillan On Arms Supplies:

Replying to a question in the House of Commons on March 22 about the purpose of Mr. Ben-Gurion's visit to London, Mr. Harold Macmillan said:

"Mr. Ben-Gurion has been spending a few days in this country on a private visit. He called on me, at his request, on March 17, when we discussed the problems of the Middle East and the world."

Mr. Macmillan was further asked if one of the matters discussed by them was the supply of arms and for an assurance that the British Government would not contribute in any way to an arms race in the Middle East, and he replied that he would refer the questioner to a reply given by the Joint Under-Secretary of State for Foreign Affairs, Mr. Robert Allen, on March 15.

He added: "I did observe that in an interview Mr. Ben-Gurion had said: 'I am in favour of complete disarmament in the Middle East, with mutual inspection, before world disarmament begins—if it does begin. An embargo in the present position, when a Great Power is sending arms to one country, would be a great injustice.' All these things have to be considered. I do not think it would be wise for me to deal with them by question and answer."

Asked if he, too, was in favour of trying to control the supply of arms to the Middle Eastern countries, he said: "I am in favour of anything we can do to reduce tensions there as part of, and perhaps in connexion with, world disarmament."

[The preliminary reply of March 15 referred to by Mr. Macmillan was by Mr. Robert Allan, Joint Under-Secretary of State at the British Foreign Office. He had said: "In the view of Her Majesty's Government, it is the duty of the Great Powers to show restraint in the supply of arms to the countries of the Middle East. This view is well known to the Government of the Soviet Union."]

Visit To USA:

The Israeli Prime Minister, Mr. David Ben-Gurion, arrived in Boston on March 8 to receive the honorary degree of Doctor of Laws from Brandeis University.

On March 10, Mr. David Ben-Gurion had a two-hour meeting with President D. D. Eisenhower in Washington.

He told newsmen later that he and President Eisenhower reviewed world problems, including the relations between Israel and the United States.

Ambassadors to the United States from 10 Arab countries expressed to the US Secretary of State, Mr. Christian A. Herter, on March 7 their deep concern over the consequences on the relations between the Arab world and the United States which could result from the visit to the United States of the Israeli Prime Minister, Mr. David Ben-Gurion.

In a Joint Statement, these Arab diplomats accused Israel and Zionists in USA of aiming to aggravate relations between the United States and the Arab States.

The US Secretary of State, Mr. Herter, said that the visit of Mr. David Ben-Gurion would not mean any change in America's friendly relations with the Arab countries.

Mr. Ben-Gurion returned home on March 24.

He told newsmen in Tel Aviv that in his talks with British, American and West German leaders, he had found almost no difference of opinion on any matter.

[Prev. ref. 2797:UAR:C, 3204:ISR:A]

B. **Budget For 1960-61:** Israel's Budget estimates for the fiscal year beginning on April 1, 1960 which were presented to the Knesset by the Finance Minister, Mr. Levi Eshkol, on February 15 showed increased allocations for defence and a determination to go ahead with the Jordan river waters scheme in spite of the United States' refusal to give financial aid towards it because of Arab opposition. [The Israeli plan is to divert the waters of the Jordan river to irrigate the Negev desert].

The total of the estimates was I£1,574,000,000 (about £315,000,000), of which I£1,029,000,000 was the Ordinary Budget, I£534,000,000 was the Development Budget and I£13,000,000 was for Local Authorities.

The allocation for the Ministry of Defence from the Ordinary Budget was given as I£260,000,000, but to this could probably be added the sum of I£134,000,000, described as "special expenditure".

This would mean that Israel would be spending just over a quarter of her total revenue on defence.

In addition, another I£134,000,000, listed as 'General Reserve', presumably would also, if needed, go to defence.

Officially, Israel's Defence Budget is secret, and these figures are an inexact indication rather than a fixed sum.

In the Development Budget, I£26,000,000 would go to water projects (part of the total of I£110,000,000 for agriculture) while I£65,000,000 would be used for industrial development.

There was an allocation of I£259,000,000 for housing. This was less than what was originally planned, since immigration was now only about 2,000 or 3,000 monthly.

There were no hints in the speech of the Finance Minister, Mr. Levi Eshkol, of a devaluation of the Israeli £. But there was one item of I£128,000,000 for subsidies for exports which presumably covered varying premiums paid to exporters for their added earnings.

A statement at the end of the Arab League Council meeting in Cairo announced that Israel's proposed diversion of Jordan waters for the Negev desert irrigation project would constitute "an act of aggression" against the Arabs.

It added that the Arabs would be justified in taking "legal self-defence" measures as provided in the United Nations Charter.

[One Israeli £ is equal to 4 sh. roughly.]

(*The Times*, London and *Cairo Radio*)

[Prev. ref. 2542:ISR:A]

C. **Commercial Agreement With Turkey:** A considerable increase in trade between Turkey and Israel is envisaged in a Commercial Agreement between the two countries announced in Tel Aviv on March 20.

The Agreement provides for a flow of goods worth $16,000,000 each way in 1960. This would nearly double Israel's exports to Turkey in 1959.

Under the Agreement, Israel will export to Turkey tyres, cars, fertilizers, pharmaceuticals, refrigerator and radio parts, cotton thread, newsprint, nylon thread, glass and asphalt. Turkish exports to Israel will consist mainly of agricultural products, sugar and cotton.

(*Tel Aviv Radio*)

[Prev. ref. 2556:ISR:A]

D. **Ancient Manuscripts Bearing On Dead Sea Scrolls Brought To Light In Soviet Union:** Ancient manuscripts and other material that may have a bearing on the famous Dead Sea Scrolls have just been brought to light in the Soviet Union according to Prof. Abraham I. Katsh of New York University.

Prof. Katsh, who is Chairman of Hyu's Department of Hebraic Studies, said on March 18 that he came across the material during a month-long tour of library archives in some 10 Soviet cities stretching from Siberia and Central Asia to the Baltic Coast.

He said: "This material must be carefully studied. But there is a possibility that some of it will help establish the dates of the Dead Sea Scrolls."

[The Scrolls are generally considered to be the first existing examples of Hebrew writing. But, the date of their origin is in doubt.]

Prof. Katsh indicated that a comparison of the writing on some of the hundreds of manuscripts and other material he found in the Soviet Union with that of the Scrolls may provide new clues as to when they were written.

He said that he planned to study the material further from the microfilms he had made during his stay in Moscow.

Just before going to Warsaw for further research, he told newsmen that he had also found in Moscow's library archives several unknown and unpublished poems by Yehudah Halevi, considered as an outstanding medieval Hebrew poet as well as a hitherto unknown 14th century manuscript by the grandson of Maimonides.

Maimonides has been called the greatest Hebrew philosopher of the Middle Ages.

Background:

The finding of another Dead Sea Scroll in March, 1960 continues a story of discovery that began in 1947. There had been earlier finds, notably in 1883 when a Jerusalem antique dealer named Shapira committed suicide because his discoveries on the east side of the Dead Sea were rejected as spurious.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

In 1947, an Arab goatherd wandering on the north-west shore of the Dead Sea discovered by chance a cave that was found to contain seven scrolls and innumerable fragments of scrolls. These seven scrolls were sold to dealers in Bethlehem, from whom the Hebrew University in Jerusalem acquired four. The other three went to the Monastery of St. Mark in Jerusalem and then found their way to the United States, where they have been published by the American School of Oriental Research.

It was not until 1948, however—and then only through a Note in an American archaeological journal—that the world of scholarship knew anything of the significance of the Scrolls and their discovery. The whereabouts of the cave were known only to the monks of St. Mark's and, after the withdrawal of the British administration from Palestine, war and chaos reigned in the area.

In 1949, a more detailed account of the scrolls in another American journal suggested that the cave was in the neighbourhood of Ain Feshka, south of Jericho. It was eventually discovered later that year (1949) by the Arab Legion acting on behalf of the Department of Antiquities of the Kingdom of Jordan. The Department, in collaboration with the Ecole Biblique et Archeologique Francaise of Jerusalem and with the assistance of the Palestine Archaeological Museum, undertook the excavation of the cave.

Meanwhile, details of the known scrolls had appeared. Among them was the complete Book of Isaiah, a commentary on the Book of Habakkuk, an apocryphal book called the *War of the Children of Light and the Children of Darkness*, a book of hymns, and a book of ritual of an unknown Jewish sect. Two other scrolls required laboratory treatment before they could be unrolled; they were the Book of Enoch in Aramaic.

By the middle of 1955, scrolls and fragments of scrolls had been recovered from three different localities in the area of Qumran and their interpretation was greatly aided by excavations carried out at the settlement of Khirbet Qumran. The first scrolls already referred to were all found in the one cave in the face of a cliff about a mile north of Qumran and a mile and a half west of the Dead Sea. They were written in Hebrew or Aramaic on leather and ante-dated by almost 1,000 years the earliest Hebrew manuscripts of the Old Testament.

The second category of scrolls, found also by chance in a cave 12 miles south of Qumran, relates to the second Jewish revolt against Rome in AD 132, and contains at least one document signed by Bar Cochba, its leader. The third group consists of thousands of fragments, found in one of the 25 caves explored by an expedition organized by Mr. G. Lankester Harding, Director of Antiquities of the Jordan Government, which explored an area about five miles long with Qumran at its centre.

Of these fragments, about one-third are biblical texts, covering every book of the Old Testament except the Book of Esther. The remaining two-thirds contain portions of the *Apocrypha* and *Pseudepigraph*. The expedition also recovered two other scrolls—the only known ones not written on leather—which contain a collection of traditions about buried treasures. These two scrolls were sent in 1956 to the Manchester College of Technology, where Prof. H. Wright Baker successfully accomplished the delicate task of "slicing" the corroded dust-laden sheets to enable a translation to be made.

In 1960, nearly 13 years after the discoveries of 1947, there is no sign of popular interest in the Dead Sea Scrolls abating. The literature that has grown up round the scrolls is enormous; the selective bibliography in one recent scholarly work covered more than 15 pages with about 25 entries to a page, and one British scholar claims to have 2,000 separate items by way of book reviews and articles on the scrolls in his own library. But there are many differing schools of thought about the origins of the scrolls and how they came to be hidden where they have been found.

There is, in particular, much disagreement about whether the Teacher of Righteousness lived within the Christian era or before it, and whether the sect of the scrolls was the Zealots or the Essenes.

(*Tass* and *The Times*, London)

[Prev. ref. 3194:ISR:A]

KOREA (South)

A. Election Of President And Vice-President: Dr. Syngman Rhee was re-elected President of the Republic for a fourth term on March 15.

Dr. Rhee, who was the leader of the Liberal Party, was elected unopposed by default as his Democratic Party opponent, Dr. Chough Pyong Ok, died in a US hospital in February. The latter's name, however, remained on the ballot list and many sympathy votes were cast for him.

[In the 1956 elections, the then President of the Democratic Party, Mr. Henry Shinicky, who opposed Dr. Rhee, died ten days before the polling date.]

Dr. Rhee (84) has been President of the Republic since 1948 when the country became free.

The main interest of the electoral contest after Dr. Chough Pyong Ok's death centred exclusively on the Vice-Presidency. The rival candidates were Dr. Rhee's running mate and Speaker of the National Assembly, Mr. Lee Ki Poong, and the Democratic Party's Mr. John M. Chang.

Mr. Poong, who was defeated by Dr. Chang in 1956, won the contest this time.

According to the Korean Constitution, the Vice-President automatically assumes the office of President in the event of the latter's death.

Soon after the polling was over, Dr. Chang announced that he would seek a court injunction declaring the elections void.

The Democrats had withdrawn all observers from the counting stations.

On March 18, the Democratic Party members marched out of the National Assembly, chanting, "Long Live Korean Democracy", after declaring that the elections were "null and void".

The Democratic Party said that it would boycott the future Assembly meetings and was discussing mass resignations from the Assembly in protest against the "irregularities and interference" in the elections.

In the past few years, the Government had strengthened its hold on local administration, and consequently on the crucial urban vote, by making the office of Mayor nominative instead of elective.

In two recent by-elections, at Yongil and Yongju, following the invalidation of the successful Assembly members in the 1958 elections, there was overt interference by the police.

Moreover, the date of the Presidential elections, normally fixed for mid-May, was brought forward almost two months on the plea of avoiding the busy period for farmers, and enabling as many of them as possible to vote.

This was decided just as Dr. Chough flew to the United States to undergo a serious abdominal operation from the after-affects of which he died. The change of date greatly curtailed the time available to the Democratic Party for campaigning, and made it virtually impossible for its leader to take any active part, even if he had been able to recover completely.

(*The New York Times* and *The Times*, London)

[Prev. ref. 832:KRS:A, 977:KRS:A]

MALAYA

A. New Tyre Factory: The British firm, Dunlop Rubber Company, has been permitted by the Government to build a tyre plant estimated to cost $25 million (Malayan) at Petaling Java, a satellite town of Kuala Lumpur.

The Government announced on February 17 that a grant of pioneer status, which would give tax relief for the first few years, was conditional on the Company satisfying the Government on the degree of protection which the Company would require, but pioneer status has already been approved in principle.

A factory to be built on 40 acres already purchased will initially produce 400,000 tyres yearly, half for Malaya and half for export. It is understood that some capital will be subscribed by Malayan investors.

(*The Times*, London)

[Prev. ref. 3007:MAL:A]

PAKISTAN

SUMMARY: US Aid During 1959; New Stamps On Kashmir; Committee To Enquire Into Film Industry; Marriage And Family Laws Commission's Recommendations.

A. American Aid During 1959: According to information released in Karachi on March 22, American economic aid to Pakistan considerably increased during 1959 as compared to previous years.

Pakistan had been receiving economic aid from America under two main categories—Project Assistance and Commodity Assistance. With the establishment of the US Development Loan Fund (DLF) in 1958, the pattern of Project Aid underwent a change. This assistance was later received as loan instead of an outright grant, on a long-term basis, repayable in rupees.

Pakistan received a total of over $96,000,000 under Project Aid during 1959 as compared to over $29,000,000 during 1958. A major part of the Project Aid during 1959, *viz* over $90,000,000, was under DLF programme and the rest an outright grant.

Allocations of assistance under Commodity Aid Programme amounted to $180,000,000 during 1959 as compared to $115,000,000 in 1958. Pakistan, however, utilized a total of about $132,000,000 in 1959 as compared to about $111,000,000 during 1958.

Under the Commodity Aid Programme, American surplus commodities had been received both as grant and as sales against local currency under special legislation.

Pakistan received a total of over $1,541,000,000 as assistance from all other outside sources from 1950 to 1959.

The large amount of aid was from United States. The American economic aid to Pakistan started with Point-4 Programme of President Truman in June, 1950 and had, up to the end of 1959, amounted to about $1,119,000,000.

Out of this, over $933,000,000 was under Project Assistance, Commodity Assistance and Relief Assistance. A sum of over $185,000,000 was in the form of loans.

Under Project Aid, Pakistan obtained the services of 442 technicians from USA while 644 Pakistani personnel were trained in USA.

B. Issue Of Four New Stamps Showing The "Correct Position" Of Jammu And Kashmir And Junagadh And Manavdar States: The Pakistan Posts and Telegraphs Department issued on March 23 four new stamps showing what was described in Karachi "as the correct position of Jammu and Kashmir and Junagadh and Manavdar States in relation to India and Pakistan." [Junagadh and Manavdar are in Western India.]

The stamps were of the denomination of half-anna, two annas, eight annas and one rupee, and showed the two Wings of Pakistan and a super-inscription on ammu and Kashmir State saying "Final status yet to be determined".

The stamps also showed Junagadh and Manavdar States as distinct from Indian territory.

[Prev. ref. 3036:INI:D]

C. Mr. A. K. Brohi Appointed Ambassador To Nepal: It was announced in Karachi on March 19 that the Governments of Pakistan and Nepal had agreed to exchange diplomatic missions at embassy level.

The Pakistan High Commissioner in India, Mr. A. K. Brohi, was appointed Ambassador to Nepal in addition to his assignment in New Delhi.

(*Dawn*, Karachi)

D. Committee To Examine Film Industry: The Ministry of Industries set up on March 15 a seven-man Committee, headed by Mr. N. M. Khan, Director-General of the Projects Division, to examine the problems connected with the film industry and suggest measures to develop it into a medium for the promotion of national culture and education.

The Committee consists of only officials. No representative of the industry was included.

Its terms of reference were: (1) To review the working of the film industry and identify the problems facing it; (2) To make suggestions to solve these problems; (3) To suggest ways and means of improving the industry, including the production of films in collaboration with producers of other countries; (4) To make proposals to enable the film industry in Pakistan to develop into a medium for the promotion of national culture and education and provide a healthy entertainment at the same time; and (5) To recommend measures for the general development of the industry.

(*Dawn*, Karachi)

[Prev. ref. 3081:PAK:I]

E. Recommendations Of Commission On Marriage And Family Laws: It was stated in Karachi on March 16 that the Government had accepted the recommendation of the Commission on Marriage and Family Laws —that no man should be allowed to take a second wife in the life-time of his first wife or pronounce divorce without first obtaining permission from matrimonial courts.

The Commission recommended the establishment of such courts.

The Commission's report said that Islam had given complete economic independence to woman and woman inherited from all sides, and that all the property inherited or earned by her was her own. Islam made marriage a civil contract by which woman could ensure to herself all security. Woman had an equal right of divorce and could demand dissolution of marriage on proof of the incapacity of her husband for marital life, or mental or physical cruelty, or ill-treatment. She could demand divorce by merely expressing her unwillingness to live with her husband. She would claim equal justice from her husband who had taken a second wife.

It regretted that due to rigidity of juristic orthodoxy, the liberal aspects of marriage were relegated to the background.

Recommending the recognition of all the right of woman as given by the Qoran, it said that a simple and better procedure should be adopted to secure them justice.

Emphasizing the need for registration of marriages for security and stability in family relations, it observed: "Unfortunately, the Muslim society in general has become so irresponsible in regard to such vital questions concerning life that the State must step in to prevent abuses. Polygamy has been neither enjoined nor permitted unconditionally, nor encouraged by the Holy Book but was prompted by the lower self of man."

(*Dawn*, Karachi)

[Prev. ref. 351:PAK:J]

TURKEY

A. Trade Relations With USSR: Turkey and the Soviet Union signed on March 14 a Protocol annexure to the Turco-Soviet Trade Convention of October 8, 1957 fixing the value of trade between the two countries for 1960 at $21,000,000.

This was the first time in many years that the two countries (which conduct a relatively small trade) had signed such a Protocol.

This was interpreted by Western diplomatic circles in Ankara as a sign of a 'thaw' in Turco-Soviet relations.

Turkey would export to the Soviet Union items such as wool, cotton, hides and leather, citrus fruits, some kinds of dry fruits and tobacco.

The Soviet Union would export to Turkey various types of machinery and equipment, metals, chemicals, sawn timber, cellulose, paper, glass and other commodities.

(*The Hindustan Times*, New Delhi and *Tass*)

[Prev. ref. 765:TUR:A, 2328:TUR:B]

UNITED ARAB REPUBLIC

A. Col. G. A. Nasser On Relations With USA And Israel, And On An Islamic Bloc: President G. A. Nasser told a group of visiting American publishers in Cairo on March 20 that if the United States supported Israel there would be no room for better relations between USA and the United Arab Republic.

[This was his first comment on the visit of the Israeli Prime Minister, Mr. David Ben-Gurion, to USA.]

President Nasser was quoted by one of the publishers as saying that he felt that 90 per cent of Americans were sympathetic to the cause of the Arabs. He had received 100,000 letters of support a month from USA during the Suez crisis and was still receiving them at the rate of 30,000 a month.

Mr. Ben-Gurion's visit to USA, he added, refreshed the memories of the Arab countries of what happened in 1948 when the US President, Mr. D. D. Eisenhower, gave support and arms to Israel. The Arab people feared that what happened in 1948 (the Palestine war) would be repeated through Zionist pressure in the United States and the heavy Jewish vote. While USA-UAR relations had been improving, he felt there was at present something in the air, and America was supporting Israel—which was trying to convince other countries that she was threatened—against the Arab countries.

Warning To West Against Interference:

Addressing a rally at Der'a in the Syrian Region on February 25, President G. A. Nasser warned Britain, France and USA that any interference by them under the 1950 Tripartite guarantee of the Middle East *status quo* would be crushed.

Commenting on what he called "voices emanating from Britain" to the effect that the three Western Powers—France, United Kingdom and United States—were agreed and were resolved to go ahead with their "policy towards tripartite aggression", he declared:

"To these imperialist Powers, I say that we will never accept this guardianship and interference, nor do we trust war criminals who shed our blood because we signed the UN Charter and that it is the sole authority to organize the world.

"To these imperialist Powers, I say that any aggression here or thought-of-aggression or determination to impose trusteeship on the area, or interference in its affairs, will result in the destruction of their interests in this Arab area as the Arab people are well aware that they possess the power to do so.

"When petrol ceases to reach them, their factories, armies and vehicles will come to a standstill.

"The time when the imperialist Powers used to threaten and boast has gone, never to return. They can boast and threaten in London and Paris, and we will pay no heed.

"We are building our homeland with one hand, and carrying arms with the other to defend our homeland, nationalism and Arabism."

(*The Egyptian Gazette*, Cairo)

[Prev. ref. 2837:UAR:A]

B. New Ministry For Syrian Region: President G. A. Nasser left Damascus for Cairo on March 18 after seven new Syrian Ministers had been sworn-in to fill the four posts vacated by the resignation in 1959 of three Baathist Ministers and the dismissal of another, and two posts just created.

The seventh portfolio was held by the Interior Minister, Colonel Sarraj.

Four of the new Ministers were Army officers and others were civilian officials.

The appointments came after widespread speculation that a comprehensive re-shuffle of the Government would be announced while President Nasser was in Syria.

At one stage, it was suggested that after having dropped the Baathist Left-wing members, Col. Nasser would co-operate with the Right-wing veteran politicians and had put out feelers to them; but, later, it was said that he would avoid such an embarrassing shift by appointing "technicians" with no party political background.

The new Ministers were:

Col. Akram Deiry, a senior officer of the Damascus Forces—Labour and Social Affairs;

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Col. Ahmed Heneidi, Director of Vice-President A. H. Amer's Damascus Office—Agrarian Reforms;

Col. Jamal Soufi, Commander of Naval Forces at Latakia—Supply (new portfolio);

Col. Jado Ezzedin, Commander of Forces at the Front adjacent to Israel—Minister of State for Presidential Affairs (new portfolio);

Dr. Husni Shawaaf, Under-Secretary of the Economy in UAR—Economy;

Mr. Yousef Muzahem, Syrian Under-Secretary of the Interior—Wakfs; and

Mr. Sabet el Aris, Minister to Yugoslavia—Culture and National Guidance.

The Syrian Executive Council is now formed of 18 members.

President G. A. Nasser has not yet replaced two Syrian members of the UAR Government who, as leading Baathists, had resigned with their colleagues earlier.

(*The Times*, London)

[Prev. ref. 3132:UAR:B]

ASIA OUTSIDE ASIA

SUMMARY: "Pioneer V" Launched; UK Defence Budget; US Trade With Communist Countries.

A. **USA Launches "Pioneer V":** A 90-lb satellite, carrying radio equipment designed to transmit information from distances up to 50,000,000 miles, was launched with success from Cape Canaveral (Florida, USA) on March 11.

The third stage of the rocket was released by a signal from Jordell Bank, England, where an American team was attached to the giant radio-telescope staff.

It was stated that the satellite would be at times out of range of all other tracking stations, as it was going into a huge orbit round the Sun, Earth and Venus.

Officials of the National Aeronautics and Space Administration (NASA) said that the satellite known as *Pioneer V* was going successfully into orbit. By noon on March 11, it was 42,460 miles from the Earth.

According to first information, the orbit would take 311 days to complete and the greatest distance from the Earth would be 186,000,000 miles. The satellite would approach within 74,700,000 miles of the Sun following a path inside that of the Earth and outside that of Venus, but touching the orbit of each once in every trip.

It was expected to last 100,000 years before being burnt up in the Earth's atmosphere.

This was the first known attempt to establish communication at such ranges. The radio-transmitter of the satellite is powered by solar cells in four "paddlewheel" vanes and will transmit its information only when within a range of 50,000,000 miles and in response to a signal.

The measuring equipment included a high energy radiation counter and an ionization chamber and Geiger-Muller tubes to measure medium-energy radiation, a micro-meteorite counter to determine the strength and direction of the magnetic fields in space and neto-meter to measure dust particles and a magan aspect-indicator which triggers an electrical impulse when it faces the Sun.

Officials in Washington said that it would take some months for trackers to establish the final trajectory because the satellite would come under the gravitational influence of Venus.

Because of a slight loss of speed, it might not intersect the orbit of Venus.

Tracking stations on the Earth should be able to communicate with the satellite throughout the 151 days the satellite takes to reach its closest approach to the Sun. After that, contact would be lost until it returned towards the Earth.

Structure Of The Rocket:

The following are the details of the structure of the rocket:

Height—90 feet, through three stages.

Weight—more than 105,000 lbs at blast-off.

First stage—modified *Thor* intermediate range ballistic missile weighing 100,000 lbs loaded with liquid fuel, delivering 165,000 lbs of thrust.

Second stage—liquid-fuelled engine adapted from earlier *Vanguard* and *Thor-Able* rockets, weighing more than 4,000 lbs and delivering 7,500 lbs of thrust.

Third stage—solid-propelled rocket adapted from *Vanguard* and earlier *Thor-Ables*, weighing more than 500 lbs and generating about 3,000 lbs of thrust.

Planned operation—*Thor* drives the rocket for more than 160 seconds after launch, then drops away. Small rockets start upper stage spinning near the end of the second stage engine burning time, about 100 seconds. After second-stage separation, the third stage burns about 40 seconds to propel payload to the Earth's escape velocity, about 25,000 miles per hour. Third stage separates from payload, and both coast into a Sun orbit.

It was stated on March 13 that the Jordell Bank Observatory continued to maintain contact with the satellite.

The radio-telescope contacted the satellite twice that day (March 13).

Reports from Jordell Bank said that the satellite was continuing its journey through space on course and was still travelling at a speed of several thousand miles an hour.

Prof. A. C. B. Lovell of the Jordell Bank Observatory said that the new satellite was released from the third stage of its carrier-rocket by a signal sent from his giant radio-telescope.

A button was pressed at Jordell Bank and the signal flew through space, causing an electrical current to melt a bolt in the satellite and release a powerful spring. The spring jerked the 90-lbs capsule from the last stage of its rocket. Soon afterwards, the transmitter in the probe was switched off by another impulse from Jordell Bank. All indications were that the probe was successfully separated from its rocket by Jordell Bank's signal.

Rocket Beyond 1,000,000 Miles From Earth:

The satellite passed the 1,000,000-miles-from-Earth mark at 2.00 a.m. Washington time (1230 hours IST) on March 18 and sent back information on its progress in answer to a query from Hawaii.

Mr. T. Keith Glennan, Director of the US National Aeronautics and Space Administration (NASA) told a celebration meeting in the NASA auditorium in Washington that the satellite had just "spoken" from 1,002,700 miles.

He said that the space vehicle had given them seven different kinds of information including that its temperature was 68 degrees Fahrenheit, that it had registered five heavy and 87 light impacts from micro-meteorites and that it had made two counts of cosmic rays.

The scientific data given by the satellite revealed that the surrounding conditions were in certain cases similar to those reigning near the Earth.

[Prev. ref. 2679:AOA:A, 3046:AOA:S, 3185:AOA:G, 3185:AOA:H]

B. **US Satellite "Explorer VIII" Fails To Go Into Orbit:** A United States Earth satellite, *Explorer VIII*, failed to get into orbit round the Earth on March 23. Its carrier-rocket was thought to have failed.

The satellite was designed to make the most thorough study yet of lethal radiation belts surrounding the Earth.

The satellite, equipped with five radiation detectors, was aimed to go into a flattened orbit ranging from 200 miles above the Earth at its closest approach to 33,000 miles away at its most distant point.

The National Aeronautics and Space Administration (NASA) said that its major objective was to analyse the energies of electrons and protons of the van Allen radiation belts over a long period.

The van Allen belts, discovered two years ago by Dr. James van Allen of Iowa State University, extend from 500 miles to many thousands of miles above the Earth and consist of charged particles trapped and guided by magnetic lines of force.

(*The New York Times*)

[Prev. ref. 3185:AOA:H]

C. **US "Discoverer" Satellite Fails:** A new satellite rocket *Discoverer X* exploded at the Vandenberg Air Force Base in California, USA, on February 19, a few moments after it was launched. It veered to the right and the US Air Force destroyed it by remote control.

The plan called for the 78-foot-long *Thor-Agena* combination to go into Polar orbit, then later eject a capsule so that it could be recovered.

Of the six satellites put into orbit by the United States, none have yet been successfully recovered.

The last *Discoverer* was launched on February 4 after several postponements. Its second-stage missile was damaged as the first was fired and the missile was, therefore, not believed to have attained the speed needed to put its satellite into orbit.

The *Discoverer X* launched on February 19, which was to have circled the Earth for about 28 hours and then slowed by a braking rocket, was to have re-entered the atmosphere and be further slowed down by a parachute.

Ten transport planes flying above Hawaii were then to have tried to intercept it with dragging cables hanging from the ends of their fuselage.

(*The New York Times*)

[Prev. ref. 3045:AOA:R]

D. **USA To Send A Man Into Space In 1961:** Mr. George Low of the United States National Aeronautics and Space Administration (NASA) told the Space Committee of the House of Representatives in Washington on February 16 that USA planned to fire a man into space 'sometime next year' (1961), bringing him back to Earth after he had made three circuits round the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

globe. The flight would last 4-1|2 hours.

He said that the *Project Mercury* capsule carrying the astronaut would begin its descent from an altitude of 120 miles off the coast of California.

Braking rockets and the air-drag of the atmosphere would reduce its speed from 27,500 miles to 200 miles an hour. When the capsule reaches 10,000 feet, a huge parachute would open up and it would drop into the Atlantic off the Florida coast.

By the time it hits the water, Mr. Low said, the capsule would be falling at only 20 miles per hour.

(*The New York Times*)

[Prev. ref. 2934:AOA:O]

E. French Sahara Bomb Five Times More Powerful Than Hiroshima Bomb: The French Defence Ministry announced in Paris on March 16 that the French atomic bomb exploded on February 13 in the Sahara had a power of between 60 and 70 kilotons (the equivalent of 60,000 to 70,000 tons of TNT).

The Ministry described the bomb's yield as "particularly satisfactory."

After an analysis of measurements taken at the time of the explosion, it was determined that the French bomb had been about five times as powerful as the American atomic bomb dropped on Hiroshima in World War II, which had a power estimated at about 13 kilotons.

(*The Statesman*, Calcutta)

[Prev. ref. 3208:AOA:A]

F. Radar Station In UK To Detect Approaching Ballistic Missiles: The United States and Britain announced on February 17 that they would cooperate in building a high-power radar station on Britain's east coast capable of detecting approaching ballistic missiles.

The announcement was made simultaneously by the US State Department in Washington and in the British House of Commons.

The cost of the station was estimated at $120,000,000.

The Ballistic-Missile-Early-Warning station (BMEW) would be built at Fylingdales Moor in Yorkshire. America would bear $98,000,000 of the cost and Britain the remaining $22,000,000.

Officials in Washington said that the station would be capable of detecting ballistic missiles over a large part of the Northern Hemisphere.

The exact range of the radar station was kept a secret, but a US Air Force spokesman said that it would provide a five-minute warning of an enemy missile approaching the United States.

The station would have a massive radar antenna so powerful that the enormous heat it creates would make it dangerous for anyone to stand close to it.

It would stand in a fenced-off area covering four square miles and people would be kept more than two miles away in front and about half-a-mile away behind the radar bowl.

The radar station would be under the command of the Royal Air Force. Officials said that it would be manned by about 50 RAF and USAF officers and men and about 500 civilian employees.

Two other BMEW stations were also being planned. They would be located at Clark, in Alaska, and Thule, in Greenland.

It was stated that USA took the initiative in seeking the establishment of the station in Britain.

(*The New York Times* and *The Hindu*, Madras)

[Prev. ref. 3042:AOA:C]

G. Britain's Defence Budget For 1960-61: The annual White Paper on Britain's defence expenditure, presented to Parliament on February 16, estimated the expenditure for 1960-61 at £1,629,000,000.

This was about £115,000,000 more than the original defence estimate for 1959-60.

It was explained that the increase was due, in part, to the inclusion in the Defence Budget of certain items of expenditure formerly borne in civil account.

Of the total sum to be spent on defence, the biggest allocation was to the Air Force which would receive £529,000,000 (an increase of £37,000,000). Expenditure on the Army was estimated at £487,000,000 (an increase of £46,000,000), and on the Navy £397,000,000 (an increase of £27,000,000).

While the United Kingdom made an important contribution to the preservation of peace by strengthening the nuclear power of the West, this was only one component of the deterrent. "Because of the need to meet local emergencies, which could develop into a major conflict, conventionally-armed forces are a necessary complement to nuclear armaments."

Britain, it said, believed that the heavy burden of defence expenditure made it increasingly necessary to promote wider international co-operation in this sphere among all the countries of the 'free world.'

The section of the White Paper relating to the development of new weapons referred to the future of the British ballistic missile *Blue Streak*, formerly decided upon as the type of missile best suited to British needs.

It said: "Our aim of research and development in the field of strategic deterrent is to devise a means of delivery that is invulnerable to the opposing defences. The development of the British ballistic missile *Blue Streak* is continuing. However, it may be decided not to rely exclusively on fixed-site missiles."

An order for the first all-British nuclear submarine was expected to be placed in the coming year.

The new aircraft-carrier *Hermes*, equipped with the latest devices in air defence, was about to join the British fleet.

The White Paper said: "The Government's broad defence policy has undergone no major change. Our task must still be to contribute in the most efficient and effective way possible, with our allies, to the maintenance of world peace.

"But our defence effort must be flexible, since the threat of war takes many and changing forms, and it must be expected that there will be shifts of emphasis from time to time to meet changing circumstances.

"This country makes an important contribution to the preservation of peace, by strengthening the nuclear power of the West. This is only one component of the deterrent. Because of the need to meet local emergencies which could develop into a major conflict, conventionally armed forces are a necessary complement to nuclear armament. Against the continuing communist military threat, the defence of the free world rests on a complex of collective security alliances."

(*UK High Commission*, New Delhi and *The Statesman*, Calcutta)

[Prev. ref. 2681:AOA:H]

H. S-EATO Comes Under US Immunities Act: In Washington on February 20, President D. D. Eisenhower issued an executive order designating the South-East Asia Treaty Organization (S-EATO) as a public international organization entitled to the benefits of the International Organizations Immunities Act of December 29, 1949.

The Act provides that certain privileges, exemptions and immunities shall be extended to such public international organizations as have been designated by the President of the United States through appropriate executive orders and to their officers and employees and the representatives of the member-States of such organizations.

The United States joined Pakistan, Australia, France, New Zealand, Philippines, Thailand and Britain on September 8, 1954 in signing the South-East Asia Collective Defence Treaty. The headquarters of the Organization is in Bangkok.

(*Dawn*, Karachi)

[Prev. ref. 2780:AOA:Q]

I. American Trade With Communist Countries: The United States Secretary of Commerce. Mr. Frederick Mueller, revealed in his quarterly report released in Washington on February 23 that the United States had issued licences for export to communist countries totalling $30,540,000 for the last quarter of 1959. This was the highest total for eight years.

The largest single export item was a textile mill valued at $17,000,000 for the Soviet Union.

Other exports included commercial transport aircraft for Poland valued at $7,800,000, alcohol for USSR amounting to $746,000 sulphur for Czechoslovakia totalling $690,000, tobacco for Czechoslovakia, East Germany and Hungary for $600,000, agricultural machines for USSR and Rumania for $437,000 and styrene for USSR for $420,750.

The US Government refused to grant licences for $1,400,000 worth of merchandise, including synthetic rubber, borax, fluorspar and other chemicals.

The report said that American imports from communist countries totalled $21,300,000 for the third quarter of 1959 as against $18,500,000 for the second quarter.

The Secretary of Commerce said that his Department had authorized American technical 'know-how' relating to various industrial sectors, except oil-processing, to be passed on to the communist countries.

Regd. No. D-727
Vol. VI. No. 17

BURMA

A. Parliament Begins—New Cabinet: The newly-elected Chamber of Deputies began its first session on April 1 when 232 members were sworn-in.

At the opening session, the House observed two minutes' silence in memory of the Africans killed in Sharpeville in South Africa. It also recorded its regret on the South African Government's action.

On April 4, the House formally elected the leader of the Pyidaungsu Party, U Nu, as Prime Minister.

[Pyidaungsu meaning "Union" was the new name adopted by the "Clean" Faction of the Anti-Fascist People's Freedom League. The Faction, headed by U Nu, as opposed to the "Stable" Faction of U Ba Swe, won a landslide victory in the Elections.]

The same day (April 4), Mahn Ba Saing (Pyidaungsu) was elected Speaker of the Chamber of Deputies.

Later in the day (April 4), U Nu and his ministerial colleagues were sworn-in.

New Cabinet:

The following were the members of the new Cabinet and their portfolios:

- U Nu—Prime Minister, Defence, Home Affairs, Democratization and Administration of Local Bodies, Information, Relief and Resettlement;
- Sao Hkun Hkio—Foreign Affairs;
- Thakin Tin—Finance and Revenue, National Planning;
- Bohmu Aung—Transport, Posts and Telegraphs, Marine and Civil Aviation, Public Works, Housing and Rehabilitation;
- U E Maung—Judicial Affairs, Education;
- U Raschid—Industries, Mines and Labour;
- U Ba Saw—Social Welfare and Religious Affairs, Union Culture, Health;
- Thakin Tin Maung—Agriculture and Forests, Land Nationalization, Co-operatives and Commodity Distribution; and
- U Thwin—Trade Development, Civil Supplies.

U Nu's Policy Statement:

In a policy statement made in Parliament on April 5, U Nu said that his Government's first and foremost task would to be reform itself and make it fit to wage a crusade for democracy, ensuring no misuse of power, applying the rule of law and welding the people together.

He paid a tribute to General Ne Win's 'care-taker' Government for preserving the ideals of democracy.

Admitting the mistakes committed by them in the past, he promised to reform his Party, the politicians and the Government machinery in line with democratic principles.

The economic policy of his Government, he said, would be Burmanization of trade and industry as far as possible and limitation of State participation in the economic sector.

In the enthusiasm of Independence, he said, they had embarked on an economic policy of State ownership without knowing enough of their own limitations. The limit had now come to reduce State participation in economic activity. "We have decided that during the four years we will be in power, we will not nationalize any industry or enterprise, nor will we embark on any policy of State control without taking account of our limitations. Our principal aim must be to free the nation's commerce from foreign domination and bring the control of commercial activities into national hands."

Referring to national unity, he promised to mend the mistakes of the past and urged the minorities to forgive and forget the mistakes of his former Party, the Anti-Fascist Peoples' Freedom League. The new Party which he had formed (Pyidaungsu) would never resort to abuse of power.

He promised to create separate States for the Arakanese and Mons as promised earlier on condition that these people really desired State-hood. Immediate steps would be taken to verify the desire of the people in Arakan and Tenasserim (where the Mons live).

He announced the formation of a Commission comprising monks and laymen to advise Government on the implementation of his promise to establish Buddhism as the State religion. The Commission would report its findings and suggestions during 1960.

Though he mentioned the necessity to maintain the rule of law in the country, he did not make any mention of the policy towards ending the insurrection, which, though almost defunct, still exists in some parts of the country.

He added that the Government would take immediate action to ratify the Border Agreement between China and Burma (concluded by Premier Chou En-lai and General Ne Win) and expressed the hope that "the two great neighbours—India and China—would also be able to arrive at an agreement soon on their border problem in the same spirit of amity and compromise which marked the conclusion of the Treaty between Burma and China."

He pledged that he would continue Burma's foreign policy of positive neutrality.

(*The Nation*, Rangoon)

[Prev. ref. 3263:BUR:A]

B. Gas Strike: The Burma Oil Company (1954) announced in Rangoon on March 28 that it had obtained encouraging gas production from its test well at Payagon in the delta area.

The Company pointed out, however, that it was too early yet to say whether there was sufficient gas to make production economic and a considerable amount of testing over a period of time and possibly further drilling would be necessary before this could be ascertained.

No oil had been discovered in this well.

(*The Nation*, Rangoon)

[Prev. ref. 1385:BUR:A]

CAMBODIA

A. King Suramarit Dead: King Norodom Suramarit, who had been ailing for some time, died in Pnom Penh on April 3. He was 64.

King Norodom Suramarit had succeeded his son, Prince Norodom Sihanouk, who abdicated the throne in 1955 to lead a popular democratic political movement and became Prime Minister.

The King was at one time a Cabinet Minister and private counsellor to his son when his son was Prime Minister.

He was educated in Saigon and married Princess Kossamak Nearikeak, daughter of the then reigning monarch, King Sisowath Monivong. He entered the Cambodian administration in 1918 and soon afterwards was appointed *aide de camp* to the King at the royal palace. In 1929, he became Minister for the Navy, Commerce and Agriculture. Just before World War II, he was sent to Paris by the King to settle difficulties with the Colonial Ministry. He achieved a settlement satisfactory to both sides and was made a Commander of the Legion of Honour. When his son, Prince Norodom Sihanouk, became King at the age of 19 in 1941, Norodom Suramarit abandoned his ministerial post and became private counsellor to his son.

INDIA

SUMMARY: Further Chinese Note On Border Issue; Afro-Asian Convention On Tibet; Dr. Sukarno's Brief Visit; Armed Forces Strengthened; Oil Strike In Cambay; Import Policy For April-October, 1960.

A. Sino-Indian Border Dispute—Chinese Note On Undelimited Frontier: In a Note dated April 3 (published on April 11) in reply to India's Note of February 12, 1960 (see page 3187), the Chinese Government reaffirmed its stand that "the entire Sino-Indian boundary has never been formally delimited and the areas now disputed by the two sides have always belonged to China, not to India, with a considerable part of them remaining upto now under the effective control of the Chinese Government."

It stated that the Indian Government was unable to cite any Treaty basis for the delimitation of the Western sector of the boundary and that with respect to the middle sector, "the Indian Government admits there exists no Boundary Treaty whatsoever."

As regards the Simla Convention of 1914 and the letters exchanged between the Tibet authorities and Britain on the MacMahon Line, it claimed that "these documents are illegal and null and void and the Simla Convention did not discuss at all the question of delimiting the boundary between China and India."

It turned down the Government of India's contention that the Sino-Indian boundary runs along the main watersheds and that, according to international usage, a customary boundary which followed such unchanging natural features stood defined and did not require formal definition again by the two sides.

It added that the claim that "the entire Sino-Indian traditional customary boundary follows the main watersheds is groundless' and

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

that "according to internationally accepted principles an international boundary signifies a demarcation line up to which the neighbouring States exercise their sovereignty over their respective territories and must be jointly defined by the States concerned."

Even though some sections of the Sino-Indian boundary might have comparatively distinct natural features, it was still necessary for the two sides to define jointly their starting and terminal points and their specific alignments.

As regards the question of jurisdiction of the Western sector, it stated that "it is an extraordinary thing that the Indian Government which claims to have exercised jurisdiction and been sending personnel to carry out regular patrol in this area, should have for a long time been totally unaware of the fact that since 1950 Chinese personnel and supplies have been busily travelling between Sinkiang and Tibet through this area and a road has been built across it."

It hoped that both the Chinese and Indian Governments "will do their utmost" to make the forthcoming meeting of the Prime Ministers of India and China a success and added: "The Chinese Government has by no means overlooked the fact that there remain difficulties on the way ahead, and there are still some people in the world who, harbouring ulterior motives, are trying all means to split and undermine the relations of our two countries and to prevent the success of the talks."

(*The Hindustan Times*, New Delhi)

[Prev. ref. 3187:INI:A, 3223:INI:A]

B. Border Roads Development Board Set Up: The Government of India has set up a Border Roads Development Board with the Prime Minister, Mr. Nehru, as Chairman and the Defence Minister, Mr. V. K. Krishna Menon, as Deputy Chairman to accelerate the economic development of border areas. The first meeting of the Board was held on March 29.

The Board has been given the powers of a Government department with its own Financial Adviser. Other members of the Board include the Secretary of the Ministry of Transport and the Consulting Engineer (Roads) of that Ministry, the Secretary of the Ministry of Defence and the Secretary for Kashmir Affairs in the Home Ministry.

A plan of road construction in these areas has been prepared and it will be the duty of the Board to have this plan implemented expeditiously.

Another Committee has been set up in the Cabinet Secretariat to ensure effective co-ordination at the Centre of development programmes in these border areas. The States and the local administrations are given financial assistance in this matter.

New districts have been created in the border areas of Uttar Pradesh and Jammu and Kashmir, each in charge of a Deputy Commissioner with wide administrative and financial powers. In Punjab and Himachal Pradesh, these tracts are still snow-bound and new districts would be formed in due course.

(*The Statesman*, New Delhi)

[Prev. ref. 3242:INI:E]

C. Afro-Asian Convention On Tibet: A three-day Afro-Asian Convention on Tibet opened in New Delhi on April 9 to demand the liberation of the Tibetan people from Chinese subjugation.

Nearly 50 delegates from 18 countries of Asia and Africa participated in the Convention.

Extending their whole-hearted support to the Tibetans "in the hour of their distress", the leaders of the delegations condemned what they called the new-fangled colonialism which had raised its head from communist China and threatened the countries of the two continents which were struggling to throw off "the yoke of Western colonialism".

Among the delegates were saffron-robed Buddhist monks from Ceylon and Burma and seated on the dais were 10 Tibetan lamas.

Before the Convention began, a two-minute silence was observed, at the suggestion of Mr. J. P. Narain, to pay homage to the "martyrs of South Africa".

Mr. J. P. Narain's Speech:

Mr. Jai Prakash Narain, who presided, said that the Convention, after its inaugural session, would consider what steps should be taken now to ensure the achievement of its goal—self-determination for the Tibetan people.

He said: "As an Indian, I cannot but deeply lament my country's part in the perpetuation of the fiction of Chinese suzerainty. It was wrong politically and ethically to turn one's back on Tibet on the ground that it was a domestic or internal question of China."

Referring to the work of the International Commission of Jurists which appointed a Commission of Investigation some time ago, Mr. Narain said that when its report appeared the world would be in a better position to know the truth about Tibet. "The material that has already come to light, however, is sufficient to convict China before the bar of world opinion of gross crimes of oppression and cruelty."

The scope of the Convention, originally fixed to consider only Tibet, he said, had subsequently been widened at the suggestion of representatives of West Asia and Africa to cover the whole anti-colonial struggle in these two continents. "We have to consider what steps could be taken in concert towards that goal."

Other Speeches:

The Swatantra Party leader, Mr. C. Rajagopalachari, who also addressed the Convention, however, said: "I am glad that the Government of India is doing all that it can and has taken an attitude which this assembly will endorse."

He said that it was difficult to find suitable words to express sympathy with the liberation movement in Tibet. It was not a question of legalistic exploration as to the sovereignty of Tibet. It was a question of human rights which must be decided on the plane of justice and humanity. Even on the legalistic plane, there could be no doubt about the rights of the Tibetan people to rule themselves. "I believe since China has over and over again expressed herself against colonialism, she should terminate the invasion of Tibet which is a brutal form of colonialism."

U Law Yonen, Editor of *The Nation*, who led the Burmese delegation, expressed his dismay at UN's "lukewarm" attitude towards the Tibetan problem and said that UN must come to the rescue of the small nations if democracy was to survive.

The Ceylonese leader, Rev. Malewant Gnanissara Thero, said that the rout of the communists in the recent Ceylonese elections was largely due to the torture the Chinese communists let loose on the Tibetans.

Mr. Patrice Lhonix of the Institute for Congolese Studies who represented Congo, said that the hearts of oppressed Africans went out to the Tibetans and called for a co-ordinated action to end all aggression.

Mr. Chang-Kuo-sin (Hong Kong) said: "We Chinese delegates from Hong Kong have come to this Convention with a heavy heart to see that some of our countrymen have sunk to such depths of political misconduct and it is difficult to condemn our own countrymen, but we must speak against ruthless suppression of human and civil rights."

The Indonesian delegate, Mr. Imron Rosjadi MP, said that his country was still carrying on a bitter war against Dutch colonialism and half of the ill-feeling against the Dutch was on account of West Irian. "As victims of colonialists, we realize the sufferings of the Tibetans."

Mr. Junsho Ota, Chief Priest of the Nichi Hongeniji temple and Chairman of the Board of Directors of the All-Japan Buddhist Association, said that within five years of the Bandung Conference, China had violated the principles laid down there by attacking Tibet and India.

Delegates from Malaya, Nepal, South Vietnam, the Philippines, Chinese Turkestan, Pakistan, Turkey, the Lebanon, Kenya, UAR and Jordan also spoke.

The Dalai Lama's Message:

The Dalai Lama, in his message, appealed to the Convention to enlighten public opinion on the urgent necessity of coming to the rescue "of my poor and unfortunate people" and said: "My people are living in a nightmare of oppression and tyranny. The newest form of colonialism is unprecedented. A massive colonization of Tibet by the Chinese is in progress. If this is not halted, there may be no Tibet."

He added: "I have repeatedly appealed for a just and peaceful solution of the Tibetan question. All that we ask is that we should be allowed to live on equal terms with our neighbours, as in the past, while following our own traditional mode of life, being left to solve in our own way such fresh problems as the changing times have brought.

"We Tibetans have no quarrel of any kind with the great Chinese people. We have always endeavoured to live in peace and amity with them. Even after the territorial integrity of Tibet was violated by the Chinese armies, I had always sought for peaceful and amicable settlement. Even after my arrival here in India, I have repeatedly appealed for a just and peaceful solution of the Tibetan question.

"You who belong to nations that have successfully claimed these rights are in a good position to know that our demands are just and deserving of support.

"I would beg of you to lend your fullest support when the Tibetan question is raised again in the international forum, and I have no doubt that the voice of Afro-Asian countries, growing stronger and more powerful every day, will compel the attention of the entire world.

"Though, in a question like this, the broad human issues, as I am sure you will agree, must take precedence over legal and political arguments, we nevertheless feel that there is considerable misunderstanding among people regarding the historical status of Tibet. We also feel that the hesitation shown by some of the Afro-Asian States, despite their evident sympathy, is probably attributable to the lack of understanding and necessary knowledge.

"Therefore, I deem it necessary to emphasize that whatever might have been our relation with China in the ancient past, we have enjoyed full and complete sovereignty since the Declaration of Independence made by the thirteenth Dalai Lama.

"It has given me and my people a great deal of hope and encouragement to find that the Government of India has endorsed this position in its Note to the Government of China of February 12. They have clearly pointed out that in 1914 it was not the first time that Tibet conducted negotiations and concluded treaties, in its own right, with foreign States. On several occasions before 1914, Tibet had conducted negotiations and concluded treaties with other States.

"It has further made it clear that at the Simla Conference, the Tibetan and Chi-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

nese plenipotentiaries met on an equal footing. This position was explicitly and unequivocably accepted by the Chinese Government.

"It has also drawn the attention of the Chinese Government to the fact that the credentials of the Tibetan representative issued by the Dalai Lama made it clear that Tibet was an equal party at the Conference, with the right to decide all matters that may be beneficial to Tibet, and the Chinese representatives accepted the credentials of the Tibetan representative as being in order.

"The credentials of the British Indian representative, which were also accepted by the Chinese representative, confirmed that all the three representatives were of equal status, and that the Conference was meeting to regulate the relations between the several Governments. These observations made by the Government of India should dispel any doubt that anyone may have entertained regarding the sovereign status of Tibet.

"There are many nations in Asia and especially in Africa which are at present fighting against tyranny like the Tibetans. To them goes our deepest sympathy. We, as their brothers in the struggle against oppression are, perhaps, in the best position to know exactly how much they are suffering. We cannot isolate oppression. Whether it is in the heart of Asia or in the Tropics of Africa; whether it is political subjugation or social injustice, as shown recently in South Africa, it is the same foe to all free men."

Committees' Reports:

Two Committees of the Convention on Tibet, which considered the political and human right aspects of the issue on April 10, held the Chinese guilty of committing aggression on, and genocide in, Tibet.

The Political Committee said that the Chinese Government had violated every Article of the 1951 China-Tibet Agreement signed by the Dalai Lama under "duress".

It was also of the opinion that Tibet must be ensured the right of self-determination.

The Committee on Human Rights was of the view that the issue should be taken up with the UN Human Rights Commission as genocide had been committed in Tibet "in all its forms as mentioned in Article 2 of the 1948 UN Convention".

The Committee on Anti-Colonialism in Asia and Africa suggested the need for setting up a permanent organization to persuade various Governments to raise the issue in UN.

All these recommendations were considered at the plenary session of the Convention on April 10.

Dr. Mohammed Rum (Indonesia), Dr. Tokumai Matsumoto (Japan) and Mr. Jaftha Mbaya Oyangi (Kenya) were the chairmen of the respective Committees.

Resolutions:

On April 11, the Convention announced the establishment of an Afro-Asian Council with headquarters in New Delhi with Mr. Jai Prakash Narain as its first President.

It also adopted a resolution put up by its Human Rights Sub-Committee and appealed to UN "to take speedy action under the 1948 Convention for the Prevention and Punishment of Genocide, and for the restoration of full human rights, which again is feasible only when the Tibetan people are helped to win back their liberty."

It called on all free people, Governments and international organizations of the world to lend their moral and political support to the "unfortunate people of Tibet in their desperate struggle".

It decided to establish a permanent Council for Tibet to work for the rights and liberties of Tibetans and to assist Tibetan refugees in India, Nepal and elsewhere to rehabilitate themselves and regain their Tibetan way of life. The Council would collect information regarding Tibetan life and the vast historical and art treasures of Tibet.

It agreed with the views of the Dalai Lama that colonization was "being used by communist China as a political weapon not only to firmly entrench its predatory rule on the people of Tibet but to exterminate the whole race itself and replace it by the Huns".

A resolution sent by the Political Committee, which was also adopted, saluted "the valiant Tibetans who, against overwhelming odds, resisted and are still resisting bravely the brutal efforts of the communist Chinese Government to obliterate their national identity and to suppress them politically".

It noted that the Sino-Tibetan Agreement of May 23, 1951, which was signed by the Tibetans under threat of military occupation, promised the Tibetans "the right of exercising national regional autonomy under the unified leadership of the Central People's Government", undertook not to alter the existing political system in Tibet, guaranteed freedom of religious belief and protection of monasteries, promised to maintain the established status and powers of the Dalai Lama and declared that in matters relating to various reforms in Tibet, there would be no compulsion by the central authorities. The Chinese had not only violated all these pledges but had also set about systematically destroying the foundations of Tibet's social and religious structure, its economic and political life and even its ethnic character.

It also adopted a resolution on South Africa which was moved by Mr. Frank Moraes noting with "horror" the recent events in South Africa where the doctrine of 'white' supremacy had led to the brutal massacre of Africans and warning the Government of South Africa that the Asian and African peoples would not submit to racial arrogance and extended its solidarity to the people of that country who were valiantly fighting the battle for freedom and equality.

It appealed to UN and its member-States to take effective steps to end the "barbarous practice" of *apartheid* and, if need be, to apply necessary sanctions for that purpose.

Kenya Delegation's Walk-out:

On the final day (April 11), there were pointed exchanges between the President of the Convention, Mr. Jai Prakash Narain, and two delegates from Kenya which led to the withdrawal of the Kenya delegation from the Convention.

The leader of Kenya delegation, Mr. Jaftha Mbaya Oyangi, accused the Convention of observing double standards and of "watering down" the importance of matters relating to Africa.

Mr. J. P. Narain took strong objection to the use of the phrase "watering down" and claimed that the Convention was only adopting resolutions which had earlier been passed unanimously by its Sub-committees and the question of any resolution being "watered down" by the Convention, therefore, did not arise.

The incident was over a resolution on Algeria which the Anti-Colonial Sub-committee of the Convention had failed to adopt owing to differences amongst its members. Mr. Oyangi, who was the Chairman of the Sub-committee, had insisted that specific mention should be made of the role of France in the whole affair and that the Convention should be as strong in condemning France over Algeria as it had been in condemning China over Tibet. After the walk-out by the Kenya delegation, the Convention adopted a resolution appealing for peace and freedom in Algeria but without mentioning France.

Earlier also, the delegates from Kenya clashed with Mr. J. P. Narain over a part of the resolution submitted by the Anti-Colonial Sub-committee relating to the freedom of the peoples of Africa. The delegates objected to the stipulation of safeguards for minorities in a constitution of free Africa, and Mr. Narain warned them in strong terms against the dangers of the overlordship of one race over others. The Africans, he said, had already had enough taste of this dual citizenship. Let them not want to taste it in reverse with themselves as the rulers and the white people as their subjects. It would be equally bad.

Chinese Reaction:

The *New China News Agency* said on April 10 that the holding of the Afro-Asian Convention on Tibet in New Delhi on the eve of Mr. Chou En-lai's visit to India was "obviously meant to poison the atmosphere" of his forthcoming talks.

It was also meant, it said, to "hinder the reasonable settlement" of the Sino-Indian border question.

The Convention, it added, was "directed by a small handful of notorious Indian reactionaries".

[Prev. ref. 2708:INI:E]

D. **Dr. Sukarno's Brief Visit To New Delhi:** The Indonesian President, Dr. Sukarno, arrived in New Delhi on April 1 for a 2½-hour stop-over on his way to Baghdad.

On arrival at Palam airport, he was received by the President, Dr. Rajendra Prasad, the Vice-President, Dr. S. Radhakrishnan, the Prime Minister, Mr. Nehru, the Finance Minister, Mr. Morarji Desai, and the Indonesian Ambassador in New Delhi, Mr. R. H. Abdul Kadir.

The brief airport reception over, Dr. Sukarno, accompanied by Dr. Rajendra Prasad, drove to Mr. Nehru's house for dinner.

Those present at the dinner were the Indonesian Foreign Minister, Dr. R. Subandrio, the Indonesian Minister for Small Industries, Mr. Suharto, the Director of the Indonesian President's Cabinet, Mr. Aamzil, the Indian Secretary-General, Mr. N. R. Pillai, the Commonwealth Secretary, Mr. M. J. Desai, and the Indian Ambassador at Djakarta, Dr. J. N. Khosla.

Dr. Sukarno and Mr. Nehru were reported to have discussed the international situation and matters of mutual interest for about 90 minutes. The relations of the two countries with China were also believed to have been reviewed.

Before emplaning for Baghdad the same night (April 1), Dr. Sukarno declared that at any 'summit' conference on peace and disarmament, Asian countries should be represented.

Asked about his 90-minute discussion with Mr. Nehru, he expressed his satisfaction over the talks and observed: "We talked about many things, including those concerning the world situation and improved co-operation between India and Indonesia."

He disclosed that he had invited Mr. Nehru to visit Indonesia again.

When asked whether Mr. Nehru had accepted the invitation, Dr. Sukarno, turning towards Mr. Nehru, smilingly passed on the question to him.

Mr. Nehru said: "It is always a great happiness to go to Indonesia, but as to when it will be, I do not know."

E. Armed Forces Strengthened: Replying to the debate on demands for grants in respect of the Defence Ministry in the Lok Sabha (House of the People) on April 9, the Defence Minister, Mr. V. K. Krishna Menon, said that the strength of the Army units had been augmented recently and the country's defensive power was now greater than before.

Army units, he added, had also been moved to forward positions. The Air Force had been considerably strengthened and it was now an all-jet force. In a short time, the Air Force would take into its squadrons supersonic aeroplanes.

The House voted the demands totalling more than Rs. 310 crores—about Rs. 29 crores more than the revised estimates for 1959-60 because of the Chinese incursions into Indian territory.

The Government, Mr. Menon said, would have to come before the House in the course of the year for more money for defence because many matters were pending.

Whatever might be the outcome of the forthcoming meeting between the Prime Ministers of India and China, he said, the fact remained that the northern frontier had become alive and "it has to be looked after in our time. It means re-conditioning of our thinking in every way, largely on the progress of industrialization and greater determination of people of all classes to defend the territorial integrity of the country and real preparation of men and women to be able to stand a shock if it should come."

India's policy, he said, was to defend her frontiers and not initiate a war in another man's territory. Any country which engaged in a defensive war was likely to suffer initial reverses, as the enemy would try to attack "your limited strength at a spot that is suitable to him". By this, he did not want to be an alarmist. It would be foolish to scatter either the armed forces or the air arm all over the frontier.

All the ammunition required by the armed forces was now manufactured in the country. The Government stock-piled certain things which could not be manufactured in the country consistent with its resources.

During the last two years, the Air Force had been considerably augmented. It had also produced equipment for planes and machine-tools in the last 18 months worth Rs. 2.5 crores. Supersonic engines would be made in India in three or four years.

As regards the Navy, he said, the construction of the Navy dockyard, which had suffered a setback because the contractor had broken his contract, was now being completed with the help of Army engineers and would soon go into commission.

He disclosed that the Government had acquired two dockyards—one in Bombay and another in Calcutta—where, in two years, destroyers would be built for the Navy.

The aircraft-carrier, which India was acquiring, was not a second-hand one but a new one, which would reach the country some time in 1961.

(*The Statesman*, New Delhi)

[Prev. ref. 2787:INI:F]

F. Oil Struck In Fifth Well In Cambay Area: It was revealed in Bombay on April 2 that oil was struck in the fifth well in Cambay area, near Lunej, on April 2.

Commenting on the success of the oil exploration work in the Cambay area, the Central Minister for Mines and Oil, Mr. K. D. Malaviya, said: "Our efforts for oil exploration in this area have been extremely rewarding. It is very unusual to find oil in five wells, one after another, in any area. Work on the sixth, seventh and the eighth wells has already been taken up."

Mr. Nehru visited the well on April 4 and named the drilling rig used there as "Vijaya." This derrick was used for the first test well at Lunej.

In a Press Note issued on April 4, the Oil and Natural Gas Commission said that the "results of the tests so far suggested a fair possibility of Cambay turning into a potential oil-field."

Against the world oil-strike average of about one well in 40 tests wells, it said, it was a "rare achievement" that in Cambay all the five test wells completed so far had provided evidence of gas and/or oil.

The average depth of the present wells was between 5,000 and 6,000 feet. The area under intensive exploration today was 10 square miles. With the help of 80 Russian and Rumanian technicians and over 300 Indian personnel, the drilling and ancillary operations undertaken since July 25, 1958 had proved productive.

It announced that the Commission intended to increase the number of drills in operation in Cambay area.

Oil Refinery For Cambay Planned:

The Central Minister for Mines and Oil, Mr. K. D. Malaviya, said in the Lok Sabha (House of the People) on April 7 that Cambay was now a "proved and commercially feasible" oil-field, though the exact quantity of oil and gas in this field had not yet been determined.

However, he added, the Government was "very hopeful" about starting planning for a medium-sized refinery of 500,000 or 1,000,000 tons capacity in the area by the end of the current year (1960-61).

He said it was proposed to drill about 150 to 200 wells "in this proved oil-field". The exact quantity of oil would be known when an average ratio between oil and gas in these wells was established. More wells would be drilled in the adjoining areas as it was hoped "to find some more oil-fields."

He also announced that it was proposed to undertake a "rapid seismic survey" in the Cauvery basin in the next two months to explore the possibility of striking oil. Instruments for the purpose had been ordered. If the results were encouraging, drilling operations would be undertaken.

(*The Times of India*, Bombay and New Delhi)

[Prev. ref. 3123:INI:O]

G. Import Policy For April-October, 1960: Without adding to the half-yearly import bill of Rs. 180 crores, the new import policy for the next six months (April-October, 1960) announced on March 31, aimed at a marginal increase in the import of essential raw materials and spare parts for industry.

Larger imports of copper, brass scrap, parts of motor cycles and scooters and many other items would be balanced by the reduction in the import quotas of a wide variety of industrial products whose indigenous output had lately increased.

Of special interest to consumers was the decision to increase the import quota of watches. Totally banned two years ago, watches worth Rs. 2,50,000 were allowed to be imported during the previous six months. In the next half-year (April-October, 1960) this quota would be increased to Rs. 10,00,000.

Other items to be imported in larger quantities would include milk-food for infants, natural and synthetic oil, rubber contraceptives, printing machinery, switches, transformers, machine tools, some chemicals and spare parts of musical instruments.

Boiler tubes, leather belting, pine oil, certain textile chemicals, several drugs and some motor vehicle parts were among the items whose import had been curtailed.

In announcing the increase in the import of non-ferrous metals, the Commerce and Industry Ministry expressed the hope that established importers would ensure their "controlled distribution...according to the directions of the Government".

A system of annual licensing would be introduced during the coming half-year. Under this, the import of a large number of items of interest to the industry could be planned, licensed and contracted on an annual basis.

This would, however, be subject to the limitation that payments during the first six months would not exceed 50 per cent of the amount authorized in the annual licence.

An analysis of the trade trends during the last three years showed that industrial raw materials formed more than 60 per cent of the country's total imports, while capital goods accounted for roughly 15 per cent.

The remaining 25 per cent was divided almost equally between foodgrains and consumer goods, which, however, included such essential items as kerosene, drugs and medicines.

(*The Statesman*, New Delhi)

[Prev. ref. 2942:INI:I]

H. All-India Manufacturers' Organization Annual Session: Inaugurating the 20th annual session of the All-India Manufacturers' Organization in New Delhi on April 3, Mr. Nehru laid stress on two requisites of rapid industrialization—a properly thought-out, planned approach and a crusading spirit —and said: "We have the human material. We have almost everything which, put together in a proper way, can give quick results."

He made three main points in his speech. First, he was unhappy that some of "our own people" were trying to create an "atmosphere of misery and sorrow" by constantly "bemoaning the lot of this country" at a time when their efforts should aim at creating an atmosphere of "hope, strength and self-reliance."

Secondly, he deprecated the "old lingering idea" that it was easy to order what India needed from abroad instead of making things ourselves and that imported stuff was better than what India manufactured. It was good that compulsion of events (the foreign exchange crisis, for instance) had forced India to produce many things which she could not import.

Thirdly, he favoured as much open competition between the public sector and the private sector as possible because it was good for both of them. The "frog-in-the-well" mentality of the private sector in demanding all the time that the public sector should not touch anything that it (the private sector) would do itself was harmful.

There should be a proper balance, he said, between the big and medium and small-scale industries. The big industries provided an essential base without which the future progress would be retarded. But this country needed hundreds of thousands of smaller industries.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Mr. N. D. Sahukar's Address:

In his presidential address, Mr. N. D. Sahukar, Chairman of the Organization, demanded the appointment of a Special Military Commission for a thorough examination of the defence potential of industries in the private-sector, a re-examination of the entire control mechanism, greater co-ordination between credit institutions and an overall one per cent reduction in interest to quicken the tempo of industrial production and mobilization of gold reserves.

He said that the "sloth and indifference" which characterized industrial activity in the country in the past were melting away and the success achieved in the industrial sphere during the First and Second Five-Year Plans was "something of which we should all be really proud."

He pleaded for the liberalization of imports of capital goods and industrial raw materials which would quicken the pace of industrial progress. The tax structure should be devised in such a manner as to provide the necessary impetus to the industrial investor.

He also called for positive steps to bring out and canalize hoarded gold for national use. The money saved by the evasion of taxes was invested in gold ornaments and bullion. "Therefore, whatever we can do to unearth hoarded gold will do the country immense good."

Increasing taxation was resulting in a rise in prices and the Government "should thoroughly examine the effect that additional taxation would have on the price of a commodity." It was necessary to hold the price line "as all our best laid plans will go awry if we do not curb the inflationary trend which has raised its ugly head in recent months."

[The A-IMO represents mostly the small and medium-scale industries and the main objective of many of its units is to help feed the larger industries in the private and public sectors.]

Resolutions:

In a resolution passed on April 4, the session expressed concern over the increase in the cost of production of many industries "as a result of the ever-increasing incidence of indirect taxation, particularly in the form of excise and import duties, sales-tax and octroi levy on raw and processed materials and components imposed by the Central and State Governments as also local bodies" and said that the "unco-ordinated" levy of taxes did not permit a correct appreciation of the total burden imposed by the taxation structure.

It was of the view that if the rising cost of production was not checked by "moderating" the incidence of taxation, "our efforts to stabilize and reduce the cost of commodities will be frustrated."

It said that production of goods at lower cost would alone stimulate demand, lead to increased output, increased exports and increased saving and investment.

Pleading for the rationalization of the tax structure, it urged reduction of "commodity taxation" through amalgamation, wherever possible, of excise duty, sales-tax and purchase tax in such a way that the total incidence did not exceed a reasonable percentage of the value of the commodity.

It also urged simplification of the procedure of collecting the various levies and taxes. Exemption from toll and octroi duty on goods either in transit or meant for export and not for use, sale or consumption within municipal limits was also demanded.

It recommended the appointment of a Commission to study the incidence of indirect taxation on manufactured commodities, with particular reference to its effect on the total cost of manufacture.

By another resolution, it welcomed the liberalization of import restrictions by the Government, particularly the decision to permit the import of more raw materials like non-ferrous metals, raw rubber and chemicals.

In order to minimize the hardships experienced by medium and small-scale industries in obtaining adequate and regular supplies of raw materials, it urged that licences be issued on the basis of planned production targets and simultaneous announcements of policy regarding all items, including steel, machine tools, heavy chemicals, art silk and yarn.

In a resolution on "Labour policy for the Third Five-Year Plan," it pleaded for the adoption of such a policy as would promote cordial industrial relations, maximum productivity and settlement of disputes through collective bargaining and voluntary arbitration. It urged the adoption of a uniform labour policy for the whole country, with limited rule-making powers to the States.

It pleaded for the revival of the Labour Appellate Tribunal or the creation of a Special Labour Branch of the Supreme Court in order to minimize delays involved in adjudication.

[Prev. ref. 2590:INI:J]

I. **Tariff Commission's Report On Sugar Cost Structure:** The Tariff Commission, in its report on the cost structure of sugar, published on April 4, divided the sugar producing States into four regions and proposed four regional schedules indicating ex-works cost of manufacturing in the respective regions.

It expressed the view that "preparation of an all-India schedule of the cost of production will result in an unrealistic figure on the whole" in view of the variance in the duration of seasons from one region to the other.

Its recommendation in this regard was accepted by the Central Government.

It prepared four separate cost schedules applicable to four regions: (a) northern region comprising the States of Uttar Pradesh, Bihar and Punjab; (b) Bombay State; (c) Madhya Pradesh and Rajasthan; and (d) southern region comprising the States of Andhra Pradesh, Madras and Mysore.

According to a Press Note issued by the Directorate of Sugar and Vanaspati in the Central Ministry of Food and Agriculture, the Commission clarified that Kerala should be covered by the cost schedule for the southern region and Orissa, West Bengal and Assam by the schedule for the northern region.

The Government also accepted the Commission's recommendation that in addition to the cost of production derived from the cost schedules with reference to the duration of the season and the rate of recovery of sugar, 12 per cent return on employed capital should be allowed so as to provide sufficient funds for each unit to meet its commitments under bonus and gratuity, shares, managing agents' commission and income-tax and finally leave a residue to a large majority of the units in all regions to declare reasonable dividends.

The Commission had not recommended the grant of any rehabilitation allowance for fixation of ex-factory price since it had come to the conclusion that such an allowance was not justified for all units in the sugar industry.

It suggested that any unit which required additional funds for purposes of rehabilitation should seek assistance from financing institutions.

The Government had decided to make use of cost schedules prepared by the Commission to determine the control prices of sugar.

The Government was also of the view that the present control prices in Uttar Pradesh, North Bihar and Punjab did not call for any change.

[Prev. ref. 3203:INI:N]

J. **Working Journalists' Federation Annual Meeting:** Presiding over the eighth annual session of the All-India Federation of Working Journalists in Patna on March 26, the President of the Indian Federation of Working Journalists, Mr. M. V. Sane, called upon all political parties and the people to launch a campaign urging the Government to re-organize the newspaper industry on the lines proposed by the Press Commission.

It would be a tragedy, he said, if the lethargy of the people and the Government provided "an opportunity to the vested interests entrenched in the Press to misuse this powerful medium of public education for their own aggrandisement."

The time had come for the Central Government and Parliament to seriously consider the question of ownership of newspapers in view of the growing monopolistic tendencies in the industry. "Continued ownership of such a powerful medium of mass communication by profit-seeking industrialists is detrimental towards the establishment of a socialistic pattern of society."

He regretted that the Central Government had not set up a Press Council or introduced price-page schedule as recommended by the Press Commission and urged the Information and Broadcasting Ministry to promptly initiate moves to usher in the long-delayed Press Council.

Referring to the Wage Committee's decision, he said: "In a number of States, claim petitions made by working journalists in the context of the Committee's recommendations are pending before law courts, and the Labour Departments of the State Governments have not done anything to expedite these cases.

"We must take serious note of this embarrassing situation and try to persuade State Governments to be more alert and prompt in this matter. We must also ask for a revision of these decisions through another Wage Board."

He urged the Central Government to take immediate measures to re-organize the *Press Trust of India* in accordance with the recommendations of the Press Commission and said: "It is dangerous to allow this news agency to continue in the hands of a few newspaper owners."

He announced that two more co-operative journals—*Daily Despatch* and *Nava Mani*—would start publication from Madras soon. The *Prayag Patrika* had commenced publication from Allahabad in March, 1960 and a similar effort was being made in Bombay.

Resolutions:

The session, which concluded on March 28, passed a resolution expressing alarm at "the increasing concentration of ownership of news media and their purposeful abuse for the promotion of private and personal interests and demanded that Parliament should enact legislation for ensuring the diffusion of ownership of the present joint stock companies owning newspapers and encouraging newspaper public trusts and co-operatives as recommended by the Press Commission.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

It added that until this was done, freedom of the Press would be a mirage and would even endanger the successful working of democracy.

It viewed with concern that despite unanimous approval of Parliament of the recommendations of the Press Commission, the authority of the State had encouraged and indirectly favoured such concentration in the matter of allotment of newsprint, granting of loans and financial assistance, allocation of advertisements, clearance of newspaper titles, extension of teleprinter facilities, issue of import licences for import of machinery and selection of representation abroad and demanded that in the interests of all-round development of the Press and unfettered flow of news the least the Government could do was to permit these facilities only when it did not lead to concentration and monopolization.

It regretted that in spite of several assurances given in Parliament by the Central Minister for Information and Broadcasting that no news agency which was ancillary to a newspaper or a business house would be granted facilities and recognition, a new news agency, in which two newspaper chains were greatly interested, had been granted the necessary permission, thus increasing the concentration. It demanded that the Government of India should immediately withdraw the licence.

It added that since the Government of India and Parliament had accepted the recommendation of the Press Commission that the *Press Trust of India* should be converted into a public corporation, it failed to understand how the Government had suddenly reversed its policy to encourage the formation of a new news agency in which only two newspaper chains would have controlling interest.

[Prev. ref. 2709:INI:I, 2710:INI:J]

K. **"Omega"—Fundamental Particle In Nuclear Physics Discovered:** *It was reported in New Delhi on March 31 that an important discovery in the field of nuclear physics, which was of far-reaching significance in the understanding of nuclear force and the harnessing of nuclear energy, had been made by Dr. B. Bhowmik, Reader in the Physics Department of Delhi University, and his associates.*

Dr. Bhowmik discovered the existence of a new "fundamental particle" in the course of his research on nuclear emulsions and he named it "Omega" tentatively. The existence of only about 15 "fundamental particles" is known so far, the most commonly known being electrons, protons, neutrons and mesons.

As is well known, the atom consists of a nucleus with electrons rotating about it. The nucleus is built up of protons and neutrons which are held together by "fundamental particles" called mesons which act as a cementing force. These mesons are of two kinds—the Pi meson having a weight of 273 times an electron and the K meson with a weight 966 times an electron.

It is of importance to know what other particles may also be responsible for holding together neutrons and protons inside the nucleus of an atom.

Dr. Bhowmik discovered the new "fundamental particle" while studying the properties of the K meson in nuclear emulsions, which are special photographic plates. These plates were exposed to an artificial beam of K mesons from the Berkeley Bevatron (a giant particle accelerator producing 6.5 billion electron volts, used to break up the nucleus of an atom). The track of the beam left on the nuclear emulsion, when magnified about 2,000 to 3,000 times under a microscope, revealed the existence of the new particle.

Dr. Bhowmik said that the new particle had a weight of about 1,300 times an electron. He described it as being "negatively charged and unstable". It disintegrates into a negative Pi meson and a neutral Pi meson with an energy release of 356 million electron volts.

The discovery of the new particle was of immense significance as it enabled a better understanding of a nucleus. It would facilitate the breaking-up of a nucleus which when accomplished was accompanied by a release of enormous amounts of energy which might be harnessed for use as power.

(*The Statesman*, New Delhi)

[Prev. ref. 3145:INI:Q]

L. **Indian Ocean Research By Russian Expedition:** The 5,700-ton *Vityaz*, the floating oceanography research institute of the USSR Academy of Sciences, arrived in Bombay from the Seychelles on April 4 in the course of her 30,000-mile cruise from Vladivostok to Odessa.

[The *Vityaz* is studying oceanography under the joint auspices of UNESCO and the International Geo-physical Year Programme. Three oceanographers of the Indian Navy had boarded the ship at Cochin two months earlier for scientific studies when the vessel had called at Cochin.]

The *Vityaz*, the second Russian research-steamer to arrive in India, had been operating in the northern part of the Indian Ocean. The first Russian floating non-magnetic observatory, *Zarja*, visited Bombay in 1959.

Prof. V. Bogorov, leader of the Soviet Expedition, told newsmen that a 10,000-ft-high submarine mountain and about 100 new species of fishes, crabs and other submarine life had been discovered in the Indian Ocean by them.

The mountain, which was discovered off Madagascar, he said, would be named after Bardin, a well-known Russian scientist.

They would be able to throw new light on the geological history and structure of the Indian Ocean. The Ocean bed has a very complex structure and varied greatly in the eastern and western regions. The Indian Ocean was unique as nowhere else in the world. There was a seasonal reversal of winds like the south-east and north-west monsoons.

The most interesting research, he added, was done south of the Sunda Archipelago in the Javanese depression reaching a depth of 7,500 metres. A fact discovered there was that all the layers of water, reaching up to 4,000 metres in depth, were heated by the Sun and the lowest layers got their warmth from the Earth.

The *Vityaz*, he said, carried out a series of special investigations on radio-activity and it came to be known that there was no "stagnant" water in the ocean. Water circulated even at the very bottom. After being dissolved in water at great depth, radio-active wastes quickly rose to the surface where Strontium-90 and other radio-active products were consumed by plankton and plankton-eating fish. In this way, dumping of radio-active wastes in the sea became dangerous to humanity.

(*The Times of India*, Bombay)

[Prev. ref. 3114:AOA:M]

M. **Church A Public Trust—Bombay High Court Ruling:** The Bombay High Court held on April 5 that a Roman Catholic church fell within the scope of the Bombay Public Trusts Act and was in any event an endowment within the meaning of the Act.

The High Court gave this ruling in an appeal filed by Rev. Fr. Tarcissus Mascarenhas, Vicar of the Sacred Heart of Jesus, Worli, against a decision of the Charity Commissioner who had held that the church was a public trust registrable under the Act. This was a test appeal which the High Court dismissed.

The appellant had argued that the Public Trusts Act was not applicable to Roman Catholic churches, that these churches were governed by canon law and that the provisions of the Act contravened the fundamental rights of Roman Catholics.

It was also urged that a Roman Catholic church did not come within the scope of the definition of a 'public trust' and that definition of the words "trust" and "trustees" in the Act was beyond the legislative competence of the State.

Mr. Justice Mudholkar and Mr. Justice Tarkunde, who delivered the judgment, said that the canon law was not the law of the land, but it could be regarded as the personal law of Roman Catholics.

The provisions of the Act, they held, did not affect the fundamental rights of Roman Catholics to hold property and to freely profess, practise and propagate their religion, but it only regulated the administration of religious and public trusts. The Constitution had empowered the State Legislature to impose reasonable restrictions as well as to require the administration of property to be in conformity with law.

It was the contention of the appellant that Roman Catholics had no beneficial interest in a church and, therefore, a Roman Catholic church would not be a public trust. Further, Section 36 of the Act which placed restrictions on alienation was *altra vires* the Legislature; and if a Roman Catholic church was held to be a public trust, then canon law was the instrument of trust and its provisions should be given effect to.

The respondents, the State of Bombay and the Charity Commissioner, challenged the contentions of the appellant and stated that a Roman Catholic church was a public trust and every church building, by reason of its dedication or consecration, was set apart forever for public Christian worship and that the 'faithful' all over the world, and in particular the parishoners, had a right to worship in a church.

They further contended that the Bishop and the Parish Priests were administrators under the canon law, and even the Pope himself was the supreme administrator and not owner of ecclesiastical property. Under the canon law, a church was a "public trust" and the administrators were "trustees."

(*The Times of India*, Bombay)

IRAQ

A. **Gen. A. K. Kassem Announces Formation Of A Palestinian Army:** The Prime Minister, General Abdel Karim Kassem, announced over Baghdad Radio on March 27 the formation (in Iraq) of a Palestinian Army for the independent Palestine Republic he has proposed.

He called upon all Palestinians to volunteer and said that training courses would begin for them on April 15.

Commissioned and Warrant Officers would be trained at Iraq's Reserve Officers College, and there would be a special basic training programme for the lower ranks.

Volunteers would have the same rights and privileges as those in the Iraqi Army. Later, the training programmes would be expanded to meet all requirements of the Army.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

This, he said, was a realistic, practical step to restore the sacred land of Palestine.

B. Designs For Shipyard At Basra Being Prepared In Leningrad: According to information available in Baghdad on March 22, designs for a river shipyard to be built at Basra under the Soviet-Iraqi Economic and Technical Assistance Agreement of March 15, 1959 are on the drawing boards in Leningrad.

The chief engineer responsible for the design, Mr. Vladimir Cherepnin, said in an interview that the shipyard would build river tugs and big barges.

The design provides for the construction of a ship with four through lines, foundry, hull, mechanical and wood-working shops. The shipyard will also have its own designing bureau.

It is planned to start the construction of the shipyard in 1961 and complete it in 1963.

(*Tass*)

C. Death Sentences Commuted: The Prime Minister, General Abdel Karim Kassem, commuted the death sentences on eight persons to jail terms on March 27. The prison sentences of hard labour for life on six others were also reduced.

The reprieves were made to mark the Greater Bairam Feast on March 28 which ended the Muslim fast of *Ramzan*.

The former Iraqi Prime Minister, Mr. Fadhel Jamali, a former Foreign Minister, Mr. Burhaneddine Bashayan, and another ex-Premier, Mr. Mohktar Baban, had all had their death sentences commuted to 10 years' imprisonment.

The former Army Chief of Staff, General Rafik Aref, and General Omar Ali had had their death sentences also commuted to seven years' imprisonment.

General Ghazi Daghistani, Gen. Aref's second in command at the time of the 1958 revolution, had been sentenced to three years, more than half of which he had already served in preventive detention.

Other prominent members of the monarchist *regime*, such as the ex-Premier, Mr. Tewfik Soueide, and the ex-Finance Minister, Mr. Khalil Kanna, had their sentences of hard labour for life commuted to fixed terms of imprisonment.

General Aref, General Daghistani and ex-Premier Jamali were sentenced to death by a military court in Baghdad on November 10, 1958 for plotting to overthrow the Syrian regime. Bashayan was sentenced on similar charges.

UNITED ARAB REPUBLIC

A. Afro-Asian Film Festival: Scores of film stars from Asia and Africa, in colourful national costumes, attended the opening of the second Afro-Asian Film Festival in Cairo on February 29.

Among the countries participating in the Festival were India, China, Indonesia, the Soviet Union, North Viet-Nam, North Korea, Lebanon, UAR and the Yemen.

India was represented by the Tamil film *Veerapandya Kattabomman*, starring Shivaji Ganesan.

Full-length film shows began on March 2.

The Indian film drew repeated applause when it was screened.

The Festival decided on March 8 that the third Afro-Asian Film Festival would be held in New Delhi in 1962.

A resolution passed by the Festival Committee unanimously approved the idea of exchange of films between the participating countries to encourage the joint production of Afro-Asian films.

On March 11, the South Indian film stars, Padmini and Shivaji Ganesan, were adjudged the best actress and actor for their portrayal in the Tamil film *Veerapandya Kattabomman* and received Gold Eagles at the Festival.

[*Veerapandya Kattabomman* was the only feature film nominated by the Government of India for the Festival.]

The Gold Eagle for the best short film was awarded to the Indian documentary *Taj Mahal*.

The Gold Eagle (first prize) was awarded to the Soviet feature, *Prince of Samarkand*.

Silver Eagles were awarded jointly to the Egyptian actress Magda for her performance in the film *Kaiss and Laila*, and China's Yan Li Tchun for her part in *Five Golden Flowers*. Wang Chia Ni, Director of the Chinese film, also received a Silver Eagle.

Twelve Certificates of Merit for performances in full-length features were also awarded, including one to the Indian actress, Padmini, heroine of *Veerapandya Kattabomman*, and 17 Certificates of Merit for performances in short films.

(*The Egyptian Gazette*, Cairo)

[Prev. ref. 3168:INI:L]

ASIA OUTSIDE ASIA

SUMMARY: IATA Meeting; Ghana's Draft Constitution; British Labour Party And Nationalization; IPI Asian Representative; Son For Queen Elizabeth.

A. IATA Meeting — Adjustment Of Air Fares: Increases in some highest-class fares, an extension of cheaper travel facilities and a reduction in the number of classes of passenger services to two were among the decisions announced on March 16 at the end of the International Air Transport Association's (IATA) Special Traffic Conference in Paris.

Some 250 delegates from 80 air lines had been attending the Conference since February 23 in an effort to settle fares problems on which the necessary unanimous agreement was not obtained at the normal Traffic Conference in Honolulu in October, 1959.

Subject to the approval of Governments, the new arrangements will apply during the traffic year which begins on April 1, 1960, but presumably because of the short interval which now remains, a number of the Paris decisions will not become effective until afterwards.

The two classes of service to be offered to passengers in future will be known as First Class and either "tourist" or "economy", according to the area in which the latter is provided.

A new amenity on the North Atlantic route is to be a special 17-day excursion fare of £125 return between London and New York for travel in jet aircraft and of £114.5s.9d return for flights in propeller-driven aircraft on "economy" services between October 1, 1960 and March 31, 1961. The corresponding propeller-driven aircraft fare between London and Montreal will be £106.15s.9d.

The single fare for the highest-class service between London and New York will be £178.11s.5d. This will apply both to jet aircraft with First Class lay-out and to propeller-driven aircraft in which sleeper-type seating is provided. For propeller-driven aircraft with normal First Class seating, there will be a London-New York single fare of £157.2s.10d. The new two-fare structure on the North Atlantic will start on July 1, 1960.

At present, there are four classes on the North Atlantic—the single fares between London and New York being: de luxe, £178.sh12, (plus £7.sh3 surcharge for jet travel); First Class £157.sh3 (plus £7.sh3 jet surcharge); tourist, £114|6|- (jet surcharge £5.sh8); and economy, £91.sh16 (jet surcharge £5.sh8).

New basic economy fares for jet air-liners were agreed at £96.8.7 single, between London and New York, and £90.14.3 single, between London and Montreal. (The current London-Montreal economy class fare is £90, plus £5.sh8 jet surcharge). Trans-Atlantic "economy" class travel in propeller-driven aircraft will be cheaper. From May 1 to September 30, 1960, fares for such aircraft will be £7.2.10 less for a single journey and £12.17.2 less for a return flight than the basic jet fares. Between October 1, 1960 and March 31, 1961, they will be £10.14.3 less for a single journey and £19.5.9 return less than the jet aircraft fares.

Fares between other points in North America and other points in Europe and the Middle East will follow the same pattern.

The Paris Conference renewed the current reduced fares for family travel in the off-season for both classes of service.

On the mid-Atlantic run, the air-lines decided to maintain the present fare structure, with some minor modifications, until October 1, 1960. From that date, the level of First Class fares will remain virtually unchanged and will apply equally to jet aircraft offering normal First Class accommodation and to propeller-driven aircraft in which sleeper-type seating is provided. There will also be a lower First Class fare applicable only to propeller aircraft, as on the North Atlantic.

From October 1, 1960, the lower-class service on the mid-Atlantic will be known as "economy" with fare reductions of up to 16 per cent below the current tourist fare. One-way fares for propeller aircraft in economy service will be at least £10.14.3 less than the "economy" fare for jet aircraft, the exact amount depending on the sector flown. Special student fares are also to be introduced on the mid-Atlantic from May 1, 1960.

With effect from October 1, 1960, First Class fares between Europe and the Far East and Australasia will be increased by a small percentage, while tourist fares will be lowered by amounts ranging between 6 and 10 per cent over the same sectors. The lower-fare service will be re-named "economy" class from October 1, 1960, fares for jet and propeller aircraft being the same.

Excursion fares from Europe to India, Pakistan, Ceylon and Nepal will come into force on May 1, 1960. Parties of six or more travelling together on an inclusive tour basis will pay a fare 22 per cent below the normal applicable one.

First Class fares between Europe and Africa are to be raised from October 1, 1960. The margin is not stated, but tourist fares will be reduced in general by up to 10 per cent. Special round-trip excursion fares will also be introduced between the Union of South Africa and points in Europe, and between Britain and the Union. Both these excursion fares will be 16 per cent below the present tourist fare and will be valid for a period of 90 days.

Within the Far East and the Australasian area, the present general level of fares for First Class and "tourist" class will be maintained, with minor adjustments.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

British Overseas Airways Corporation (BOAC) appear likely to benefit from the results of the Paris Conference on two scores. At Honolulu, they pressed for an extension of "economy" class fares—at present confined to the North Atlantic—to other routes. Lower fares are now to be introduced in some of the areas in which they are particularly interested. Their *Britannia* turbo-prop aircraft should also benefit from the fare differential for propeller-driven aircraft, making them more competitive against jets.

Since the Honolulu Conference, BOAC has also been given permission by Mr. Duncan Sandys, British Minister of Aviation, to operate lower-class services on cabotage routes —those between Britain and the British Colonies and territories, on which fares are not subject to IATA approval. The date for the introduction of these lower cabotage fares has not yet been announced.

BEA was able to obtain agreement at Honolulu for reductions in excursion fares on many European routes this Summer, so that they are unaffected by the fares decisions taken in Paris.

The IATA announcement said that the agreements reached had resolved all matters left open by IATA Conference at Honolulu, except for fares on trans-Pacific services.

(*The Times*, London)

[Prev. ref. 460:AOA:G, 980:AOA:A, 1340:AOA:K]

B. **Draft Constitution For Ghana:** A White Paper setting out a draft Constitution for a sovereign unitary Republic of Ghana was laid before the Ghana Legislative Assembly in the first week of March, 1960. The Assembly was sitting as a Constituent Assembly.

The Assembly was asked to endorse the Draft Constitution before it was submitted to a plebiscite to be held between April 19 and 26.

There was no provision in the draft on the membership of the Commonwealth. Mr. Kwame Nkrumah, who will be attending the Commonwealth Prime Ministers' Conference in London in May, 1960, will, however, tell the Conference that the Republic of Ghana would wish to remain within the Commonwealth.

The surrender of the whole or any part of the sovereignty of Ghana to a union of African States and territories is provided for in the constitutional proposals.

The Draft Constitution vests the government of the State in a President and a Cabinet of at least eight Ministers who must be members of the National Assembly. The President will exercise all the powers at present exercised by the Governor-General and by the Prime Minister. He will not be a member of the National Assembly but he will be entitled to address the Assembly and to send messages to Parliament. The first President of the Republic will be named in the Constitution.

The National Assembly will have 105 members. All those who have attained the age of 21 years and are not disqualified by law on grounds of absence, infirmity of mind or criminality, would be entitled to vote.

To ensure that the President and the Assembly work as one the constitutional provisions link the election of the President to the election of members of the National Assembly. If the Assembly and the President disagree the issue is to be decided by a General Election.

The election of the first President will be held along with the plebiscite on the Draft Constitution. Any Ghana citizen over 35 years of age may be nominated as a presidential candidate by any ten members of Parliament and the people will be asked to decide who should be the first President. Even if there is only one nomination the election is to be held so that the people can express their approval or disapproval of the candidate.

The election of future Presidents will take place whenever the National Assembly is dissolved by the President. At the General Election every parliamentary candidate can give notice that he supports a particular candidate for the Presidency. On election as member of Parliament his vote will be automatically cast in favour of the presidential candidate whom he supported.

If any presidential candidate has the declared support of more than half the members of Parliament, he will become President.

In the event of there being no clear majority, the members will be released from their previous declaration of preference for a particular presidential candidate and will proceed to elect a President by secret ballot.

If after five secret ballots the members cannot agree upon the choice of a President, the National Assembly will be automatically dissolved and another General Election held.

Though the Draft Constitution is based upon the theory that the system of election of the President and National Assembly is such that they will always be in agreement, it vests the President with the power of vetoing any bill or part of a bill.

The President can at any time dissolve the National Assembly but by so doing he must either retire from office or submit himself for re-election. If a President resigns or dies during his term of office, the National Assembly will elect a new President to serve until such time as the Assembly is dissolved, when the normal form of presidential election will take place. There is provision for setting up a Presidential Commission of three persons to discharge the functions of the President during an interval between the death or resignation of a President and the assumption of office by his successor, or during the illness of a President or his absence from Ghana, or whenever a President is adjudged by the Chief Justice and the Speaker of the Assembly as incapable of acting.

General Elections are to be held every five years. Since the coming plebiscite is held to correspond very nearly to a General Election, it is proposed that if the presidential election shows little change in the existing balance of parties the present Assembly will continue as the first National Assembly of the Republic.

A session of the Assembly is to be held at least once a year. If an emergency arises while the Assembly stands dissolved, the President may summon all those who were members until the dissolution to sit in continuance of the previous session until the majority of the General Election results are declared.

Under the Draft Constitution the National Assembly will have much the same powers of control of the national finances as at present. No expenditure may be met out of public funds except on the President's authority, and this authority cannot be given unless provision is made either by the Constitution or by an Act of Parliament. The President is required to cause estimates of expenditure to be prepared and, if approved by the Cabinet, laid before the National Assembly.

The present system of a Supreme Court, divided into a court of appeal and a high court, will continue in being. Judges of the Supreme Court cannot be removed from office except by a two-thirds vote of the National Assembly on grounds of stated misbehaviour or infirmity of body or mind.

The Draft Constitution is designed to preserve and guarantee chieftaincy. A House of Chiefs will continue to exist for each region of Ghana with functions relating to customary law and other matters as may be provided by law.

The entrenched provisions of the Draft Constitution relate principally to the franchise, the status of Ghana as a unitary Republic, the declaration of fundamental principles, and the tenure of office of Judges. The repeal or amendment of any of the entrenched provisions can only be effected by way of a referendum after which Parliament can pass the necessary legislation. Apart from the entrenched provisions, the Constitution could be amended by an ordinary Act of Parliament.

Dr. Kwame Nkrumah's Broadcast:

In a broadcast to the nation on March 6, the Prime Minister, Dr. Kwame Nkrumah, said that the keynote of the proposed republican Constitution was "one man, one vote" and the unity of Africa.

Only when the principle of "one man, one vote" was adopted throughout the African continent, he said, could the "misery and oppression which prevail in many parts of this continent come to an end."

His People's Convention Party and the Government also believed "that the people of Africa will never be truly great happy and prosperous while they remain divided into a number of small States.

"So deep is our faith in African unity that we have declared our preparedness to surrender the sovereignty of Ghana in whole or in part in the interests of a Union of African States and territories."

The proposed Constitution was "based firmly on the rule of law" and left no scope for arbitrary action or for discrimination against any individual or community.

It was in many ways a unique Constitution and contained many features not found in the constitutions of other countries.

Assembly Votes Approval:

On March 15, the Constituent Assembly voted its approval of the Government's proposals to turn the country into a Republic under an Executive President.

Approval by a majority vote came at the end of a two-day debate on the proposals which will now be submitted to the people of Ghana in a plebiscite on April 19.

Earlier, the Constituent Assembly had rejected an Opposition amendment calling for the appointment of a Constitutional Reform Commission to inquire into the whole constitutional question.

Opposition members insisted on a division on the amendment, but it was defeated by 75 votes to 10.

One Opposition leader, Mr. Jatoe Kalco, said he thought that a declaration on Ghana's continued membership of the Commonwealth should have been embodied in the Draft Constitution (instead of in an accompanying White Paper).

He added: "It would be a sad day if Ghana decided to quit the Commonwealth."

(*The Egyptian Gazette*, Cairo and *Ghana High Commission*, New Delhi)

[Prev. ref. 2424:AOA:A, 2424:AOA:H]

C. **Re-thinking By British Labour Party On Nationalization:** The National Executive of the British Labour Party decided in London on March 16 to "water down" its traditional pledge to bring about large-scale nationalization.

Clause 4 of the Party Constitution embodying this pledge would remain intact but there would be an *addendum* stating that this would not necessarily be achieved by a wholesale State take-over of private industry.

The National Executive's decision amounted to a victory for the Party leader, Mr. Hugh Gaitskell, whose proposals to revise the Constitution on this issue provoked bitter controversy from some sections of the Party.

Mr. Morgan Phillips, the Labour Party's General Secretary, told a news conference after the meeting: "It became clear during

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the discussion that agreement was going to be very easy about the need for amplification and clarification of the aims of the party.

"I have never known a meeting with such a high standard of good-spirited debate in the whole of the 20 years I have been attending meetings of the Executive Committee."

The relevant part of Mr. Gaitskell's proposed addendum to the constitution was said to stress the changing needs of industry and commerce for differing forms of public ownership according to circumstances.

Since the Labour Party's third election defeat by the Conservatives in October, 1959, Mr. Gaitskell's proposal to revise the Party Constitution had provoked bitter opposition —particularly from the Left-wing, which saw such a move as a retreat from traditional socialist doctrines.

D. **IPI Appoints First Asian Representative:** The International Press Institute announced on March 21 the appointment of Mr. A. G. P. Vittachi, Editor of *Ceylon Observer*, as the Institute's first Asian Representative.

Mr. Vittachi would take over his new assignment shortly after the International Press Institute (IPI) Conference in Tokyo.

The functions of the Representative would be: (1) to give advice, wherever it is desired, to editorial staff; (2) to go deeply into the problem of the language Press and to make recommendations both for the Press itself and to IPI for future programmes; (3) to organize workshop training seminars for news editors, sub-editors and reporters—these seminars, to be organized on a country basis and a regional basis, modelled on the domestic seminars held by the American Press Institute at Columbia University but adjusted to Asian needs and conditions; (4) to collect material on all successful experiments or innovation in the Asian Press which have led to increased circulation—this information to be made available to the members through the medium of an IPI report; (5) to spot editorial talent anywhere in the field and make recommendations for help that should be given through any agency; and (6) to examine training programmes now in operation and report on them.

The IPI further hopes that it will be able to appoint a management expert who will give advice to newspapers who may desire it for such matters as budgeting, circulation distribution and the building up of advertising revenue.

[Prev. ref. 2753:AOA:B]

E. **Increased British Aid To Under-developed Countries:** A British Government White Paper published in London on March 14 said that the flow of financial aid from the British Exchequer to the under-developed nations of the world had risen in the previous two years from £80,000,000 £138,000,000 in the present financial year.

The greater part of this assistance goes to the less-developed nations within the Commonwealth, but substantial sums are laid aside for general development programmes carried out by such international bodies as the World Bank.

In addition, private investors in Britain also send abroad each year another £300,000,000, of which about a third goes to less-developed nations, making a total of some £250,000,000.

The White Paper set out in detail how this money was spent and demonstrated how the increasing prosperity of Britain was shared by the under-developed nations of the world.

(*UK High Commission*, New Delhi)

[Prev. ref. 2295:AOA:B]

F. **Tin Council Fixes Next Export Quota:** The International Tin Council, which concluded its session in London on March 9, fixed the total permissible export of the six producing members of the Agreement. The figures for the tenth period—April 1 to June 30, 1960—was 37,500 tons.

Countries represented at the Council meeting were: Austria, Australia, Belgian Congo and Ruanda-Urundi, Belgium, Bolivia, Canada, Denmark, France, India, Indonesia, Israel, Italy, Korea, Malaya, the Netherlands, Nigeria, Thailand and the United Kingdom.

In deciding on 37,500 tons, the Council took into account the provisions of paragraph 8 of Article 7 of the Agreement. The Council estimated that actual exports would be about 35,300 tons.

The Council extended to the end of June, 1960 the authority which it had granted on previous occasions to the buffer-stock Manager to operate within the middle range of prices (£780 to £830 per ton) in the Agreement.

As stated in January, the Council's buffer-stock held 11,150 tons on September 30, 1959.

[Prev. ref. 3138:AOA:S]

G. **Queen Elizabeth Gives Birth To A Son:** Queen Elizabeth II gave birth to a son in London on February 19. The child would be second in line of succession to the British Throne.

This was the first baby born to a ruling British monarch since Princess Beatrice was born to Queen Victoria in 1857.

All churches—Anglican, Roman Catholic and Non-Conformist—directed that special prayers be sung and bells rung for the new Prince.

Within minutes of the birth, the news was flashed to all parts of the Commonwealth by priority telegrams and telephone calls.

(*The Times*, London)

H. **Disturbances In Movement Of Earth—Sun's Influence:** The Director of the Paris Observatory, M Andre Danjon, reported officially on February 22 that the movement of the Earth was suddenly disturbed on July 20, 1959, and the day suddenly got longer by a thousandth of a second.

M Danjon said in his report to the French Academy of Sciences that his recent observations had confirmed the report he made on the subject in November, 1959.

He explained that on July 20, 1959, the duration of the day suddenly increased by a thousandth of a second.

Since then, the days have been becoming shorter by a millionth of a second per day. This shortening showed no tendency of changing.

Radio astronomers and specialists in the ionosphere and cosmic rays noted that on July 20, 1959 there were unusual solar eruptions.

M Danjon said that once before, on February 23, 1956, very strong solar explosions had coincided with a change in the rotation of the Earth.

He added: "It is unlikely that these were coincidences. The movement of artificial satellites is disturbed by solar variations, and we are justified in believing that the movement of the Earth can also be."

(*The Egyptian Gazette*, Cairo)

[Prev. ref. 792:AOA:O]

I. **Infinite Number Of Planets Inhabited:** Russia's well-known Professor of Astronomy, Mr. Boris Vorontsov-Velyaminov, wrote in *Tekhnika Molodezhi* (*Technic and Youth*) on February 20 that "there must be an infinite number of planets in the universe inhabited by beings endowed with reason."

He added: "Although only a small per cent of the planets have highly organized forms of life, the universe was boundless and, therefore, even the number of planets with reasoning beings must be infinitely great."

His view was seconded by Prof. Vladimir Alpatov, a biologist.

By tentative estimates, Prof. Alpatov stated, there were approximately 100,000,000 planets, and it was quite probable that some of them had reached a state of development corresponding to that of Earth. It could be expected that life, similar to that on Earth, flourished on such planets.

Dr. Nikolai Zhirov (chemistry) covering the problem of atmosphere on other planets, pointed out that the organism of a Martian, for instance, could very well adapt itself to normal existence with a low body temperature.

He said he felt that the gaseous composition of Martian atmosphere was quite suitable to sustain the life of beings which had become adapted to it.

Prof. Alexander Imshenetsky. Director of the Institute of Micro-biology, wrote in the same journal that now the principal task was to design instruments for detection of lower organisms in outer space and for micro-biological study of cosmic dust.

He said he believed that the time was near when such samples would be retrievable from the Moon.

(*Tass*)

[Prev. ref. 2782:AOA:X]

J. **Panama Canal And Its Trade And Defence Value:** The value of the Panama Canal as a trade and defence asset for the entire Western hemisphere was underlined both positively and negatively during 1959.

More ships and bigger, chiefly bulk carriers, piled up new high records for total transits, for cargo tonnage and in toll collections.

These gains reflected healthy commerce in which ocean freight bound from or consigned to Latin America played an increasing part.

But when it became necessary in mid-year (1959) to close one lane of the locks at Gatun briefly for modernization, delays of ships running to four days brought home to businessmen and military analysts what a stoppage in this world-wide public utility operated by the United States could mean.

Then, in November, 1959, when domestic politics in the Republic of Panama set off a series of disorders along the Canal Zone border, the commendation of the demonstra-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

tions in the *Sovetsky Flot*, newspaper of the Soviet Navy, left small doubt as to the evaluation of the waterway's strategic importance.

But, in the jet and missile age, the Canal's logistics potential is based on the rapid passage it offers to bulk foodstuffs and raw materials rather than on the movement of troops, munitions or naval vessels as in World War II.

Vessels squeezing through the 45-year-old waterway during the fiscal year ended June 30, 1959 totalled 11,181, an increase of 1,000 over the number six years ago and a volume not forecast before 1970. In May, 1959, a new monthly high of 897 ocean-going commercial ships was set. In November, 1959, there was a new daily high of 30 vessel transits.

This traffic trend prompted several short-term projects to widen, deepen and light the Canal. More than $11,300,000 was spent in 1959 and at least $10,000,000 is projected to be spent in coming months.

The day of decision when the President and Congress of the United States must properly determine what long-term steps will best meet the rising demands of world shipping was brought closer.

These cannot be financed by the Panama Canal Company, which is merely the Government's wholly-owned operating agency. Any important move, such as digging the Canal to sea level, or building an overflow canal in Nicaragua, will require heavy appropriations. The sea-level project, which has been commended by the Company's Board of Directors, would take $2,600,000,000.

Although the Canal tolls totalled $46,500,000 in 1959, up from $37,200,000 six years ago, the net gain was only $3,000,000, compared with $3,600,000 in 1954.

Besides heavy spending for more capacity, the Company has had to meet greatly increased costs for supplies and labour.

Since late 1956, the minimum wage has been 50 cents an hour, but for the last two years the United States minimum of $1 an hour has applied on contracts for Canal projects, that is almost all large contracts except those for housing and schools.

The average wage paid on the Canal Zone jobs is 82 cents an hour, regardless of citizenship.

A uniform wage scale, as provided in the 1955 Treaty, became effective early in 1959. Under this Treaty, qualified Panamanians, such as physicians, nurses, teachers, engineers and some highly skilled labourers are paid at United States domestic rates, except that Americans receive a differential for overseas service and a tax differential to equalize the much lower Panama income-tax rates with the United States rates applying in the Zone.

All wages paid in the Canal Zone are distinctly higher than those in the Republic of Panama.

Contracts planned in 1960 include $9,000,000 for the superstructure of a $20,000,000 arch truss bridge across the Canal at Balboa, $8,000,000 for channel widening, $2,000,000 for housing, $1,000,000 for new tug-boats and up to $2,000,000 for replacement of towing locomotives at the locks.

[Prev. ref. 999:EGY:A]

K. **Mystery Creature Of Nyasaland:** A message from Mazimba in Nyasaland reported on February 29 that a local game ranger, Mr. Oliver Cary, was camping in a dense forest near the shores of Lake Nyasa in the hope of tracking down the mysterious "Ufiti" (which means, in the local dialect, the "ghost of the supernatural").

The "Ufiti", a shaggy black creature living in huge nests at the top of smooth-trunked trees, was seen for an hour on February 28 by the Protectorate's new Chief Secretary, Mr. G. S. Jones, who was visiting the area.

Game Department officials have counted about 100 "Ufitis" since the first was seen at the end of 1959 in the Nkata Bay district, and photographs have been taken.

Game officials and missionaries in this isolated part of the Protectorate have been hiding in trees and behind bushes with cameras to get photographs and one, Mr. P. Goodwin, claims to have photographed the "Ufiti" several times.

From descriptions received so far the "Ufiti" appears to be about five feet six inches tall and weigh about 150 lbs. It has a black, hairless face, and the rest of its body is covered with black hair.

Plaster casts of its spoor have been sent to world authorities for examination.

One suggestion is that the "Ufiti" is a strange hybrid of the chimpanzee which has developed along its own lines for a long period.

The Nyasaland Government placed the "Ufiti" under its protection on March 4.

This decision to protect the creature from the guns and snares of hunters was taken at an Executive Council meeting presided over by the Governor of Nyasaland, Sir Robert Armitage.

Anthropological experts have classified the creature tentatively as a genus of the Pongidae, which includes all the tail-less anthropoid apes, but they are not ignoring the possibility that it may belong to an entirely unknown species.

(*The Times*, London and *The Statesman*, Calcutta)

L. **Population Of Asia And Far East In 1950-1980:** Details of a United Nations Study entitled *The Population of Asia and the Far East, 1950-1980* was released in New Delhi on March 4.

According to this Study, the population of Asia and the Far East, for long the most densely populated area of the world, would continue to grow and its percentage of world population would increase between now and 1980.

The Study emphasized that population growth in this area, comprising one-sixth of the Earth's land surface, but containing one-half of the world's population, was a dominant factor in global population trends.

[For purposes of this report, Asia and the Far East covers that part of Asia lying south of USSR and east of Iran, with the exception of New Guinea.]

The share of this region in world population rose from about 51 per cent in 1920 to about 53 per cent in 1950 and, on the basis of revised estimates, would rise to about 55 per cent in 1980.

Figures given on the distribution of world population showed that in 1957 Asia and the Far East had an average population density of 70 persons per square kilometer compared with nine persons each in the Soviet Union, North America and Latin America, and 15 persons, on the average, in the remainder of the world.

Thus, while the region was roughly equal in area to that of the Soviet Union, North America or Latin America, its present population was more than seven times larger than any one of the other three regions.

As regards past population growth (1920 to 1950), the report gave figures showing sustained and quickening population growth in Asia and the Far East, climbing from 991 million in 1920 to 1,317 million by 1950.

Among the factors of past population growth in the region discussed by the report was that the birth-rate which, while generally high in comparison with that of modern western populations, had been far from uniform in different countries of Asia and the Far East. The most marked changes in the birth-rate noted were those occurring in recent decades in Japan where the annual rate had declined from a post-War peak of 34.3 births per 1,000 in 1947 to 17.2 in 1957.

For the whole region, the death-rate had been decreasing at an accelerating pace and was expected to continue to decline.

As to future population growth, it gave tentative estimates for Asia and the Far East for 1950-1980, according to which the 1950 total of 1,317 million would climb to 2,268 million in 1980.

Of the four sub-divisions into which the region was divided, the most rapid population growth was anticipated in South-East Asia where, on the basis of revised estimates, population was indicated as rising from 172 million in 1950 to 348 million in 1980.

In Central-South Asia, a large future growth in the population of Ceylon, India and Pakistan was foreseen "despite the fact that clinics propagating methods of family planning were in operation in these areas."

[*The Population of Asia and the Far East, 1950-1980* was the fourth of a series of reports dealing with future population prepared by the United Nations Secretariat in accordance with the recommendations of the UN Population Commission. Previous studies in the series published in 1954, 1955 and 1959 contained detailed population projections by sex and age for each of the countries and territories of Central America, South America and South-East Asia. It was prepared primarily to meet practical needs which have arisen in the work of the Economic Commission for Asia and the Far East.]

(*UN Information Centre*, New Delhi)

[Prev. ref. 2754:AOA:I]

M. **Human Voice Bounced Back From A Sphere In Sky—US Achievement:** A human voice transmission bounced back to Earth from a sphere in space on February 27 for what was said to be the first time.

The taped transmission, sent from the Bell Telephone Laboratories at Holmbel, New Jersey, was received at Round Hills, Massachussets, by the communications facility of the Massachussets Institute of Technology.

The sphere which reflected the message was a 130-ft balloon sent up by rocket in a collapsed form from Wallops Island, Virginia, and inflated after ejection from the rocket at a great height. To ensure reflection from it, the balloon—a plastic bag—had been impregnated with aluminium.

The rocket which carried it aloft was 32½ ft. high and weighed 5½ tons at take-off. It produced an initial thrust of 130,000 lbs.

The balloon was seen as a "star-light glowing object" or as a brilliant reddish-orange blob of light by great numbers of people on the ground for hundreds of miles along the Atlantic coast. It travelled eastward for 540 miles over the Ocean before falling into it.

(*The Times*, London)

[Prev. ref. 2621:AOA:C, 2777:AOA:D]

N. **Possibility Of Life On Venus:** According to the Soviet astronomer, Prof. Nikolai Barabachov, life may be just appearing on Venus in forms unknown to man.

He told a correspondent of a Moscow paper on March 6 that discoveries in recent years had prompted scientists to revise their views on Venus as a cheerless, life-less planet.

He added: "It would seem that Venus is now in a stage in which the Earth was

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

in the Carboniferous period, millions of years ago."

Since the temperature on the explored side of Venus had formerly been estimated at 100 degrees, this proved that Venus is not divided permanently into a dark and light side. If that were so, the temperature difference would be much more extreme.

He also considered that two other facts supported his conclusion—that Venus has a 22-hour-day and a 32° angle between its equator and its ecliptic. In both these respects, Venus is roughly similar to the Earth.

(*Tass*)

[Prev. ref. 3221:INI:F]

O. **New Theory On Martian "Canals":** The Soviet Astronomer, Dr. Davydov, writing in *Komsomolskaya Pravda* on March 7 said that the mysterious "canals" on Mars were crevices in the ice which were believed to cover most of the planet.

He added that the quantity of water on the surface of Mars was about the same as that on Earth.

He estimated that the annual mean temperature on it varied between 10 and 20 degrees Centigrade since Mars is farther away from the Sun.

He thought that the physical laws identical to those on Earth determined the heat under the Martian crust, and that this produced tremors which split the surface.

Some of these crevices, he said, might be covered with vegetation owing to the relatively mild temperature which must reign in areas protected by "hoods" of ice.

He added that the vegetation lent colour to the crevices, making it possible for them to be seen by astronomers.

(*Tass*)

[Prev. ref. 440:AOA:G, 940:AOA:E]

P. **Aurora Lights Hotter:** *Tass* reported on March 14 that the Russian satellite (Sputnik III) observation had revealed a temperature rise of thousands of degrees in the area of the Auroras—the "northern and southern lights."

This, according to a paper submitted to the Soviet Academy of Sciences by Prof. Valerian Krasovsky, a Russian physicist, could be attributed to the invasion of the Earth's atmosphere by electrons and protons.

The inter-action of these electrons with the magnetic field upwards from 60 miles above the Earth raised the temperature by 5 degrees Centigrade (9 degrees Fahrenheit) for every kilometre (about five-eighth of a mile).

Soviet space rockets had shown that solar energy absorbed in the upper fringes of the atmosphere was not sufficient to account for such intense heat and the final evidence for solving the mystery was provided by Sputnik III launched in May, 1958.

(*Tass*)

Q. **Crack In Floor Of Oceans—US Discovery:** American geologists announced in New York on March 10 that they had made the first confirmation that a continuous 45,000-mile crack runs through the beds of the Pacific, Indian and Atlantic Oceans.

The crack swings around the southern tip of Africa and has several branches extending into the Arabian Sea and through the Pacific Ocean.

Existence of the great under-sea crack in the Earth's crust has been known for a few years. But the present work, mainly in the Indian Ocean, establishes for the first time its unbroken continuity. Previously, the continuity was only hypothesized on the basis of the crack following a world-wide "earthquake belt".

The finding was announced by two geologists of Columbia University, Dr. Maurice Ewing and Dr. Bruce C. Heezen. The studies were conducted aboard the research vessel *Vema* of the University's Lamont Geological Observatory.

The two geologists said that the scientific crew made soundings during three crossings of the rift in the Atlantic and six crossings in the Indian Ocean. "The scarcity of soundings in the southern Indian Ocean has made this a critical area for checking the prediction that the rift is continuous."

They reported precision soundings indicating that the top of the rift ranged between one and two miles below the surface of the Indian Ocean. The bottom of the valley measured two to three miles below the surface. The width of the valley varied between one and five miles at the bottom and four and 20 miles at the top.

In following the earthquake belt, the rift runs the entire length of the north and south Atlantic, around southern Africa, and into the Indian Ocean. The Arabian Sea branch connects with the well-known African Rift Valley. Another branch passes between Antarctica and New Zealand, entering the Pacific Ocean and re-branching near the East Island. One of the secondary branches continues towards the Gulf of California and Alaska.

Dr. Ewing said that the fact of the connexion between the Atlantic and Indian sections of the rift appeared to destroy the theory of continental rift. This theory holds that the Americas, Africa and Europe were together geological ages ago and have since gradually been separated by the Atlantic with the rift running generally down the centre of the Ocean.

(*US Embassy*, New Delhi)

[Prev. ref. 1304:AOA:D]

R. **Age Of The Earth — Soviet Scientists' Finding:** A *Tass* release dated March 8 said that according to Leningrad scientists, the Earth is 4½ billion years old. The scientists have compiled a scale for the absolute dating of the geological history of the rocks making up the Baltic Shield (the Kola Peninsula, Karelia, Finland, Sweden and Norway).

Five hundred and fifty measurements of the age of various rocks were made in the pre-Cambrian Laboratory of the USSR Academy of Sciences under the direction of Academician Alexander Polkanov, with the help of the Argon Method. Under this method, quantities of mica are taken from rocks, and argon is extracted from it by smelting. Simultaneously, the potassium content in mica is determined by a chemical method. The proportion between potassium and argon makes it possible to establish the absolute age of the rock.

It has been established that the age of the pre-Cambrian deposits (the earliest in the geological history of the Earth's crust) ranges from 500,000,000 years to the moment of the Earth's formation as a planet.

The new method of the stratigraphic gradation of the pre-Cambrian formations of the Baltic Shield, proposed by Academician Polkanov and Prof. Erik Gerling, and the data obtained by them threw fresh light on the earliest geological history of the Earth's crest. Soviet scientists now discount the hypothesis of a "pre-Cambrian break" of great duration in rock formation.

The work of Leningrad scientists opens up new opportunities for the prediction of iron, copper, nickel, mica and other deposits in pre-Cambrian strata. Specifically, they have established the age of the Lower Archaean deposits (the earliest pre-Cambrian formations). Thus, it has been established that the age of the iron-ores of Olenegorsk, on the Kola Peninsula, and the Kursk magnetic anomaly, in the centre of the European part of USSR, is 2,300,000,000 years.

[Prev. ref. 2530:AOA:G]

S. **Kalinga Prize For M Jean Rostand:** The famed French biologist and moralist M Jean Rostand, was awarded the international Kalinga Prize for 1959 for popularizing science.

The Kalinga Prize, which is worth Rs. 13,333 was created in 1951 from a personal donation offered by the Indian industrialist, Mr. B. Patnaik, and instituted by the Kalinga Foundation, an organization set up to contribute to the social, economic and cultural progress of Orissa.

The Prize seeks to reward outstanding scientists and to strengthen ties between India and scientists from all nations. Between 1952 and 1958, the Prize was awarded to M Louis de Broglie of France, Sir Julian Huxley of Britain, Mr. Wuldemar Kaempffert of USA, Mr. Augusto Pi-sumer of Venezuela, Mr. George Gamow of USA, Lord Bertrand Russell of Britain, and Prof. Karl von Frisch of Austria.

(*The Hindu*, Madras)

[Prev. ref. 2622:AOA:J]

T. **Mysterious Energy In Space—Soviet Scientist's Explanation:** A *Tass* release in Moscow on March 10 said that the upper atmosphere at a height of over 100 kilometres was warmed by electrons inter-acting with the magnetic field of the Earth.

It added: "This theory to explain the rise of the upper air temperature at the rate of five degrees a kilometre has been advanced by Prof. Valerian Krasovsky, physicist, together with members of the staff of the Soviet Academy of Sciences' Institute of Physics of the Atmosphere.

Prof. Krasovsky said: "Science had seen no way of explaining the origin of the mysterious energy in space before space rocket launchings.

"Only when the exact intensity of the Sun's radiant energy in the hard ultra-violet and Roentgen spectral regions was measured with the aid of rockets, did it become obvious that the solar energy absorbed in the upper fringes of the atmosphere was not enough to account for so intense an influx of heat.

"In an effort to find the clue to this problem, scientists sought to learn more of the mechanism of polar lights and other, fainter invisible air-glows as well as to get something out of the artificial satellite findings.

"It was probable that the warming of the upper atmosphere was due to frequent and long-continued polar lights invisible without the use of special equipment.

"To postulate such heat generating sources was natural with respect to the polar regions and less probable for the lower latitudes. However, investigations outside the polar zone showed that the typical spectral types of upper air radiation are observable at great heights in those regions, too. Besides, the temperature within the area covered by intense polar lights was observed to rise by thousands of degrees. This can be attributed to the invasion of the Earth's atmosphere by electrons and protons.

"The instrument readings of the third Soviet artificial Earth satellite furnished the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

final evidence for solving the upper air heat mystery. These helped to detect increased concentration of energetic electrons at heights of upwards of 1,000 kilometres where visually undiscernable polar lights occur. It is they that are responsible for the intense warming of the upper atmosphere. It has likewise been proved that the electrons and protons observable in that region cannot be the primary products erupted from the Sun. They grow out from an elaborate inter-action of the Sun's primary corpuscular streams with the magnetic field of the Earth."

(*Tass*)

[Prev. ref. 3029:AOA:D]

U. Revised Study On Sovereignty Over Natural Resources Asked For: It was made known in New Delhi on March 25 that the United Nations Commission on Permanent Sovereignty over Natural Resources had given unanimous approval to a resolution requesting revision of a preliminary Study on the subject by the UN Secretariat in time for the Commission's next session in 1961.

The revised Study would be circulated to members of the Commission not later than March 15, 1961, with the Commission holding its next session towards the end of April, 1961.

The document to be revised is a 445-page Study prepared by the Secretariat in response to the request of the Commission at its first session in May, 1959.

The Study contains material to be examined with a view to possible inclusion in a full survey of the present status of the permanent sovereignty of peoples and nations over such natural wealth and resources as land, water, oil, minerals and other sub-soil deposits. Conduct of the survey was the task for which the Commission was established by the General Assembly in 1958.

After approving the resolution on March 4 without a vote, the Commission adjourned until March 15 when it considered its report to the forthcoming session of the UN Economic and Social Council, opening on April 5, at UN headquarters in New York. The report was drafted by Mr. Rafik Asha of the United Arab Republic, unanimously elected *Rapporteur* of the Commission in the absence of last year's *Rapporteur*, Mr. Abdel Hamid Abdel-Ghani of the United Arab Republic.

The resolution adopted was a revised version of a proposal submitted jointly by Guatemala, the Philippines and Sweden. After considerable discussion both inside and outside the Commission, the revised text was agreed upon between the three sponsors and Mr. Abdul Rahman Pazhwak of Afghanistan, who had submitted an oral amendment.

The amendment proposed that the Secretariat, in preparing the revised Study, be instructed to "take account of the views expressed by members" at the session of the Commission.

The resolution asked the UN Secretary-General, Mr. Dag Hammarskjoeld, "taking into account the views expressed by the members of the Commission," to invite Governments and specialized agencies to "verify the material in the preliminary Study," and submit additional pertinent material.

It then requested the preparation of the revised Study "in the light of such submissions."

A further paragraph provided for the inclusion of appropriate references to United Nations decisions, reports and Studies.

The nine-member Commission opened its session at UN headquarters on February 16. Its members are: Afghanistan, Chile, Guatemala, the Netherlands, the Philippines, Sweden, USSR, United Arab Republic and United States.

(*UN Information Centre*, New Delhi)

V. Mapping Lunar Landscape—Work By British, French And American Scientists: It was made known in Bedford (Massachusetts—USA) on March 17 that British, French and American scientists were making a map of the Moon showing its contours as seen on its surface.

The Cambridge Research Centre of the US Air Force's Research and Development Command at Bedford said that the map was being made with the help of Manchester University and the Pic-Du-Midi Observatory of the University of Toulouse, France.

Using the Observatory's 24-inch refracting telescope, they photographed and measured the shadows cast by landmarks on the Moon's surface. They took photographs, 5,000 in all, at short intervals as the shadows moved across the lunar landscape. Knowing the position of the Sun, the Moon and the Earth, they were able to compute the height of the landmarks.

They found that the Moon's surface is flatter than was supposed, with an apparent lack of slopes or towering mountains.

(*The Statesman*, Calcutta)

W. Evolutionary Processes On Planets May Be Destroyed By Space Vehicles—Prof. Bernard Lovell's Warning: Addressing the Royal Society of Arts in London on February 28, Prof. Bernard Lovell, Director of the Jordell Bank Radio-Telescope, uttered the warning that space vehicles might destroy the evolutionary processes which could possibly result in life on the planets.

Both the Soviet Union and the United States who were on the verge of making planet probes, he added, had the scientific and moral duty to see that no aspects of "chauvinism" led to such destruction.

He said that until recently, the possibility of extra-terrestrial life had received little attention from scientists. There were now suspicions of plant life at least on Mars, and at least two crucial biological experiments were planned for future space probes to Mars and Venus. "Unless the utmost care is exercised, these space vehicles may well contaminate the planets and their atmospheres with micro-molecules which have developed on the Earth. The intentional, or accidental, execution of a probe into the environment of Mars or Venus before the biological instruments are ready might destroy for ever the validity of biological investigations and might, indeed, divert or destroy the evolution by processes already at work in these domains."

On space research, he said that there was talk of rockets capable of travelling almost as fast as light itself—186,000 miles a second.

But, it was difficult for a working astronomer to become enthusiastic about it because the rocket even then would have to travel for 100,000 years to leave the Milky Way system of stars.

It was possible that with the instruments he now had, man might study events occurring several thousand million light years away — instruments which might settle the conflict about the evolutionary processes of the universe.

X. Man Was Once A Sea Ape—Sir A. Hardy's Theory: Sir Alister Hardy, Oxford Professor of Zoology, proposed a new theory of the origin of man—that he was once a sea ape—before a conference of marine scientists in Brighton on March 6.

This, he added, accounted exactly for the differences in body shape between humans and apes today.

Sir Alister said that he had spent 30 years gathering evidence for his new theory and had only just reached a conclusion.

According to him, many apes were once driven to hunt in the sea by fierce competition for food in the forests. At first, they waded and groped. Gradually they learned to swim. The sea apes' water life went on for several thousand years. The species lost its hair—as happened to whales—but kept enough on the head to protect it against the Sun. It learned to stand upright—as apes could not—because water supported the body. For swimming, it developed longer legs than an ape. Its hands became more sensitively shaped in order to feel on the sea bed for shell-fish and to open crabs.

He also conjectured that early man learned to use tools in the water—picking up beach stones to crack open sea urchins.

It was then only a step for man to discover flints chipped into sharper, more useful tools, knives and arrows. "Then, armed with such equipment and his erect posture, he was all set for the chase. He could now re-conquer the continents, running and hunting the animals of the plains."

Man then developed his brain by tool-making. It was this period of sea-life that gave him his dominant position in the world. "I estimate apes were driven into the shallow water a million years ago. They emerged as men about 500,000 years ago."

Sir Alister said that he had discussed his theory recently with a number of experts and they had been able to find no flaw in it. It differed from currently held theories only in that the evolution occurred in water instead of on land.

Y. Lady Mountbatten Passes Away: Countess Edwina Mountbatten, wife of the former Viceroy of India, Admiral of the Fleet, Earl Mountbatten of Burma, Britain's Chief of the Defence Staff, died in her sleep on the night of February 20-21 in Jesselton, capital of British North Borneo. She was 58.

Lady Mountbatten was in Borneo since February 17 visiting local units of the St. John's Ambulance Brigade, of which she was Superintendent-in-Chief.

In a radio-telephone interview with *Reuter*, Mr. Noel Turner, the Officer administering the Government in Jesselton, said: "Lady Mountbatten retired to bed after a reception at my house yesterday (February 20) evening. She had not been feeling very well and did not greet the guests, but came down during the course of the reception, sat on a couch and spoke to some of the guests.

"After the reception, she retired to her bed-room and went to sleep. She passed away during her sleep. I cannot say just when, but my wife thinks the time of her death was around 2.30 a.m. (February 21)."

Lady Mountbatten was buried at sea on February 25 nine miles off the south coast of England.

The sea burial—requested by Lady Mountbatten in her will—was conducted from the British frigate *HMS Wakeful*, escorted by the Indian Navy frigate, *Trishul*.

The funeral service was performed by the Archbishop of Canterbury, Dr. Geoffrey Fisher.

CAMBODIA

A. **Regency Council Formed:** The Royal Council of Cambodia has chosen Prince Sisowath Monireth to be President of the three-man Regency Council which is to carry out the protocol and ceremonial duties of the late King Norodom Suramarit.

The other members of Council will be Mr. Pho Proeuns and Mr. Trung Cang, both former Ministers.

The Chief Regent, Prince Sisowath, will have virtually the same responsibilities as the late King, who left internal politics and foreign affairs entirely to his son, Prince Norodom Sihanouk.

Prince Sisowath, who is Prince Sihanouk's uncle, is known to support his nephew's policy of neutralism abroad and mild socialism at home.

Trained as an officer in France, he was Battalion Commander of the French Foreign Legion during World War II. Subsequently, he held the post of Inspector-General of the Royal Cambodian Army but, for the past five years he has been in semi-retirement.

(*The Times*, London)

[Prev. ref. 3275:CAM:A]

B. **State Investment Plan:** The Government has formulated a Five-Year Plan providing for a State investment of 8,000 million riels. Of this, 1,500 million riels is to be invested in the first year.

According to the Planning Minister, Mr. Nhiek Tioulong, 650 million riels of the first year's investment would come from foreign aid. The percentage of foreign aid would be reduced from about 40 in the first year to 20 in the last year of the Plan.

Cambodian workers and technicians trained in Chinese-aided construction sites and at factories in China would work at other construction sites.

[One $ is equal to 34.93 riels]

CEYLON

A. **Governor-General's Address To Parliament:** Declaring open the newly-elected (fourth) Parliament in Colombo on April 6, the Governor-General, Sir Oliver Goonetilleke, outlined the policy and programme of the United National Party (UNP) Government.

He announced that the Government proposed to take early steps to revise the Constitution to make Ceylon a Republic within the Commonwealth and guaranteeing fundamental rights to the minorities.

Other steps announced in the Address were:

(1) Legislation to make it compulsory for all Ministers, Senators, Members of Parliament, members of local authorities, members of State Corporations, officers of public services and officers of local authorities to declare their assets and liabilities in Ceylon and abroad at prescribed intervals.

(2) Curtailment of "wasteful expenditure", on allocations of foreign representation abroad and facilities for foreign travel at State expense.

(3) Early discussions with minority leaders to improve the estranged relations between the Sinhalese and Tamil communities and restore communal harmony.

(4) An educational system with a religious background by means of State denominational schools as well as State-aided denominational schools.

Its foreign policy would be strict neutrality and non-alignment with Power blocs and friendship with all countries.

Members of Parliament representing the Tamil-speaking eastern and northern provinces absented themselves from the opening ceremony demanding that the Address be read out in Tamil along with Sinhalese, the official language, and English.

(*The Hindu*, Madras and *The Times of Ceylon*, Colombo)

[Prev. ref. 3263:CEY:A]

B. **Trade Deficit:** The annual report of the Central Bank, made public on April 1 showed that Ceylon had registered a record trade deficit of Rs. 251 million in 1959.

According to the report, the rise in the import bill was unprecedented. Total imports were valued at Rs. 2,005 million and exports at Rs. 1,754 million.

The deficit accounted for the drop in external assets from Rs. 883 million to Rs. 689 million.

However, the report noted a rise in savings and consequent expansion in the money supply.

The main expansionary factor, it said, emanated from the Government sector.

The sizable budgetary deficit of 1958-59 necessitated recourse to substantial Central Bank borrowing.

In real terms, Ceylon's gross national product increased moderately in 1959 with the rise in export earnings as well as an increase in domestic production. When, however, the rise in population was taken into account, the rate of growth in Ceylon's economy might be considered to have been very low in 1959.

The gross national production for 1959 was provisionally estimated at Rs. 5,677 million at current factory cost prices as compared to Rs. 5,416 million in the previous year. In money terms, the increase over the previous year was 4.8 per cent while in real terms it rose by 3.8 per cent. When allowance was made for the population increase of 25 per cent, the growth of real production *per capita* was 1.3 per cent.

Of the increase in real resources, about 57 per cent was absorbed by consumption while about 27 per cent went into gross capital formation.

The acreage under tea at the end of 1959 was 5,79,600 acres compared to 5,72,700 acres at the end of 1958. The production of tea would appear to have fallen very slightly by about 25,000 lbs from the 1958 crop of 413 million lbs.

However, it said, the production figure for 1958 was now considered to have been overestimated. The production figure for 1959 indicated a rise of 1.9 per cent over 1958. This rate of growth was below the average growth rate of four per cent that prevailed in the preceding ten years.

INDIA

SUMMARY: World Court Judgment On Portuguese Possessions; Col. G. A. Nasser's Visit; Note To UN On Price Policy; World Bank Mission's Report.

A. **World Court Judgment On Portugal's Complaint Over Entry Into Dadra and Nagar Haveli:** The International Court of Justice at The Hague ruled on April 12 that Portugal had right of passage to her enclaves in India for private persons but not for her armed forces.

Giving judgment in Portugal's case against India, it held that India had not acted contrary to her obligations with respect to the passage of private persons.

It overruled two preliminary objections raised by India on jurisdiction and declared that it had jurisdiction in the dispute between the two countries.

The Court's verdict was read by the Vice-President, Sir Md. Zafrullah Khan (of Pakistan).

The Court normally has 15 judges. However, Sir Hersch Lauterpacht (UK), who has been ill for some time, and the newly-appointed judge, Mr. Roberto Alfaro (Panama), was not on the Bench for this judgment.

In addition to the permanent judges, two *ad hoc* judges had been appointed to the Bench for India and Portugal for this case, since neither have a permanent judge. The *ad hoc* judge for India was Mr. M. C. Chagla, and that for Portugal, Dr. Manuel Fernandes, a former Director-General of the Portuguese Ministry of Justice.

The President of the Court, Mr. Helge Klaestad (Norway), and M Jules Basevant

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

(France), Mr. Abdel Hamid Badawai (United Arab Republic), Mr. F. I. Kojevnikov (Soviet Union) and Mr. E. Spiropoulos (Greece) appended special declarations to the judgment of the Court. Mr. Wellington Koo (Formosa) appended a separate opinion.

Mr. Bohdan Winlarski (Poland) and Mr. A. H. Badawai appended a joint dissenting opinion. Mr. E. C. Armand-Ugon (Uruguay), Mr. Lucio M. Moreno Quintana (Argentina) and Sir Percy Spender (Australia) and the two *ad hoc* judges also appended dissenting opinions.

Portugal had claimed right of passage for both her armed forces and her officials from Daman on the west coast of India, which she still governs, to the inland enclaves of Dadra and Nagar Haveli. Portugal lost control of these two enclaves after a rising in 1954.

The case opened in 1955 and Portugal asked the Court to declare that India had committed a breach of international obligations.

India had raised six preliminary objections to the Court's jurisdiction. Four were overruled previously and the last two—rejected on April 13—were joined to the merits of the case. These were that the dispute fell exclusively within Indian jurisdiction and that it had its roots before 1930, when India accepted the Court's jurisdiction.

The Court found by 11 votes to four that, in 1954, Portugal had right of passage to the extent necessary for the exercise of Portuguese sovereignty and subject to the regulation and control of India in respect of private persons only.

By eight votes to seven, the Court found that Portugal had no right of passage for her armed forces.

The Court found that the 1779 Treaty was valid but did not grant sovereignty; it had only granted a sum of Rs. 12,000.

Portugal had invoked the Treaty as a basis of its sovereignty over Dadra and Nagar Haveli and claimed that it had acquired sovereignty over them under Article 17 of this Treaty.

Different Versions:

The Indian official text of this Article of the 1779 Treaty as presented to the Court was:

"Article 17: Narayan Vithal Dhume conveyed assurances that the *Firangee* (foreigner) had evinced friendly sentiments towards the *Sarkar* (Government) and would in future be more friendly. In response, it is agreed that villages yielding revenue of Rs. 12,000, where the authority of the *Sarkar* is unimpeded, would be assigned towards Daman from the current year (1779). The *Firangee* will not raise any *imarat* in the same. Such villages will be specified".

The Portuguese official text of the Article as presented to the Court was:

"The Majestic State has evinced the greatest friendship towards this Pandit Pradhan, as proved by the Attorney. Pandit Pradhan has agreed to make a contribution in Daman of Rs. 12,000, starting from this year (1779) through his Daman jurisdiction by virtue of which he shall specifically give to the State the *sanad* or the confirmatory order of the villages".

The Court rejected the fifth Indian preliminary objection by 13 votes to two and the sixth preliminary objection by 11 votes to four.

By nine votes to six, the Court found that India had not acted contrary to her obligations with respect to the passage of private persons.

The Court noted that in the course of time there had been free passage for private persons, but not for armed forces. For armed forces prior permission from the territorial sovereign had been necessary. In the view of the Court, such permission was a negation of passage and of right.

The Court examined the actual practice of the British, Indian and Portuguese authorities in the matter of the right of passage to determine whether it fell within the domestic jurisdiction of the territorial sovereign. It also studied "the question of the legal effect and of the circumstances surrounding the application of Article 17 of the Treaty of 1779 and of the Mahratta decrees issued in pursuance thereof."

In presenting India's case before the Court on October, 1959, the Indian Attorney-General, Mr. M. C. Setalvad, had said that the Portuguese claim "has to be viewed in the setting of a larger and fundamental political dispute between India and Portugal." Portugal wanted to ask "that legal sanction be accorded to the re-imposition of Portuguese rule on people who have declared themselves free" and that she should be allowed "to take armed forces over the territory of India in order to achieve that object."

The Court found that Portuguese sovereignty over the villages had been recognized by the British in fact and by implication and had subsequently been tacitly recognized by India.

As a consequence, the villages (of Dadra and Nagar Haveli) had acquired the character of Portuguese enclaves within Indian territory and there had developed between the Portuguese and the territorial sovereign with regard to passage to the enclaves a practice upon which Portugal relied for the purpose of establishing the right of passage claimed by her.

It had been objected on behalf of India that no local custom could be established between only two States, but the Court found it difficult to see why the number of States between which a local custom might be established on the basis of long practice must necessarily be larger than two.

As regards armed forces, armed police and arms and ammunition, it said, "the position was different."

It appeared that, during the British and post-British periods, Portuguese armed forces and armed police had not passed between Daman and the enclaves "as of right and that after 1878 such passage could only take place with previous authorization by Britain and later by India, accorded either under a reciprocal arrangement already agreed to or in individual cases. It had been argued that that permission was always granted but there was nothing on record to show "that grant of permission was incumbent on Britain or on India as an obligation".

Special Features:

The Court said that in respect of the passage of armed forces, armed police, arms and ammunition it was dealing with a "concrete case having special features."

Historically, the case went back to the period when, and related to a region in which, the relations between neighbouring States were not regulated by precisely formulated rules but were governed largely by practice. Finding a practice clearly established between two States, which was accepted by the parties as governing the relations between them, the Court must attribute decisive effect to that practice.

The Court was, therefore, of the view that no right of passage in favour of Portugal involving a co-relative obligation on India had been established in respect of armed forces, armed police and arms and ammunition.

Having found that Portugal had in 1954 a right of passage in respect of private persons, civil officials and goods in general, it proceeded to consider whether India had acted contrary to her obligation resulting from Portugal's right of passage in respect of any of these categories.

Portugal had not contended that India had acted contrary to that obligation before July, 1954, but it complained that passage was thereafter denied to Portuguese in the employ of the Portuguese Government and to a delegation that the Governor of Daman proposed, in July, 1954, to send to Nagar Haveli and Dadra.

The Court found that the events which had occurred in Dadra on July 21 and 22, 1954 and which had resulted in the overthrow of Portuguese authority in that enclave had created tension in the surrounding Indian district. Having regard to that tension, the Court was of the view that India's refusal of passage was covered by her power of regulation and control of the right of passage of Portugal.

The Soviet judge, Mr. F. I. Kojevnikov, started in his declaration on the judgment that he "can concur neither in the reasoning nor in the operative part of the judgment on the first and second points" for he was of the opinion that in this case the Court had no jurisdiction to examine and adjudicate upon the merits of the dispute.

He added: "Portugal did not possess and does not possess any sovereign rights over Dadra and Nagar Haveli and it never had and has not now any right of passage over Indian territory to these regions and between each of them".

The Greek judge, Mr. E. Spiropoulos, said: "It is a fact that, after the departure of the Portuguese authorities, the population of the enclaves set up a new autonomous authority based upon the will of the population. Since the right of passage assumes the continuance of the administration of the enclaves by the Portuguese, the establishment of a new power in the enclaves must be regarded as having *ipso facto* put an end to the rights of passage".

Mr. M. C. Chagla's Dissenting Opinion:

The Indian *ad hoc* judge on the International Court of Justice, Mr. M. C. Chagla, said in his dissenting opinion that the Indian fifth and sixth objections to the jurisdiction of the Court should have prevailed and that the Court should have held that it had no jurisdiction to entertain Portugal's application.

Mr. Chagla said: "On the merits, in my opinion, India has substantially won. Although I take the view that Portugal has no right of passage whatever inasmuch as the Court has found in favour of Portugal a very limited right confined to private persons, goods and civil officials and inasmuch as India herself has stated that she has no objection to the passage of private persons and goods, and the right regarding civil officials is of little consequence and is also subject to the regulatory power of the Government of India, I think that the judgment of the Court in the main vindicates the attitude taken up by India in the controversy between herself and Portugal over the question of the right of passage".

He added that Portugal had failed to establish her claim. If the Court were to award Portugal the right of passage, the Court must be in a position clearly to define it. But the right claimed by Portugal was "vague, shadowy and unsubstantial".

He said: "We have now a grim prospect of unending litigation in this Court. One thing is clear—if Portugal gets from this Court what she is asking, the dispute between India and Portugal will not be determined by its own decision. The Court will only be sowing seeds for future disputes and discords.

"At best and at the highest, Portugal has only established a series of revocable acts of courtesy and accommodation on the part of the British authorities (in the British period).

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

"The basis of the passage, as stated by Portugal herself, is the rule of good-neighbourliness and international co-operation—moral principles which lack legal content. In my opinion, therefore, Portugal has failed to establish any local custom even with regard to a limited right of passage.

"In the result, she is not entitled to any relief and her application should be dismissed."

Dr. Manuel Fernandez's Dissenting Opinion:

The Portuguese *ad hoc* judge on the Court, Dr. Manuel Fernandes, former Director-General of the Portuguese Ministry of Justice, said in his dissenting opinion:

"The Court gives satisfaction to the claim of Portugal. It recognizes that when India decided to oppose the communications between the Portuguese territories of Daman, Dadra and Nagar Haveli, Portugal had a right of passage over Indian territory to ensure these communications to the extent necessary for the exercise of Portuguese sovereignty over the enclaves of Dadra and Nagar Haveli. But the Court takes the view that this right relates only to the transit of private persons, civil officials and goods in general and not to that of armed forces, armed police and arms and ammunition.

"I cannot agree with that differentiation, which appears to be artificial and unfounded in fact and in law. I am consequently in disagreement also with the conclusion reached in the judgment that India had not acted contrary to her obligations resulting from Portugal's right."

Sir Percy Spender's Opinion:

Sir Percy Spender (Australia), another judge, said that he agreed that Portugal had "acquired by local custom a right of passage to the extent necessary for the exercise of Portuguese sovereignty over the enclaves, subject, however, to the regulation and control of India, which right extended at least to the passage of private persons, Portuguese civil officials and goods in general."

He did not agree, however, that no right of passage had been acquired in respect of armed forces, arms and ammunition.

He found that India did act contrary to her obligations resulting from the right of passage which the Court had found had been acquired by Portugal.

Portuguese President's Statement:

On April 13, the President of Portugal, Admiral Ameriqo Tomas, with the Prime Minister, Dr. A. Salazar, by his side, told a crowd outside the National Assembly in Lisbon which had marched from the City Hall on a call by the municipal authorities to celebrate what they referred to as "the victory of The Hague" that the World Court's judgment "consecrated the just cause of Portugal."

The demonstrators, many of whom were young people in the uniform of the "Portuguese Youth" organization, had carried banners with slogans on them, such as "Goa is Portugal", "They are not colonies but the nation", "We were right" and "A single people, a single country."

Speaking from the balcony of the Assembly building, Admiral Tomas said: "The Portuguese of India gave a good example at the time of dangers and sacrifices. All Portuguese are at their side, they will never be alone."

The Lisbon Municipal Council voted a motion on April 13 expressing satisfaction at the World Court's ruling and its gratitude to Dr. Salazar.

Foreign Office Statement:

The Director-General of Political Affairs in the Portuguese Foreign Office, Senator Franco Nogueira, said in Lisbon on April 12 (in an official statement): "We greet the decision of the International Court of Justice with joy and receive it with emotion."

He added: "The decision recognizes our legal right, the validity of our titles and our full sovereignty, over Dadra and Nagar Haveli and our unquestioned right of passage for private persons, civil officials and goods. It is a good thing that the highest court of the community of nations recognizes, consecrates and proclaims it.

"India cannot see in this Court decision anything humiliating or impolite. We can legitimately hope that Prime Minister Nehru, a statesman of international renown, will not let the opportunity go by to observe towards the Portuguese State of India the attitude of good-neighbourliness and mutual respect which should govern the conduct of members of the community of nations.

"The presence of the Portuguese nation in the Hindustani sub-continent does not represent any offence to India. Her security is not endangered. India's complete sovereignty over her own territories is not under discussion, and we do not intend to limit or violate them. Her legitimate interests are not involved for we respect them and we are not forgetting them."

Goan Leaders' Reactions:

Welcoming the decision of the International Court of Justice denying Portugal the right of troop movement to her enclaves inside Indian territory, the President of the United Front of Goans, Mr. Francis Mascarenhas, called on the Government of India on April 13 either to integrate these areas with India or to allow their residents to form a Government of their own.

He said that the Goans "now expect positive action by the Government of India to satisfy the political aspirations of the Goan people of the liberated enclaves and other territories still under the Portuguese heel".

The Goans had waited too long, he added, and even if the Government persisted in its policy of silence over the Goan issue they were now determined to liberate all Portuguese territories on Indian soil.

He announced his intention of starting an all-out movement very soon for this purpose. He declined to specify the steps he proposed taking.

Explaining what he meant by the "positive action" which he expected from the Government of India, he said that the least the Government could do was to enforce complete economic sanctions against Goa, even if it meant hardships to Goans. "If we want freedom we must not be afraid of hardships. All money remittances to Goa and all smuggling of goods into the territory should be banned. All avenues by which Indian rice and other goods reached Goa should be blocked." Indian rice was reaching Goa *via* Aden; this must be stopped.

Mr. V. N. Lawande, President of the Azad Gomantak Dal and Joint Secretary of the Goan Political Convention, welcomed the Court's decision as "a momentous decision and a victory for the down-trodden colonial people."

He said in a statement on April 13: "The verdict which recognizes the basic right of the colonial people to overthrow foreign rule and has dealt a blow to Portugal's ingenuous theory of turning colonies into overseas provinces overnight is an indication of the growing influence of the Afro-Asian nationalist forces in the international sphere and an eye-opener to Dr. Salazar and his co-travellers that their days are numbered. The freedom struggle in Goa, Angola, Mozambique and other Portuguese colonies is now entering a new phase and before long, I am confident, the world will witness a scene more inspiring and momentous than during the liberation of Nagar Haveli".

Mr. Peter Alvares of the Goan National Congress said in a statement on April 13, that the International Court's decision was a triumph for the forces of anti-colonialism.

He added: "This international judicial verdict of mankind has set its seal of approval upon the action of the Goan liberation forces. It has upheld India's right to protect the liberated areas. The verdict will encourage the speedy solution of the Goa problem".

Reaction In Dadra And Nagar Haveli:

The liberated enclaves of Dadra and Nagar Haveli received the news of the Court's judgment with joy on April 13.

Jubilant crowds marched through the streets of the former Portuguese colonies, hoisted flags at several places and held meetings where decisions to undertake the next step for complete freedom were taken.

Mr. Nehru's Reaction:

The Indian Prime Minister, Mr. Nehru, told the Lok Sabha (House of the People) on April 19 that it was obvious from the judgment of the Court that Portugal's main claim of rights in respect of Dadra and Nagar Haveli had been rejected by a majority of the Court.

Certain other things decided by the Court by a majority, he said, were not, however, clear and they would be examined fully.

In reply to a series of questions, the Deputy Minister for External Affairs, Mrs. Lakshmi N. Menon, said that the decision of the Court was being studied by the Government of India.

One member wanted to know if, in view of the denial of sovereignty of Portugal over Dadra and Nagar Haveli by the Court, India would accord recognition to the independence of the two enclaves and other Portuguese enclaves in India, and Mrs. Menon said that the decision of the World Court was before the Government. The independence of Nagar Haveli had already been acknowledged by the very fact that the enclaves had liberated themselves and, in consequence, Portugal had been denied the right of passage of the armed forces.

[The Statute of the International Court provides that its decisions have no binding force except between the parties and in respect of the case in question.]

B. **Col. G. A. Nasser's Visit:** The President of United Arab Republic, Col. Gamal Abdel Nasser, paid a goodwill visit to India from March 29 to April 10.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

During his 12-day stay in the country, he went through a packed programme of political talks, public receptions and visits to development projects.

On arrival in New Delhi on March 29, a large gathering led by the President, Dr. Rajendra Prasad, and the Prime Minister, Mr. Nehru, gave him a cordial welcome.

In the following two days, Col. Nasser had lengthy discussions with Mr. Nehru on problems of common interest.

Address To Members Of Parliament:

On March 30, Col. Nasser addressed Members of Parliament and spoke of the growth of Asian-African solidarity and the role of non-alignment in the attainment of world peace and prosperity.

He said that Egypt's insistence on the policy of non-alignment and her refusal to join military pacts had angered the States responsible for these Pacts as was obvious from the tripartite (UK, France and Israel) aggression against Egypt in 1956.

But, he contended that in fighting against them Egypt was fighting for principles much more important than her frontiers.

Expressing his country's "deep thanks and sincere gratitude" for India's active support during the Suez crisis in 1956, he described India as the "interpreter of Asia and Africa, who had firm faith in the efficacy of the moral force in removing the remnants of injustice".

"The best example of that," he added, "can be seen in the recent outrages in South Africa where the policy of racial discrimination feels it can spill blood in addition to destroying freedom".

He described it as an "ignorant policy", which had no consideration for human dignity.

He welcomed the change in world opinion about the banning of atomic tests and lessening of international tensions since his last visit to India five years ago and hoped that the proposed 'summit' meetings would ensure a lasting peace.

But it was not enough to raise the slogan of demilitarization. If demilitarization was to have any value at all, the causes which sometimes forced people to take to arms must be remedied.

He believed that the Afro-Asian nations had to make enormous efforts to get over the backwardness which had been imposed on them and asked them to be ready to face what he described as "the new imperialism in the form of monopoly of science".

He hoped that the world would soon realize that stability in a group of nations could not be achieved if big disparities continued within that group.

The under-developed countries had the right to demand that their progress was not hampered by those who had been earlier in the field of economic development. They had also the right to ask for help, experience and facilities as well as co-operation and understanding from the more advanced countries.

Characterizing the birth of the United Arab Republic, which had brought the peoples of Egypt and of Syria together in a Union, as an important development, he said that the idea of Arab nationalism was the most powerful driving force in his country.

Asian-African Solidarity Stressed:

Asian-African solidarity was again the theme of Col. Nasser's address at a reception given to him by the Indo-UAR Friendship Society, the Indian Association for Asian-African Solidarity and the Indo-Arab Society on March 31.

Speaking in Arabic, he declared that Afro-Asian solidarity was important because of the political balance it provided between the major Power blocs in the world thereby, apart from bringing Asians and Africans together, contributing to the settlement of international problems and the promotion of peace.

This solidarity, "a faithful development of the march of time," he said, had "remained a dream" till the Bandung Conference in 1956 when Africans and Asians, despite their different political backgrounds, had come together to discuss problems of mutual interest.

Speaking on the occasion, Mr. Nehru said that the countries in Asia and Africa were drawn together not only by the compulsions of geography and their common traditions and similar history of having been subjugated by foreign countries but also by the identical problems facing them at present.

The under-developed countries, he said, tended to think alike because of the similar problems they faced. The two main issues on which Asian and African countries had identical views were the need to industrialize rapidly to catch up in the race for economic development and on the "basic question of peace and war".

Under-developed nations had an abhorrence of war as it obstructed their plans for development. The world today was faced with a conflict between different ideologies and military alliances and the Great Powers involved in this conflict considered it presumptuous if other nations tried to follow independent policies. Many Asian and African countries had nevertheless developed their own policies which were not dictated by any rigid ideology and which were "good for us, for them and for the whole world."

The policies followed by UAR and India, he said, were basically the same, President Nasser's foreign policy of "positive neutrality" and the Indian policy of non-alignment were based on essentially the same idea just as their domestic policy of development on the socialistic pattern was the same.

The same night (March 31), Col. Nasser and party left on a country-wide tour that took them to Aligarh, Damodar Valley Project (DVC) near Asansol, Bangalore, Madras and Bombay.

News Conference:

One of Col. Nasser's last engagements before leaving India on April 9 was a news conference in Bombay at which he expressed the hope that India and China would be able to arrive at an agreement on the border dispute according to the principles laid down by the Bandung Conference.

He disclosed that he had extended invitations to Dr. R. Prasad and Mr. Nehru to visit UAR. Mr. Nehru had accepted the invitation and would visit UAR while returning from London after the Commonwealth Prime Ministers' Conference.

He was asked if he would discuss the Kashmir issue with the Pakistan President, F-M Ayub Khan, and if he would use his good offices to bring about an early settlement of the dispute.

He replied: "We want to see an end of this problem, because it is creating difficulties and troubles to both the countries. That would also be of advantage to both the countries. I am willing to use my good offices in solving this question if the two countries agree about it. I am ready."

On being asked to give his views on the activities of China on India's border, he said that the talks between the Premiers of India and China were only about ten days ahead. "I hope you will be able to reach an agreement according to the Bandung principles."

Replying to a question whether he would advise the use of armed forces in solving the question relating to the Portuguese territories in India, he said that he was against armed action. The problem had to be solved by peaceful means. Armed forces should be used only against aggression by another country. Even then, all peaceful ways and methods had to be tried first. One could not say what would be the result of armed action.

Replying to a question whether UAR could not impose a ban on ships carrying arms to Goa through the Suez Canal, he said that it was a complicated question and he would not like to answer it. He, however, made it clear that his Government supported India on the Goa issue.

He said that he had discussed with Mr. Nehru the happenings in South Africa.

Replying to a question, he said that what was going on in South Africa was not anything new. It had been going on even earlier. So far, it had been neglected by the whole world, but today it was not.

Joint Communique:

On April 10, a joint *communique* signed by Col. Nasser and Mr. Nehru was simultaneously released in New Delhi and Cairo.

The following is the text of the *communique*:

"On the invitation of the Government of India, His Excellency President Gamal Abdel Nasser, President of the United Arab Republic, visited India from March 29 to April 10, 1960. The President was accompanied by Dr. Mahmoud Fawzi, Minister of Foreign Affairs, Mr. Aly Sabri, Minister of Presidential Affairs, Mr. Tooma El Awad Allah, Minister of Municipal and Rural Affairs, and other high officials from the United Arab Republic.

"The President and members of his party visited some of the principal cities of India. At Delhi, the President addressed the members of the Indian Parliament. At Aligarh, he received an honorary Doctorate from the Aligarh University and in Bombay he inaugurated the Egyptian and Syrian Cotton Festival. He also visited a number of industrial establishments, scientific institutions and rural development projects. Wherever he went in India, President Nasser was accorded a warm and friendly reception by the people. In the Government of India's view, the enthusiasm shown by the people was a tribute to a leader who has secured and consolidated the freedom of his country. It also provided eloquent evidence of the friendly feelings which the people of India have cherished through the ages for the people of the Arab countries.

"During his stay in Delhi, President Nasser and Prime Minister Nehru had a number of talks on the world situation in general and other problems of mutual interest. The President and the Prime Minister re-iterated their faith in the policy of non-alignment and their resolve to maintain friendly relations with all countries. They are of the view that while assistance and co-operation through international agencies or otherwise would be welcomed for the development of the newly-independent countries of Asia and Africa, there should be no interference in the internal affairs of any country.

"The President and the Prime Minister welcomed the trend toward relaxation of international tensions. They also welcomed the forthcoming meeting of the Heads of Governments and expressed the hope that their efforts to reduce tensions would meet with success. They pledged their support for any measure of agreement which would promote an atmosphere of peace and reduce the chances of conflict.

"The President and the Prime Minister welcomed the progress which has already been made by the Conference on the suspension of nuclear tests which is now meeting in Geneva. They expressed the hope that final agreement would be reached without further delay, thereby relieving anxiety throughout the world. They regretted that

at a time when avenues are being explored for reaching an agreement on the permanent abolition of nuclear tests and considerable progress has been made in that direction, nuclear bombs have recently been exploded over a region in Africa against the wishes of the people who are affected by such explosions and against the consensus of world opinion. They expressed the hope that such tests would be discontinued.

"The President and the Prime Minister also discussed the prospects of the disarmament talks which are now taking place in Geneva. They were of the view that the progress on disarmament is an essential condition for reducing tensions and promoting a peaceful atmosphere. They expressed the hope that the meeting of the ten-nation Disarmament Committee of United Nations would lead to positive results in the field of disarmament.
